GEORGE STREET, 30 CORNHILL, LONDON, E. C., AGENT FOR THE RECEIPT OF SUBSCRIPTIONS AND ADVERTISEMENTS.

ADDRESS, PUBLISHER OF "THE NATION," BOX 6732, NEW YORK.

The Week.

IN Virginia a movement begins which we feel sure Congress will feel disposed to encourage. A. H. H. Stuart, T. S. Flournoy, John L. Marye, Jr., Wyndham Robertson, F. G. Ruffin, General John Echols, J. F. Johnson, and others—Whig Senators and Representatives, and governors and acting-governors, and the like, in former days—unite with others in declaring that they will accept in good faith the principle of negro suffrage if Congress will grant universal amnesty. This is a very hopeful sign, and is directly attributable to the result of the late election and to Virginia's respect for Grant. The old Whigs must be allowed a little credit too, and, in a left-handed way, the old Democrats, whom the old Whigs hate so well. To go to the other end of the late Confederacy, we find that in Louisiana a mob, led by the editor of the *Marksville Villager*, has burned the office of the *Marksville Register*, a Republican journal. A brutal murder of two Republican negroes is also reported from Winn Parish, and General Rousseau's chances of remaining in Louisiana after the beginning of March have not much improved since November. Governor Warmoth is not the best authority in the world, but is probably to be fully believed when he says, speaking of the management of the military during the election, that orders enough were issued, and that in Georgia they might have meant something, but that, being made public in Louisiana, they only served to inform the lawless that they need have no fear of the Federal general—which, to do them justice, they hadn't.

The "trouble on the Ogeechee" we do not profess to understand fully, for the accounts that come in are not only in great part Associated Press reports—which, to be sure, may be read backward, whenever negroes are concerned, and the truth thus guessed at—but they are very meagre indeed. At first it was reported that the sheriff had gone out to arrest certain negroes, that he and his deputies had been surrounded and made to give up their writs, and that the white people were flying to Savannah, leaving behind them negroes engaged in burning, stealing, and committing rapes. The latest accounts, and all the accounts between the earliest and the latest, are silent as to the names of persons murdered or ravished, but the names of some owners of burned houses and stolen cattle are given, and, we dare say, with truth and correctness. Furthermore, we learn by Monday's despatches that the military having gone to the scene of the disturbances, fourteen negroes had voluntarily given themselves up, and more were expected to "come in to-morrow." The fact of the matter we take to be this. As the cotton crop is just gathered, and stored in the gin-houses in process of ginning, some of the negroes steal as much of it as they can, and secretly sell it to some of the white gentlemen who are now attending the Savannah mass-meetings, and denouncing the outrages. The planters put watchmen in the houses where the seed-cotton lies or the ginned staple is awaiting transportation, and these sometimes connive at the thieving and sometimes shoot the thief, who, on his part, sometimes shoots back. This brings the sheriff, who, no doubt, a former rebel, and very probably a former owner or overseer of slaves, comes amongst an enraged population of ignorant people among whom a little blood has just been shed in the manner above-mentioned, and a good deal of affecting celebration of funerals has been going on, and he and the posse are overawed, or perhaps overpowered, by a hastily collected mob of ignorant, excited people, who come very speedily to their senses when by-and-by the United States uniform is brought before their eyes. One or two of them may have something on their consciences heavier than thefts or the wounding of the night watchman; but it will be as well to wait a while before believing so. And it cannot be said too often that the hundreds of murders officially reported in Georgia this year have been committed on blacks by whites; that Georgia is to a great extent a frontier country without law; and that, as always happens, the weakest Georgians—the colored ones—have been getting the worst of the law for a time so long, that if they had even sinned up to the reports of the Associated Press and the fears of the refugees from the Ogeechee, the matter would not be so very surprising.

From the rest of the South the news is on the whole not very bad. From Arkansas there are complaints of the brutal behavior of the militia (loyal), which is said to have "inaugurated a reign of terror." The reign of terror, by the way, seems to have set in most severely in a county which Cullen Baker—a desperado stained by scores of murders and robberies—has recently been blessing with his mild sway. When he wants a horse for himself or any of his gang, he orders a farmer to bring him a fresh beast in exchange for his weary one, and the farmer gladly complies, and is rejoiced if Mr. Baker vouchsafes him money to boot. Baker is but one; in August, September, and October last, before the myrmidons of the Radical Clayton began causing the flight of distinguished citizens of Arkansas, twenty leading Republicans had been killed or wounded by assassins, and about two hundred colored Republicans had been murdered, to say nothing of the wounded and whipped. It is very possible that the militia are not handling with gloves such persons as are known for murderers, but that their action is on the whole in the interest of order and law nobody informed of the condition of Arkansas would think of denying. In Florida, Reed has got the better of his obstreperous Lieutenant-Governor, Gleason, and that scandal is at an end. As important a piece of news as any that comes from South Carolina is to the effect that the Spragues of Rhode Island have bought for $200,000 the mill privileges on the Congaree, in the neighborhood of Columbia, South Carolina, and that they will erect cotton factories there. If they will use the help of colored women instead of the comparatively useless poor white girls who have brought trouble to more than one Southern factory, there is no reason, we suppose, why they should not have a Rhode Island success in South Carolina.

There is the same uncertainty as ever about the fate of the Tenure-of-Office Bill. The writer of an able article in *Harper's Weekly* argues against the expediency of repealing it, on the ground that, if combined with Mr. Jenckes's Civil Service Bill, it would have the effect of preventing the ruthless use of the great executive power of the President against the will of the people, and at the same time prevent the national election from being merely "a fierce bread-and-butter contest," and would relieve the President of the immense drain on his time, attention, and strength now caused by his having to distribute the offices so as to satisfy party claims. He maintains, too, what few will deny, that the general principles on which the bill was passed are no less weighty now than they were a year ago; for of course, if the bill be based on principles of permanent value, the incoming of a good

President in the room of a bad one is no reason for repealing it. But there remains one objection to it, on which we touched last week, which the article does not meet, and that is that the bill aggravates that division of responsibility which is one of the great political evils of the day. The Jenckes bill would make it difficult for a President to fill the offices with bad men; would relieve him of the disgraceful pressure of "claims" which now follows his election; but with the Tenure-of-Office Bill in existence, he would always be able to get rid of the full responsibility of keeping bad men in office. True, he has the power of suspending; but it would under certain and not improbable contingencies be easy for him to say that there was no use in suspending, as the Senate did not sustain him. This is exactly the kind of process that has been going on for the last year. What we want in the government, municipal and State as well as Federal, is greater concentration of responsibility, so that we may, when things go wrong and rascals appear in office, be able to go to the exact person who is accountable and ask him to do his duty without shuffling or equivocation. The curse of the present system is that the President is no more responsible for the condition of the civil service than for the general prevalence of sin. The party which elects him is responsible, but where is the party to be found?

Mr. D. A. Wells's report has made its appearance, but too near our day of publication to allow of more than a very brief mention of its contents, although the New York *Tribune* has done the public the service of presenting a careful condensation of it. As regards the condition of the country, Mr. Wells asserts that while in the last five years one million of emigrants have landed in the United States, bringing with them eighty million dollars in gold, during the same period the increase of the national wealth, as exhibited in cotton and iron manufactories, railroads, telegraphs, sheep and other agricultural products, and in the consumption of certain foreign commodities, has been greater than during any similar period in the national existence. The agencies which he sets down as having contributed to this result we need hardly enumerate. On the other hand, he finds, as the result of the war, that in a great number of the more important branches of industry, in which before the war American labor and capital were able to defy competition, they are now totally unable to make head against foreigners, and this melancholy state of things he ascribes to unequal and heavy taxation, an irredeemable paper currency, and a limited supply of skilled labor. In support of these statements he adduces a wonderful variety of illustrations drawn from the recent history of various branches of industry, but into this tempting collection of facts we have not space or time to follow him at present. He looks for recovery through the restoration of the national credit, the refunding of the national debt at a reduced rate of interest, and the reduction of the cost of national production, which, of course, means the reduction and simplification of taxation and the practice of rigid economy. His plan of resumption is the application of 2 or 2½ per cent. on the whole debt year after year to the purchase in open market of gold-bearing bonds, with the concession of the privilege of contemporaneous conversion of greenbacks into bonds at certain rates and in certain sums. He says the only mode of funding at a lower rate of interest is to improve the security—a lesson which some of our financiers are slow to learn; and he winds up with what looks like an attack on the present beautiful tariff by recommending an enlargement of the free list and a general reduction of the rates of duty, and the abandonment of the *ad valorem* duties for specific duties.

The Greco-Turkish difficulty continues to be the principal topic of European news. A diplomatic conference is to meet at Paris with the view of settling it, on the 9th of January, to be presided over by M. Lavalette, the French Minister of Foreign Affairs. We hear nothing as to the probable action of the conference with regard to Crete, but Turkey was apparently so determined not to take part in it, if the question of Cretan independence were so much as discussed, it is not unlikely that it will not be pressed even if brought forward. A Cable despatch in the early part of the week represented the Cretan insurgents as having finally laid down their arms and made their submission; but although this is a more distinct and circumstantial announcement of "the close of the war" than has yet been made, the non-arrival of any confirmation of it up to this date throws over it the same suspicion as all previous intelligence of a similar character. In the meantime, there seems to be a great deal of quiet determination at Constantinople, and a great deal of enthusiasm at Athens, and in the latter much of that belief that "war is certain" which usually accompanies enthusiasm. But then, out of Athens and Constantinople, nobody seems to have any expectation of war. The Turkish causes of complaint, the open transmission of stores and ammunition to Crete, and the open enlistment of volunteers at Athens, are really no stronger now than they were a year ago; and the reason why Turkey shut her eyes then was probably that she was in daily fear of trouble on the Danube. The late Roumanian Minister, M. Bratiano, was a "War-Horse," and plunged the country into all sorts of difficulties. He flew in the face of civilization by his persecution of the Jews, and then determined to fly in the face of Turkey, and began to make threatening demonstrations against her, and to accumulate arms at a rate that led Beust to pronounce the Principalities an "arsenal"—and all, it was believed, with the secret encouragement of Prussia and Russia. Austria and France, however, took the alarm, and remonstrated so decidedly that he was dismissed, thus relieving the Porte from a great anxiety.

The Turks have now determined to take the Greeks in hand, and, feeling satisfied either that the Great Powers won't permit a fight, or that, if there is one, Greece will be allowed to go to the wall, are pressing them hard, and have, it is said, fifty thousand men ready to cross over the frontier. Greek resistance in the open field would probably not last a week, and the war would speedily resolve itself into a campaign of regular troops against guerillas, in which the cultivated portion of Greek territory would be laid waste, and the hostilities be marked by all the usual atrocities of Turkish warfare. How long it would last and how it would end would depend on the force of Greek propagandism and the forbearance of the European powers. That the latter are prepared to allow such a firebrand as the break-up of the Turkish empire to be flung into the midst of them, no intelligent observer believes. All that can be said is that what is happening clearly makes the position of the empire more and more precarious; but an interesting account of an interview with Fuad-Pasha, published a year ago in the *Revue des Deux Mondes*, shows that the Turks are perfectly aware of the desperateness of their fortunes, but are fully determined to die not in bed, "as a sick man," but in the field with their harness on their backs—and really desperate Turks are by no means a contemptible enemy.

One of the curious features of the quarrel is the small amount of Philhellenism it develops. One finds in the European press a great deal of dislike and contempt for the Turks, but hardly any sympathy, and rarely an expression of respect, for the Greeks. This is as true, too, of the ultra-democratic as of the tory or legitimist press, and considering the prodigious enthusiasm in the Greek cause displayed during the war of independence, and the strength in Europeans of the sentiment of antiquity, and above all of Greek antiquity, and the hearty support which the cause of all "other struggling nationalities"—Italian, Hungarian, and Polish—meets with, it is a singular phenomenon. The causes of this are various. The statesmen are, of course, influenced by political considerations solely; but the commercial classes have been prejudiced by the multiplication and exceeding sharpness and success of Greek houses in the great commercial centres, while the kingdom of Greece has done nothing to win respect for the Greeks as politicians. It has not paid its debts, and, worse still, has made no honest effort to pay them; its finances are in utter disorder; its offices and office-seekers innumerable, and its police worse than none. The consequence has been that instead of laying the foundation, as Piedmont did for Italy, of a great political future for the Hellenic race by a display of Hellenic skill, courage, and wisdom on a small scale, it has simply made a display of Hellenic acuteness, restlessness, enterprise, and the European public is now well-nigh disgusted with Hellenism, which has been driven into seeking most of its sympathy in this country. Of course there is much to be said by way of explanation regarding the evil effects of Turkish domination in keeping alive

a feverish and unhealthy spirit among the Greeks, and preventing calm attention to internal administration. We hope that at the meeting on Friday next, in this city, competent speakers will address themselves calmly and honestly to these points, and thus not only do the Greeks good service, but save themselves from the reaction which nearly always follows on over-rhetorical treatment of very difficult subjects. Nobody who knows much of European Turkey considers it a simple matter to drive the Turks out and hand Constantinople and its appurtenances over to the Athenian statesmen, and we hope that our Philhellenists will not talk of it as if it were. The case of Crete stands on different grounds.

The Turkish question is receiving some wild treatment in the daily press. An enthusiastic letter-writer in the *Times* pronounces King George ruler of the 15,000,000 of Greeks, no matter where they live, in virtue of the fact that he is called "King of the Hellenes," and declares that if he were to become "faithless to the Hellenes he would cease to be King of Greece." To this clear and sapient proposition he adds another, that "the special provision which states the Turks shall hold no jurisdiction over Christians, and that the latter are under the protection of Christian powers, proves that the Porte holds only a conventional authority." There is no such "special provision." The *foreign* Christians are exempt from the Porte's authority; native Christians of whatever race are Turkish subjects, and it is their hardships under Turkish rule which, in fact, are making all the trouble; but the writer of the letter unhappily seems to have only a very vague idea of what he is talking about. The *Tribune* has launched out against the Turks too, but treats them historically. It announces as something new and startling the fact that Prince Charles of Roumania "pays only a nominal allegiance to the Sultan." He pays all the allegiance that Roumania has paid to the Sultan for the last forty years. The same paper says that "Servia, Bosnia, and Herzegovina accord but the merest figment of sovereignty to the Porte." What "the merest figment of sovereignty" is, we are unable to say; but the fact is that Servia is to all intents and purposes independent of the Porte, and has been so for half a century, while Bosnia and Herzegovina are as much a part of the Sultan's dominions as Constantinople. So that the process of "disintegration" in Turkey is not going on nearly as fast as some over-zealous friends of Greece would have us believe. We hope the journalists are not going to lose their heads over the Greek question. It is a very good question, but it has *facts* in it worth notice.

The year 1868 has witnessed the death of a large number of distinguished men—each year the opportunities of distinction increase in number, and the facilities increase for spreading the names of celebrated men—but perhaps within the twelvemonth no man or woman has died who was at once of the first order of intellect or greatness and of commensurate fame. Royalty in 1868 lost the two barbarian chiefs, Theodorus of Abyssinia, and Hole-in-the-Day, an able ruler, though only of Chippewas; the wives of both these potentates; Ravaheri Manjoka, Queen of Madagascar; the ex-King of Bavaria, Ludwig the First, poet, philosopher, and lover of Lola Montez; the assassinated Prince Michael of Servia; and Phra-Bard-Somdetch-Phra-Pharamendr-Maha-Monkut, the King of Siam, a monarch whose character was a curious mixture of barbarism and civilization. At his death, by the way, one of our New York daily papers lost a subscriber, whose place may or may not be refilled, the proportion of barbarousness in the composition of Somdetch's brother and successor not being as yet known. Aristocracy lost Walewski, Gortchakoff, Wensleydale, Salisbury, Cranworth, Cardigan (Balaklava), the reforming, or reformer-loving Duchess of Sutherland, Baron Rothschild, Narvaez, Anna Paulovna, the musical Czarina of Georgia, and the notorious young Marquis of Hastings. The age of this last-mentioned nobleman—he died at 26—reminds us to remark that of all the persons well enough known to justify the appearance of their names in a necrology of the year, the young in the lists are the notorious merely, such as Menken who was 36, Hastings, who was 26, "Japanese Tommy," who was 25. The really famous men were old, and very many of them had reached a very good old age before filling up the measure of their celebrity. Wensleydale was 86, Gortchakoff was 79, Rothschild was 76, Narvaez was 68.

Neither literature nor the plastic art met with any great loss in 1868 Brougham, a voluminous writer, was so old as to be no great loss to anything—literature, science, law, or politics. Berryer was a loss to politics, law, and oratory; but letters, including journalism, have only to lament Milman, Athanase Coquerel, De La Vigne, Eyre Evans Crowe, Limayrac, Higgins (Jacob Omnium), Halpine (Miles O'Reilly), John Douglas Cook, Lever, Seba Smith (Major Jack Downing), D'Arcy McGee, Beach, Foucault, Mallefille, Capendu, Perthes, and Van Lennep. Painters and sculptors deceased during the year are Elliott, Leutze, Dick, Ball Hughes, George Cattermole, G. H. Thomas, John Doyle, Stifter, Miss Quiner, a self-taught sculptor, and the two Mounts—names representing various degrees of ability, but none of them, except Doyle's, representing a reputation not bounded by the artist's native country. Music lost the illustrious Rossini, who died at Paris in November, at the age of seventy-seven, leaving a name perhaps as sure of long remembrance as that of any of the dead of 1868. Besides the politicians whom we have already mentioned, the name of Thaddeus Stevens will occur to all Americans, of Howell Cobb to most Southern Americans, and of Peter Cagger to those who are familiar with the politics of New York. Whether or not, but for Peter Cagger's sudden, violent death, Grant would now be the President elect, doubtless, at any rate, Seymour would not have been the beaten candidate. We name, at random, George Rapall Noyes, the Orientalist and Biblical critic, who deserves remembrance for his quiet but important influence in the emancipation of the religious world of New England; Edwin A. Stevens, the inventor; James Buchanan, formerly President of the United States; Sir James Brooke (Rajah Brooke), the private gentleman, a modern king of men, conqueror and ruler, reviving old histories, who attained sovereign power in the East by his personal ascendancy and vigor of mind; Generals McCall and Asboth; Rear-Admiral Bell; Commodore Gansevoort, a veteran of the days when we had eight ships; Governor Tod, of Ohio; Monagas, President of Venezuela; Flores, President of Uraguay; and Olarte, the President of Panama; Adler, philologist, a good scholar and good man, who died in this city some months since, after an illness painful in many respects; Heber Kimball, the Mormon; Peter Force, the book collector and author; Mitchell, the maker of geographies; the centenarians—Mrs. Wright (103); a Mrs. Rachel Posey, a Revolutionary pensioner (103); Okee-Wah, an Ottawa squaw (123); Mrs. Nancy Cooley (108); a Mrs. Haskins (116); and a Mrs. Sarah Collins (102)—not one male centenarian among them.

The news from Spain is better than it was last week. The insurrections which broke out in Seville, Cadiz, and Malaga have been suppressed with little trouble and little bloodshed, the republicans showing nearly as great readiness in surrendering as in rising. The cause of these disturbances is, as we have said before, the long delay in taking the national decision on the form of government, and the belief of the republicans, whether well or ill founded, that the Provisional Government is using the delay to intrigue in favor of a monarchy. They therefore demand as a compromise the admission of a certain proportion of democratic members, but at the latest advices the concession had not been made. All fear of French intervention, if any ever existed, has vanished, owing to the increasingly troubled condition of France herself. The democratic movement there grows in vigor, and has apparently been greatly stimulated by M. Pinard's insane persecution of the press. The newspapers grow in boldness and defiance, and the Emperor is said to be on the verge of having to choose between a return to pure despotism and the abandonment of personal government. His imperialist followers are reported to be in favor of the former course, and his nerves seem to be gradually giving way under his burdens. M. Pinard is a Jesuit, or at least a devotee, introduced into power by the Empress's favor, and his measures therefore tend to involve the Church in the odium with which he is covered. M. Gambettâ, the young lawyer who rose into fame by his furious denunciations of the Government on the recent press trials, is going to run for the Corps Législatif in the place of M. Berryer, from Marseilles, and, it is said, with a strong prospect of success.

GRANT'S DIFFICULTIES.

GRANT'S opinions about the course the Government ought, in his opinion, to pursue on the leading questions of the day, both home and foreign, begin gradually to leak out, through the medium of "conversations" with newspaper correspondents and politicians; and although conclusions drawn from reports of this kind have to be accepted with a good deal of allowance, both for misreporting and misunderstanding, we need have no hesitation in saying that the country is now in possession of the leading outlines of his policy—using the word in the constitutional sense, as covering the set of measures the President is prepared to *recommend* to Congress, and the set of principles in which he is prepared to act on matters lying within his discretion, and not in the Johnsonian sense, as covering what the President thinks ought to be done, or is determined to have done by any means, fair or foul, within his reach, and without regard to the opinions of Congress or the public. The most interesting and trustworthy account of Grant's views and aims we happen to have seen has appeared in the Boston *Advertiser*, whose Washington correspondence has long enjoyed the rare distinction of being sensible, accurate, and decent. According to that writer, Grant is in favor of "honesty, economy, and manliness." These are, of course, vague terms; but the correspondent gives some illustrations which help us to fix their meaning. For instance, we get a good idea of what Grant means by honesty from what he said of a certain legislator's speech—that "it was a falsehood; there was nothing on which you could put your finger and say, 'This is a lie,' but the whole thing was a falsehood, for all that; I've despised him ever since I heard him make that speech." This is excellent, but it foreshadows much trouble. We can assure him that if he criticises speeches in this spirit he will speedily find himself at daggers drawn with a host of "good men," "sound on main questions," and brimful of "moral issues," whose friends will not relish the application of the army standard of truthfulness and candor to their "great efforts" to help humanity along the road of progress and this great country to fulfil its destinies. He must be more careful in his analyses.

As regards economy, he is opposed to all machinery of government and all government undertakings which facilitate the growth or existence of "Rings," or which promise to make the payment of the national debt doubtful or difficult. He hopes somehow to secure peace and freedom at the South, through the co-operation of the Southern people, if possible; without their co-operation, if necessary. About the Tenure-of-Office Act he says and has said nothing; about his opinions on the Civil Service Bill the correspondent makes no report; but the General's views with regard to the appointments in the civil service appear to be precisely those on which Mr. Jenckes's bill is based; that is to say, using the discretion which the absence of such a bill still leaves him, and obeying the party traditions to the extent which prudence and expediency seem to warrant, he will select his employees, whenever he can do so with a proper regard to the public interests, from the ranks of the Republican party; "but his aim first and last will be to get upright and efficient men, rather than to reward party services." "Copperheads, political time-servers, and blatant Democratic politicians" may, however, "as well send in their resignations, to take effect on the 4th of March next," the fact being that no person answering to this description can possibly have got into the public service during the last four years by any honest arts or for honest purposes.

This all reads very well, and is very assuring, but does not furnish sufficient basis for a judgment as to the character of the new administration, without some account of the strength with which the jobbers and intriguers and plunderers of the Treasury are mustering for the defence of the old régime. The correspondent of the *Advertiser* says that "if he could show how the jobbers are organizing their forces and how adroitly they are laying their plans," people might be afraid about the future. The accounts which appear in nearly all the papers are of much the same tenor and effect. There is to be during the coming winter a real gathering of the clans of corruption at Washington. The various "Rings" were never so strong or so well organized and audacious. The beauty of the case is that they all, knowing the noble weakness of the American public, pretend to be operating on behalf of some great moral or humanitarian idea. For instance, there is a great Ring working, as in the case of Alaska, for the extension of "the area of freedom." They want to purchase Cuba and pieces of Mexico, and it has even been suggested to annex Canada by force. Now, no great purchase or annexation of this kind can be made, in the present state of the art of peculation, without the Ring pocketing enormous profits. They probably secure in the first place a share of the purchase money by bringing the scheme to a head and getting it through the Senate; they then secure another share by having the vote of the money hang fire in the House long enough to frighten the vendor, as in the Alaska case. We pass over without notice the smaller fees to "counsel" and patriotic editors of wholesome and independent papers, and the dinners and champagne to lobby agents. We pass over, too, the arrant dishonesty on the part of a nation, as of an individual, involved in borrowing money to buy real estate on speculation, when it is unable to pay debts already contracted.

The Indian Ring in like manner is fighting its battle by drawing fearful pictures of the cruel and inhuman treatment which the Indians would be subjected to if they were transferred to the jurisdiction of the War Department. It accordingly demands for them continued subjection to the enlightened ministrations of the bureau, with its gigantic yearly almsgiving, its snug "agencies," and its total exemption from real responsibility; for it is easy to see that when an agent opens an account with "Black Kettle," the balance at the end of the year, owing to "Black Kettle's" limited knowledge of book-keeping, is hardly likely to be in "Black Kettle's" favor. It says, moreover, that all would go well if the naughty white men on the frontier would only treat the red man properly; but as there is no immediate prospect of any change in the white man's character, the excuses for the present abuses promise to last as long as the Indians. The Whiskey Ring are confidently reported by the Western press to be preparing to operate on the temperance line. They are, it is said, going to call for a rise in the whiskey tax from fifty cents to two dollars, in the interest of "morality" and "public order." They are going to show the desolation to homes, the injury to health, the increase of crime wrought by the poisonous bowl, and they are buying up all the whiskey they can find and advising all their friends to do so, so as to create an interest strong enough to force the rise through Congress. Then they will sell out, pass the profits to their bank account, make contracts for future deliveries of whiskey, and begin to work for a reduction of the tax next year, on the scientific principle of "undulations."

Whether General Grant can stand firm against all this, or whether if he gives way we shall not see a worse crash, a greater loosening of the bonds of morality, than has yet been witnessed in American history, are points on which a great many people feel a good deal of the anxiety which finds expression in the letter of a correspondent in another column. The suggestion it contains as to the means he should adopt of relieving himself of a portion of the labor and care which lie before him is certainly worth consideration. Our confidence in Grant continues unabated, and it is strengthened by the almost unanimous support he is likely to receive from the press. Papers of all shades of opinion seem to be encouraging him to resist the plunderers, and it will be well if the public which lies behind the press does its part in strengthening him for the shock. The ways in which the breath of popular feeling reaches a statesman are innumerable. The press is only one of its channels. Nobody can say a good hearty word against peculators and sentimental knaves and hypocrites, in the counting-house or club or parlor, without contributing something to the unseen but mighty and all-pervading force by which nations are saved.

EUROPE AT THE CLOSE OF 1868.

THE eye of the observer of European events, which for months has been fixed with close attention on the south-western peninsula of that continent, is now turning with almost equal interest towards the south-east, where a little speck of war, portentous perhaps of a general tempest, has appeared on the horizon. The Greek Government, called upon by the Sultan to desist from fanning into new flames the almost extinct embers of the Cretan insurrection, has rejected the Turkish ultimatum, and volunteers are mustering at Athens, under the eyes of the Prime

Minister Bulgaris, for the invasion of Epirus and Thessaly. The Turkish fleet, under Hobart Pasha, sweeps the archipelago in pursuit of Hellenic blockade-runners, and prepares to aid the land army, under Omer, in invading the mainland of Greece. European diplomacy, however, is busy preventing the first real outbreak of hostilities, which would not only be followed by scenes of endless horror, as in every encounter of Greek fanaticism with Ottoman barbarism, but probably also by shocks on the Lower Danube, in which Christian states and nationalities would be arrayed against each other. In thus rashly plunging into war, young King George, the ruler over less than a million and a half of people—the Ionian islanders included—is believed not only to count upon Russia, but also to work for her, the natural heir of the "sick man" of the East, should he die a violent death, and it is this event which France and England, and still more eagerly Austria, are bent on preventing. If the reported surrender of the Cretan insurgents be true, the crisis may be considered as postponed.

The Slavic subjects of Turkey as yet give no sign of a readiness to join in the bloody fray. Bulgaria is less discontented, perhaps, and certainly less inclined to insurrection—with Widin, Rustchuk, Silistria, Varna, and Shumla on her soil—than Panslavic agitators represent her to be. Servia, under her young Milan Obrenovitch, the nephew of the recently assassinated Michael, seems to wait for an opportunity under the auspices of France and Austria for achieving the little that is still wanting to her final independence. Montenegro is probably awed into inactivity by the same powers. Roumania, on the other hand, shows decidedly turbulent proclivities, unwarlike as the modern Dacians are; and the late dismissal by Prince Charles of the reckless Bratiano ministry, which made itself so obnoxious to both Turkey and Austria, is hardly more than a tardy concession to external pressure, though represented to have been brought about by the disinterested advice of Prussia. The dismissed chiefs of the philo-Russian war party, Bratiano and Stephen Golesco, have been elected presidents of the Bucharest Chambers, and warlike clamors against Turks and Hungarians fill the Roumanian press.

The anti-Hungarian animosity of the Moldo-Wallachians is stimulated by the hope—secretly held out to them by domestic and foreign demagogues—of incorporating with Roumania the south-eastern province of Hungary, Transylvania, the majority of whose inhabitants are of Roumanian descent, and whose quiet reunion with the other parts of the realm of St. Stephen is one of the greatest victories lately achieved by the tried statesmanship of the Magyars. Another of its successes is the complete reconciliation with Croatia, whose representatives have just been admitted, amid great enthusiasm, to the Diet of Pesth. For the first time, perhaps, in their history are the Hungarians seen to act in true concord with the house of Hapsburg; and for the first time also has liberty, both religious and national, become the policy of that house. The breach between the Austro-Hungarian Empire and Rome is now regarded as final. The antagonism between that empire and Russia is no less patent. They may openly come into collision on the Lower Danube; they *must* do so sooner or later on their own frontiers, on account of their Polish provinces; for there Austria props what Russia seeks entirely to uproot—the Polish nationality.

What prevents the Czar from taking up the gauntlet immediately, both on the Danube and on the Vistula, urged on as he is by the burning fanaticism of his mighty people to destroy the last vestige of Poland, to subdue the Maygars, to expel the Turks from Europe, and to annex every country inhabited by Slavi, is probably less the fear of a grand European coalition—for Prussia and Italy might serve as a check on France—than the terrible derangement of Russian finances, the drain on the military resources of the empire by the war in Central Asia, the unfinished condition of the network of railways, the frightfully increasing demoralization of the peasantry, and a spirit of restlessness which pervades the whole of Russian society and threatens troubles in the interior. It seems, however, easy to predict that the Russian nation, moved by the desire of expansion, will not long brook, without an attempt to revenge it, the humiliation of seeing Austria restoring Polish self-government in Galicia, dictating orders in Bucharest, and playing the part of protector in Constantinople. Preparatory, perhaps, to a grand Panslavic crusade abroad, the Russian Government is working hard and mercilessly at the Russification, both in a religious and a national sense, of its western provinces. In Lithuania the work is more than half-done; in the "Vistula country"—for this is now the name for Poland in the narrowest meaning of the word—it is pushed forward with vigor; in the Baltic territories it is in its incipient stages. The half-unshackled press of the Russian capitals urges the radical and speedy performance of the work.

The second-rate kingdoms of the north of Europe, Sweden and Norway, Denmark, Holland, and Belgium, enjoy now their tried constitutionalism undisturbed by either threats of war, desire of expansion, or internal convulsions. Sweden, having recast her mediæval legislative machinery under the auspices of a liberal king, the grandson of Bernadotte, seems to be contented with her moral progress, and to have resigned—for the time, at least—all hope of recovering Finland from Russia. Denmark, sore tried, reduced, and humbled, has ceased to urge the immediate restoration to her of Northern Schleswig, which was stipulated by the late treaties. Holland repudiates the design imputed to her of forming an alliance with France against Prussia, and Belgium tries as little to ally herself, as was rumored, with Prussia against France. The expected marriage of the Crown-Prince of Denmark—whose brother is King of Greece, and whose sisters are to sit on the thrones of England and Russia, respectively—with the daughter of Charles XV. of Sweden and Norway, is a matter of some public interest to the Scandinavians; the Dutch are agitated by debates on the budget; and the Belgians by the probably fatal disease of their Crown-Prince, a boy of nine.

England is unequivocally on the path of progress. She has overcome the Fenian agitation, revived her military prestige by the brief and brilliant Abyssinian expedition, democratized her elective institutions, smoothed the way to an amicable adjustment of her difficulties with the United States, and by her recent elections strengthened the Liberal majority in Parliament, and placed the executive power in the hands of men like Gladstone, Stansfeld, and Bright—Disraeli and his cabinet evacuating, without a struggle, a position become untenable. Though the elections, in spite of the changed electoral basis, have, in the main, hardly affected the character of the British legislature, the constitutional life of the United Kingdom has evidently entered upon a new phase. Neither can it be denied that in the social and literary spheres, too, tendencies are perceptible which threaten to break down many a conservative barrier. Free enquiry and democracy are advancing at an equal pace.

In France, public opinion moves in the same direction, the Government in the opposite one. Hence an almost continuous skirmishing between the organs of the two. The attempts to commemorate the death of the representative Baudin, a victim of the *coup d'état* to which the Second Empire owes its existence; the bold expressions of anti-Napoleonic sentiment on the part of representative men of various parties—like Marie, Crémieux, and Berryer (a few days before his death)—to which those attempts served as an occasion; the defiant tone with which the liberal press, both in the capital and in the provinces, answered the persecutions of Pinard, the subsequently dismissed minister of the interior; and the speeches delivered over the tomb of Berryer—all these seem to justify the belief in which this veteran orator died, that France is rapidly approaching another stormy crisis. Napoleon the Third's prestige is certainly half-gone. He is old, and his ablest men—Morny, Fould, and Walewski—are dead. France is tired and ashamed of being kept stationary while all the world around moves. Resting on more than a million of bayonets, and with Queretaro and Mentana as its latest warlike reminiscences, the Second Empire is neither peace nor glory. For order alone, liberty is too great a sacrifice. France envies England her peaceful progress, Spain her revolution, and—more than all—Prussia her Königgrätz.

In availing themselves of the consequences of that memorable victory to their utmost extent, King William of Prussia and his statesmen are indefatigably active. Every result is drawn to its utmost conclusions. The murmurs of France, the complaints of the Danes, the machinations of the dispossessed princes, the agitations of South

Germany, the protests of minorities—separatist, Danish, Polish, or radical—are all coolly disregarded. Count Bismarck—and he is still the leading spring of it all—knows that Germany's desire for unity and power will pardon numberless encroachments upon public or private rights, and continue to support his policy by handsome majorities in the three Parliaments—of Prussia, of the North German Confederation, and of the Customs Union—which acknowledge his master as presiding sovereign; and as regards France and her possible allies, he relies on his incomparably sounder financial system, on his tried needle-guns, and on Russia. Thus confiding in its strength, the Prussian ministry now and then shows an inclination to relapse into its former absolutistic ways, of which a defiantly provoking speech of the Minister of Justice, lately delivered in the Prussian House of Deputies, was a striking instance. Scenes like that cannot fail to strengthen the anti-Prussian feeling which still animates a large portion even of the liberal population of South-western Germany, and which enables the governments of Bavaria, Würtemberg, and Hesse-Darmstadt to keep up a show of opposition to the aspiring policy of the House of Hohenzollern, while the Grand Duke of Baden goes with his father-in-law, King William.

The Swiss Confederation has rarely enjoyed more tranquillity than just now. Even Geneva has been quiet for some time. Berne, Zürich, and Lucerne are engaged in carrying through a revision of their constitutions, which will render them more democratic and liberal than they have ever been. Altogether, the Alpine Republic is still moving in the direction which the events of 1847 and 1848 marked out for her.

Italy, too, on the other side of the Alps, has had peace throughout the year just closed, but peace without tranquillity. The remembrance of Mentana is still too fresh in all men's minds. French guns are still planted on the fortifications of Civita Vecchia. The Legion of Antibes still parades, and Italian patriots are still executed in Rome. Brigands still infest the mountains. The finances of the country are at a low ebb. The King has lost his popularity. His foreign policy is undefined. The Parliament is rent with factious strifes. The people are restless. Garibaldi in his island is preparing for new adventurous attempts. Mazzini—from his sick-bed at Lugano, in Switzerland—preaches a new crusade against the Pope and his supporters. Final pacification is impossible as long as Rome remains severed from the kingdom. But, in spite of all these causes and symptoms of unrest, the independence and the integrity of Italy were probably never more firmly secured than at this moment. This is owing to the growth of Prussia, the entirely changed position of Austria, the sympathy of England, the decadence of French imperialism, and the transformation of Spain.

This transformation is the great event of the year. After sixty years of internal strife, Spain seems to have definitively shaken off the ignominious yoke of the dynasty imposed upon her by Louis XIV. Napoleon I. commenced the movement, in 1808, at Bayonne; Napoleon III. witnessed its final dénoûment near that place, at Biarritz, in 1868. And the bitter experiences of the former emperor warn the latter not to attempt another intervention in that country, between which and France there *are* Pyrenees, after all. The attitude of the Spanish people, too, is apt to deter enemies and to gain and encourage friends. No recent revolution has had a more orderly and regularly progressive development than this. Disturbances there have been, it is true, like the outbreaks at Cadiz and Malaga, but meetings and ballots are as yet mainly the chief weapons of the various parties. Their principal chiefs and leaders are still men of deserved eminence—Prim, Serrano, Olozaga, Orense, Castelar. The decision as to the future form of government is left to the Constituent Cortes, soon to be opened. With that opening the storms may begin, and it is hard to say whether the final conflict between rival creeds, factions, and candidates will be fought out within the precincts of the assembly. If the Republic be triumphant, it will be because the supporters of Don Carlos, Montpensier, Aosta, Espartero, and others will not sacrifice their interests and predilection to their monarchical conviction, and thus fail to agree on a common candidate for the throne. But democratic ideas are rapidly gaining ground among the masses of the people. Both the reigning King of Portugal, Dom Luis, and his father, ex-King Ferdinand, are mentioned among the candidates, but the latter seems to prefer the ease which he deservedly enjoys to the pomp and trouble of a new reign, and the former will probably be wise enough not to sacrifice to the gratification of personal ambition the interests of his quiet little kingdom, which, if united with Spain, would hardly escape being absorbed by her.

"HUMANITY."

We are obliged to Miss Anna Dickinson—for whom, by-the-by, the *Nation* seems to have a horrible fascination—for furnishing us, in the following passage from a recent lecture of hers in Boston, with an excuse for saying one word more about the efforts which are now making on the stump to elevate the black man:

> "A certain paper which shall be nameless here, which the *Tribune* designates as an obscure literary weekly, but which accounts itself a power in the land, and which is the mouthpiece of a larger number of people than ought to be in the land—this paper begs us to hold our peace on this vexed question of negro equality until certain wise and learned men shall determine precisely the status of the negro. Humanity is to wait upon the dicta of ethnology, Christianity upon the dictates of science! The black man is not to have the benefit of a doubt; he is to be sacrificed, and no distant voice is to be raised till these same wise and learned men shall settle beyond controversy whether he is a cross between an ape and a man or not! I would call the attention of this same literary weekly—very weakly—which thinks that it has fathomed the necessities of this case, to the fact that this same matter of ethnology is in rather an unsatisfactory condition, and that the best authorities disagree materially in their doctrines. What is the negro to do while these savans are settling their disputes? Is nothing to be done to elevate him in the scale of the races at least, and is he to be left without protection?"

Let us say, in the first place, that it was not the negro or "humanity" either that we asked to "wait;" it was Miss Dickinson. We suggested to *her* the propriety of waiting for more light on a very difficult question of ethics and physiology and ethnology before treating it either in books or speeches, and we have seen no reason since to repent having offered this modest advice. In fact, we are every day more and more satisfied of its value. What we say to the negro, and what we would all his friends should say to him, is not to "wait" one minute, but to be up and doing. The great difficulty in his case is, that he is constantly tempted to wait not till "the wise and learned men" have settled his "place in nature," but until certain stump-orators have settled what his "rights" are, and what privileges and immunities "humanity" entitles him to. They, and not the ethnologists or other savans, are now, in our humble opinion, his greatest stumbling-block, for they are continually telling him that there is no use in his moving, that his condition is in fact hopeless till they have finished their next course of lectures, or have "run" an "organ" for another year, or held a few more meetings. Of the ethnologists he knows nothing and about them need care nothing. He seldom hears of them. The idea that they can make or mar his fortunes by their discussions is about as sensible as the idea that "miscegenation" can be prevented by prohibiting intermarriage between blacks and whites. How much could a solemn resolution of the Anthropological Society do to prevent a colored man in Washington or New Orleans from growing rich or becoming eloquent or learned, or to prevent a rich or eloquent or learned man from at last winning his due meed of honor in a civilized community, or prevent a race which could boast many rich and eloquent and learned men from being thoroughly respectable, both in the low and the high sense of the word, in the eyes of all other races? "Blood," it is said, "will tell;" but nothing under heaven "tells" like performance. In 1790, nobody in Europe believed that armies could be led by *manants;* but a few charges by Murat the stable-boy, and a few bursts of desperate valor from Lannes the dyer, dispelled that ancient delusion. When a few negroes have displayed the ability to break a bank, and a fair number of them have shone in the operating-room or laboratory, and the lecture-room or pulpit, we may depend upon it we shall see negroes at rich men's dinner-tables, and in fashionable pulpits, and on bank and railroad boards. But until this has been done, no amount of stump-speaking, and no number of demonstrations of his physiological or ethnological equality, will help him to a place in the front rank, or even give him more than the world's pity. To hope for social equality for him in any way but as the reward of his own exertions, is to hope for a miracle—for the suspension in his favor of the laws of the moral universe. It is by the rigid exaction, as part of this moral order, from

every man of proofs of his worth in the shape of deeds, that civilization is kept alive and increased.

Therefore, the thing for the negro to do is not to wait one hour; to let the orators rave and the savans investigate while he digs and delves and spins and weaves and studies, in the firm assurance that herein lies the road, and the only road, to social equality. The thing for most persons engaged in stumping for the negro to do is, to go down to the South and apply such abilities and knowledge as they possess to the humble and obscure but, in God's sight, illustrious labor of teaching, guiding, and consoling him. The funds now expended in the hire of halls, in gaslight, bill-sticking, and tickets, may also most righteously be diverted to the purchase of books and the establishment of schools for him; and lest any orator or lecturer should be at a loss where to remit, we may mention that a normal school and farm for colored people is now in existence at Fortress Monroe, under the superintendence of General Armstrong, and is doing admirable work in teaching them the habits of industry and the arts and restraints of civilized life, and to that institution those who feel excited about the black man's condition will do well to direct their contributions. There are hundreds of other ways of using money for his benefit; we mention this as the one best known to us. Anything almost will serve him in better stead than "the temporary noises, menacings, and deliriums" of the humanitarian platform.

We speak thus strongly because we see no end to the amount of "waiting" which certain orators would exact of the black man. After the war they told him that his condition was hopeless until he got the suffrage. He has got the suffrage. They now tell him that the suffrage is a mockery without free farms—that his condition, in other words, is hopeless till the Government makes him a present of land—and have invented in support of this theory a cock-and-bull story about the distribution of land for nothing amongst the peasantry as having been "the one permanent and valuable result of the French Revolution." Miss Dickinson has recently gone one step further, and declared, amidst great applause, that he is foully wronged if white women refuse to marry him because of his color. It is quite clear to us that if he waits till all his friends certify that he has got all he is entitled to ask for, he will not take charge of his own future within the next century. The one thing the North owes him now, through the Government, is security; what the humane owe him is the means of education. These cannot be supplied too lavishly, and there is no form of supplying them that can be inappropriate.

It is high time, too, that it should be generally understood, as it does not seem to be amongst a certain class of reformers, that the public will not accept their definitions of "truth" and "justice" and "humanity;" that these terms have had various meanings in various ages and states of knowledge and civilization, and that their true meaning is to be got at not by spouting, but by study and experiment. When Miss Dickinson asks whether "humanity is to wait," what she means is her own notion of "humanity," the value of which depends entirely on her knowledge and mental training; just as when some of her confrères abused Mr. Fessenden for not "following after the truth," what they meant was their own notion of the "truth;" and when some of them talk of "justice" for the negro, what they mean is what they are pleased to consider "justice." At the bottom of these vagaries is, in nine cases out of ten, a kind of vague, unacknowledged belief in the inspiration of anybody who pleases to mount a platform to declaim in behalf of some oppressed or unhappy class. But we approach a correct definition of humanity just as we approach a correct definition of truth, by increasing our knowledge, and knowledge is increased by patient investigation. In other words, the improvements which have been made in education and in the relief of distress, in the administration of justice and in the prevention of pauperism, have been reached through just the same processes, mental and other, as the discoveries in chemistry and mechanics—that is, by recording, comparing, and inferring. The old Scythians, a correspondent reminds us, thought humanity required them to eat their grandfathers; the old Romans saw nothing inhuman in infanticide; in the Middle Ages the burning of heretics was considered by millions of excellent men the highest service that could be rendered to humanity; and it is not so very long since people far more enlightened than the inquisitors thought it humane to make children's lives miserable by perpetual flogging or the fear of flogging. In Catholic countries to-day there are thousands of good people who think the best service they can render humanity is indiscriminate almsgiving, but who look with horror on all attempts to diminish pauperism by great social or political changes. Those who have taken up humanitarian labors in the scientific spirit, however, tell us that there is nothing more inhuman than indiscriminate almsgiving, nothing more cruel than giving way to every gust of pity that cases of seeming distress may excite in one's bosom.

The great discovery of our age in the field of social reform is, that nothing is really humane which does not tend to improve human *character*, and that, in going to work to right B.'s wrongs or relieve A.'s suffering, we have to consider not what would A. or B. like *now*, but what will in the end make him a wiser, stronger, more self-reliant and more truthful man, what will increase his sense of responsibility to society and to his Maker;—which is but another mode of saying that in philanthropy, as in politics, to be sure of our ground we have to "think out" our measures and test their value by conjuring up their remote consequences. How far a great number of our platform humanitarians are from recognition of this method as the true one is well illustrated by Miss Dickinson's last specific for negro wrongs, the inculcation on white people of the duty of marrying blacks—that is, of avoiding what she pleasantly calls (in one of those question-begging phrases by which orators of her school do half their work), "the sin of caste." We bring the matter up again simply because a great number of very intelligent people hailed its production with as much rejoicing as if she had hit on a cure for crime or pauperism or consumption. Now, nobody can ever recommend marriage as a good mode of extirpating fallacies or prejudices, or righting wrongs—and, especially in the present condition of physiological knowledge, marriage, between two races differing so widely in physical and moral constitution as negroes and whites—who has ever seriously considered what marriage means, what it results in, and what moral responsibilities it involves. It is usually treated in novels and sentimental literature from Miss Dickinson's point of view, as the agreement of two young persons of affectionate dispositions and high aspirations to live together during their lives and hold their goods and earnings in common. But to the moralist and social reformer marriage means the agreement of two persons to produce children, and to become responsible for their education and maintenance and their start in life. A little reflection on the part of anybody who has been brought up in the Christian theory of duty, and who has received a fair amount of mental training, will show him that to agree to produce children under conditions likely to affect their character or happiness unfavorably, for the purpose of aiding a "movement" or righting other people's political or social wrongs, would be to take a position towards the children such as the Almighty alone has a right to assume. In fact, in saying even as much on this subject as we say now, we touch on such a variety of problems, of such magnitude and interest and obscurity, that we almost reproach ourselves for saying anything at all in a newspaper article. We only do so to illustrate the extent to which the stump is infusing into the treatment of some of the gravest moral questions of our day the spirit of presumption and recklessness and ignorance with which it has long cursed politics and legislation.

DINERS A LA RUSSE.

Not unfrequently, at some grand entertainment in England or America, the guests are served with what is called a dinner *à la Russe*, but we have never been able to find any resemblance between that and a real Russian dinner, other than that no dishes are placed on the table, which is covered only with the plates and glasses, and occasionally fruit and flowers. The meats are carved outside, and all the dishes are handed round. A genuine Russian dinner, made up of so many delicacies and heavy dishes, at such an entertainment, would produce an effect not intended. The guests would be soon asleep, and speeches would be either not heard or not delivered. The Russians eat no breakfast, but soon after rising take tea with cream or lemon, and dry bread. Except in the large cities, where more sensible habits have crept in, they are apt to dine at one or two o'clock. In the early evening there is tea again, and the day ends with supper.

In Russia as in Sweden, the first thing at dinner is always the *zakuska* (lit. the morsel eaten after drinking), the *voschnack* or breakfast. This consists of a small glass of brandy or cordial, and a bit of bread and butter, cheese, salt or smoked fish, caviare, or radishes. The Russians are excellent hands at preparing brandies with different flavors, the best of which are *kümmel* and *pomerantsevaya*, the latter of bitter oranges. The glass of brandy is thought to have a healthy, stimulating property; but something salt is positively demanded by the climate, and after a short time in Russia, the foreigner will be always glad to get a bit of raw herring or salt salmon, or caviare, especially if it is nearly liquid and fresh from the fish. There is a kind of little fish, like a herring, found at Pereslav, which is an especial favorite. The *zakuska* is of course always placed on a side-table. After the *zakuska* the guests each cross themselves three times and take their seats at the table, just as the soup is coming in. Soup is the *sine quâ non* of every Russian dinner, and there are some varieties hearty enough for a full meal in themselves. The great national soup is *stchi*, made of meat and cabbage, with sour cream added at pleasure. It is coarse, but palatable if well prepared, and very nutritious. *Borshtch* is, however, better, beets taking the place of cabbage, and a few slices of ham being usually added. *Rosolnik* is an excellent soup of cucumbers and other vegetables and fowl; no water is used in preparing it—the cucumber juice is enough. The most delicate soup known to the Russian cuisine is *ukha*, and should be made of sterlet, though perch will answer. There are two cold soups much eaten in summer, corresponding to the German beer-soup, *okroshka* and *Catvinia*, made of *kvas*, with pieces of fish, meat, cucumber, and other vegetables floating in it. They both have a taste to which it is almost impossible for a foreigner to accustom himself. It is said, however, that Horace Vernet was very fond of *Catvinia*. Perhaps the beautiful green color attracted his artistic eye. Another cold soup, made of whortleberries and red wine, is also sometimes eaten.

With the soup are served small pâtés of mushrooms, sour cream, carrots, rice, or usually hashed meat or cabbage. They are either baked in paste or fried in butter, and are almost always very delicate, especially the cabbage ones. Instead of pâtés, buckwheat grits (*kasha*), with butter, are much eaten. This and the *stchi* are the staple food of the peasantry. There is a large pie made of the flesh and isinglass of the sturgeon, together with rice and eggs, baked in a crust resembling muffins, called *rastigai*, which is excellent. This dish is specially appropriated for name's days.

The third course is always called the *sauce*, as the dishes are served up with some kind of sauce. There are but two or three dishes particularly remarkable. One of these is *porosyonok s' khrenom*, a cold boiled sucking-pig, with sauce of horse-radish and sour cream, and is an excellent and delicate dish. A small roast lamb stuffed with buckwheat is also not to be despised. Beefsteaks are usually fried, as gridirons are very uncommon; and there is no equivalent in Russian for the word *broil*. The method of cooking beefsteak most esteemed by epicures is to put each, covered with bread-crumbs soaked in Provençe oil, into a small, closely-shutting tin case, and then place it on the coals. Mutton is not good in northern or central Russia, but beef is excellent—even better than in England. Cutlets are generally made of veal, hashed and moulded, with or without the addition of bread-crumbs, into the shape of a chop, with a piece of bone stuck in one end. Cutlets of fowl, similarly prepared—*à la Pozharsky*, the celebrated patriot—are well known at Delmonico's. On the same dish with the meats are usually served two or three sorts of vegetables, but the Russian upper classes eat very few vegetables. The peasants, on the other hand, live almost entirely on a vegetable diet. The coarser vegetables, such as beets, turnips, cabbage, carrots, parsnips, are nowhere so delicate in flavor as in Russia. An excellent dish is made by steaming a variety of them in a closed earthen jar. Turnips stuffed with bread crumbs and cream, and baked, are delicious, and are often eaten among the sweets. Indian corn grows abundantly in South Russia, but cannot be had at Moscow fit to eat. Tomatoes are very rare, and are only used as a sauce. Wild asparagus can be eaten in many parts of Russia. The sprouts are small, but there is a delicate flavor that is lost in the cultivated variety.

If any one wishes salt, he must help himself with his knife. To pass the salt is unlucky, and if it is done a piece of b read should be placed on it. The Russians, even of the highest ranks, like everybody else except the English, eat with their knives, but that has not introduced the use of salt-spoons, even at the palace. It is a Russian custom not to use them. But there is in Russia no prejudice against the knives and forks of others. With the *zakuska* there are rarely given more than two wine-glasses and two or three forks, even if there are a dozen persons at dinner, and every one uses these without the slightest feeling of unpleasantness.

Fish is brought on after the sauce, though a mayonnaise of fowl is often substituted. As a pious old Russian lady said one day, "It is remarkable that the good God has always given the best fish to those countries which have the longest fasts;" but we are inclined to think that the number of large rivers has as much to do with it as the fasts, though they are here certainly long and severe. The standard fish in Russia is the sturgeon, though probably of a different species from the one which we reject with contempt. The flesh is firm, of a yellowish white color, and the taste, if properly boiled, delicate. It is served up either hot or more usually cold, with a mayonnaise dressing. The sturgeon is found in abundance in the Volga and in the great Siberian rivers, but the best comes from the river Ural, where its fishery is carefully protected. The caviare, the roe of the sturgeon, from the Ural is also thought the best. Another excellent and common fish is the sudak, a kind of large perch. This is eaten boiled, but is best when fried in slices. Salmon is brought to Moscow from the rivers of Finland, where it thrives in all its glory. Trout can be had both large and good, but less delicate than in America. The most esteemed comes from Gatchina, near St. Petersburg. Codfish is very rare, but is sometimes brought in winter from the White Sea. There is another fish brought in large quantities from Archangel in a frozen state—the *navaga*, a species of *Gadus*. It is a narrow fish about ten or twelve inches long, boneless, having only a cartilaginous spine, and has an excellent flavor. It should be fried to a crisp with bread crumbs. Another small fish, the *berutchka*, found only in the river Don, is even better than the *navaga*. But the king not only of Russian fish, but of fish everywhere, is the sterlet (*Acipenser Ruthenus*), which is found in Europe only in the Volga. There are epicures at Moscow who say that the sterlet exists in the Mississippi—a statement which should at once be verified by Delmonico or some other *restaurateur*, for if it can be found it will be a great addition to our bill of fare. (There is a fair representation of it in Webster's Dictionary under the word Acipenser, though the definition under Sterlet is not correct.) It is found of almost any size. The writer has eaten on the Volga a sterlet thirty inches long, for which he only paid a ruble. The same fish at Moscow would bring twenty rubles, and at St. Petersburg more still, for the sterlet must be carried there alive and cooked before it dies. The smallest sterlet, six or eight inches long, costs at Moscow a ruble and a half; and if you go to a restaurant, you will be conducted to the kitchen to a pool of fish of all sizes to make your choice. The *ukha*, or sterlet soup, is very good, but the best method is to boil the fish quickly and serve with a simple sauce of capers, olives, and lemon. There are no bones, but cartilage; the flesh is of a reddish-yellow color. To get the final, most exquisite morsel, one must cut off the head and suck the marrow.

The roast consists of poultry or game, with a salad, or, usually, cucumbers salted without vinegar, but with fennel and spices added to the brine. A taste for these is very soon acquired. Hares, of two species, are abundant, and woodcock and double snipe can be had in the season; but the most usual birds are *tetereva* and *ryabtchik*. The *tetereva* (*Tetrao tetrix*) is a large bird, resembling a grouse in flavor, is large and plump in winter, but is best in the late summer, when young. Its breast is dark, with an underlayer of white meat. The *ryabtchik* (*Tetrao bonasia*) is in size and flavor between a quail and a partridge. It can be had all the year round, for, during the early summer months, there is a supply preserved frozen in the excellent and useful Russian ice-cellars. All sorts of Russian game are now exported to Paris in winter, where they find a ready market.

With regard to the sweets, there is not much to be said, except that there is a very nice sort of pastille called Muscovite, something between a jelly and an ice, flavored with fruit. *Charlotte à la Russe* is not known in Russia. That name is given there to a *Charlotte aux pommes*. Of native fruits, the apples and pears of the Crimea, the grapes of Astrakhan, and the cherries of Vladimir, are the best. Currants, gooseberries, and cranberries are always large and fine, but are used only in pickles or preserves.

Together with white bread, there is always placed at each plate a piece of the ordinary sour, black rye-bread of the peasants, for everybody demands it in the Russian climate. White bread of all kinds is excellent in Russia, and can be only, if at all, surpassed by the bread of Vienna. Moscow is celebrated for a very light, puffy white bread, made in the shape of a padlock, called a *kalatch*, which is sent daily to St. Petersburg, as the Neva water does not possess the requisite qualities for making it good. There are few kinds of hot bread known, such as muffins, etc.; but buckwheat cakes are a national dish, and are always eaten in the carnival week, usually with melted butter and caviare.

Pistachio nuts are often introduced into the sauces of Russian dishes, and their presence at once recalls the "roast mutton with pistachio nuts" of the "Arabian Nights," and reminds the traveller that he is approaching the frontier of Asia. Mushrooms are also a favorite dressing. There are

more than fifty kinds of edible mushrooms in Russia, and every peasant child early learns to distinguish them and to know their different names.

At dinner the Russians do not drink water, but beer, *kvas*, or wine. The beer is good, milder, and less bitter than German beer. *Kvas* is a national drink, a liquor made of fermented rye without hops. It has a sweetish-sour taste, not at first agreeable, but is very healthy. It is usually home-made. Russia is beginning to produce very good wine. Knyazhveitch has vineyards in the Crimea of vines brought from Spain, France, and Germany, and makes a fair sherry and tolerable red and white wines, both better than the inferior brands of Bordeaux. Prince Vorontsoff has devoted himself to the culture of native grapes, and his Alupka, Massandra, and Ai-Danyl, both red and white, enjoy a deserved reputation. They have a strong flavor of the grape, and are pure. A fair sort of champagne is made on the lower Don, but the *Donskoe shampanskoe* that one will be apt to find at Moscow is made there by a manufacturer of artificial mineral waters. The best wines are from the Caucasus—the Kakhetinskoe and Kizlyar. On a warm day mead, made of honey and flavored with roses, is not a bad drink. At the end of the dinner will probably be given a variety of the sweet cordials, which all good Russian housekeepers are so skilled in making—currant, black-currant, raspberry, sloe, cherry, etc. They are sometimes very good.

When the dinner is over, the guests cross themselves again, shake hands with their host and hostess in thanking them for the dinner—if the hostess is old or pretty you can kiss her hand—and adjourn to the salon or cabinet for a cigarette and a small cup of coffee or yellow tea. Yellow tea is not often had—the best sort costs forty rubles a pound—and a thimbleful is enough. More than that would be bad for the nerves. Though at present an immense amount of tea is imported into Russia from Canton, there is no question but the Kiakhta tea, brought overland, is much better The idea that good tea cannot stand a sea-voyage is exploded; the true reason of the superiority is that access is had to a better tea region, the produce of which belongs to old-established Chinese houses who never send it to the coast.

It is the fashion in Russia to go away almost immediately after dinner, probably because the dinner has been so heavy that every one wants to sleep. As there is no carving at the table, but little delay between the courses, and nobody sits over the wine, the whole ceremony of a dinner party is very soon over. At the Governor-General's at Moscow—where the dinners are superb, with seven or eight courses and a dozen wines—if the invitation is for four, the last guest will have gone at half-past six. The actual time at table is never more than an hour and three or four toasts are drunk at that. To get a thoroughly Russian dinner well served, with the accompaniment of servants in white pantaloons and white or red silk shirts, and of the music of an organ, the traveller should visit one of the largest restaurants in Moscow. But if he wants to see how old Russian epicures eat and enjoy their dinner, he should get an invitation to a Saturday afternoon dinner at the English Club. The dinner will be always remarkably good, but he cannot choose his own bill of fare.

Correspondence.

A BOARD OF COMMISSIONERS TO NOMINATE REVENUE OFFICERS.

To the Editor of the Nation:

The *Nation* has said much in favor of the Government's paying its debts honestly, also in favor of the passage of Mr. Jenckes's bill for the organization of the civil service—both of them consummations devoutly to be prayed for, and the former depending largely on the latter; at least such is the opinion I am led to, both from general reflection and from the feeling which I observe in the most earnest and intelligent opponents of repudiation in our little village (the United States is considerably made up of "little villages," although the citizens of them prefer speaking of them by more high-sounding titles). The feeling mentioned above is one of despair at the overwhelming amount of rascality in the collection and disbursement of the national revenue, and a growing conviction that, no matter what taxation is submitted to, the proceeds will be so attenuated by stealings as to make the effort to pay the debt futile, and that repudiation and national dishonor will come while, or after, the people (in the main) have done their full and sufficient share of honest work to avoid it. There is no doubt that the principal strength of the dishonest repudiator lies in this very feeling among comparatively honest men.

Now, it is hopeless to expect that Mr. Jenckes's bill can pass in time to save us this incoming year, and it is equally hopeless to imagine that General Grant can personally so learn the competency and honesty of all those whom he will have to nominate to office; for allowing that he will, as we hope, disturb no efficient officer of the Government for political opinion, still it is hardly doubtful that a majority of the civil service officials are at this time more incompetent and more intensely corrupt than perhaps was ever known in this country or any other country. To expect him to do so would be about as sensible as to have wished him to personally make the inspection of every enlisted man in the Army of the Potomac; but can he not (and here is the gist of this letter) select six or a dozen competent and honest men who, acting as a committee, would, under certain simple but fixed rules, take up all applications for office in rotation as they come to hand, and so deal with them that General Grant would be able to send up to the Senate no name of a certainly corrupt or glaringly incompetent man? It does not seem much to ask; and if only the "security for Bardolph," or, in other words, the six or twelve committeemen (or what you choose to call them; a big name would suit, for it would be a big job), could be obtained equal to the emergency, it would not be a very difficult thing to do; and how much it would immediately help the country, and how much prospectively, in clearing the way for a system, is hard to calculate. L. C.

Baraboo, Sauk Co., Wis.

We spoke in the *Nation* of December 3 of M. Benard's "insinuation that Mr. H. C. Carey's protectionist ideas had a close connection with his hostility to free labor, and that a man who would not let people sell or buy where *they* pleased could not have much scruple about making them work where *he* pleased," as "absurd." That insinuation we found in the following paragraph of M. Benard's letter in the *Journal des Economistes*, in which he is driving home against Mr. Carey the charge of being a protectionist:

"M. Carey, en outre, est protectionniste: s'il veut appliquer ses rares talents d'analyse à cette question, *il reconnaîtra qu'il n'y a qu'un pas du protectionnisme au servage, et un autre pas du servage à l'esclavage.* Ce sont trois anneaux d'une chaîne au moyen de laquelle les races dominantes confisquent à leur profit, le temps, les forces, le travail, le capital, la liberté, et le droit de la grande majorité des habitants du pays.

"Je suis heureux d'apprendre, toutefois, que M. Carey repousse l'accusation d'être partisan de l'esclavage; *cela me donne le droit d'espérer qu'il ne tardera pas à cesser d'être partisan de la protection*, et qu'il reconnaitra que le droit de vivre comprend celui de travailler, de produire, d'échanger, et de consommer en toute liberté, c'est à-dire aussi longtemps que ce travail, cet échange, et cette consommation ne portent pas atteinte au droit des autres producteurs ou consommateurs."

The *Free Trader* thereupon declared that it was the *Nation* that was "absurd," and made some cutting remarks on our inconsistency in making so much fuss about "morality in politics" when we said nothing about the immorality of protection. This we characterized, with reasons annexed, as "wild nonsense." The editor of the *Free Trader* now writes us a long letter in defence of his position, which he requests us to publish. This we, however, decline to do, because it would simply be the transfer to our already overcrowded columns of the whole burden of a controversy with another paper which we did not originate. We have made no personal imputation on the editor of the *Free Trader*, and are under no obligation to circulate his opinions on questions of morals or policy. If his arguments or assertions do not reach exactly the same readers as those of the *Nation*, he must remember that this condition of the controversy was plain to be seen before he began it. In addition to this, we have too much respect for our readers, and too much respect for our own understanding, to devote any portion of our space to the discussion of the question whether a protectionist is either necessarily a partisan of slavery or likely to be a partisan of slavery. Protection in a free country is, as we believe, the result of mistaken views on the part of the majority as to the consequences of a certain form of taxation—that is, mistaken views on a question of expediency, and a question on which all speak and vote. The attempt to convert it into a question of morals, such as the right of a strong man to seize a weak one and use him as a beast of burden, is one of those extravagances for which Bastiat—who, addressing a public utterly unused to political discussion of all kinds, felt it necessary to put everything in the strongest possible light and make all his conclusions startling—is perhaps responsible. But we advise his admirers in this country not to swallow more of him than they can digest, for he is very strong meat; and, to save trouble, we beg to inform the *Free Trader* that this is our last word on this somewhat ridiculous affair.—Ed. Nation.

Notes.

LITERARY.

We have received from Mr. T. H. Morrell, too late to give it an examination, a catalogue which we must mention in this week's paper, or else our mention of it will be made at the end of the sale which it announces. The title-page of the pamphlet reads as follows: "Catalogue of a Valuable Collection of Books on America, Illustrated Works, etc., belonging to T. H. Morrell, consisting of rare works on the History and Antiquities of America, Early Printed Tracts, Franklin Imprints, and Washington Eulogies; together with a number of *superbly illustrated and unique books* having inserted plates; privately-printed, large-paper editions, etc., to be sold at auction on Tuesday, Wednesday, and Thursday, January 12, 13, and 14, 1869, by Messrs. Bangs, Merwin & Co., at their salesrooms, 694 and 696 Broadway." The sales begin at 7 o'clock in the evening, and the auctioneers act as purchasers, if desired.

—People who take the J. S. C. Abbott view of the First Napoleon—and it is not to be denied that such people have some excuse, considering the efforts made by the publishers to put the farrago in question into the hands of American youth—may properly be asked to take a look at their hero when he was displaying his inbred gentlemanliness of character. It is curious, by the way, to note the very wide difference in this respect between the uncle and the nephew of his uncle—the latter not lacking a certain decided magnanimity and kindness, the possession of which lends some additional color to the scandal about the Dutch admiral and the entire lack of Napoleonic blood in the present Emperor of the French. The story of the uncle, now for the first time published, relates to a dinner at Dresden, at the meeting of the sovereigns in 1812. The Emperor and Empress of Austria were present, and so, among others, were the King of Prussia, the King of Saxony, and the Crown Prince (the late king) of Prussia. As the story is told by Varnhagen in the tenth volume of his diary, which has just appeared at Leipsic, Napoleon, while at dinner, received some news which seemed to trouble him, whereupon, in entire disregard of the Empress of Austria, who was seated next him, he leaned back in his seat and yawned without concealment, indeed accompanied the yawn with a loud noise. He then rose from the chair and began walking up and down the room in a hurried manner, the ladies and the sovereigns meantime awaiting his good pleasure. At last he stopped and called out in a violent tone, "Prince de Neufchatel!" (Berthier, his chief of staff and general factotum). Berthier went to his master and received his orders. Next Napoleon called out in the same peremptory and insolent way, "Roi de Saxe!" The King duly obeyed, and a few minutes' conversation having been held with him, he also was summarily dismissed. After giving this proof that even his habit of conquering kings had not deprived him of an uneasy respect for kingship, though it had affected his manners unpleasantly, he walked over to the Crown Prince of Prussia and pinched his ear, remarking at the same time, "You resemble your mother a good deal." The Prince was silent. "Have you visited the fortress?" was Napoleon's next remark. "No," said the Crown Prince, shortly and disrespectfully, and, in his version of the story, that was the end of it—except that all his relatives were angry with him because he would not say "Non, Sire," but only "Non." According to Austrian accounts, however, Napoleon angrily closed the conversation by telling the Crown Prince, "Vous êtes une bête"—a not unlikely conclusion, but perhaps one that would be more easily recollected by one's hereditary neighbors than by one's self.

—Doctor Bowditch has begun in the *Atlantic* a series of papers on consumption, and, in the first of them, dwells at some length on moisture of the soil beneath and around houses as a cause of deaths by consumption among the families inhabiting them. That this is a true cause there is, we suppose, little doubt; but recent researches made by Doctor Haviland, an English physician and man of science, raise the question if Doctor Bowditch may not have made a mistake in staying on the surface, and if he might not with advantage have given extended consideration to the geological structure of the New England States as furnishing some strong reasons why that part of the country is the chosen home of phthisis in America. In talking on the distribution of disease in Great Britain Doctor Haviland makes the following statements: He has found, by an examination of the Registrar-General's health statistics, that cancer, a disease which is among the most baffling with which medical men have to deal, is of comparatively rare occurrence in the north-west of England and in Wales, and also in the south and south-east of England. Now, Wales and North-west England belong geologically to the oldest formations—the silurian and the carboniferous—while the other great district free from cancer includes the chalk hills of Southern England and the "oolitic formations" of Gloucestershire, Northamptonshire, and Oxfordshire. Stronger still—in fact, a good deal stronger—is the evidence furnished by the arrangement of those portions of England which, also free from cancer, connect the two great districts we have mentioned. Coloring blue, say, in sign of their exemption, those portions of the map where cancer is not prevalent, we shall find the two large patches of blue connected by two blue strips extending across the red sandstone of Warwickshire, the red sandstone and lias of Leicestershire, the red sandstone and carboniferous rocks of Derbyshire, and the sandstone heights of Worcestershire and Staffordshire. The two blue patches and their connecting links—on which take place but a small number of the 42,000 deaths from cancer which occur in the kingdom year by year—cover those parts of the country which are of the most ancient geological formations. Turning to the regions where cancer is most fatal, we find them to belong to the tertiary or most recent formations, and we find also that for the most part they surround the great rivers after they have reached their full size and approach the sea. The Thames cancer-field is said to come to its bounds where the London clay stops—the clay being of the lower eocene, a late formation. Other cancer-fields are in the alluvial valley of the Humber and on the alluvium of Norfolk, Suffolk, Lincolnshire, and East Yorkshire. Now, the distribution of consumption is almost exactly the reverse of that of cancer. It flourishes on the old formations, and gets its smallest number of victims in the lower and more sheltered though damper haunts of cancer. That those haunts are lower and more sheltered may, to be sure, be the reason of their comparative exemption from phthisis, and the fact of their geological structure may bear only secondarily on their character as seats of disease. In other words, it may very well be that Doctor Haviland should not have spoken of their geological features at all except as these affect their physical features. But in either case it would seem as if Doctor Bowditch may have laid too much stress on mere dampness as injurious to consumptive patients, and too little on other causes. The whole subject is interesting and worth attention, if only for the illustration it gives of the connection between the various sciences. At first sight there certainly appears no necessary connection between geology and the treatment of cancerous patients.

—We should like to reproduce entire a not very long account, which appears in the *Michigan Teacher* for December, of a school-house in the last stages of decay, yet used until very lately as part of that system of education of which we boast so much. However, an extract must suffice. It is a county superintendent who tells the tale:

"It stood, as is customary with school-houses in my county, at a 'four-corners,' but the approaches to it were over low and marshy ground, and the foundation was so soft that the building had sunk in it nearly to the windows, while the top of the door casing, as I stood before it to enter, was just opposite my neck. The small lot about it had never been cleared, and logs that belonged to a former generation of trees still lay rotting there. Outbuildings or fences there were none, and never had been. The house itself was in size about twenty-six by twenty feet, with a space of about eight feet 'between floors.' It was built of large logs, roughly hewn on two sides and hastily piled one over another, the chinks being filled with mud and split sticks, which in the course of years had made an effective ventilating apparatus. The sides were rudely banked up, the earth very nearly reaching the windows. It was shingled with 'shakes,' nailed on as they came from the splitter's hands."

The windows had but thirty lights out of eighty-four, all the upper sashes having been replaced by boards. Through the roof the sky appeared in various places.

"The furniture corresponded to its place. An entire long desk ran along one side, and half of such a one stood on the other. They were made of rough boards leaned against the walls at a difficult angle, and whittled, burned, ink-stained, and otherwise inscribed in a manner thoroughly hopeless of description. Probably some dozens of obscene figures and words could have been counted upon them. There was one long bench that rejoiced in the luxury of a back, and five of varying lengths that were bereaved of this convenience. Some of the boys had ingeniously improvised resting-places for their spines; the girls, for the most part, tortured theirs against the sharp edges of the desks. It is needless to add that both desks and seats were a world too high."

And it is needless to add that the teaching corresponded to all these surroundings. But it is just to add that this reproach of our age was some credit to the pioneer age which built it.

—The *Maine Journal of Education* for January describes another relic of rude times, which belongs, however, to the schools of the Border States. Says the writer:

"On the afternoon of December 24, 1865, I sat by the school-room desk listening to a recitation in algebra. Suddenly a member of the class, who had just finished an example in radicals, stepped quietly to my side and handed me a neatly-written note. On opening it, I read the following:

"'RESPECTED TEACHER: We, your pupils, humbly request a *Christmas treat*, composed of the following eatables: One bushel apples, five pounds raisins, ten pounds candy, five pounds lozenges, one box oranges, etc., etc.'"

The astonished teacher, on returning to his boarding-place, learns that this is "a custom sanctioned by long usage," and that "teachers in this section of the country have usually complied with it," under pain of "barring out." Indeed, Yankee teachers who attempted to resist it had been smoked out or even ducked by their pupils, with the verdict of "served them right" from the parents. In short, the writer, fearing lest he should become another "finished example in radicals," ordered the necessary treat instanter, which was eaten the next morning, with cakes and pies furnished by the scholars, amid "compositions, speeches, and singing," and the recitation of appropriate doggerel by "one of the smallest boys."

—Dumas *père* is a person to be greatly admired, as he will prove to the satisfaction of any one who doubts it; and we already have his word for it that he is loved by almost everybody, so great a share does he possess of a certain mysterious magnetic power—the nature of which he does not clearly define—over the feelings of all with whom he is brought in contact. But he is not always careful in the matter of idle words; indeed, he is charged by what few enemies he has with sometimes saying the thing which is not—a charge not, we fear, without some solidity of foundation. It is not long since, as is suspected, he set going—or, at all events, allowed to go uncontradicted—a circumstantial fable to the effect that, ten years ago, he wrote to Rossini a letter of magnanimity and enthusiasm, requesting the composer to divulge the secret of a remarkable recipe for cooking maccaroni. Rossini, however, was unaffected by the fineness of the motives which influenced the more generous Frenchman; he replied that, in truth, he had this great recipe, but that he kept it for himself and his friends, and, in conclusion, he invited his petitioner to dine with him on the next Tuesday, and learn fully why, being in possession of such a secret, he should sedulously guard it. Dumas, this unveracious story proceeds to relate, accepted the invitation, had but an indifferent dinner—for a thoroughly good dinner there is required confidence in the moral nobility of one's entertainer—and ever afterwards denounced the great maestro as *un faux gourmand*. But this airy bubble is now pricked by the celebrated Mr. Daniel Home, and vanishes away entirely. That gentleman was at dinner with M. Dumas *père* on the 18th of May, 1858, when the reply of Signor Rossini was received. It was as follows: "Before submitting my recipe to your cultivated appreciation, I beg you to come and taste the said maccaroni to-morrow (Wednesday), at half-past six o'clock precisely. Madame Rossini and I hope that you will pardon this spontaneous invitation in favor of the intention." Dumas went to this impromptu dinner, got his recipe, and never, says Mr. Home, pretended that he had dined badly, or that his host in any way deserved to be stigmatized as a *faux gourmand*. The greatest of story-makers will soon be exposing the charlatanry of the mediums.

—We have just received from a correspondent in Switzerland an octavo brochure of eighty-eight pages, published at Geneva, by Lelièvre et Fils, and entitled "*Compte-rendu des Débats de l'Affaire de l'Accusée Jeanneret.*" It is the report of a trial which ranks high among all the *causes célèbres* on record, whether we regard it from a legal point of view or as a problem of medical psychology. Dumas in the novel of "Monte Cristo" paints a young, refined, and beautiful woman, moving in the best circles of Parisian society, and yet poisoning successively six or seven members of her family. But even the most audacious of French romancers did not dare to delineate such criminality without ascribing it to some apparently adequate motive. Madame de Villefort administered deadly potions to her relatives under the impulse of a morbidly intense maternal love, which centred all her moral and intellectual faculties on the one idea of making her son the sole heir of a large estate. Affection incited her to assassination. But the invention which created such a monster of sentimental depravity has been surpassed in real life by the exploits of a Swiss nurse, who took advantage of her professional position to administer poison to the sick persons confided to her care, from the effects of which seven of them died. In the perpetration of this monotonous series of diabolical crimes Marie Jeanneret does not seem to have been animated either by animosity or cupidity. On the contrary, she always showed the warmest affection towards her victims, and nursed them with tender and untiring devotion; nor did she derive the least pecuniary benefit from their death. Neither the conduct of the accused after her arrest nor the testimony of physicians and *experts aliénistes* furnished any evidence of insanity. The monomaniac usually acts impulsively; but Mlle. Jeanneret always manifested the coolest premeditation and imperturbableness, never exhibiting any hesitation or confusion, or indeed the slightest symptom of hallucination, but answering with the greatest clearness and presence of mind every question put by the president of the court. Even M. Turrettini, the prosecuting attorney, in presenting the case to the jury, was at a loss to know on what grounds to urge the conviction of the accused, and after exhausting the usual category of hypotheses and showing the inadequacy of each, was obliged to seek a motive in *l'espèce de volupté qu'elle éprouverait à commettre un crime*, or what, in the less elegant but more vigorous vernacular of the West, would be called "pure cussedness." In fact, the conduct of Marie Jeanneret seems more like the working of some malignant and irresistible force in nature, or the relentless operation of a destructive machine, than the voluntary action of a free and responsible agent. M. Zurlinden, the counsel for the defendant, dwelt with emphasis upon this mysterious phase of the subject, and thus saved his client from the scaffold. The trial ended on the 26th of November. The jury, after five hours' deliberation, rendered a verdict of "Guilty, with extenuating circumstances;" as the result of which Marie Jeanneret was sentenced to twenty years of hard labor (*travaux forcés*). Our own theory of the case, as derived from a careful study of the evidence, is that Marie Jeanneret was infatuated with poisons, partly by watching the effect which they produced on her own system (for she never hesitated to take herself what she administered to others, the only difference being that, like Mithridates, she had become by habit proof against their venom), and partly by reading about them in medical and botanical works, to the study of which she was passionately devoted. She also attempted analyses of these substances, and in one instance was severely burned by the bursting of a crucible in which she was endeavoring to obtain atropine from *atropa belladonna*. Atropine is the active principle of belladonna, and was first discovered by Brandes; it is endowed with very energetic properties, and is used by physicians only in extremely rare cases, and with great precautions. It was especially this terrible poison of which Marie Jeanneret appears to have had an insane desire to test the virtues empirically on the invalids committed to her charge. She had read of great physicians who had thus experimented on themselves and their disciples and become the benefactors of mankind; and why should she not adopt the same method in the pursuit of truth? However absurd such reasoning on her part may seem to us, we can find no other motive sufficient to explain this union of contradictory qualities, generosity, amiability, and criminality, forming one of the most obscure and perplexing problems ever placed before a jury for solution.

—A new work of what may be called an "enthused" character has just been written by M. Quinet, and is announced under the title of "La Création." The introduction to it, published in the *Revue des Deux Mondes*, gives us some idea of its scope and character. The author makes no claim to original researches in natural science, but simply applies to the annals of creation as chronicled by geologists the same methods of historical criticism and construction which, during the last half-century, have been applied with such brilliant and fruitful results to the career of mankind. It is one of the great intellectual feats of our day—this discovery that man and nature, the records of the human race and the records of the physical world, are to be studied by identical methods. The law by which Alphonse de Candolle, in his "Géographie botanique raisonnée," traces the migrations of the oak and the sassafras, is the same, says M. Quinet, as that by which Thierry follows the migrations of the Barbarians, and Ottfried Müller the wanderings of the Dorians. Naturalists are no longer content with descriptions and classifications of flora and fauna such as Linnæus and Buffon gave, but behind family and species they perceive the deeper question of origin. A leaf of rhododendron or a gentian blossom on the slopes of the Alps carries the thoughts of a naturalist of the new school back through the cataclysms of ages and raises the problem of the first distribution of organized beings. The same species of plant on the high lands of Scotland, Switzerland, Greenland, and India points to a period "when an unbroken chain of mountains bound these distant countries together. Every insect, every flower, every blade of grass has a genealogy which the naturalist must trace with as much care as that with which the historian follows the pedigree of a statesman or emperor." M. Quinet treats of these phases of the subject with something of fervor, to be sure, but with skill, constructing on the basis of positive science a world more marvellous than the fictions of Arabian tales. One suggestion he makes of which it is hardly necessary to speak seriously, but he puts it forth with

amusing good faith and earnestness. Geology, he declares, opens a new and illimitable field for the fine arts. Raphael has painted the Scriptural account of creation, and shown us the universe taking shape under the hand of the Almighty; Michael Angelo has delineated the history of man from Genesis to the last Judgment on the walls of the Sistine Chapel; Correggio has represented the Sacred Grove of Jupiter, and Domenichino the Biblical plains of Sodom and Gomorrah. Why should not the imagination of the artist go back still further to the pre-Adamite world, and paint the scenes and forms which science has re-created? Why should not the megatheroids have their Paul Potter, and the tertiary mammifers, ancestors of our dogs, be immortalized by the genius of a Snyders? Were there no landscapes in the carboniferous age or in the old red sandstone period that could tempt the brilliant pencil of a Claude Lorraine or the gloom-enamored brush of a Salvator Rosa? Why should the artists of our scientific epoch perpetuate the impossible monsters of mythology, "gorgons and hydras and chimeras dire," the harpies of Homer, the horses of Neptune, the serpents of Laocoon, the triple-throated Cerberus, the sphinxes of Egypt and the centaurs of Greece, instead of reproducing the shapes that once actually inhabited our earth, saurian reptiles, pterodactyls, mylodons, deinotheria, the ichthyosaurus, and the iguanodon? Art might then be realistic without limiting its range to the horizons in whose circle we dwell. Michael Angelo had a vision of these possibilities when he sculptured Day and Night, the Titanic forms of a geological rather than of a historical era, and so on, and so on. M. Quinet has a remarkable chapter on the prophecies of science which "surpass all the prophecies of Isaiah and Ezekiel." Man is not the highest expression, the finality of creation. Geology predicts another race of beings to succeed us on the earth so superior to us in intelligence that our arts and our poems will seem to them but the toys and the prattle of childhood. They will admire our geometry and our architecture only as we admire the hexagons of the honeycomb or the structure of a spider's web. What a beautiful coral-reef! they will say of the Parthenon or the Cathedral of Cologne. What a charming bird-song! they will exclaim of the "Iliad."

—Mr. F. W. Chesson, one of the editors of the London *Star*, has addressed a letter to a member of Parliament on "The Dutch Boers, and Slavery in the Trans-Vaal Republic," which has been published in pamphlet form by W. Tweedie. The interest in this people, newly awakened by the discovery of gold regions to the northwest of their territory, and the probability of a large emigration thither which will revolutionize the political and social aspect of South Africa, make this letter very timely, and we can promise all who read it a very clear understanding of its subject. It is dated December 1, and contains the latest practicable intelligence from the Trans-Vaal, *via* Natal. A sketch of the origin of the two contiguous Dutch republics establishes, with the text of the treaty of independence concluded with Great Britain in 1852, the right of the latter country to interfere with the Boers for the suppression of slavery, which it was expressly stipulated should not be allowed to exist. Not only it does exist, as Mr. Chesson shows, but it is unblushingly and openly maintained by continual commandoes, or raids of the most inhuman description, among neighboring tribes—such as, in the very year of the treaty, destroyed at Kolobeng the fruits of Dr. Livingstone's pious and civilizing labors among the Bakwains. The children which survive these horrid massacres are kidnapped, and with grim sarcasm "apprenticed" as "destitute orphans," having first been sold as "black ivory." Mr. Chesson, after exposing this fraud, assigns three reasons for the exercise of at least a moral restraint upon the Boers for the relief of their slaves and the peace of the adjoining tribes and states. First, The claims of humanity, which the treaty provided for, but which the Boers, under both the elder and the younger Pretorius, have absolutely neglected. Second, The complicity of the Portuguese of the southeast coast in these razzias from the Trans-Vaal, in aid of the slave-trade which Livingstone is perilling his life, and a British fleet is costing many lives and a large amount of money, to eradicate. Third, The planting of the British flag at the Victoria gold-fields, the audacious "annexation" of the whole country, as far as Lake Ngami, by President Pretorius, and the strong desire now felt at Natal to establish, under British supremacy, a confederation of the South African states. The Trans-Vaal is in a deplorable financial condition under its present government, and has neither moral principle enough to discountenance commandoes nor intelligence enough to do anything towards educating the people. The simplest measure to obtain the end desired by Mr. Chesson would be to repeal Article VI. of the treaty, and either allow ammunition to be sold to the tribes as well as to the Boers, or to deny it to the latter altogether so long as slavery continues.

HALLECK'S POETICAL WORKS.*

It would probably be wrong to deny that Halleck had some genuine poetical feeling and some genuine poetical power. Destitute of either, he would not have called Columbus "the world-seeking Genoese." To apply that epithet to the world-finding navigator—no matter what it was exactly that he was seeking—argues some imaginative capacity. The same quality may be predicated of the lines in the "Burns" in which he speaks of the graves of great poets and thinkers as being

> "The Delphian vales, the Palestines,
> The Meccas of the mind."

And there is lyrical fervor and energy, together with occasional cheap happinesses of expression, in the "Marco Bozzaris," though the reputation of that poem is as good an example as now occurs to us of the worthlessness of popular estimates of poetry, it being as pasty a diamond as ever deceived the average judge of jewellery. We may say, too, of his best poem, the elegy on the death of his friend Drake, that it is a poetic, simple expression of real feeling, and that it merits long life as a lyric of much gracefulness and tenderness.

But of most of even his better writing it is true that it impresses the reader as being the work of a somewhat elegant mind, stronger on the side of the understanding than on any other, and of no great power on any side. Ninety-nine times in a hundred he was a wit, and a small one, poetizing in admiring and sometimes successful imitation of Campbell and the Smiths, and in imitation of Byron, for the one time that he was a poet. A much-admired poem, "Alnwick Castle," gives us the complete man himself better than any other single piece of his. It has one touch of true poetry; the lines about the roses are certainly beautiful, though their beauty is apparently in part accidental and unintended:

> "Wild roses by the Abbey towers
> Are gay in their young bud and bloom:
> *They were born of a race of funeral flowers*
> That garlanded, in long-gone hours,
> A Templar's knightly tomb."

The evanescence and fragility of the pale wild rose, suggestive of a slight hold on life and an early death, are well expressed by the term "funeral flowers." So, at any rate, we analyze the chief charm of the passage; the loveliness of the mere picture is in itself to be called charming. But the poet seems to have applied the suggestive epithet to the Alnwick roses because local tradition traces their origin to a parent rose which actually performed the funeral office of adorning the grave of a Percy buried in the East. In another place he uses the same substantive adjective to express the idea we have attributed to him, and if he did this either before or after the happy stroke he made with it in "Alnwick Castle," he has in either case weakened his claim to the credit of intending all the beauty which the term has in the stanza we have quoted. We imagine he justified his third line by his fourth and fifth; by its truth to historical rather than to imaginative fact. Be it much or little, this fine thing is sole, the best of the remaining portion of the poem being not above the easy reach of any clever stringer of octosyllabic rhymes.

The versification also of "Alnwick Castle" is a thing about it to be praised; smoothness—and better than mere smoothness—of rhythm and rhyme being a characteristic of Halleck's always neat and sometimes elegant workmanship. He could hardly have worked after his beloved Campbell, whom he took to himself by a process of natural selection, and not have been noticeable for this minor excellence; but the essential commonplaceness of his nature, his lack of thought, the not lofty or refined motives of his poetry, are conspicuous in "Alnwick Castle," as in his writings generally; and, further, it affords a glaring illustration of a very offensive habit that may be called its author's besetting sin, or rather his besetting folly, which is to "make laugh," as the Indian says, by some laborious piece of sheer buffoonery with as much sense or wit in it as goes to the business of grinning through a horse-collar, and which only a most uncultivated taste could consider witty or funny. In "Alnwick Castle," he is not at his worst in this respect, but the reader gets from that piece the just impression of this quality in the author, because he there spoils by means of it a better poem than he usually had to spoil.

Wherever exhibited, his wit is apt to be of this same poor sort. The "Croaker" squibs are singularly devoid of any better fun-making than consists in feeble puns, small personalities directed against local, political, and other notorieties, and in fatuous tricks of rhyming. So, too, of "Fanny," which besides wearing an appearance of unpleasing ill-nature, or want of considerateness, is in the last degree trivial, and which seems drearier and weaker than it is because of its direct imitation of a

* "The Poetical Writings of Fitz-Greene Halleck, with extracts from those of Joseph Rodman Drake. Edited by James Grant Wilson." New York: D. Appleton & Co. 1869.

satirist who never better showed his great power of cruel, bitter sarcasm on himself and others than in the "Don Juan" that fathered "Fanny." It is, however, right to remember that the "Croaker" verses were produced when their author was hardly more than a youth, and that "Fanny," which he was slow to acknowledge—probably because of its personalities—was done very hastily. A far better sample of Halleck's satirical abilities is "Connecticut," which contains some semi-satirical descriptions of the New Englander which are not less than clever in their vividness of conception and presentation.

We have spoken at what may seem unnecessary length, and with what may seem undue harshness, of a writer for whom we do not, indeed, profess much respect, but concerning whom, we admit, we should not have felt it laid upon us to speak at all, either in praise or blame, if only he himself were concerned. But the way in which the editor of this new edition has performed his task seems justification for our having set down in frankness our estimate of the poet's precise weight and value. And it should be said, too, that the editorial preface and the notes, while they admonish the critic that still there are readers who need to have the truth about Halleck brought to their attention, also admonish him of another thing, and one which he is perhaps in some danger of forgetting—the very great difficulties, peculiar to their particular time, against which Halleck and his literary contemporaries had to contend in their efforts to do good work. The wonder is not that he and they were no better than we see them to have been, but that they were not far worse. Each man of them stood pretty much alone, exposed to no adverse criticism except such as nine times in ten sprang from personal spite, and each was absurdly but sincerely praised by a public almost wholly untrained and very kind. We of this generation can hardly half understand the ardor of the affection with which the Americans of forty or fifty years since loved their country and determinedly lauded its productions of whatever kind. They were the Americans who had seen the country born amid their own forebodings and amid the sneers of all the outside world. They had learned to cling with a personal fondness of almost childish intensity to that government and social system of which every one of them knew himself to be a part, and the unjust derision of which wounded each individual citizen's pride. So in those days he was a personal friend and ally who did anything to attract favorable foreign notice, or in any way to lessen the number and validity of the causes for which foreigners laughed at us all and each, and patronized us all and each, as low creatures who at all events could never have a literature. Of this feeling Halleck, like all of our early writers, got the full benefit and the full injury. Our ancestors' patriotism and ignorance combined to make all our first poets into first-rate geniuses; and Halleck was one of the earlier, and yet was not coddled into utter worthlessness, as happened to some, to most. But to-day is very late for any one to write of men of Halleck's calibre as General Wilson writes in the passage of his preface with which, in justice to ourselves and the poet, we will close:

"'The Croakers,' that now appear for the first time with Halleck's poetical writings, are the joint productions of the attached friends Fitz-Greene Halleck and Joseph Rodman Drake. The origin of these sprightly *jeux d'esprit, as eagerly looked for each evening as were the war-bulletins of a later day,* may not be without interest to the authors' troops of admirers. Halleck and Drake were spending a Sunday morning with Dr. William Langstaff, an eccentric apothecary and an accomplished mineralogist, with whom they were both intimate (the two last mentioned were previously fellow-students in the study of medicine with Drs. Bruce and Romayne), when Drake, for his own and his friends' amusement, wrote several burlesque stanzas 'To Ennui,' Halleck answering them in some lines on the same subject. The young poets decided to send their productions, with others of the same character, to William Coleman, the editor of the *Evening Post.* If he published them, they would write more; if not, they would offer them to Major M. M. Noah, of the *National Advocate;* and if he declined their poetical progeny, they would light their pipes with them. Drake accordingly sent Coleman three pieces of his own, signed 'Croaker,' a signature adopted from an amusing character in Goldsmith's comedy of 'The Good-natured Man.' To their astonishment a paragraph appeared in the *Post* the day following, acknowledging their receipt, promising the insertion of the poems, pronouncing them to be the productions of superior taste and genius, and begging the honor of a personal acquaintance with the author. The lines 'To Ennui' appeared March 10, 1819, and the others in almost daily succession; those written by Mr. Halleck being usually signed 'Croaker, Junior,' while those which were their joint composition generally bore the signature of 'Croaker and Co.'

"The remark made by Coleman had excited public attention, and 'The Croakers' soon became a subject of conversation in drawing-rooms, bookstores, coffee-houses, on Broadway and throughout the city; they were, in short, a town topic. The two friends contributed other pieces; and when the editor again expressed great anxiety to be acquainted with the writer, and used a style so mysterious as to excite their curiosity, the literary partners decided to call upon him. Halleck and Drake accordingly, one evening, went together to Coleman's residence, in Hudson Street, and requested an interview. They were ushered into the parlor, the editor soon entered, the young poets expressed a desire for a few minutes' strictly private conversation with him, and the door being closed and locked, Dr. Drake said—'I am Croaker, and this gentleman, sir, is Croaker, Junior.' Coleman stared at the young men with indescribable and unaffected astonishment, at length exclaiming: 'My God, I had no idea that we had such talents in America!' Halleck, with his characteristic modesty, was disposed to give to Drake all the credit; but as it chanced that Coleman alluded in particularly glowing terms to one of the Croakers that was wholly his, he was forced to be silent, and the delighted editor continued in a strain of compliment and eulogy that put them both to the blush. Before taking their leave, the poets bound Coleman over to the most profound secrecy, and arranged a plan of sending him the MS., and of receiving the proofs, in a manner that would avoid the least possibility of the secret of their connection with 'The Croakers' being discovered. The poems were copied from the originals by Langstaff, that their handwriting should not divulge the secret, and were either sent through the mail, or taken to the *Evening Post* office by Benjamin R. Winthrop, then a fellow-clerk with Mr. Halleck in the counting-house of the well-known banker and merchant, Jacob Barker, in Wall Street."

The "Croakers" being the merest triviality, our fathers, most of them, were of the degree of critical power which the editor exhibits in this ludicrous passage; and in thinking of Halleck, that fact should be well remembered. But, we must say, it is a pity that what the poet suffered sufficiently from while he was living, he should be made to suffer more from now that he has gone. Editorial work has seldom been more inefficiently done than in the case of this volume.

FISKE'S TOBACCO AND ALCOHOL.*

Mr. Fiske's spicy little book is an amplified review of Mr. Parton's recent hasty writings on these difficult subjects. Mr. Parton is an easy victim for any critic with an eye for a *petitio principii,* or an undistributed middle, or for good cases of that convenient method of argumentation which starts from a desirable conclusion and manufactures the necessary premises to fit. As his reviewer makes very plain, Mr. Parton asserts everything and proves nothing. He has no realizing sense of what a fact is; he cannot distinguish between a fact and his own preconceived notion of what the fact ought to have been. He is precisely as sure of his inferences from facts as he is of the facts themselves. Yet Mr. Parton is very fond of the word "fact"—witness this sentence: "The mere fact that this admirable person [Goethe] lived always unpolluted by this seductive poison is a fact of some significance; but the important fact is that he *could not* [the italics are Mr. Parton's] have smoked and remained Goethe." If Mr. Parton meant to say what is distinctly implied, that Goethe could not have been as admirable a person as he was if he had smoked tobacco, the "important fact" is not a fact at all, but merely a very peculiar opinion of Mr. Parton's. If he simply meant to say that Goethe plus tobacco would not have been precisely the same being as Goethe without the tobacco, we fail to see the importance of so very obvious and meaningless a suggestion.

Mr. Fiske is at pains to illustrate somewhat fully Mr. Parton's deplorable habit of taking his conclusion for granted in single words, like "unpolluted" and "poison" in the above sentence, long before he advances any proof whatever of the applicability of such terms. It is well to call attention to this habit on the part of so entertaining and voluminous a writer as Mr. Parton, because careless readers are misled by such insidious beggings of the question. The habit, if persisted in, quickly produces total atrophy of the reasoning powers. We commend the following method of abbreviating historical investigations to all lively magazinists who value their time more than accuracy and logic. After mentioning that Jefferson never smoked, Mr. Parton says: "There is no trace of the pipe in the writings of Washington and Franklin; *probably* they *never* smoked; *so that* we may rank the three great men of America—Washington, Franklin, Jefferson—among the exempts." The italics are ours. Here Mr. Parton's keen scent for the effects of tobacco on a man's thought and style supplies the first premise; the second is a rash guess at a universal negative; the conclusion is that nobody ought to smoke. The moral of the comic song about little Washington's cutting down his father's apple-tree is sound sense compared with this sort of reasoning:

> "Then whoso doth a hatchet take
> And appel-trees cuts down,
> If he lives long enough will be
> A great and pious man."

Mr. Fiske is inclined to stigmatize Mr. Parton's argumentation as "radical" when he means sentimental or sloppy; he also uses the phrase "radical philosophy" as synonymous with foolishness. It is a pity that a

* "Tobacco and Alcohol. I. It does pay to Smoke. II. The Coming Man will drink Wine. By John Fiske, M.A., LL.B." New York: Leypoldt & Holt. 1869.

useful word with a good meaning should have become a term of contempt, but Mr. Fiske is not responsible for the perversion. If Mr. Parton's investigations had been radical, he might perhaps have contributed something more than amusing trivialities and flimsy sophisms to the discussion of his grave subject.

Mr. Parton's dangerous faculty of quoting authorities in such a way as to put them on his own side when they belong on the other is set in a strong light by his reviewer. Searching in a hurry for quotable bits from great men's writings on a broad subject, is conscience-stretching work for partisan writers of magazine articles and temperance tracts. In this particular instance it is only haste and ignorance which have together produced the legitimate effects of knavery.

But Mr. Fiske has done more than expose Mr. Parton's crudities; he has endeavored to state concisely and accurately the *rationale* of smoking and drinking. Here we miss a little the weight which professional experience might lend to an exposition of the physiology and chemistry of these practices. It is rather rash for our author to announce in the first lines of his preface that his essay has cost but five weeks' labor. Little cost, little worth, is apt to suggest itself, though impertinently perhaps. That the study of physiology and pathology should have afforded Mr. Fiske an agreeable recreation, from time to time, for several years, as is stated in the preface, is a fact which will hardly satisfy people who think that popular summaries on scientific subjects deserve the best thought and care of the most thorough students of science. But Mr. Fiske brings to his subject a truly scientific spirit, and discusses it with moderation, clearness, and penetration. He develops clearly the fundamental principle that everything in diet and medication depends on the dose. There is nothing which we put into our mouths which is not hurtful, and even fatal, in too large doses. It is by no means to be taken for granted that the small dose produces an effect of the same kind as the large dose. Salt in very moderate doses is an emetic, and in large doses a poison; but it is nevertheless a necessity of life in the dose which taste determines. This matter of the dose is the rock on which most total abstinence arguments go to pieces. Mr. Fiske wisely devotes a large part of his essay to exhibiting the absolute inconclusiveness of the common argument, that a pint of brandy or twenty cigars at a time being bad for a man, therefore a liqueur-glass of brandy or two cigars necessarily have a proportional injurious effect. This argument is not supported by the facts of physiology and medication, as our author very well shows.

The argument that civilized men are quite as healthy as civilized women, although the men drink and smoke, while the women as a rule do neither, is hardly as significant as Mr. Fiske seems to think it. To make it effective, it would be necessary to show that the general way of life of civilized women is approximately the same as that of the men, or at least that it is as healthy as that of the men—propositions which we fear it would be impossible to maintain. In a very complex matter like this no safe conclusions can be drawn from experiments which are not conducted under like conditions. If the effects of alcohol and tobacco were as bad as their worst enemies pretend, they would still be insignificant beside the evil effects upon women of indoor life and worrying and irregular occupations. For every human being that tobacco or alcohol harms foul air makes thousands miserable.

All through Mr. Parton's articles there runs the absurd assumption that the savage man is the healthy, normal, standard creature, and that civilized man must try to live like a savage if he would have the vigor which he ought to have. Mr. Fiske does no more than justice to this absurdity. The savage man is no more a physical standard for the race than he is a moral and intellectual standard. The restraints, obligations, and exigencies of civilized life are not violations of natural order, but necessary parts of that order; and all natural products which help civilized man to bear the strains to which body and soul are subjected in the appointed course of things, are as much God-given as the manna in the wilderness or the herd of buffaloes which suddenly delights the eyes of the hungry Indian village. To tell a cultivated and conscientious member of modern society that he should regard the savage man as his exemplar, is something more than arrant nonsense. Such talk has a flavor of the profoundest scepticism. It implies that the higher state of man is less natural and less intended of God than the lower.

Mr. Fiske states forcibly the argument drawn from daily and almost universal experience in the use of the common stimulants which in excess are narcotics. Tea, coffee, cocoa, and tobacco stand upon precisely the same footing. Alcohol is less safe, because in excess it stimulates the animal side of man to a degree which may make him a public nuisance. The old maid who nightly sniffs with delight the aroma of her cup of tea cannot logically turn up her nose at her choresman's pipe. The teetotaller who stimulates his digestion and unlooses his tongue with black coffee is not in condition to revile his brother who finds a glass of wine safer and better. Let any one who, on account of their abuse, is inclined to curse the use of these stimulants, reflect on the great increase in useful thinking which has taken place since tea, coffee, and tobacco were introduced into Europe.

It is curious to note the action and reaction between the "liberal" religious opinions of New England and the philanthropic movements which have originated there. All philanthropic works, except the distribution of tracts and Bibles and the sending of missionaries to the heathen, are strengthened by the substitution of "liberal" for Calvinistic opinions in religion, by the addition of good works and good lives to faith in a creed as requisites for salvation. But by-and-by the philanthropic men and women find that they are getting a little beyond the landmarks they once knew. How can the ardent advocate of woman's rights regard St. Paul as a writer inspired for all time? Obedient and submissive wives, indeed! Clearly, Paul wrote for his own times. We are beyond him on that point, at any rate. So when a convention of Evangelical ministers passes a resolution that no person who touches alcohol ought to be admitted to the church, logic requires them to pass another, namely, that they have within them a better light than Christ's. The proposition that the wine which Christ blessed was not wine, but syrup or sweetened water, flies in the face of common sense and authentic history. As Mr. Parton has well said, it is an insult to the public understanding.

Meantime, public discussion is the only means of picking the good out of the mass of rubbish with which the general subject is encumbered. As an exercise in reasoning, we recommend young people to read, first, Mr. Parton's papers, which are now published together in pamphlet form, and then Mr. Fiske's pleasant and profitable little book. Whoever read Mr. Parton's articles on their first or second appearance should now take Mr. Fiske's antidote.

WAR MATERIAL AT THE EXPOSITION.*

The unprofessional reader who takes up this handsome book will probably be overwhelmed with astonishment before he has spent an hour upon it. That the invention of gunpowder revolutionized the art of war is a statement of the truth of which few are ignorant, and the fact that modern ingenuity has made great improvements in the weapons employed for its use is not less generally known. That the range of muskets and cannon has been improved, and, by the process of rifling, the precision of each increased; that greater rapidity of fire has been attained by the substitution of cartridges for powder, ball, and wad, and of percussion caps and friction primers for flint-locks, linstocks, and portfires, and that a movable bayonet for close fighting has been supplied to the musket, are common knowledge, but they are also about the limit of what most people know in regard to the weapons by which the battles of the nineteenth century are decided. The primitive idea of a tube of metal, with explosive material and projectile rammed in at one end, and fire applied to the former at the other—in other words, a machine as simple in principle as the cross-bow, is, beyond a question, the popular conception of the death-dealer of the period. It is hardly necessary to do more than to read the running titles of the pages of this report to see how behind the times such a conception is. The ingenuity of the age has been bestowed upon the implements of warfare with such industry and success that it seems as if a pitiless Aladdin had been rubbing his lamp with no thought but to call into existence all things destructive to life. Here one reads at first of many cartridges, metallic and others, and all containing the means of their own ignition; cartridges that are ball, powder, fulminate, and case, all in one; cartridges that are water-proof and gas-tight; rim-fire cartridges, central-fire cartridges, and the cartridge of the Zundnadelgewehr, or Prussian needle-gun, in which the powder is ignited from the front; in short, a considerable number of most excellent and serviceable cartridges, to the explosion of no one of which is the percussion cap necessary.

Next comes a long list of breech-loading small-arms, with an elaborate description of each, illustrated by numerous diagrams. First, we have the Prussian needle-gun, which played such an important part in the seven weeks' war of 1866, and thus become acquainted with a set of new terms, such as "chamber-closer" and "breech-bolt," which occur very frequently in the following pages. Then the Spencer rifle, our American arm, which

* "Report to the Government of the United States on the Munitions of War exhibited at the Paris Universal Exhibition, 1867; with eighty illustrations. By Charles B. Norton, late Lieutenant-Colonel, U. S. Volunteers, and W. J. Valentine, Esq., President of U. S. Commission, 1855, United States Commissioners." Printed by authority. New York: Office of *Army and Navy Journal*, 39 Park Row. London: E. & F. N. Spon, 48 Charing Cross. 1868

is a repeater as well as a breech-loader, and from which an ordinarily skilled marksman can fire seven shots in twelve seconds, and then refill the magazine in about half the time required to load and cap a muzzle-loader. Then another magazine gun, exhibited by the Windsor Manufacturing Company, of Vermont, which carries fifteen charges, and which, the inventor claims, may be fired as a repeater nine times in eleven seconds, and as a single-loader twenty-five times per minute, while the magazine, with its fifteen charges, is held in reserve. Then the Snider rifle, also of American origin, but adopted by the British Government, and largely used elsewhere. *Quid multa?* There are also the Remington rifle and the Peabody rifle, both American; the rifles of Fosbery, of Burton, of Henry, of Cooper, British inventors; the Albini and Braedlin rifle, on the Mont Storm principle; the rifles of Joslyn and Berdan, both Americans; that of the Swiss, Martini; the Hammond rifle, from Connecticut; and the rifles of Sharp, of Soper, of Gray, of Benson & Co., of the Westley Richards Company, and the Prussian gun of Tanner. It appears that of the fourteen guns selected for the English "Breech-loading Rifle Competition," in April, 1867, six were American, and two others were founded on the Mont Storm principle, also an American invention. The Chassepot rifle, also a needle-gun, but superior to the Prussian, the rifle of Devisme, the magazine gun of Jarre & Co., which, it is claimed, can be fired fifty times a minute, the Tronchon gun, the breech-loading rifle to fire by electricity, exhibited by Baron & Delmas, all French guns, form the subject of the remainder of this astonishing chapter.

The next chapter treats of field guns, and especially of the inventions of Armstrong and Whitworth. It contains much interesting information bearing upon the question of the relative merits of the breech-loading and muzzle-loading systems as applied to field guns, and seems to show that English scientific and professional opinion is strongly in favor of muzzle-loading for this arm. It also seems to show that the Whitworth muzzle-loader is superior to the Armstrong in range, accuracy, endurance, and simplicity of construction; but that it is about one-fifth heavier, that it is more dependent on lubrication in firing, and that it does not equal the Armstrong in giving indications of the approaching destruction of the gun.

The breech-loading guns of Krupp, the great gun-maker of Essen, and the American "Gatling Battery," an automatic machine-gun with six steel barrels, which dispose of about seventy rounds a minute, next receive attention; but the most interesting invention described in this chapter is the "Ferris" gun, from Utica, New York. This wonderful gun is constructed on a principle which, it is hoped, is well adapted to attaining a result hitherto aimed at without success, to wit, the construction of a trustworthy wrought-iron gun. It has thrown a ball nine miles, and the report says: "There is no doubt about the nine-mile range of this model gun—a gun that can throw its shot and shell into a city the inhabitants of which can neither see the smoke nor hear the sound of the firing."

The foregoing hasty sketch of the contents of less than half this report has extended to such a length that little more than a statement of the contents of the rest of the volume can be given. Indeed, nothing more is needed, for enough has been said already to let our readers know what manner of book this is. It is a cyclopædia, in which one may readily find, with the aid of its excellent table of contents, which is little less than an index, information about the latest and most approved inventions in the domain of munitions of war.

The fourth chapter treats of heavy ordnance—French, American, English, Prussian, and Swedish. It opens with a full and interesting description of the way in which the work is done at the French Imperial Arsenal at Ruelle, where the materials, including the ores, are selected and treated with the utmost possible care, and proceeds to give minute details of the casting, boring, rifling, and testing of the principal cannon used in the various services named above. Ingenuity now gives place to science, and there is plenty to read about resistance, tenacity, homogeneity of metal, the core system and the coil system, hooping, reinforce rings, rifling with parabolic grooves, hexagonal bores, range, accuracy, and penetration; but simpler food is furnished in a description of the magnificent success of our fifteen-inch Rodman gun against the *Warrior* target at Shoeburyness, which made the *Standard* admit that it had "proved its capability of penetrating any of the English iron-clads afloat," and of Krupp's monstrous rifled breech-loading steel gun, which weighs fifty tons, and is to throw a shell weighing 1,080 pounds, or a solid steel shot weighing 1,212 pounds. Krupp presented this gun to the King of Prussia, but it had never been fired when this report went to press.

The fifth chapter treats of projectiles, including the inhuman novelty of explosive rifle bullets, the sixth and seventh of army accoutrements and sanitary equipments, and the eighth of fortifications, and the use of shields and plates for strengthening the resistance of their more exposed portions.

The ninth and last chapter is devoted to iron-clad ships, especially those of France and England. It is long and interesting, and Americans will read it with satisfaction, for it seems to show that we have little to fear at present from the navy of any other country.

An appendix contains an account of the Roberts breech-loading rifle and of the Broughton gun, and a letter claiming for the Gatling Battery such improvements of a late date that one with ten barrels has been fired at the rate of over three hundred shots a minute.

In conclusion, we have only to say that this report is profusely illustrated with excellent diagrams and drawings, that it is simply and well written, and that it seems to have been prepared with the most commendable industry and with entire impartiality.

Rural Poems. By William Barnes. Illustrated by Winslow Homer and Hammatt Billings. (Boston. 1869.)—"Landscape Poetry" or "A Landscapist's Poetry" would almost be a better title for Mr. Barnes's little book than the one he has given it. We have read no poems that are so much like a painter's studies; they read as if they might be the notes that a landscape painter of the English school had jotted down to aid him when he happened to be debarred from sketching and needed a help for his memory. This, for example, affords a good illustration of what is probably Mr. Barnes's natural and favorite impulse towards verse-making. "Lowshot Light" it is called:

"As I went eastward ere the sun had set,
His yellow light on bough by bough was bright.

"And there, by butter-cups beside the hill,
Below the elm trees, cow by cow was bright.

"While, after heavy-headed horses' heels,
With slowly rolling wheels, the plough was bright.

"And up among the people, on the sides,
One lovely face, with sunny brow, was bright.

"And aye, for that one face, the bough, and cow,
And plough, in my sweet fancy, now are bright."

All of its author's marked peculiarities are to be found in this piece. He shows himself, as we have said, first of all a painter, and in a much narrower sense—that is to say, more distinctively such—than is the case with any of the very many poets who have had it for a large part of their business to depict natural scenery. Since in this respect he is truly unique among poets, so far as we know, we will give a second specimen of his work before we speak of some others of his characteristics. We copy the stanzas which he calls "Green":

"Our summer way to church did wind about
The cliff, where ivy on the ledge was green.

"Our summer way to town did skirt the wood,
Where shining leaves, in tree and hedge, were green.

"Our summer way to milking in the mead
Was on by brooks, where fluttering sedge was green.

"Our homeward ways all gathered into one,
Where moss upon the roofstone's edge was green.

And that is the whole of it. Mr. Barnes is almost always just so simple and direct in his plan, and when he is not, his art is like the artifice of children, when, as it often does, it gives a stronger sense of their innocent ignorance than is given by their natural honesty. His phraseology is always just so simple in its English, and is apt to be marked by such provincial mannerisms as "cow by cow," "did skirt" for "skirted," and "by" in the sense of "beside." It is usual with him, too, to be as transparently artful in his rhymes and rhythms as he is in both the pieces which we have copied; and in thought and feeling he is never less pure, good-hearted, and rustic than we find him in "Lowshot Light." Sometimes, to be sure, he brings out much more prominently than he has done in that poem the human interest which even his essentially picturesque nature finds attaching to the scenes which give so great delight to his eye. He can be a little pathetic over the homely sorrows of his rural neighborhood and can share in its homely joys; and he can do a little fun-making of the sort current among the villagers; and he is evidently full of natural affections, loving parents and wife, and the church where his children were christened, and the memories of his courting days and of days when friends were buried. But it is plain, too, that his small world is to him mainly a thing to be looked at; that he is untroubled by much thought or passion, and that his bounded life is scarcely at all different from that of the parish except as it touches on art.

What kind of a book he has made is, then, easily seen. It is of humble pretensions, and is perhaps hardly to be called poetry; but it grows upon one; it is thoroughly to be liked for its freshness, which is that of the

dew itself, and the cows in the deep meadows, and the country hedge-side; for its kindliness, and the full impression it gives of rural peace; for its unaffectedness, and for its rare and unconscious frankness and courage. This is saying, in other words, that it offers the wearied traveller in our literature of to-day an oasis of rest, as grateful as green grass and water from the brook and shade might be to the jaded, sickened victim of towns. There is not even so much as a hint of an apology for a simplicity that sometimes seems triviality—and in fact sometimes is triviality. We may be sure, had it fallen to our author to write the poems which Mr. Morris's critics praise for being as direct and objective as Chaucer's, he would not have once thought of making Mr. Morris's prefatory remarks. Subjective poetry and the nineteenth century and sociology might never have come upon the earth, for any influence they have had on Mr. Barnes as a poet. So we can promise something like a new sensation to nearly anybody who will make his acquaintance.

Messrs. Roberts Brothers, for their part, have made the volume a very pretty one, and their artists have given them some, though not overmuch, assistance. The proof-reader, however, might have been looked after somewhat more sharply; some of his punctuation is of a kind to cause Mr. Barnes a good deal of affliction. For instance, the twenty-third page has one full-stop too many, and two of the full-stops on the eleventh page should be commas, or perhaps semicolons. It is worth while to say this, for no doubt there will be more editions of the work, which is in no sense a mere holiday book. That there may be many more editions is a hope that we have given reasons enough for the reader's entertaining. We have another, too, which, however, we will not now dwell upon. A class of our writers we were thinking of—the large class which so much needs to unlearn habits of dishonesty and inflation of speech, and learn how to talk honestly and straightforwardly. To learn to talk so is partly to learn to think so; at all events there is nothing like it for the discovery of one's inanity. Mr. Barnes's influence on such persons could not be other than good; provided they did not, at the outset, turn from him with unwise disdain of his lack of embroidery and pinchbeck finery, and were sensible enough to excuse his occasional undeniable ungainliness and feebleness.

The Sabbath Question. Sermons preached to the Valley Church, Orange, N. J. By George B. Bacon, Pastor. (New York: Charles Scribner & Co. 1868.)—This book, the author tells us, is printed especially for the use of those to whom the sermons contained in it were first preached, but in the hope that it may be at the same time useful to a larger public. We trust that this hope will not fall to the ground. Only good can come from the wide circulation of a book so earnest, reverent, and broad. Even those who do not agree with the writer cannot fail to be impressed by his freshness and candor, and to acquit him of any desire to make the Sabbath less honored or less religiously observed. But the book is calculated to do much more than produce this merely negative impression. It must, by the force and number of its arguments, convince a great many persons that the present sanctions of Sunday are illogical and unfortunate, and that the sooner the rights and honors of the day effect a change of base the better. To do this is its main purpose. It does indeed, in the closing chapters, construe the uses of the day rather more liberally than is common, but the larger part of it is given to showing that the arguments by which the observance of Sunday is usually enforced are but a "rope of sand," and to substituting in their places others that appeal more strongly to the rational mind. If any one expects to find here a good word for the "continental Sabbath"—which, by the way, is a much more orthodox institution than our own—he will be sadly disappointed; although Mr. Bacon does not consider social visiting on Sunday "continental," or a walk in the fields necessarily wicked. The book contains six sermons. The first, on the Sabbath of God, is perhaps rather fanciful. The second, on the purpose of the Jewish Sabbath, shows very clearly that the Jewish Sabbath and the Puritan Sunday are not one and the same thing. The third treats of the uses and abuses of the Jewish Sabbath; the fourth, of the origin of Sunday, as distinguished from the Sabbath; the fifth, of the honor that belongs to it; the sixth, of the right observance of Sunday. The book is printed so that "he who runs may read," and the author's style is as intelligible as the printer's type.

The Biblical Repertory

AND

PRINCETON REVIEW

Will hereafter be published by

Messrs. Charles Scribner & Co.,

654 BROADWAY, NEW YORK.

This able and influential journal has now completed its fortieth year. It has outlived all the religious quarterlies in being at the time of its origin, and is, with a single exception, the oldest quarterly of any kind in the country. This is a strong token of the soundness and vitality of its principles, and of the ability with which it has been conducted.

The Rev. Charles Hodge, D.D., the original founder of the *Princeton Review*, and its constant editor from the first, has now associated with himself, as co-editor, the Rev. Lyman H. Atwater, D.D., who has been known for a quarter of a century as a leading contributor to it, and the author of a large number of its standard articles.

In addition to the corps of contributors, regular and occasional, who have hitherto sustained the *Review*, others have been and will be enlisted. Among these its friends and readers will be gratified to find the name of Dr. McCosh, President of Princeton College.

The January number of the *Princeton Review* will be ready in a few days, and will contain articles by Dr. Hodge, Dr. McCosh, Dr. W. H. Lord, of Montpelier, Vt., and other contributors whose names will be duly announced.

TERMS:

$3 per annum. Clubs of Six, $2 50 each; $5 for two years, if paid in advance. Single Numbers 75 cents.

CHARLES SCRIBNER & CO.

654 Broadway, New York.

BIBLIOTHECA SACRA.

The twenty-sixth volume of the BIBLIOTHECA SACRA will commence with the January number, 1869. Edited by Prof. E. A. Park and S. H. Taylor, of Andover, with the co-operation of Dr. J. P. Thompson, of New York, Dr. H. B. Hackett, of Newton, and Dr. D. W. Simon, of Berlin, Germany.

Many excellent articles are in preparation for the coming numbers, among them a series on "Homiletics," by Professor Park. The first of this series will appear in the July number.

The price is as cheap as the cheapest, while hundreds of testimonials from the Press and individuals assign the BIBLIOTHECA SACRA the first place among the Quarterlies. Therefore *get the best.* It is published in superior style at $3 per annum.

TAINTOR BROS., Publishers,

678 Broadway, N. Y.

The Nation.

This Journal commences its *Eighth Volume* with the first issue of January, 1869. It has a well-established character as a political, social, and literary force, a medium for the best talent of the country, and a representative of national principles; while its absolute independence has, the Publishers believe, won it the respect and confidence of men of all parties. Its increased circulation among Clergymen of every denomination is proof of its value for the class of public teachers; and for the sake of its still wider diffusion among them the Publishers offer to send the paper free, and postage prepaid, for one month, to any clergyman wishing to make a trial of it with a view to subscribing.

The Publishers are constantly assured by Advertisers of the profitable returns from their advertisements in the *Nation*, the circulation of which is considerably larger than that of any similar weekly published in this country. Book publishers in every part of the Union, principals of schools, makers and exhibitors of works of art, will find it peculiarly to their advantage to advertise in the *Nation*. Full particulars of terms, etc., given by circular.

HARPER'S PERIODICALS.

MAGAZINE. 1869 WEEKLY. 1869 BAZAR.

HARPER'S MAGAZINE.

HARPER'S NEW MONTHLY is, with a single exception, the oldest publication of its class now issued in the United States. There are only about six in Great Britain which have an earlier date, and the circulation of "Harper" is more than three times that of these six combined.

The first Number of HARPER'S MAGAZINE appeared in June, 1850—the Number for December, 1868, being the *two hundred and twenty-third*, commencing the *Thirty-eighth Volume.*

The general plan of the work was carefully considered at the outset. Such changes have been made in the details as experience proved to be adapted to carry out more fully the original idea. This was to produce a Literary Magazine which should so fully represent the intellectual activity of the times that it should be welcomed in every cultivated American household. Nothing, however notable in other respects, which conflicted with good taste or pure morality should find place in its pages. Partisanship in politics and polemics in theology were to be rigorously excluded, the discussion of these topics being left to their appropriate organs. Apart from these questions, nothing which could have interest for the great body of cultivated American readers should be beyond the scope of the Magazine.

Each number of the Magazine contains from *twenty-five* to *one hundred* per cent. more matter than any similar publication in the language. This enables the Conductors to furnish a greater variety of contents than can be given by any of its contemporaries.

In the department of *Imaginative Literature* the Magazine has contained not less than three thousand Tales, Poems, and Essays. Fully nine-tenths of these have been furnished by American writers, in every State and Territory of the Union. In addition to these, the Magazine has given, simultaneously with their publication abroad, the best serial novels of DICKENS, THACKERAY, BULWER, MARIAN EVANS, DINAH MULOCK-CRAIK, and others of the foremost living British Novelists. In this department the Publishers challenge comparison with any other European or American Magazine.

In the departments of *History*, *Biography*, *Travels*, and *Adventure*, as well as in those of *Popular Science*, *Art*, and *Industry*, the Magazine has an acknowledged pre-eminence. Special attention has been given, and will be given, to papers in these departments. These papers have given to the bound volumes of the Magazine a place in hundreds of School and Town Libraries; and the Publishers are assured from many sources that no other volumes are in such constant demand.

As an *Illustrated Magazine*, HARPER'S is confessedly without a rival upon either continent. It has been the leading idea of the conductors to furnish profuse illustrations wherever the pencil of the artist could aid and supplement the pen of the writer. In all, more than ten thousand separate illustrations have been given. A great proportion of these have been prepared expressly for this work. The cost of these illustrations alone for each Number of the Magazine is greater than the entire sum paid by any other American Magazine for matter and illustrations.

The following list of illustrated papers contained within the past year will give a general idea of the value of the Magazine in this respect:

Titles of Articles.	*No. of Illus.*	*Titles of Articles.*	*No. of Illus.*
ANDES OF PERU AND BOLIVIA (Five Papers)	97	HIGHLAND LIFE OF VICTORIA AND ALBERT	9
JOHN A. ANDREW (Portrait)	1	THE WOMAN'S KINGDOM	39
MEMOIRS OF BABYLON	8	JOHN BULL IN ABYSSINIA	13
CAFÉS OF THE PARIS EXHIBITION	14	TO AND UPON THE AMOOR RIVER	16
CHATTANOOGA, AND HOW WE WON IT	10	EXPLORATIONS IN LOWER CALIFORNIA (Two Papers)	28
CRADLE LANDS OF THE BIBLE	13	THE CHINESE EMBASSY	10
FROM DERBY TO DISRAELI (Portrait)	1	FISH-CULTURE IN AMERICA	24
DU CHAILLU, GORILLAS, AND CANNIBALS	9	DAVID GARRICK	3
THE GOLDEN FLEECE	4	FASHIONS IN GUINEA	13
THE PINERIES OF MINNESOTA	12	THE HANDEL FESTIVAL (Portraits)	7
PERSONAL RECOLLECTIONS OF THE WAR (Two Papers)	28	UNWELCOME GUESTS OF INSECTS	16
PILGRIMAGE IN SUNNY LANDS	24	THADDEUS KOSCIUSZKO (Portraits)	2
A DAY'S FIGHTING AT QUERETARO	2	LOOKOUT MOUNTAIN, AND HOW WE WON IT	17
THE NURSERIES ON RANDALL'S ISLAND	21	NEW YORK IN THE REVOLUTION	11
THE RESTIGOUCHE	19	STREET PAVEMENTS	7
THE VOYAGE OF THE ROB ROY	15	SHOOTING STARS AND METEORS	19
A SUMMER ON THE PLAINS	16	TRAVELLING IN SIBERIA	17
TROUVILLE, A FRENCH PARADISE		SILVER AND SILVER PLATE	10
		GEORGE AND ROBERT STEPHENSON	21

Not a few of these papers are of the highest permanent value. Thus the articles on the Andes of Peru and Bolivia, by Mr. E. G. Squier, illustrated by nearly a hundred engravings from photographs taken by the author, give a more complete view of the wonderful civilization of the old Incas than can be found in all books heretofore published. These papers in the Magazine cost the subscriber less than the price of a single Number; if published in ordinary book form, the cost would be more than that of the Magazine for a year.

The Publishers have made arrangements which warrant them in the assurance that the Volumes for 1869 shall be fully worthy of the favor and support which have been accorded to the Magazine for almost twenty years.

HARPER'S WEEKLY.

This journal has now completed its twelfth year. Its existence has been coeval with the most remarkable epoch of American History, during which it has been not simply a mirror of the world in which it has lived, but also an important Agent in the events of which it has been the faithful chronicler.

The Publishers have succeeded in making HARPER'S WEEKLY what from the first they intended it to be—the best illustrated newspaper on this Continent. The Volume which is now concluded is a good illustration of this success, and is the best guarantee which the Publishers can offer for the future.

The illustrations cover every great event which has occurred in the Old World as well as in the New, at the same time that all due attention has been given to topics of especial and local interest. In this department the best artists in this country are constantly engaged, and the Publishers are also largely indebted to photographers in all the large cities of America, Europe, and the East for prompt and valuable contributions. The enterprise of the publishers in this department of their paper is not equalled by that of any other illustrated paper in the world.

As a Literary Journal, HARPER'S WEEKLY is recognized as the only illustrated newspaper which has ever succeeded in establishing and maintaining its claim to pre-eminence. From its first publication it has contained the very best literary matter ever furnished to a reading public, including not only short stories, but also serials from the most distinguished writers in Europe and America. "The Moonstone," the most interesting of Wilkie Collins's celebrated works of fiction, was published in the last volume of the WEEKLY from the author's manuscript, and illustrated by artists engaged by the publishers. "That Boy of Norcott's," a serial which has recently been commenced in the paper, and which will be continued in the Thirteenth Volume, will prove to be one of the most brilliant stories ever issued.

The Editorial matter of HARPER'S WEEKLY constitutes one of its most prominent features; it includes weekly articles upon National Politics, Finance, Commerce, and Miscellaneous topics. The policy of the paper in this department has always been bold and comprehensive. While the Weekly is a champion of every cause based upon justice and identified with the best interests of the nation, it has never advocated any policy from merely partisan motives.

HARPER'S WEEKLY is conducted upon a broad and comprehensive policy. It is the reflection of all the fluctuating tides of our present civilization, and at the same time sympathizes and co-operates with their progressive and upward tendencies. Hence its past success; and, with unabated efforts in every department of the paper, and at whatever trouble or expense, the Publishers are determined that this success shall be maintained.

HARPER'S BAZAR.

HARPER'S BAZAR has gained a success the most rapid and wonderful ever known in the annals of journalism. The purpose of the Publishers to produce the best and most beautiful Family Paper ever issued has been fully accomplished.

As an illustrated chronicler of Fashion it is without a rival in this country. By a special arrangement, involving great expense, with the publishers of the Berlin *Bazar*—the leading journal of fashion in Europe—its fashion-plates are published in New York simultaneously with their appearance in Berlin and Paris. These engravings, following the ever-changing fashions, comprise illustrations of every article of dress worn by men, women, or children; and each alternate week they are accompanied by a comprehensive supplement containing a large number of patterns, by following which these various articles of apparel may be readily cut and fashioned by the economical housewife. These patterns alone are worth the cost of the paper many times over. Besides these illustrations, a colored fashion-plate is frequently furnished with the BAZAR.

A large portion of the BAZAR is every week devoted to instructive and entertaining reading-matter—Stories, Poems, Biographical Sketches, and Gossip—thus becoming a complete repository of household treasures. In this department the productions of the most popular writers at home or abroad find a place—the standard of literary excellence being not in any respect inferior to that of the Magazine or Weekly. The Editorial articles of the BAZAR are always spicy, and cover every topic of social interest. "Manners upon the Road," a series of letters from an Old Bachelor, have been a noticeable feature during the past year; and in this shape or some other the contributions of this most graceful of living American writers will be continued.

The same enterprise on the part of its publishers, and the same judicious editorial management, which have made the BAZAR the most interesting and popular of family journals, will be continued in the future. No effort and no expense will be spared to permanently secure for this journal the victory which it has won so rapidly, and which it so well deserves.

TERMS.

Single Subscriptions to either periodical, $4 a year; for any two, sent to one address, $7; for the three, $10.

To Clubs of five, sending $20 in one remittance, an additional copy will be sent gratis. For $20 will be furnished six copies for a year, made up of either or all of the periodicals, at the option of the subscribers.

To Periodical Dealers the Magazine will be furnished at $27 per hundred copies; the Weekly or Bazar at $7 per hundred copies.

Subscriptions to be paid in advance. Upon the wrapper of each copy, following the subscriber's name, is the number with which the subscription expires. It is not necessary to give notice of discontinuance, as the papers are stopped at the close of the time of subscription.

The *Postage* on the Magazine, within the United States, is 24 cents a year; on the Weekly and Bazar, 20 cents a year, payable at the office where received. Subscribers in Canada must send 24 cents for the Magazine, or 20 cents for the Weekly or Bazar, to prepay the United States postage.

Any *back Number* of either publication can be supplied. *Bound Volumes* will be furnished as follows: Of the Magazine, each containing the Numbers for six months, $3; of the Weekly or Bazar, containing the numbers for a year, $7—postage or express freight paid by the publishers.

Subscriptions may commence at any time. When no date is specified, it is understood that the subscription for the Magazine begins with the current volume; for the Weekly or Bazar, with the number next after the date of the order.

HARPER & BROTHERS, New York.

STANDARD WORKS

JUST PUBLISHED

BY

CHARLES SCRIBNER & CO.,

654 BROADWAY, NEW YORK.

PRESIDENT HOPKINS'S MORAL SCIENCE.

LOVE AS A LAW. A Treatise on Moral Science. By MARK HOPKINS, D.D., LL.D., President of Williams College. 1 vol. 12mo, $1 75.

This work is both theoretical and practical. In the theoretical part morality is made rational, both as based on ends and as involving intuitions. Obligation, in distinction from right, is made the moral idea; the foundation of obligation is fully discussed, and a reconciliation of different systems is attempted. In the practical part the Law of Love is applied in connection with the Law of Limitation, and with a classification of duties—new as respects its basis.

DAY'S ENGLISH LITERATURE.

AN INTRODUCTION TO THE STUDY OF ENGLISH LITERATURE. By Prof. H. N. DAY, of New Haven. 1 vol. 12mo. Uniform with Day's "Logic," "Art of Discourse," and "Art of Composition." $2 25.

The distinguishing characteristic of this text-book is that it directs the study to literature itself as a growth, not to authorship, not to history, not to criticism. It presents in the first part a selection of the masterpieces of our literature most worthy of special study in themselves, while best representing the successive phases of the language and literature. In the second part it presents, in a strict analytical method, a full, detailed view of the elements of the language, and of the departments of the literature, with the leading authors in each department.

*** Although announced some weeks ago, the above works are but just published.

DR. LILLIE'S LECTURES ON PETER.

LECTURES ON THE FIRST AND SECOND EPISTLES OF PETER. By the Rev. JOHN LILLIE, D.D., late Pastor of the Presbyterian Church at Kingston, N. Y., author of "Lectures on the Epistles of Paul to the Thessalonians," etc. With an introduction by Philip Schaff, D.D. 1 vol. 8vo, $3 50.

Dr. Lillie's lectures on Thessalonians and his labors on Lange's Commentary have secured him a reputation among the first of our expositors and commentators. The volume will be warmly welcomed by all Biblical students.

PROF. PORTER'S MENTAL SCIENCE.

THE HUMAN INTELLECT. With an Introduction upon Psychology and the Human Soul. By Prof. NOAH PORTER, D.D., of Yale College. 1 vol. 8vo, nearly 700 pages, $5.

ALSO, LATELY PUBLISHED:

BUSHNELL'S MORAL USES OF DARK THINGS. $2.

TRENCH'S ENGLISH, PAST AND PRESENT. $1 50.

Any of these books sent by mail, post-paid, upon receipt of the price.

NEW PATENT PIANOS.

RAVEN & BACON

(Established 1829),

Warerooms 644 & 646 Broadway, N. Y.,

MANUFACTURERS OF

PIANO-FORTES, WITH THEIR PATENT COMBINATION SOUNDING-BOARDS.

Patented August 14, 1866.

This invention, introduced exclusively into our Pianos, is of the greatest advantage to the tone of the instrument, as it affects the sounding-board, the very soul of the Piano, and produces thereby a pure liquid tone greatly superior in quality and power to that of the ordinary Piano. The sounding-board, released from its connection with the piano-case, and resting upon under sounding-boards, is relieved from the rigidity caused by such connection, and its vibratory quality increased.

Our Pianos are first-class in every respect, and purchasers will have not only our own guarantee as to their quality, but also the guarantee of the reputation of the instrument, obtained from the experience of our patrons who have used them for a generation. All lovers of this eminently household instrument, as well as parties proposing to purchase new Pianos, are invited to call and examine our assortment.

In presence S. S. SMITH.

[5 cent stamp, cancelled.]

STATE OF NEW YORK, CITY AND COUNTY OF NEW YORK, ss.—On this 10th day of December, 1868, before me personally appeared LOUIS DE PENNEVET, known to me to be the individual described in and who executed the foregoing instrument, and acknowledged to me that he executed the same.

A. V. W. VAN VECHTEN,
Notary Public N. Y. State, City and Co.

MANHATTAN SAVINGS INSTITUTION,

644 Broadway, Corner Bleecker Street,

NEW YORK, December 10, 1868.

The Trustees of this Institution have declared the Thirty-sixth Semi-annual Dividend on all Deposits (by the rules entitled thereto), at the rate of SIX PER CENT. PER ANNUM ON ALL SUMS NOT EXCEEDING $1,000; AND FIVE PER CENT. ON LARGER SUMS; payable on and after January 18, 1869, free of Government Tax.

The Dividend will be credited under date of January 1, and if not withdrawn will receive interest the same as a deposit of that date.

SIX PER CENT. PER ANNUM ON ALL SUMS FROM $1 to $5,000 will be allowed Depositors, July 1, 1869, and January 1, 1870.

E. J. BROWN, President.

C. F. ALVORD, Secretary.
EDWARD SCHELL, Treasurer.

UNION ADAMS,

637 BROADWAY, NEW YORK,

IMPORTER OF

MEN'S FINE FURNISHING GOODS,

MANUFACTURER OF

Fine Dress Shirts,

Collars, and Cuffs.

Orders by mail receive prompt attention.

BENEDICT BROTHERS,

(KEEPERS OF THE CITY TIME),

691 BROADWAY, NEAR FOURTH STREET,

NEW YORK.

Agents for the American "Waltham" Watch. Importers and Manufacturers of Fine Watches, Diamonds, Chains, Jewellery, and solid "Sterling" Silver-Ware.

Our Gold Chain is of the best quality, and we sell at the lowest price, quality considered.

Every article of Silver Ware has BENEDICT BROTHERS stamped upon it, and is guaranteed to be equal to English manufacture.

WATCHES—not only of the celebrated American "Waltham" Watch Company, but the finest of European manufacture.

Watches for Timing Horses, Watches that Wind and Set without a Key, the celebrated Nardin Watch, and a Watch made especially for us, in Europe, which has the name of BENEDICT BROTHERS upon it—a PERFECT TIME-KEEPER.

*** Very special attention is given to Repairing and Cleaning Watches.

NOTE.—We have reduced the price of the American "Waltham" Watch below the List Price of the Company.

Should you desire anything in our line, we will answer any enquiries by letter, giving description, price, etc.

ALL WATCHES FROM OUR HOUSE ARE IN SOLID GOLD OR COIN SILVER CASES ONLY.

BENEDICT BROTHERS,

691 Broadway, New York.

A Favorite Resort.

We can hardly name a more attractive establishment, for those in pursuit of presents, than BENEDICT BROTHERS, at 691 Broadway. Fitted up very tastefully, in black walnut and gilt, with a luxurious lounge for ladies, extending the entire length on one side, it engages and charms the attention at once; but we soon discover that one of its foremost attractions is the politeness and urbanity of the salesmen, who spare no pains in exhibiting the various wares, and yet never urge one to buy. If we were to mention any one feature of the establishment—after the collection of diamonds, which is both rare and superb—it would be the unusually fine assortment of sets of jewellery, in all the choicest styles—Byzantine, Etruscan, Coral, and Cameo—pure in material and artistic in workmanship. There are also many exquisite watches and several tempting cases of heavy initial sleeve-buttons. It is a good proof of the truth of the foregoing that, although it has been open scarcely a year, this establishment is already a favorite resort of many of the more wealthy and fashionable ladies belonging to our first society. The BENEDICT BROTHERS merit generous success, and we are glad to see them so far along in the high road which leads thereto. —*Home Journal.*

STAMFORD INSTITUTE FOR BOYS.

A family school founded 1850. With a limited number, special encouragement is given to backward or timid pupils, and unusual attention to individual peculiarities. Physical culture a specialty, including Military Drill, Gymnastics, and Boating. Ample grounds, with buildings and appointments complete, in every respect. Boys fitted for College, business, West Point, or Annapolis. Circulars with references sent on application.

W. C. WILLCOX, M.A., PRINCIPAL, Stamford, Conn.

TO

CAPITALISTS & INVESTORS.

THE FIRST MORTGAGE 7 PER CENT. BONDS

OF THE

ROCKFORD, ROCK ISLAND, AND ST. LOUIS RAILROAD COMPANY,

PAY BOTH

PRINCIPAL AND INTEREST IN GOLD,

And are free of Government Tax.

This enterprise has long since passed the point at which its completion could be considered doubtful. *Nearly half the line is substantially ready for the rails*, and contracts are in progress for large quantities of iron, and an adequate supply of rolling stock. The rails for the division connecting the Company's Coal Mines with the Chicago and Northwestern Line are all on the ground, and being rapidly laid, so that *the Company will shortly be delivering their coal*, for which they have contracts covering all they can mine this season.

THE CAPITAL STOCK, FIXED AT NINE MILLIONS,

is already largely subscribed for, and the remainder is going into the hands of individuals along the route, or being taken by the counties and towns through which the road passes.

THE ENTIRE CAPITAL

will, without doubt, be soon taken, and the subscription closed.

THE BONDS ARE A FIRST AND ONLY LIEN

of $21,000 per mile upon 400 miles of railroad, traversing

THE RICHEST AND MOST POPULOUS DISTRICT

of Illinois, upon the Company's franchises, and property of every description, including

20,000 ACRES OF VALUABLE COAL LANDS,

partly owned in fee and partly leased for 50 years, and estimated to contain

ONE HUNDRED MILLION TONS OF COAL.

Each Bond is for $1,000, or £200 sterling, and is convertible into Stock of the Company at the option of the holder. The interest is payable on February 1 and August 1.

The Trustee for the Bondholders is the Union Trust Company of New York. Arrangements have been perfected by which a considerable part of this Loan is likely to be placed in Europe, and only a small portion of the issue will remain to be disposed of at home.

Parties subscribing at once *will secure the Gold premium on the coupon of February* 1, which is equal to a reduction of one per cent. on the price of the Bonds.

We are authorized to offer what remains of these Bonds at 97½ and accrued interest in currency; at which price, considering the soundness of the enterprise and the ample security of the Loan, the Bonds must be regarded as the

CHEAPEST AND BEST INVESTMENT ON THE MARKET.

Other approved Securities received in exchange at market rates.

Pamphlets giving full information sent on application.

The Bonds may be had of

H. H. BOODY, Treasurer,

12 WALL STREET,

AND OF

HENRY CLEWS & CO.,

BANKERS,

33 WALL STREET, NEW YORK.

ADDRESS, PUBLISHER OF "THE NATION," BOX 6732, NEW YORK.

The Week.

PERHAPS as important a matter as any that has engaged the attention of Congress during the week is the "Sue Murphy Relief Bill," which has kept the Senate busy for a greater or less part of every day, and which needs all the discussion it is likely to get. The question is of paying a so-called loyal citizen of Alabama for property destroyed by the national forces during the war. Fighting had hardly ceased when claims for the value of property destroyed began pouring in, and, if we are not mistaken, some of them were paid; but an order issued in 1866 put a stop to the leak, which only needs the least reopening to become a torrent. The number of valuable libraries which we shall discover to have been burned by our illiterate soldiery; the millions of dollars' worth of fine residences destroyed by the removal of clap-boarding for camp-fires; the droves of cattle and horses that will turn out to have been seized by Federal commissaries and quartermasters; the unsuspected multitude of Unionists that will be found to have kept their faith, in case of the gratification of Mr. Doolittle's and Mr. Hendricks's desire that the good name of the North may not be disgraced, will exceedingly surprise the tax-payer. He will pay for more Patent Office reports and *Congressional Globes*, under the designation of four hundred thousand dollar libraries, than he now has any conception of. The friends of this particular bill seem to have been unfortunate in their choice of a test case. At any rate, it is alleged that Mrs. Murphy needs no relief, because the destroyed property was not hers but her stepfather's, and, secondly, because if she deserves relief it is not to the United States that she ought to look for it, because she assisted at several presentations of rebel flags and even made encouraging speeches.

Other matters of importance that have come up in the Senate are the bill to authorize an air-line railroad between Washington and New York and a bill introduced by Mr. Edmunds to prevent the holding by any one person of two national offices at the same time. Mr. Sherman spoke strongly in favor of the air-line road, and in the course of his speech caused to be read a certain circular which the railroad presidents are sending about, and which shows that the lobbying against the proposed destruction of the Jersey monopolies will be of the most strenuous character. Mr. Sherman, however, predicted with a confidence which everybody hopes the event may justify the total failure of the companies' scheming. Mr. Edmunds's bill seems likely to pass, but not without some slight modifications, that will, however, not affect the principle of it. In many of the States the State constitution forbids occupancy of State offices by a United States officer—a prohibition which neither a stickler for State rights nor an upholder of the dignity of the Union will be disposed to quarrel with. The number of offices is, however, so great and the general effect of office-holding so doubtfully good, that it seems desirable that whenever possible one man should, as Mr. Fessenden points out, be two or three or four officers—lighthouse-keeper, say, collector and assessor of internal revenue, and postmaster, in some desolate fishing hamlet—and thus the citizen be led out of an American temptation that destroys many.

In the House nothing has been done so noticeable as the repeal of the Tenure-of-Office Act. It passed under the operation of the previous question and by 121 yeas to 47 nays. The numbers read as if the vote was a party one, but it was not; a majority of the Democrats voted in the affirmative, and the nays were principally Republican. Schenck, Garfield, Jenckes, Shellabarger, and Maynard voted in the negative. Mr. Washburn, of Indiana, has the credit, such as it is, of having offered this bill, but, as the House was reminded by Mr. Butler, he, not Mr. Washburn, is the man who first introduced the measure, and this bill of Mr. Washburn's is identical with the one which he (Mr. Butler) introduced the other day, and which was referred to the Judiciary Committee. It is understood that a majority of the Judiciary Committee were for making a favorable report. A bill for which Mr. Butler really deserves credit is one that he has framed for the prevention of a great evil in Virginia. The judges of the State courts there are, many of them, incapacitated by former disloyalty for the exercise of judicial functions. Lawyers, therefore, take their convicted clients' cases into the United States courts, the judges of which conceive themselves bound to discharge the prisoners. Mr. Butler's bill directs a stay of proceedings in all such cases until the justices of the Supreme Court shall have decided whether or not such convictions are valid. Mr. Robinson, on Monday, offered a bill which allows the Secretary of the Treasury, the Mayors of this city and Brooklyn, the Governor of the State, and the Collector of the Port to expend five millions annually for the improvement of New York harbor. The passage of this bill would easily call into existence another "ring" of first-rate magnitude.

For the rest, the Appropriation Bill kept the House pretty busy for a good deal of the week; but it found time to listen to Mr. Boyer, who made an unnecessary Democratic speech, *de omnibus rebus*, in reply to the unnecessary Republican speech on the same topics with which Mr. Blaine favored the country before the recess. Mr. Boutwell proposes a suffrage amendment to the Constitution. It declares the right of men of color to vote for President, Vice-President, and Representatives, and provides punishments for all who hinder them. There has been bitter debate over the alleged breach of contract on the part of Wells, Fargo & Co. and a proposition to order the Postmaster-General to withhold a certain amount now nominally due them. Finally, the House was amused by an incidental debate between "honest John Covode" and the equally pious but a trifle wiser Catholic champion, Mr. Fernando Wood. Mr. Covode opposed the sending of an American minister to Rome, because certain Papists went into his district last year and fraudulently defeated him, as he fully believes.

A singular illustration of the kind of contributions the South is making to our legislative wisdom was furnished last week by Mr. Spencer's bill, introduced into the Senate, directing the Secretary of the Treasury to buy all cotton offered him after the first of July next at 20 cents per pound for uplands and 30 cents for Sea Islands. As cotton now sells at about 26 cents, and is not unlikely to be considerably lower next year, the effect of this bill would of course be, in case the crop proved very large, to place the whole of it at the Secretary's disposal at a good high figure, and his embarrassment would be increased by the fact that the bill directs him to sell what he buys at an advance of at least five cents, so that in a dull season it would go

off slowly, as buyers, knowing he could not spin it himself, and that he could not "carry it" very long, would hold off. Now that Mr. Spencer has manfully "leaped ahead," where is the enterprising Congressman who will make similar arrangements with the Government for having the shoe-dealers relieved of their drooping stock, the farmers of their declining hay, and, in fact, everybody in the country of his old clothes, horse-shoes, furniture, and other worthless odds and ends? There is nothing that a decent man wants to sell that a truly popular government ought not to be compelled to buy at a fair, humane rate.

On the question of resuming specie payments there has been no light thrown since the opening of Congress. Senator Morton, who has made himself the director of the process in the Senate, has been spending the holidays carrying on a somewhat comical discussion about it with Mr. Greeley, the opinions of the latter having absolutely no value, except as an indication of the owner's child-like and beautiful confidence in human nature. The country is flooded with letters and pamphlets on the same subject from other sources, and we shall not trouble our readers with further notices of them. Many contain much that is valuable, but life is too short for the profitable perusal of them. The best advice we can offer to simple souls for their guidance amidst the prevailing din and confusion and conflict of testimony is to cling firmly to this one idea, that a government can only procure gold by taxation, loans, or plunder; that gold coin is a luxury which we sold as too expensive for us when the war broke out; that if either Government or people want to get it back to use as a circulating medium once more, they will have to buy it or borrow it, just like a silk dress or a buggy. With these aphorisms suspended from his neck anybody may plunge into the melee and crack skulls over the question of how to buy the gold most cheaply—for that is really the only question under debate—with a fair expectation of coming out just as creditably as the common run of financiers.

The "war on the Ogeechee," and the "Georgia outrages," and the "insurrection of negroes in Georgia," and the new San Domingo war are all creditable to the Associated Press reporter at Savannah, who must be proud of himself, and a just cause of pride to his employers who pay him his salary, as a not imbecile person collecting accurate news. A man, Middleton by name, accused some of his hands of stealing rice, and got warrants for their arrest. The sheriff, before going out to serve the warrants, demanded the aid of the military. He is a cowardly man, and there seemed no sound reason for granting his request; so he set out with his deputies, and when he came in sight of the plantations, and the people began to get together, he fled, no man pursuing him. At once Savannah decided there was a civil war; it was known, so they say, that most of the planters have been cheating their hands for a year or two, and might have justly feared trouble. A company of a hundred and twenty marched out well armed, fired at a negro boy and shot him through the leg, saw a dozen negroes taking to the woods, and then returned to the city, when they at once organized three battalions, with colonels and a general and so on, and prepared for a battue, the reporter meantime telegraphing about the murders and rapes and burnings. General Sibley, going out by General Meade's order, found frightened negroes anxious to be arrested if they had done anything, no fortifications, no arms but "corn-minders' guns" (three stand), and a bayonet on a stick, no hostile intentions, no anything of all the newspapers had said so vociferously.

The combination of Democrats and Republicans which voted to repeal the Tenure-of-Office Act bears a striking resemblance to that which, under Butler's lead last spring, directed the Committee of Ways and Means to bring in a bill taxing the bondholders ten per cent. We are, as we have said more than once, in favor of the repeal, and do not know what motives have influenced men like Messrs. Garfield and Schenck in opposing it, but we have no doubt they are respectable; and we may add that we think the passage of a measure of such importance, without permitting such men to produce their arguments against it, is another of those gross insults to the country and breaches of parliamentary propriety of which the Republican party has committed so many. To estimate this last one at its full magnitude, however, one must go back and read the speeches in which some of the worthies who are now for repealing the act, urged its passage, and in which they assailed the President for violating it, and the solemn and elaborate demonstrations of its necessity and wisdom, not as a protection against Andrew Johnson only, but against all Presidents, which they offered us, and the rabid abuse they and their newspaper followers heaped on any man who called himself a Radical, and yet presumed to doubt its expediency. A more striking illustration of the contempt in which they hold the unfortunate public was hardly ever offered than the present cool attempt, after all this, to cast it aside without even giving themselves the trouble to offer a single reason for their change of opinion. They have arranged the argumentative part of the business, they say, privately amongst themselves. The names of the majority and minority ought to be kept for reference and comparison, and will certainly repay study.

It is hardly necessary to say that if this lavish use of the previous question continues, the publicity of Congressional proceedings, considered either as a means of informing the public judgment or as furnishing a check on the conduct of representatives, becomes a farce. All legislative measures are, on the whole, better debated in the newspapers than they are in Congress, so that the people can form a tolerably fair opinion of their value without Congressional help. But then members of Congress are supposed to be in possession of facts and circumstances which do not always reach editors, and which constitute disturbing or modifying influences for which no allowance is usually taken in forming the clear-cut conclusions of the newspaper. One of the great uses of Congress and of Congressional debate is to let the public know what these facts and circumstances are, both as an assistance in drawing inferences touching the particular case and in the general work of political education. Moreover, although nobody expects each member to give his reasons for his vote, everybody wishes or ought to wish to know by what arguments he was influenced in voting, especially in cases in which the party is divided. In other words, we want to know, as the only efficient check on his conduct, what reasons he gave for voting as he did, or what reasons he listened to; either will do, but one or the other is essential, if the responsibility of legislation is to be anything more than a name. We are not, or ought not to be, satisfied by being told that he talked the matter over in the cloak-room or on a back sofa, with General Butler. What the general said on that occasion may have been admirable and overwhelming, but the experience of thirty centuries has settled it for ever that no man has a right to make laws for a free people without either standing up and giving his reasons openly or listening to somebody else who gives reasons for him openly. Better be governed any day by a silent despot than a silent crowd, for an honest crowd is never silent, and an honest despot may be. We need say nothing of the facilities which this free use of the previous question affords for covering up jobs, and the pleasure with which the various "rings" must therefore witness it; but we ought to call attention to the manifest tendency there is on the part of the Butlerites and inspired Radicals to combine in the House with the Democrats against the rational and thinking Republicans.

Mr. Chandler has been re-nominated for the senatorship by the Republicans of Michigan, as, indeed, everybody expected he would be. In his speech of acknowledgment before the caucus he vigorously denounced Great Britain, and declared that he had a mortgage on Canada which he was going to foreclose on an early day. This helps to confirm the suspicion which we expressed a fortnight ago, that this unscrupulous power was at the bottom of the opposition to his re-election, and that it was her agents who got up the stories about his drunkenness and other excesses. As we ought not, however, to keep back any facts which militate against our theory, we will mention that General Butler, who published a certificate of Mr. Chandler's sobriety, asserts that the opposition was due to Mr. Chandler's having been a vigorous promoter of impeachment, and represents it as simply part of a crusade which is going on against everybody who took an active part against Mr. Johnson in that remarkable process. If this be the

true state of the case, all we can say is that those who are engaged in this miserable persecution of wise and saintly men ought to be thoroughly ashamed of themselves. We have little doubt that, if the truth were known, they would be found to be the same persons whose efforts to take away the pensions from the disabled soldiers and sailors and the widows and orphans call forth so regularly the noble "soldiers and sailors" resolution in the platform of all the nominating conventions of both political parties. Certificates were also furnished to Mr. Chandler by Mr. Henry Wilson, who testified to his sobriety, and by Mr. Stanton, who testified to his usefulness during the war and the confidence reposed in him by Mr. Lincoln. One of the most mysterious and yet encouraging facts in connection with the vice of intemperance is the freedom from it enjoyed by politicians who are "sound on the main question." We find, on enquiring of their associates as to their habits, either that the sight of liquor is hateful to them, or that, if they consume it, it produces no more effect on their nerves or character than ass's milk, while, on the other hand, there are few "traitors" or conservatives who are not frequently carried to bed helpless, or even seen in the most shameful condition in the streets.

There is, we are assured, no doubt that the Civil Service Bill will be opposed by the leading men of both parties, and that there is little chance of its passing this session without strong pressure from public opinion. Practically the power of appointment to subordinate positions in the public service is now in the hands of Congressmen, and they use it for their own private benefit and that of their friends; and he must be a very sanguine person who expects them to give it up without a struggle. We venture to say, too, that the House, and the Republican party in the House, will be divided on the bill by much the same line as has divided them on the question of taxing the bonds and the passage of the bill, under the previous question, repealing the Tenure-of-Office Act; that is to say, the thinking, reasoning minority of Republicans will be found supporting it; the ranting, roaring prophets, war-horses, and jobbers, the "whole-souled" men and the Democrats, will be found opposing it. General Logan opened operations against it on Friday last, in the Committee of the Whole, by reading a printed speech, without notice, denouncing it fiercely. He said Mr. Jenckes's plan was undemocratic; was the "opening wedge to an aristocracy;" maintained that "the people" (*i. e.*, Washington rings) ought to appoint Government officers; and drew a glowing picture of the proud contrast which the gang of peculators and adventurers who now fill the public offices of this great country present to the sleek and pampered minions who swarm in the offices of foreign despots. In fact, no such neighing and snorting has been heard in Congress since Mr. Chandler introduced his great retaliation bill in the Senate. After having whisked his tail several times in Mr. Jenckes's face, and exchanged whinnies with several sympathizers, General Logan plunged into his seat, and several others then reared up and kicked fiercely in the same direction, in token of their hostility to the measure. General Grant is now well known to be strongly in favor of the bill, but it cannot be too often repeated that, unless the people come to Mr. Jenckes's assistance, there is no chance of its passing; and if it does not pass, we fear our expectations as to Grant's reforming power will be wofully disappointed.

The Paris Conference on the Turco-Greek difficulty is sitting as we write, and the prospect of a favorable termination to its discussions is, the Cable despatches say, good. The pretence that there is any doubt about the result is, and has been from the beginning, very amusing. In fact, the conference is a little farce got up to cover the retreat of the belligerents from their unpleasant proximity to each other. The Porte knows well that England, France, and Russia are responsible for the good behavior of Greece, under two separate treaties, and that, even if they were not, they would take good care not to let anybody but themselves attack Turkey just now. Greece, on the other hand, though Greeks are generally ready to fight Turks on general grounds, has been perfectly well aware that when the moment came to take the field with her invisible army and empty treasury, somebody was sure to step up and hold her arms so as to prevent her either from exterminating the foe or perishing in the fray. The "hostilities" have thus far been confined to the murder of a Turkish officer at Syra and an exchange of shots between the Turkish flag-ship and a Greek blockade-runner, without damage to anybody; the blockade-runner, however, displaying the skill and audacity which has always made the Greeks, however outnumbered in men or guns, more than a match for Turkey at sea. In fact, since the Greek Revolution, and the consequent loss of the Greek seamen, the Turkish navy has been rather an encumbrance than a help to the empire. It has usually, of late, been commanded by an Englishman, as at present; but the officers and crews are almost worthless. The late Admiral Slade used to tell that when he first took command he came up one fine moonlight night from his cabin, in the Black Sea, and found the flag-ship going along with all sail set and a fine breeze blowing, and the watch, except the man at the wheel, all asleep, officers included.

The French news continues to be of the same general tenor. There has been a change of ministry—that is to say, one set of the Emperor's clerks has been dismissed to make way for another. M. Pinard, who made such a dreadful failure in getting up his press prosecutions after the Baudin affair, and who, in fact, made the Baudin affair important, has been dismissed for over-zeal; but the poor man is too much mortified to take the senatorship which is usually offered to disgraced ministers, and goes back to the bar to practise his profession. M. de Lavalette succeeds the Marquis de Moustier in the Foreign Office, a change which is looked on as a concession both to the Italians and Prussians. M. de Moustier was a Papist, in the literal sense of the word, and had made himself very obnoxious at Berlin, while M. de Lavalette, though a friend of the Pope, was, when ambassador at Rome, one of those plain-spoken friends whom weak and foolish men hate more than enemies. The nonsense of the Papacy was abhorrent to him, and he spoke of it freely, and his removal was looked on as the triumph of Ultramontanism in the Emperor's councils. The change is of no importance as regards the Eastern question, both the outgoing and incoming minister agreeing on that; but Lavalette is said to be opposed to the policy of perpetually threatening and demonstrating against Prussia. The unpopularity of the Imperialist régime in Paris, in the meantime, continues to grow, and its comicalities to grow more comical. A journalist has just been arrested for describing the personal appearance of the Dutch admiral whom, and not Louis Bonaparte, ill-natured people insist on considering the Emperor's father, in terms which apply exactly to the Emperor himself. Then an attempt made to win the rising generation over to Cæsarism by inviting two law and two medical students each week to Compiègne during the hunting season, has failed ignominiously and ridiculously. No medical or law student could be found who would accept the Imperial invitation. The young men, it plainly appears, have, as we say here, all "gone republican." M. Paul de Cassagnac, the noted bravo, mourns over this in the *Pays*, and suggests a more stringent policy as the best remedy.

There is little use in attempting to interpret the news from Spain There is a discussion going on in all the papers as to whether the kingdom contains more monarchists than republicans; but about this the opinions even of well-informed Spaniards are not worth much, and the opinions of enthusiastic foreigners are worth nothing. In the towns it appears plain the republican element predominates; but we shall not know anything about the matter for certain till the Constituent Cortes meets. The Duke de Montpensier is putting himself forward as a candidate for the throne—according to the monarchists with some success, but, according to the republicans, to the unutterable disgust of all right-minded men. There have been many fights of greater or less magnitude, in all of which the Provisional Government has acted with energy, and the troops with perfect fidelity and moderation. With these disorders the republican leaders seem to be disgusted, however. The republicans generally are enthusiastic in their admiration of the United States, which they take as their model, and the United States consul has been a prominent figure either as arbitrator or mediator in most of the great rows. The fact in recent American history which most impresses them, competent observers report, is the immediate disbandment of the armies at the close of the war.

MR. WELLS'S REPORT FOR 1868.

One of the best signs of the times in the political world is the increasing interest manifested in the annual reports on the condition and prospects of the national industry now prepared by the special Commissioner of the Revenue. They are valuable in two ways, at least; one is, that they constitute the first persistent attempt made in this country to furnish a scientific basis for legislation, instead of the fancies and guesses and vague opinions or representations of interested persons which committees of Congress have hitherto been only too apt to use in the drafting of bills. Mr. Wells furnishes a striking illustration of this in the report before us, when he quotes the account given by a Congressional committee of the effects of the tariff of 1846, which says that "no business man of mature age" needed to be reminded of certain dreadful consequences of this tariff. Mr. Wells, on turning to the statistics, shows that the recollection of "the business man of mature age" was utterly deceptive, and that the ruin and disaster wrought by the tariff existed only in his imagination.

Mr. Wells's reports are valuable, in the second place, as the products of a scientific man, and not of a politician—using this most useful but perverted word in its popular sense, as designating a person whose opinions on political questions are formed mainly with reference to their probable bearing on his own standing in a particular political party, or on the fortunes of the party itself generally. Mr. Wells looks into the financial condition of the country in the spirit in which he would enter upon a chemical experiment; not, of course, with the same indifference to the nature of the conclusions at which he arrives—for conclusions in politics involve the happiness of millions of living men—but with as much indifference as a man dealing with social problems can be expected to feel. The importance of this is all the greater owing to the influence which the free-trade and protection controversy still exercises on public opinion—a controversy which, as Mr. Wells says, "involves more of prejudice and of opinion founded on private self-interest than almost any other which, since the abolition of slavery, has occupied the attention of the American people." No man, therefore, who is noted as a partisan, or who has much of the partisan in his mental or moral constitution, can treat it with effect.

We do not propose to do more here than indicate the general tenor of his report; its separate heads will afford abundant material for discussion hereafter, and that there is plenty of time before us for such discussion may be guessed from the fact—we believe we may call it a fact—that there are now 219 plans for the resumption of specie payment (not including the plan attributed to General Butler, of not resuming at all) before the House of Representatives, some on paper and some in the heads of members. Mr. Wells first examines the present condition of the country, and he finds that there has been a great increase in production during the last five years, as indicated by an increase in the cotton and woollen manufactures, the yield of copper, iron, and coal mines, the extension of railroads, and the consumption of such commodities as tea, coffee, and sugar. The aggregate crops of this year and last he also pronounces larger in quantity and better in quality than ever before, and he alleges a general increase during the last three years in other agricultural products, though on this point he speaks less confidently. Nevertheless, he declares the condition of the great body of the people worse than it was in 1860, inasmuch as labor does not purchase as large a quantity of other commodities as it did in that year. In other words, the condition of the laborer at present is the same as it would have been if production, instead of increasing in the same or greater ratio than population, had gone on diminishing. This singular phenomenon—the failure of the laborer to share in the results of the increase and activity of capital—Mr. Wells ascribes to the necessity under which the capitalist finds himself of appropriating more than his normal share of the profits by way of insurance against the risks and uncertainty caused by an irredeemable currency. Another indication of decline in real prosperity he finds in the fact that there is not a single product of American industry which could now compete in foreign markets with those of foreigners, and not many which can compete in the home market without enormous protection, and none for which during the last two years—including *oil paintings*, *Indian corn*, *fire-wood*, *Bibles*, and *ice*—protection has not been claimed. In 1860, a good many American products were able to contend successfully with those of foreigner sabroad, and more still were able to retain possession of the home market without more than trifling protection. This painful result Mr. Wells ascribes also to "the state of the currency, heavy taxation, and a limited supply of skilled labor;" but how he makes the scarcity of skilled labor count for much when he shows elsewhere that enormous profits are being made in thel eading branches of industry, that the quantity of capital seeking investment is continually on the increase, that large numbers of skilled laborers who come to this country from Europe return home in despair of profitable employment, and that, according to the testimony of large manufacturers, a tendency to go home is visible amongst most European skilled laborers settled here, we do not very well see.

Most of Mr. Wells's attention is naturally given to the two forms of taxation by which the expenses of the Government are now met—the internal revenue and the tariff. Of the present condition of the internal revenue he speaks in the highest terms. When first instituted, it was the worst system of taxation ever devised by man; for it violated every rule of taxation discovered by human reason and experience, and operated on one of the richest and most complex of human societies. But the improvements it has undergone have brought it into close conformity with the system in use in England, and which is the product of three-quarters of a century of careful experiment; and the only change that Mr. Wells now thinks strongly desirable is an improvement in the machinery of collection, or, in other words, in the civil service. How important this improvement would be—or, in other words, in what a deplorable condition the civil service now is—may be guessed when we say that the total yield of the internal revenue at present is about $150,000,000; and Mr. Wells calculates that with a purified system of administration this would be increased to $225,000,000—or, to put it in another way, that the taxes might be increased by $75,000,000, this sum being now, in the opinion of competent judges, lost through the dishonesty or incompetency of United States officials in one department of the Government. So that a reform in the civil service would be equivalent either to the reduction of the excise taxes by one-half, or of the interest on the public debt by nearly one-half, and yet we seldom hear a word in its favor from the noisy patriots who are groaning so terribly under the burden of the bonds that they want to drive the holders into a forced conversion.

The tariff comes in for the larger share of Mr. Wells's attention, and, for obvious reasons, he has considerable difficulty in dealing with it. It is a subject on which a large number of men cannot talk or think calmly; it is a subject on which a great many others do not want to think calmly. The enormous value of the private interests involved in it have driven all scientific spirit out of the discussion and converted it largely into a game of mutual recrimination. Mr. Wells starts with the proposition that every European nation of importance has preserved the principle of protection in its legislation by distributing its burdens and restrictions in such manner as to favor domestic industry—the English, for instance, by letting in the raw material of their industry free and the food of their laborers free, and the Belgians by refusing to restrict the labor of women in their mines and iron-works. But elsewhere he speaks of the people of the United States being opposed to "free trade in the European sense," evidently taking up again the popular impression here that somewhere in Europe absolute free trade has been preached or acted on by statesmen or people, which is, of course, inaccurate. No considerable body of European free-traders have sought, and no European government has adopted, free trade in any other sense than the one in which he here advocates it in his report—that is, the distribution of the form of taxation known as the tariff in such fashion as to give the freest play to the national faculties and the fullest use of such natural advantages as the people may possess. He maintains that as the American tariff is now arranged it is in no rational sense of the word a protective tariff, inasmuch as it does not protect the weak industries or the industries which, possibly, through protection could eventually become self-supporting. It has not been arranged on anything worthy of the name of a policy or system. The strong and wealthy industries, such

as the pig-iron and the wool, which could bring powerful pressure to bear at Washington, have got all they wanted; the weak or divided interests, which could bring no pressure to bear, or only a feeble one, have been left to pine or perish, Congressmen acting invariably on the rule that protection granted, no matter in what quantity and to what branch of industry, could not but be advantageous for all, although in many cases the over-protection of one branch of industry is death to others of fully as great importance. Excessive and reckless fostering of pig-iron, for instance, kills the rolling-mills, and a thoughtless attempt to build up spool-cotton would, if the law had been put in force, have put an end to a growing manufacture of suspenders, gaiters, coburgs, lastings, and other worsted fabrics.

The illustrations with which Mr. Wells fortifies himself, and which he draws from a store such as no other man in the country possesses, and which he states with extraordinary clearness and power, make his treatment of this portion of his subject one of the most effective pieces of economical exposition it has ever been our good fortune to read. A stronger appeal to the country to insist on the revision of the tariff on a rational system—with a view, at least, to the *real* protection of whatever needs protection from the protectionist point of view, and can profit by it, and the stoppage of the enormous profits which several bloated interests are now drawing from the life-blood of the country—has never been made; and if it does not carry conviction with it, we do not know what will. We do not know, too, where to look for a better, though an indirect, presentation of the truth that the indiscriminate protection which our tariff aims at is one of the most singular of human delusions, and that when the legislature is economically feeble and without a policy, the protection of particular interests is never possible for any great length of time. You cannot, for instance, foster the wool-growers very long without fostering the woollen-millers, and once you attempt to foster both you foster neither. The report, too, though indirectly, brings out what is now one of the cardinal doctrines of financial science, that all taxes are diffused through all classes of the community in the long run, and that when you discriminate in favor of a particular industry it profits by the discrimination only till the tax has made itself felt in all others and brought prices up to their old level. In other words, you may give to a man that sells a spade the power of adding twenty-five per cent. to its price, but as soon as the farmer and tailor find out what you have done, they bring the spade dealer back to where he was by charging him twenty-five per cent. more for his bread and his coat. We trust Mr. Wells's pamphlet will meet with a wide circulation. Everybody who wants to form a rational opinion on the great questions which are to agitate the political world during the next two years ought to read it at least twice.

THE TURKISH QUESTION.

Before there is anything more said about the Greeks and Turks, it is highly desirable that those who are interested in the quarrel should form a distinct conception of what it is they aim at when they are getting up a pro-Greek agitation in this country. In so far as Crete is concerned, there are two things which it was perfectly legitimate for Americans to do for her: one is to forward contributions of money for the purchase of arms and ammunition, or for the relief of her distressed refugees at Athens and elsewhere; the other is to encourage the insurrection by expressions of sympathy. Both of these, as long as the insurrection had a chance of success, were not only not objectionable but praiseworthy; but to continue them one minute after the chance of success has disappeared would be not kindness but cruelty. If there be any public act about which orator or writer ought to hesitate, it is the encouraging men to persist in exposing their lives, and the lives of their wives and children, in a hopeless contest of which he neither shares nor intends to share the dangers or sacrifices; and nobody in this country, whose words were likely to reach the Cretans and excite in their minds false expectations, ought to have mounted the platform here in their behalf without having thoroughly informed himself, not from sentimental tourists or excited Philhellenes, but from experienced military men or politicians, as to the chances of the struggle on the island or the chances of European interference. We have read most of the speeches and documents made and issued by the Cretan sympathizers, and we regret to say we have not found one word bearing on either of those points. What we have been told of is Cretan heroism and suffering; but what we needed to know, before inciting the unfortunate combatants to protract their struggle, was whether they were likely to win in the end without aid from without.

That they were likely to get aid from without in Europe, except from Greece, nobody possessing any acquaintance with European politics has ever for a moment believed. The reasons against any such belief are numerous and weighty, but we have not space to go over them here. The disappearance of the Ottoman Empire from Europe would be a convulsion of the first order, likely to effect a great change in the seat of power and influence on the Continent, and for this no European state is at present prepared. They are all laboring in the throes of internal change, and the Eastern question is not pressed on them, as the Italian question was in 1856, by a statesman of the first rank like Cavour, having at his back a compact and well-ordered kingdom like Piedmont, which had shown in war, as in peace, skill, courage, and prudence. The sentimental interest in Greece by which Europe was thrilled forty years ago has wholly died out. The Greeks have literally no admirers, and few sympathizers on other than religious grounds. England did more for Greek nationality in transferring the Ionian Isles to her than any other power in Europe is willing to do, and there was no other power which did not think it at the time a bit of absurd generosity. Unfortunately for Greece, the condition of the Ionian Islands has ever since deteriorated; every good thing which depended on government for its maintenance is going down; so that the accession of the islands, instead of being a help to Greek nationality in the eyes of Europe, has been a hindrance.

As regards the relations between Turkey and Greece which are now undergoing discussion, one thing must be borne in mind by sensible men, and that is, that whatever the moral or political value of the Ottoman Empire or Greek Kingdom may be, both are bound by the rules of international law, and in all examinations of the relations of the two countries, from a political point of view, the right of Turkey to exist must be taken for granted. If no power were entitled to exact of other powers a faithful fulfilment of its international obligations unless they approved of its principles and internal economy, or, in other words, unless they "sympathized" with it, international law would become a mockery, and the world would be desolated by moral wars as it once was by religious wars. America is now urging fiercely against England a claim for retribution for having allowed its sympathies to influence its manner of performing its international duties, and it is not very long since the great majority of the people of the United States resolutely refused to interfere for the relief of black Christians at the South, on the ground that no State was responsible for wrongs not wrought within its political jurisdiction.

It must be borne in mind, too, that the rules behind which the Turks now entrench themselves have far oftener served the right than the wrong. They enabled Turkey to protect the Hungarian refugees in 1849; they enabled Piedmont to grow up into the champion of the new Italy; and they have preserved Switzerland through many storms and revolutions as the refuge of free thought, and the best example and best vindication Europe has yet afforded of free popular government. Nay, by preserving poor decayed Turkey from the ravening maw of Russia, they have given the Greeks time for mental, moral, and material growth, and for the political training which they will need to enable them to lay claim successfully to the Turk's place in Constantinople. International law, like all other law, doubtless is often perverted to the oppression of the weak, but it is, nevertheless, the weak who are most interested in having it reverenced and obeyed. That the Ottoman Empire in Europe will perish, and perish before long, and that it deserves to perish, we do not deny; but we do deny most emphatically that any good cause is likely to be served by encouraging a kingdom like Greece, without a cent in its treasury and with its debts repudiated, and without having established as a political community a single claim to the respect of mankind, to disregard the well-

settled rules of international law, and treat a neighboring power for which she is no match as an outlaw. The very best service the Greeks can render to the Hellenic race is to build up on what soil they have an industrious, orderly, and honest nation. If Greece were to exhibit itself to Europe for a few years what Switzerland is—a well-governed, well-cultivated, well-policed country—paying its debts punctually, and discharging its international obligations faithfully, and employing the orators and office-seekers who now infest Athens in agriculture and commerce, nobody would venture to deny its claim to be considered the heir of "the sick man" of Turkey. At present, European politicians treat its pretensions to the succession as ridiculous; and not without show of reason.

We must beware, too, of proposing to have the United States plunge into Levantine quarrels out of sympathy for Greek "Christians." Christians *qua* Christians enjoy far more freedom in all that regards their religious worship in Turkey than any other European government accords to dissenters. Anybody who wants to get up sympathy for the victims of religious persecution must seek them not in Turkey but in Russia, where Catholics are marched to Greek churches between files of soldiers by order of a Government which is continually howling over the woes of its co-religionists south of the Danube. A religious persecution is now raging in Poland and the Baltic provinces of Russia such as has not been witnessed in civilized Europe since the dragonnades of Louis XIV., but we do not hear of a Christian voice being raised here in protest. Turkish Christians not only worship freely in their own faith, but they are governed even in matters political by the ministers of their own faith. To be sure, they are often the victims of oppression; but it is the fitful oppression of careless and indolent barbarians, which, compared to the organized bureaucratic oppression of Russia, is but a trifle, and it is made supportable by the consciousness, which its victims all have, that it is evanescent.

There is nothing of much greater importance to the world at this moment than that Constantinople should, when the Turks depart, fall into the right hands. It is the natural as well as the traditional capital of regions of unsurpassed resources, and which have now for fourteen hundred years lain fallow and quarter-populated, and it lies between two great inland seas to which the wealth of what are to be the richest countries of the Old World will naturally flow down, and in its streets Asia and Europe will for ages to come meet and trade. It has, too, historic associations, both political and religious, such as no capital except Rome can claim, and which to any great capital are of untold value. The civilized world, therefore, is interested in having it descend to a race worthy of its great future. The Greeks ought to be that race, but they have as yet done little to prove that they are. They are relying more than modern opinion will bear on their undoubted talents, and, absurdly enough, on the history of the previous occupants of Greece, whom it pleases them to call their ancestors. But these are not enough. The world will not believe in their capacity to do great things hereafter as long as the small things which lie at their feet are neglected.

HOW TO REACH THE NORTH POLE.

This is the geographical "conundrum" of the day. "How to gain the sources of the Nile" having been determined by the bold adventures of Speke, Grant, Baker, and the rest, the interest of the public and also of learned geographical societies appears to have turned away in hot haste from the tropics and to be resting in the neighborhood of the North Pole. National rivalry seems to act as a stimulant to scientific zeal, and four or five exploring parties under leaders from as many different countries are eager to be foremost in carrying northward the discoverer's flag. It is a curious fact that the proposed expeditions from France, Germany, and America are all strenuous for different routes. It would be as hard to convince Dr. Hayes that success lies north of Spitzbergen as to make Dr. Petermann believe that a third expedition by the way of Smith's Sound will reach the desired goal; and neither Petermann nor Hayes, nor all the other disagreeing doctors, can make M. Lambert believe that he is wrong in choosing to go by the Pacific Ocean and Behring's Straits. As a result of this difference of opinion, we are likely next summer to hear of several small and poorly equipped expeditions breaking through the pack-ice and resisting the polar currents, when all the learning and all the bravery and all the purses of the geographical societies ought rather to be concentrated in one bold attack upon the dominions of the northern ice-king.

All these expeditions will unquestionably increase our knowledge of the coast lines of the arctic seas, and we shall also have copious additions to the nomenclature of a region already well stocked with the names of Parry, Ross, Wrangell, Franklin, and other voyagers; but such results will seem slight while the main question is not answered. This question pertains to the nature of the area surrounding the North Pole. Is it an open sea, as Kane and Hayes insist? Or is it partly *terra firma*, as Petermann depicts it? Or is it a frozen ocean, according to the theory of the early navigators, still widely adhered to? We are yet *seven degrees of latitude* from a solution of the problem, and he who first traverses that intermediate space—between the highest point now reached and the pole itself—will achieve for himself everlasting renown in the annals of discovery.

As Americans we have a special interest in the result of these enquiries, for it was the brave Dr. Kane by whom the probability of there being an open polar sea was first advanced in an address which he gave in New York as early as October 14, 1852; and it was he who announced, on returning from his second voyage, the probable discovery by Hayes and Morton of such an open basin; it was Dr. Hayes who went out in 1860 in the hope of establishing beyond all cavil the reality of this discovery; and it is he who now makes a strong appeal to the American Geographical Society, and to all of our countrymen who care for arctic researches, to take up afresh this enticing investigation.

The earnest appeal of Dr. Hayes which was made in New York on the twelfth of last November, and which has since been printed in a pamphlet, deserves consideration in connection with the views of European geographers and the recent movements which they have inspired for the prosecution of arctic researches. We propose to take our readers, therefore, to four important centres of geographical study, and to enquire what is there thought upon the problem of reaching the North Pole. We shall then return to the American stand-point and add a few comments of our own. Let us first stop at Gotha, the seat of the renowned geographical institute of Justus Perthes.

Dr. Petermann, the scientific head of this establishment and the editor of the *Geographische Mittheilungen*, is one of the most learned and accomplished scholars in his specialty, and arctic voyages appear to have exerted upon him in particular their potent fascination. His journal abounds in admirable maps, of various forms, illustrative of all that has been achieved by successive explorers in "the high North," so that it would be exceedingly difficult to study these questions without his cartographical assistance. He pays high tribute to the brave achievements of Kane and Hayes; but as for their open Polar Sea, he does not seem to see it. In a map which he published in 1865, and referred to in 1867 as authority, Greenland is hypothetically extended north almost to the latitude of 90° and across the arctic regions nearly to Behring's Straits. Smith's Sound, the route which Kane and Hayes have followed, is regarded as leading into a land-locked bay, or *cul de sac*. On the other hand, Dr. Petermann regards the region immediately surrounding the Pole and extending south to Spitzbergen as an open sea, which may best be reached by way of that northern European island.

Guided by this opinion, and inspired by his enthusiasm, a preliminary expedition has been engaged in explorations during the summer of 1868. It returned at the end of the season, having reached a point in 81° 5′ north latitude, which is further than any vessel had hitherto penetrated, for the latitude of 82° 45′ gained by Parry in 1827 was reached by sledges on the ice. This German expedition was restricted in outfit by the want of ampler pecuniary means, and its work should be regarded as only that of a preliminary reconnoissance which will probably lead to higher results. Dr. Petermann, with a perseverance which is characteristic of him, already proposes a new expedition for the Spitzbergen route, to be undertaken next year. A Bremen merchant has offered him two small steamers, and they are to enter the Polar regions between Spitzbergen and Nova Zembla. Dr. Petermann distrusts entirely the possibility of success by the Smith's Sound route, and with a strong show of argument, based especially on the well-known moderating influences of the Gulf Stream, urges attention to his favorite plan.

If we go to Stockholm, we shall find that for several years the Swedish Government has been engaged in the encouragement of explorations around Spitzbergen, the results of which have been made widely known through Swedish journals, and also through Dr. Petermann's *Mittheilungen*. During the summer of 1868 a small vessel was detailed to push as far north as it could go. It is reported in the newspapers

that it attained in the open sea a latitude of 82° 40′, which is only 5′ less than the point before referred to as reached by Parry upon the ice, in 1827 (82° 45′). Professor Nordenskiold, to whom the former explorations owe so much, has had part in this new expedition, which is hardly to be regarded as an independent Polar expedition, but as an extension of Swedish surveys hitherto undertaken. Its results are, however, very encouraging, and the voyage of the *Sofia* is not likely to be forgotten. If the reported latitude is correct, it is a degree and a half further than the *Germania*, Dr. Petermann's vessel, penetrated.

Let us next turn to London. The subject of arctic exploration was brought before the Royal Geographical Society, at one of their recent meetings, by Captain S. Osborn, of the Royal Navy, a well-known explorer, who is desirous, for the honor of the service, that these fields of research shall be further explored by the British navy, and who advocates loudly the old route by Baffin's Bay and Smith's Sound. In his discourse he hits right and left, like the bold sailor that he is, now at Hayes and now at Petermann, and now harder than ever at the British Government, for having spent in ten years £115,000,000 sterling on the navy, and only the one hundred and sixty-fourth part of that for the advancement of science. But with all these side hits he fights lustily for the Smith's Sound route, and claims that a good steam-vessel, and such resources in sledges and men as shall enable autumn and spring journeys to be safely undertaken, will certainly lead to success.

In Paris, the theme of arctic exploration is discussed under the leadership of M. Lambert, who is a firm believer in the advantages of access to the Polar basin by the way of Behring's Straits. He proposes to raise by subscription the sum of 600,000 francs, and the Emperor heads the list of subscribers with the sum of 50,000 francs. The Imperial Geographical Society has endorsed the enterprise; but, judging from the last statements which have come to us, the people are not responding with any zest to the call for money. It will take a long time to raise the amount proposed by contributions as small as those acknowledged as received from some prominent men.

This western route is not without advocates in this country, and among them may be named Messrs. T. L. Kane and Bent, and especially an American sea-captain, Thomas Long, whose name is now in all the geographical journals as the discoverer of a tract of land hitherto unknown within the Arctic Ocean, north-west of Herald Island. In a letter which he recently published at Honolulu, he gives some common-sense reasons for thinking that the Behring's Straits route is the best.

Now, with all this interest in Europe, it is not strange that the American Geographical Society, and especially that Dr. Hayes (whose plans of a third journey were interrupted by the recent war), should again enter the field. Dr. Hayes repeats the well-known arguments for sending an expedition by "the American route" which Dr. Kane and himself have already made known to us. The advantages which he urges are two in number, namely, land as a base of operation, and the opportunity of colonizing a party of hunters and natives as a permanent support. In presenting these views, he considers carefully the advantages which have been presented in favor of other routes. Next to his own way he prefers the route by Behring's Straits. His eloquent advocacy of a renewal of the research can hardly fail to awaken some response from Mr. Grinnell and his associates, who have already been such liberal promoters of discovery.

We have thus endeavored to lay before our readers in a brief way a summary statement of the most recent phases of arctic discovery. They have seen that in London and New York the Smith's Sound route finds favor; that in Gotha and in Stockholm the sea between Greenland and Nova Zembla, or around Spitzbergen, seems the better mode of approach; and that in Paris and Honolulu the Behring's Strait route is advocated. We do not feel called upon to pronounce an opinion respecting these rival claims; for without any doubt a well-organized party by either route will largely increase the sum of human knowledge. But we may say that we see no weighty reasons that compel us, none indeed that incline us, to suppress the American feeling that for us *the* route to be followed is that where our flag has already achieved such renown.

We earnestly hope that measures will be taken to enlist the Government in fitting out an expedition, or at least in furnishing a vessel and a crew. We do not urge any addition to our heavy national expenses; we only ask that some one of the many vessels lying idle, or making peaceful observations in pleasant harbors, be set apart for arctic research, and that an opportunity be given to officers and men, already enlisted in the service, to engage in arctic explorations. Then let private enterprise furnish the many "extras" which may be needed for the highest success and comfort of the explorers.

ENGLAND.

LONDON, December 25, 1868.

IN the last number of the *Nation* which has reached me is an interesting article entitled "The English Democracy at the Polls." Though fully agreeing with most of its statements, perhaps you will allow me to remark upon one or two additional considerations, which may help to explain the result of our last elections. This result has undoubtedly disappointed many persons, and especially those who expected to see some great and sudden changes—say a largely increased representation of the extreme radical wing and a number of working-men in Parliament. Although it is easy to be a prophet after the fact, I must say that I never anticipated such an event. Wealth and rank have, I need not observe, enormous power in England, as one of them, at least, has all over the world; nor is the power materially less upon the lower than upon the upper stratum of the poorer classes. It was perfectly certain that the same influences by which men have up to this time won their way into Parliament would still be operative, and that for the present, at any rate, that body would be substantially composed of the same class as before. I am not surprised to see by the last *Spectator* that the number of members of noble families and their immediate connections forms about one-third of the House, while of the other two-thirds a large proportion consists of men of wealth and standing, whose sympathies will not be very different. How long this will last after the new constituents have begun to feel their power, is a very different question; that we should begin by accepting the lead of the old governing class is only in accordance with English precedent; and the only remaining question is, how it came to pass that something more of a beginning was not made, and that, for example, some small detachment of eager radicals and working-men members was not introduced into Parliament? To this, besides the answer you have already given, I would suggest the following explanations:

In the first place, it must be remembered that, in spite of all that was said to the contrary, the reform of Parliament was not a concession to any vehement popular cry. There was, it is true, the riot in Hyde Park, which was discreditable to every one concerned, but was more an impromptu ebullition of the popular love of a row than indicative of deep political excitement. Nobody, to say the truth, was very much excited; there was nothing at all approaching to the popular enthusiasm which carried the old Reform Bill or the repeal of the Corn Laws. The utmost that anybody could say was that the public feeling was in a condition which, if long continued, and if irritated by useless opposition, might possibly become dangerous. We may be almost said to have drifted into a reform bill; the Liberal party became pledged to it without being very anxious for it, and managed to get it into a position where, so to speak, it blocked the way, until Mr. Disraeli cleverly resolved to take the wind out of his opponents' sails by passing their measure for them. If the victory had been won as the result of a keen struggle in which violent popular feeling had been excited, the conquerors would probably have been anxious to take advantage of their success. They would have occupied the citadel which they had gained by some of their most devoted adherents. As it was, possession came to them so quietly, and with so little of the ordinary excitement attendant upon severe struggles, that it excited comparatively little triumph. Instead of the power being thrown into the hands of the Jacobins of the party, it was still allowed to be wielded by the moderate men.

In the next place, the question which was prominent at the elections was not calculated to arouse the sense of latent power. I will not ask how it happened that the Irish Church came into sudden prominence, which is now an uninteresting bit of history. It is, however, known that even in Ireland the existence of the Irish Church is by no means the grievance which excites the deepest feeling. Every one, except bitter Orangemen, admits that it ought to be removed; but it is not the prime cause of Irish agitation nor the object of the bitterest animosities. In England, of course, the feeling of the constituents is far more languid. An English workman would probably know next to nothing about it, and care less, until he heard it discussed upon the hustings. If a dissenter, he might have a dislike to established churches generally; and if of no particular creed, to all varieties of parsons. But it is obviously not a question which immediately touches either his pockets or his class prejudices. Indeed, another feeling was very perceptible. The great manufacturing county of Lancaster went decisively for the Conservatives, and to a great degree because antipathy to the Irish was a far stronger feeling with the English artisan than sympathy for the injustice to which Irishmen are subjected. The sentiment exhibited in a common form of advertisement, "No Irish need apply," has sunk pretty deeply into the class which looks upon Irishmen as cheap and nasty competitors in the labor market.

The power, then, has been given into the hands of the laboring class

whenever they choose to use it. But it was not given under circumstances which made them specially anxious to show their power; nor was the question upon which their power was first to be exerted one which was likely to call out their prejudices as a class. They have therefore responded naturally by electing a great Liberal majority; but a majority of Liberals of the old type. Further, I may observe, the town vote, where household suffrage prevails, has been very strongly Liberal; the country vote, where the standard is still at £12—that is to say, at a rate sufficiently high to exclude the mass of the working-classes—where the clergy and the country gentlemen have enormous power, has been Conservative. The state of feeling thus indicated was certainly unfavorable, on the whole, to the election of working-men. In Chelsea, for example, Mr. Odger might have received the votes of the ardent radicals; but ardent radicals were not sufficiently numerous to enable them to carry a candidate of their own; they were obliged to take the member who would attract the lukewarm Liberals as well as themselves. I cannot myself much regret this result; for, except in very special cases, I doubt whether a working-man in the British Parliament, as at present constituted, would do more good than harm. At any rate, it is, I think, abundantly plain that we must wait either for the appearance above the horizon of more stirring questions, or for a gradual development of a consciousness of their own power amongst the working-men, before any great change will be manifest. When will that take place? I am no prophet, but it is easy to see that some important questions are coming up which may hasten a substantial change in the tenure of power.

One of the least agreeable symptoms, the existence of which is taken by some observers to indicate approaching danger, is the startling increase of pauperism, especially in London, during the last few years. In a paper lately read by a well-qualified observer some remarkable facts were given, which illustrate the condition of affairs. In the late years of commercial depression it is not surprising that there should have been some increase of distress among the poor. Lancashire, for example, has never recovered from the effects of the cotton famine. Pauperism, however, has increased twice as fast in London as it has elsewhere. The ratio of increase from 1860 to 1868 has been 59 per cent., and it is said that at the present moment there are 100,000 children unprotected wanderers in the streets of London. This rate of increase is, of course, produced in great measure by the fact that the poor from all parts of the country flock to London with the hope of finding employment. Meanwhile, the East-end of London itself is in a state of almost chronic pauperism; it is almost impossible to raise the poor-rate without doing more harm than good by ruining numbers of the lowest shopkeepers and others, who are just struggling above the brink of pauperism. London, for such purposes, is not one town, but a collection of villages. The poor of the whole metropolis gravitate towards the East-end, and the East-end has to support them all. Thus the tendency is to ruin the lowest class but one in order to maintain the lowest class of all. In such a mass of hopeless poverty there are undoubtedly the elements of great social danger. Meanwhile, and this is a curious point, it is estimated that the total amount of charity annually distributed in London, by the state, by poor-rates, and by voluntary contributions to hospitals, schools, and direct relief of the poor, amounts to no less than $35,000,000 annually. Another computation would increase this by $6,500,000. In short, Mr. Peabody's munificent gifts amount to a mere fraction of that which is annually given. If one-eighth of the population, or 400,000 people, were entirely dependent upon the remainder, this would suffice to give $85 annually to each, or $425 to a family of five persons. This great stream of charity is not merely ineffectual towards reducing distress, but undoubtedly it does, in many ways, more harm than good. It contributes to pauperize the population. "Pauperize" is a melancholy euphemism only too expressive. It means that there is a large class of professional beggars who have lost the spirit of independence, and do not work, on the speculation that other people won't let them starve. And if it be asked how so large a sum of benevolent contributions is so hopelessly wasted, one answer is that a great part of it is intercepted by totally undeserving objects; and that whilst people who would be fit objects for houses of correction are living comfortably on the spoils of the benevolent, numbers of deserving people are literally in a state of starvation. A society has been formed whose great object it is to grapple more effectually with the evil, by a proper organization of the various charities, so that some pains may be taken to discriminate between the different classes of applicants, to help effectually those who deserve help, and to discourage the system by which charity is rendered ineffectual.

That so much should be given in charity is, perhaps, some answer to those who accuse the upper classes of a total want of sympathy for their poorer brethren; that it should be given to so little purpose is a proof of the crying want of some superior means of organization; but under any circumstances, the plainest result is that there are social problems waiting for solution which may test the abilities of our statesmen, and possibly endanger the position of our governing classes. I will not, however, seek to moralize on a state of things from which you will find it only too easy to draw some important conclusions which are not without a very direct bearing upon the future of English politics. A civilized state which includes in its bosom so vast a mass of pauperism has need of something more than benevolent intentions, and even than benevolent actions. I will add that, great as is the evil, I for one do not believe for a moment in the omens which some persons have drawn of an approaching revolution in any violent sense; though I do believe that we have more serious questions to consider than (without detracting at all from its importance) that of the Irish Church.

I have left myself no room to do more than notice in the briefest way one other event which, perhaps, may lead to considerable results. The Irish Church difficulty will, as has often been said, probably lead to some struggle over the state Church in England. There are already some other symptoms of a difficulty. The highest court of appeal—that is, the Judicial Committee of the Privy Council—has just decided against the legality of certain practices of the Ritualists, and especially against the practice of lighting candles and of prostration before the sacrament. Will the Ritualists submit to state control? will they try to set up a free church? or will they, or any number of them, join the Roman Catholics? The answer to these questions is beyond me, as I don't profess to account for the acts of Ritualists on rational principles; but the future of the Church of England will depend to a considerable extent on the course they may take. Of this I may have occasion to speak in future.

Correspondence.

THE HARVARD PRESIDENCY

To the Editor of the Nation:

Sir: In your article on "The Presidency of Harvard," December 31, I find the following:

"Trinitarians like to proclaim that it is so [Unitarian], in order that they may frighten the lay orthodox into entrusting their sons to some provincial fold where sound doctrine constitutes a formidable proportion of the pabulum administered. There is nothing that would please the so-called orthodox, as well as Unitarians, so much as to see a Unitarian clergyman elected president of Harvard."

The principal matters asserted in these sentences seem to me untrue, and very unjust to a large and respectable portion of the community, very many of whom, to my certain knowledge, are constant and interested readers of the *Nation*.

What is the proof that the "so-called orthodox" would be pleased to "see a Unitarian elected president of Harvard"? I not only challenge the proof of this assertion, but I deny its truth. I have some acquaintance with the "so-called orthodox," and I affirm, that so far is this assertion from being true that few events could give more pleasure to orthodox people, and especially to their leading minds, than to see a man placed in that high position who, to a broad and generous culture, should add sound and, in their estimation, true religious views. That he was a clergyman would, in their estimation, neither be a qualification nor a disqualification for the office. His fitness would be found not in his profession, but in his character. He should be a man whose culture is as broad and generous as the nineteenth century can afford, having a true magnetic power over the minds of the young, and such practical wisdom as would eminently fit him for administering any delicate and difficult trust, either in church or state. When you assert that the "so-called orthodox" would not rejoice, and greatly rejoice, at seeing such a man placed at the head of Harvard, you show clearly that you would have a more favorable opinion of the orthodox if you were better acquainted with them. If to this you reply that you considered the election of such a man out of the question, then what becomes of your assertion that "Harvard is not, and for a good while has not been, in reality sectarian?"

You also give us to understand that the reason why the orthodox would desire to see a Unitarian clergyman elected president of Harvard is, "that they may frighten the lay orthodox into entrusting their sons to some provincial fold where sound doctrine constitutes a formidable proportion of the pabulum administered." If you have proof that their wishes in this matter are controlled by such considerations, you owe it to your own repu-

tation for fairness and candor to furnish your readers with it. The spirit and intention which, by using such language, you charge upon the orthodox is in the last degree mean, dishonest, and contemptible. If the *Independent* or the *Tribune* had made such charges against the *Nation*, we should see with what dignity they would be repelled. Why, then, should the *Nation* lay such charges against the largest and most influential class in Protestant Christendom? It surely will not be thought unreasonable that the proof is challenged. Proof will justify the making of the charge; nothing else can. I, at least, am willing you should lay anything to the charge of the orthodox which you can prove.

Where are those provincial folds, etc., of which you speak? What are their names? If the words "sound doctrine" mean anything, they mean the characteristic peculiarities of the system known as orthodoxy. In that sense your readers will necessarily understand you to use it. I know something of colleges whose trustees and teachers are orthodox men; and I affirm that if there are any to which your description is at all applicable—any in whose curriculum sound doctrine as just defined forms a "formidable proportion"—they must be so obscure that it requires those superior means of information which the *Nation* possesses to know of their existence. And yet the *Nation* could not have been speaking of obscure and little-known schools. It was speaking of schools of such well-known reputation that the "so-called orthodox" are notoriously desirous of frightening the lay orthodox into sending their sons to them. Will the *Nation* name these "provincial folds?"

We must be greatly enlightened as to the existing state of facts in the colleges controlled and instructed by orthodox men, or we shall be compelled to regard the sentences which I have quoted as unjust and untrue, and quite inconsistent with that fairness and candor which generally characterize the *Nation*, and for which we chiefly value it. J. M. S.

[We cannot prove it, and are ready to submit to any shame or disgrace this confession may entail. We knew the risks we incurred when we made the assertion. The fact is that it is one of those generalizations which one makes every day, and has to make in discussing social and political topics, and which cannot in the nature of things have more than a very narrow basis, made up partly of personal experience, partly of the experience of friends, and partly of impressions derived from forgotten reading, conversation, and so on—in fact, the kind of basis on which *all* generalizations about the tastes or feelings of large bodies of men must rest. If we asserted that Unitarians liked pie, we should assert something which we believe to be as near the truth as any proposition of this nature can be, or is ever expected to be, by men familiar with reasoning; but if called on for *proof*, it would be impossible for us to furnish it. "J. M. S." might produce fifty Unitarians who hated pie, and might allege that his experience of Unitarian tastes brought him to a diametrically opposite conclusion, to which we should have nothing to reply beyond expressing our regret at differing from him, and should be forced to fall back on our general character as observers and generalizers. We publish his letter simply as an acknowledgment, which to educated men we ought not to have to make, that a competent writer on social or political questions, predicates nothing of the tastes, tendencies, opinions, or character of large classes as absolute and exact truth. All such propositions are well understood to be simply approximations to the truth, the value of which is not diminished by the production of negative instances. "J. M. S." will observe that he rests *his* generalization, "that few events would give orthodox people, and especially their leading minds, more pleasure than to see a man," etc., on a basis precisely similar to that of our generalization, namely, "some acquaintance with the so-called orthodox." If we were to call on him now for "proof," we should place him in a very awkward position, because if he produced *all his* orthodox acquaintances to corroborate his assertions, he would still have the overwhelming majority unaccounted for, and likely at any moment to operate on his flank or rear. For similar reasons we decline to name any college as being the "provincial fold" we had in our mind when the article in question was written, because it would plunge us in a sea of difficulties from which we could only escape by endless humiliations. We should have to define "provincial," prove that the college in question was "provincial," and that it was a "fold," and that most of its "pabulum" was "sound doctrine," and should probably find in the end that we had convinced nobody, and thrown dozens of worthy men into a violent and unbecoming rage. But if "J. M. S." will point out a "provincial fold," we will say frankly whether we meant that one or not.—Ed. Nation.]

"THE UNPOPULARITY OF PRODUCTION."

To the Editor of the Nation:

You will suffer me to correct an error of statement in your article on "The Unpopularity of Production," in the *Nation* of December 24. I call your attention to it more particularly because I have an impression that I have seen a similar mistake in your columns before. You say very truly that there is "a glut" in the non-producing classes of our country. But in enumerating examples you fall into the error of including "clergymen" among those whose supply exceeds the demand. This is an error into which laymen are apt to fall, but is far from being borne out by the facts and figures of the case. Every Protestant denomination is lamenting its inability to supply its pulpits. I have seen the published statistical tables of nearly all of them (though I have them not at hand just now), and I distinctly remember that the disparity between churches and ministers is in all cases considerable, and in some almost appalling. My own denomination (the American Reformed Church, recently the Dutch) is not one of the largest, but, on account of its average wealth and its location in the older and richer sections of the country, is better able than any other to supply its deficiencies from its neighbors. Yet its ministry in active service (exclusive of foreign missionaries) numbers not more than 400, while its churches in this country number 435. The Presbyterians, Baptists, Congregationalists, Episcopalians, and even the Methodists, exhibit still greater relative disparity between the supply and demand.

I may add that almost all the theological seminaries complain that the number of their students does not keep pace with the progress of the churches which they represent, and that the number of young men entering the ministry barely supplies the vacancies, much less meets the spiritual necessities, and even calls, of our rapidly increasing population. New churches in destitute and pioneer settlements cannot be established, owing simply to this deficiency.

I am moved to this correction because such statements as that there is a glut in the ministry are calculated still further to increase the difficulty of inducing young men to enlist in this ill-paid and self-denying profession.

I think that the exception which I have pointed out is calculated only to strengthen your main point, viz., that the desire to become rapidly and exceptionally rich is depleting the ranks of our producing classes, inasmuch as the deficit in the ministerial supply is directly traceable to the same source. Yours truly, —— ——.

[There are two kinds of "demand" known to political economists; one is the ordinary desire which nearly everybody feels for whatever is useful and agreeable, but this exercises no influence whatever on the supply. The other is what is called "the effective demand;" that is, the demand which produces the supply, and which is testified by a readiness to pay whatever may be needful to bring the supply into the market. In saying that there was a glut of clergymen, we were, of course, looking at clergymen from an economical point of view, as laborers demanding wages, and preferring high to low wages. That clergymen are laborers of this kind is one of the facts of life which cannot be overlooked, and as such we submit that we were strictly accurate in saying there is an oversupply of them in the field. What our correspondent shows is, that there are not as many of them as it would be for the moral good of the community to have; but on this point we have predicated nothing. What he fails to show is, that there are not more of them than the community can pay as high wages as the same men can earn in other employments. It is true, no doubt, that there are more congregations than ministers, but this has nothing to do with the point under discussion. It is not true that the congregations are willing to pay enough to make the profession economically attractive as compared with others. The consequence is that there are large numbers of clergymen, not indifferent by any means to the comforts of life, who are hardly able to keep body and soul together on their salaries, but who might, as machinists or spinners or shipbuilders, earn far more. In other words, there is an economical excess of clergymen. In the same way, no matter how many men went into the watchmaking business, there would, no doubt, be still a large

number of worthy persons in the United States without watches, or only provided with very inferior ones; but if the watchmakers found that nevertheless they could not earn enough to live comfortably, it would be a sure sign that there were too many of them.

The salaries of clergymen now are much lower as compared with the salaries of thirty or forty years ago than people imagine who judge merely from the amount in money. Setting aside the decrease in the value of gold and silver coin within that period, which is considerable but uncertain in amount, we must take into account the depreciation of the paper currency as well as the loss of the social consideration in which the ministerial office was once held, and the great increase in the demand made on it as regards culture and mental activity. When clergymen were almost the only cultivated men in the community, and its principal guides, even in political matters, of course the deference with which they were treated exercised its usual influence in making the profession attractive independently of the salary. They no longer occupy this position, and no attempt has been made by congregations to make up for the loss of it in fixing the amount or nature of their remuneration. Then, also, a clergyman's literary and professional training at college one hundred, or even forty or fifty years ago, nearly carried him safely and successfully through his professional career. A few books of reference added to the standard text-books of the divinity school enabled him to meet the intellectual demands of his time. Dogmas were tolerably well settled, and the mind of the community, if active on religious matters, kept within very narrow bounds. All this is now changed. In our time the best school and college training only very slenderly fits a man for the teacher's office. He can only keep up with his work, and make himself feel equal to his work, by incessant labor and keeping constant watch of the social and intellectual movements of the day, in all countries. This means, when you come down to hard facts, that he must keep constantly buying books and periodicals, and must enjoy now and then the means of intercourse with other men of intellectual tastes and habits, and some practical acquaintance, however slight, with the great social forces. Ministers of real power, and animated by a high sense of duty, feel and know all this, but are not sufficiently well paid to help themselves. The consequence is, that hundreds and thousands of them pass their lives in what is, to a man who takes just views of life, the saddest of all positions—that of a laborer who has undertaken to do work which, through no fault of his own, he finds he cannot do well, or cannot do at all. Seeing this, it is no wonder that the best young men avoid the profession, or only enter it in small numbers. The remedy will come when the well-to-do Christians who compose their congregations make the demand for ministers and missionaries effective by offering to set apart a larger portion of their own gains for the use of those whom they ask to help them in solving the great problems of existence. The argument that ministers *ought* not to want more money, and therefore do not need it, is an argument which one meets with frequently, both in political and social discussion; but the proper field for its use is the nursery. Ministers are men, and you cannot make anything but men of them by any course of training. That the Catholic Church does not suffer from this difficulty, does not affect our position. Priests have neither wives nor children; and it is human to be willing to take less pay for an office in which you exercise the power of forgiving or retaining sins, are confessed to as the representative of the Almighty, and meet a congregation as its spiritual master, than for an office in which your business is simply to teach, and perhaps bear as much unmannerly and ignorant criticism as the constitution of a sedentary man can stand.—Ed. Nation.]

Notes.

LITERARY.

Some of our readers, we dare say, have read with some pleasure a brief historical work on a certain portion of history little known to most readers, yet very attractive not only for its freshness, but for the pictures it presents of superabounding vigor, of courage, adventurousness, sincerity, love of freedom, and all the manly qualities. We refer to the Scandinavian history of Professor P. C. Sinding, who writes of his countrymen with all his countrymen's honesty and hearty simplicity and enthusiasm. So, at least, we remember his book. We are glad to announce that he is about to publish again, although we are ignorant as to his qualifications for the particular task which he now has in hand. But he would hardly undertake what he is unfit to do, we should say. He is soon to put before the public a work in four volumes, entitled "Thorwaldsen and his Works." It will chiefly be composed of 365 copperplates which have been imported from Copenhagen. For these pictures, Professor Sinding furnishes the explanatory letterpress.——Messrs. Hurd & Houghton announce as in press: "The Little Housewife," with twelve illustrations by Oscar Pletsch, and "The Memories of a Little Boy," by Julia Gouraud, with eighty-six illustrations by Emile Bayard.——Messrs. Lippincott & Co. announce that the editor of their republication of "Swift's Works"—which are to be "carefully selected," and not too carefully, let us hope—is Mr. D. Laing Purves, who prepares a biography as well as notes. The editorial work of this house's "Miscellaneous Works of Oliver Goldsmith" is done by Professor Masson, a writer not incompetent. "The Works of Laurence Sterne" will be in one volume of the "Globe Edition" size. "Douglas Jerrold's Complete Works" will be in five volumes. Another new work which Lippincott & Co. will soon issue is still one more book of European, or rather Asiatic, travel—"The Old World," by Dr. Jacob R. Freese, U. S. Commissioner to the Paris Exposition; and others are lives of "St. Louis and Calvin," by Guizot; Zurcher's and Marjolli's "Volcanoes and Earthquakes," in an English dress; "On the Cattle Plague, or Contagious Typhus in Horned Cattle," by Dr. H. Bourguignon; and "Anecdotes of the Clergy in America," by some unannounced compiler.——Messrs. Robert Carter & Brothers announce "Tales from Alsace"—a translation we presume—which relate to "life in the days of the Reformation," and the same house lay claim to several "Juveniles," which will not, we suppose, meet the eye of the general public for some time to come.——We have to add to Messrs. Putnam & Son's list the titles of three works, "Our Admiral's Flag Abroad," by James E. Montgomery; "Sermons Preached in Grace Church," by the late Dr. Thomas H. Taylor; and "Studies in General Science," by Mrs. Antoinette Brown Blackwell.——Messrs. George Routledge & Sons will speedily publish a new work by the Duke of Argyll, the author of the clever "Reign of Law." It is called "Primeval Man, an Examination of Recent Speculations."——Messrs. W. A. Townsend & Adams announce that they will publish from advance sheets a collection of the writings of a contributor to *Land and Water*, to which their author has given the title, "Gun, Rod, and Saddle: Personal Experiences; by 'Ubique.'" The same firm have in press another collection of articles that have appeared in a periodical, namely, the lectures on food delivered before the Society of Arts, by the distinguished Dr. Henry Letherby, and afterwards reproduced in the *Chemical News*. Professor Seely writes the introduction and notes, and the work will certainly have value.

—The *Rhode Island Schoolmaster* for January complains of the indifference of parents towards the provision for schools and the selection and conduct of teachers. At a certain district meeting called to appoint officers for the ensuing year, to fix the school term, etc., but six out of the twenty-eight fathers and guardians "interested" were in attendance; and this is usually the case. "Some week or two after the term of schooling had commenced," continues the writer, "out of curiosity, I asked one of the patrons of the school who was their teacher, and the reply was, 'I don't know.'" The sixty-four parents, in another town, so completely ignored the presence of a school in the very centre of them that "but two of the whole number visited it during the entire four months," and the trustees only during the closing fifteen minutes of the term. "A very attentive man to his ordinary business . . has not attended a school meeting, or visited the school where he has sent his four children, term after term, for the last sixteen years or more." One would like to enquire how regularly he attends political primary meetings, and how often he votes at the polls. We were glad to see, in the *Schoolmaster*, the reference made by Superintendent Leach, of the Providence schools, to an important article in a late number of the Boston *Medical and Surgical Reporter*, on the defective eyesight of school-children, its progress and its causes. We hope to say something on the same subject at an early date.

—Messrs. Sampson Low, Son & Marston recently, in their monthly bulletin of news, made a statement in regard to English importations of American books which Trübner's *Record* shows to be very incorrect. It was said in the bulletin that the Board of Trade statistics showed the surprising fact that England imported from Holland more books by three thousand pounds' worth than she imported from the United States. This statement was an inference from figures which showed that from the

United States and North Atlantic ports—no North Atlantic ports out of the United States count for anything—Great Britain and Ireland took publications to the value of £7,887. From Holland the importations into the United Kingdom amounted in value to £10,740. But the truth is that by far the greatest part of the literature shipped from Holland is produced in Southern and Western Germany and Switzerland, just as by far the greatest part of the thirty-four thousand pounds' worth that Hamburg sends annually to Great Britain is written and printed and bound not in that city, but in various towns and cities of Russia, the Scandinavian countries, Austria, and Northern, Eastern, and Middle Germany. It is a very well known fact that the Dutch literature of the day is almost unknown to any but Dutchmen; it caused great surprise, even among the omniscient critics, when the other day an English prelate and scholar said he found Dutch exegetical works of great assistance to him; and the appearance in English last year of a novel, "Max Havelaar," translated from the Dutch, was quite a little sensation, and gave occasion to historical surveys of the literature of Holland during the last century. So we have every reason to be much offended with our calumniator. By the way, it is odd to see the *Record* winding up its reflections on the untruthfulness and untrustworthiness of figures and the low estimation in which people begin to hold them, by citing the action of Congress when recently it voted that our Bureau of Statistics should be dissolved as useless. The *Record* has evidently not heard of Mr. Delmar. The untrustworthiness of some statisticians troubled the House and Senate rather more than general considera tions on the science of statistics.

—"A broken urn is a whole evidence," says Fuller. Ancient medals, coins, and similar works of art are, for certain purposes, literature as much as are books and manuscripts of ancient production; so we may properly recur here to the important "find" that has recently been made by a working party of Prussian soldiers, who were making excavations near Hildesheim. First were turned up some curiously formed and ornamented pieces of silver plate, and, the search being carried on with eagerness, the whole treasure was soon unearthed. It consisted of plates, dishes, drinking-cups, vases, and candelabra, all of pure silver, and all of elaborate design and workmanship. The largest piece is a vase cover, with chasings in high relief of stags, dogs, and other animals. In better preservation than this, which is much oxidized, is a silver drinking-cup, eight inches high, with two handles, and ornamented with a profusion of vine leaves intermixed with theatrical masks—all so fine in conception and execution that the work is pronounced a masterpiece not to be surpassed. It was at first thought that these riches had been buried where they were found by some mediæval nobleman, and that the artist whose work they were might have been Michael Angelo, or Cellini, or some others of the men of the Renaissance. The antiquarians—a royal commission of archæologists—have, however, decided that certainly their workmanship is as old as the best period of Roman art in the time of Augustus; that probably it may have formed a part of the camp equipage of some Roman general; that possibly it was taken from Varus when the great Hermann defeated him with such slaughter, near Lippspringe, which is not far from the place of the discovery. The last suppositions, however, are mere surmise; the manner in which the articles were placed in their receptacle, and the carefulness with which the receptacle was prepared, make it seem likely that the hiding was done at leisure, and with much methodical labor. But there is no doubt that the whole subject will get due consideration when the archæologists begin upon it in the Göttingen *Archæological Journal*, as they soon will. One literary, or semi-literary, result of this discovery may possibly be the settlement of the vexed question of what the Roman weights really were. Almost every piece of silver has its weight stamped upon it, and some of the stamped pieces have suffered little or nothing from the effects of time.

—It is the custom in German public schools that on the examination or exhibition days not only shall the pupils offer evidence of their improvement, but the efficiency of the staff of teachers shall also be put to the test. To this end it is required that one of them shall produce an essay on some subject of a literary or scientific character. On occasion of a recent examination of the Louisienstadt Realschule, in Berlin, the performance of this duty fell to a Doctor Lasson, who is a sub-master. He chose for his theme "Ideal Culture and War," and it is a correct, brief description of his essay to call it an apotheosis of war. War is a fundamental institution of earthly communities, the doctor thinks; but whether in saying this he only meant to be understood as declaring it a historical fact that war always has been a fundamental institution of such earthly communities as we know anything about, and that it seems likely to continue to be so; or whether he meant to say not only that war has always existed, but always will exist, and always ought to, we are not informed. At all events he has much disgusted the Prussian Liberals, or many of them, and much pleased the Prussian Conservatives, who laud his profundity. The Realschule is a town-school, to be sure, and such sentiments as please the Conservatives and Count von Bismarck are sentiments better suited to the masters and sub-masters of schools that are royal foundations. But Doctor Lasson is not likely to be compelled to regret very bitterly that he has received, as he has, a good deal of tongue-thrashing in the Town Council, which is largely Liberal, and may perhaps take his place from him. His address is not, so far as we are aware, published, but it may pretty safely be doubted if its author has added so much to the extant thought as to the extant rhetoric on the subject. The glorifiers of war on abstract grounds, or because it promotes self-culture by calling out some of the very highest qualities of human nature, say things hardly more new—if a little more valuable, possibly—than are said by the humanitarians who set so exaggerated a value on spilt blood, and are so weakly sentimental over the physical sufferings and the assumed—no doubt falsely assumed—moral and spiritual deterioration of the soldier. But however all these deep things may be; whether or not the fundamental necessities of the race and the planet require perpetual warfare; whether, on the one hand, "carnage is God's daughter," or, on the other, is a monster of the pit, it seems to be true that more and more every year for a long time to come the people who have to pay for wars will be getting into their hands the war-making power; and there is good hope that they will make less war than Louis Napoleon might, for example, or the Czar, or, in general, the personages with whom the wastefulness of war and the consequent taxes are not matters of so much concern as several other things. There is, for instance, little doubt that England grows less pugnacious with each decade. There is little doubt either that the United States, having now learned what it never knew, or never felt, before—the expensiveness of fighting, will grow, is growing, comparatively pacific. Of the moral aspect of the question of war we say nothing. As we have said, no matter how Doctor Lasson may have settled the fundamental conditions of national and social life on our earth, it is, we feel sure, well worth while to give more or less thought to this economic aspect of it as affording a probable help to forecasting its future.

—Just at present Russia is behaving towards the Jews in her dominions with a little more civility than she has at other times accorded to that race. She permits an "Israelitish Theatre" in Warsaw, and, more than that, permits the managers to print their programmes not only in Russian and German, but also in the otherwise proscribed Polish. The language of the stage is German only—of course with the Jewish lisp—and most of the plays, we imagine, are German; some of them, however, are produced expressly for the "talented players of the Mosaic confession," and of one such we find a description in the *Pall Mall Gazette*. The title of it is "Jacob und seine Söhne," and it is a drama in four acts, with much music, from several composers. The play follows strictly the tale as it is told in the "Book of Genesis"—though it does not set forth Joseph's later glory—but the music is not wholly Hebrew; Mozart is borrowed from, for Zeluka—who is "Mrs. Colonel Potiphar," her husband being der Herr Oberst Potifer—courts Joseph to the tune of "La ci darem la Mano." The personages are, the wicked Zeluka just mentioned; Potiphar; three Ishmaelite slave purchasers; Jacob; "Joseph, his darling son," twice the victim of misplaced affection; his wicked brethren—except little Benjamin, whose presence is not required by the exigencies of the drama, which we take to be one of a series—and, finally, various courtiers and soldiers. Act First and Act Second take place in the land of Canaan, the scenes of the second being laid in the interior of the patriarch's house; the scene of the third act is laid in the land of Eprah, where the first, second, and third Ishmaelites bargain for Joseph—after the brethren have sung the opening chorus of "Les Huguenots." The last act is laid in Egypt and takes place wholly in the house of Potiphar. It is here that we have the most dramatic scene as well as the finale of the piece. The "La ci darem la Mano" is given by the lady of the colonel; Joseph takes the part of Zerlina; he recounts the favors which have been showered on his unworthiness by der Herr Oberst and rejects the wife's advances; then follows the incident of the cloak; Mrs. Potiphar rings the bell, the attendants enter, and the curtain falls The audience are said to lock and listen with grave naïveté and with much of that general demeanor which we may suppose to have characterized our ancestors in the days of miracle-plays and "moralities." Two curious customs obtain at this Varsovian Theatre—one, a revived custom once prevalent in the Western theatrical world, and the other a custom which has never before, we believe, prevailed either in Christendom or Jewry.

There are no women among the performers; Frau Potifer's part was played by a smooth-faced little Hebrew. And every person in the audience who belongs to the better classes—that is to say, every person who pays more than half a ruble for his seat—is required by the managers to put into the treasury an additional small sum, amounting to five per cent. of the price of his ticket. This levy goes to the poor—the Hebrew poor, we suppose—of Warsaw.

ALLEN'S LATIN GRAMMAR MANUAL.*

"WHY does not some scholar who is qualified write a *good* Latin Grammar?" is a question that has been asked so often by many teachers of Latin and most faithful students of that language, that it has come to have a sound of despair. The Latin grammars in common use are bad text-books, because they all contain several important errors. They are mistaken in greater or less degree with regard to certain Latin constructions mostly—though not wholly—relating to the syntax of the verb. They do not state the rules of syntax in a simple and intelligible manner, but on the contrary, in language so involved and obscure that one of our first classical scholars declares himself unable to understand the meaning of certain rules found in most of them. They are loaded down with a mass of unnecessary verbiage relating usually to matters which the beginner does not want to know; and finally, they fail to discriminate properly between what is important and what is not, so that a scholar has given him a rule which he will have to apply in reading every page of his Virgil or Cicero, and one of whose use he may find but a single example in all his reading, as both alike important, and both alike to be learned *verbatim* in the metaphysical—or shall we call it nonsensical?—language which grammarians so much affect.

The ordinary scholar cannot be persuaded to make himself master of these grammars, or if under the eye of some severe drill-master he does so, he has good reason to regret his wasted pains afterward. The system of what we call, with a real, if unintentional, sarcasm, "teaching Latin," as practised in most of our classical schools, would almost seem to have been devised for the purpose of inspiring in the minds of beginners a sincere and reasonable hatred of the study of Latin. If any boy, after blundering through the mazes and blind paths of "Andrews and Stoddard," can still profess with truth to have any regard for the study, he must be either preternaturally good-natured, or possessed of a wretchedly perverted taste.

At a time when classical studies have been assailed rigorously as, at best, involving an unprofitable use of time, the text-books in mathematics and the physical sciences, and even in the modern languages, have become excellent in plan and arrangement, while the Latin and Greek grammars have been neither well-arranged nor correct, and far, indeed, from being interesting, and classical studies have suffered seriously from the bad text-books from which they have had to be pursued.

The book before us seems to us the first successful attempt to remedy the difficulties we have indicated. The Messrs. Allen have begun by rejecting courageously a great deal of information contained in the old grammars which is unnecessary for beginners, including some things which the more advanced Latin scholars must know; but the book, as they take pains to say in their preface, is intended for learners, not for teachers, and the latter must look elsewhere for information upon the nicer points of the language. By this process of omission the authors have accomplished what will seem to those familiar with the old grammars the remarkable feat of stating the elementary principles of Latin Grammar, including Etymology, Syntax, and Prosody, in 120 pages of not very fine print, and yet have had room to give a remarkably full number of quotations in illustration of those principles.

But to reduce Latin Grammar to a small compass, though a meritorious, would not have been a great undertaking; our authors have gone further, and have attempted conscientiously to state the rules of Syntax in simple, comprehensible terms, therein departing widely from the traditional grammar-language. Grammar is, after all, a somewhat abstruse science, and the attempt to simplify its language is, therefore, difficult, but we think that all must admit that the Messrs. Allen have been very fortunate, and certainly far more successful than any of their predecessors.

They deserve the thanks not only of beginners but of all Latin scholars for doing so much to clear up the subject of the subjunctive mood, which other grammarians have made a very slough of despond, in which many a journey to the land of classical learning when well begun has prematurely ended. They begin at the beginning by abandoning the old theory that the potential idea is the leading one in the subjunctive, and by omitting the old translations by "might, could, would, and should" which boys have been at so much pains to learn in schools, and to unlearn at college. In the treatment of this difficult matter they confess their indebtedness to Prof. Goodwin, to whom all classical scholars now owe so much, and some of their best ideas about the subjunctive are borrowed from his "moods and tenses." With this assistance they have not only explained the subjunctive mood much better than any of their predecessors, they have the credit of having founded their explanation upon correct principles, which none of their predecessors have been wise enough, or courageous enough, to do.

To say that this grammar is a better text-book than any which is now in use would be but feeble praise; to say that it could not be improved would be praise undeserved. Every competent teacher in looking over the book will see errors of detail which could be amended, and especially the practice of condensation seems to us to be carried so far as to lay the authors open to the suspicion, which we hope is undeserved, of having considered it an important point to make the number of pages the smallest possible. For instance, the conjugation of the verb, as it stands printed, is so condensed, that we are sure that it hardly would be understood by any beginner who tried to master it without a teacher. As for the errors of detail, it is proper to say, as we know the fact, that future editions will be in a very great measure, if not entirely, free from them, as the work is now undergoing thorough revision at competent hands.

"Manual Latin Grammar. Prepared by William F. Allen, A.M., Professor of Ancient Languages and History in the University of Wisconsin, and Joseph H. Allen, Cambridge, Mass." Boston: Edwin Ginn. 1868.

CURRENT FRENCH LITERATURE.*

AUTHORS, publishers, and others interested in the question of international copyright will find useful information in "La Propriété Littéraire en France et à l'Etranger." It gives laws of 1866, and text of conventions entered into by France with England, Spain, Russia, Belgium, Italy, Prussia, Portugal, Austria, and the Pontifical States. The first of these was with Sardinia, August 28, 1843, the last with Rome, November 5, 1867, leaving Denmark, Greece, Sweden, and Turkey the only European countries with which France has no literary convention. These international treaties for the protection of literary property do not appear to be difficult to make. Why should not we too have ours?

It has been well said, since we speak of laws and treaties, that he best understands the Roman and Byzantine historians who has mastered the Institutes of Justinian, or the laws by which the Roman Empire was governed, and which are the fountain-head of the modern jurisprudence of all the nations of continental Europe. In this field our English literature gives the student little help beyond a chapter of Gibbon and the work of Thomas Collett Sandars (Lond. 1853). Sandars says "nearly a century has elapsed since the publication of the last English edition of the Institutes of Justinian," totally ignoring honest Dr. Harris, who, with travail, translated and published Justinian in 1814. True, it was a very little Justinian, without comment or notes. For Warnkœnig and the rest of the learned German hive had not yet opened; the Gaius MS. was as yet undiscovered. The musty old manuscript was found in a Verona convent (1816); then come Niebuhr, Savigny, and a host of lesser lights deciphering, scratching, reading, commenting. The long lost Gaius! Jubilee Germanorum! Göschen's report on it (Academy of Berlin, 1817) is worth reading. Mr. Sandars might well make his "amplest acknowledgments" to Ortolan, author of the "Explication Historique des Instituts de Justinien," the seventh edition of which work (first edition is of 1827) is now before us in 3 vols. 8vo. It is learned, thorough, and exhaustive.

"La Guerre de Montagne" of M. Fr. Ducuing is written with a certain facility and verve. Treatment of a subject purely military, by one who never saw a battle, not even a mountain skirmish. Our author appears to have made the acquaintance of Marshal Bugeaud in his old age, and often listened to the garrulous old warrior as he fought his battles o'er again, and showed how fields were won. As souvenirs of a great general, legitimate interest might attach to such a work, but of the attempt to make rules of warfare from the loose talk of an old soldier to a civilian, a failure is the necessary result. In Mr. Ducuing's version of Braddock's defeat national vanity walks booted and spurred over history. "General Braddock, at the head of 6,000 men and 36 cannon, was attacked by 250 French and 600 Indians. That the French are formidable in an attack is universally recognized. It must necessarily be true when we see this handful of militiamen rout a body of 6,000 English, supported by cannon." So you see it was the French, not the Indians, who defeated Braddock. Mr. Ducuing also has a chapter on the rebellion. Curious!—these foreign appreciations of our wars. The trail of the serpent is over them all.

* The works noticed may be had at F. W. Christern's, New York.

The New York *Tribune* last week published an advertisement —nearly two columns of small figures—giving numbers of certain shares of Suez Canal stock in arrears of payments, and notifying owners that on a day named such stock would be sold. The fact of such publication in a New York paper is evidence that we have Suez shareholders among us. To these, "De la Marine Marchande à propos du Percement de l'Isthme de Suez, par M. Marius Fontane," might prove profitable reading. Taking Bombay as a mean point of destination in the Indian Ocean, the economy of distance from New York to Suez over the Cape route is 2,439 leagues—6,200 by Cape, 3,761 by Suez. It is surprising how old this new undertaking is; for we find Voltaire, just 116 years ago, in his "Essai sur les Mœurs," qualifying as "an enterprise worthy of the most enlightened ages, the renewal of the canal dug by the ancient kings, and afterwards re-established by Trajan."

Transition is easy from Suez to a "Voyage dans le Soudan Occidental, par M. E. Mage, Lieutenant de Vaisseau." It appears that the fanatical abolitionists are not all in the United States. Here we have General Faidherbe replying (May, 1868) to Lieutenant Mage's dedication, and referring to the "usefulness of the black race on the globe" without finding it necessary to deprive them of the imprescriptible rights of family and individual liberty. Then, to make the matter worse, Lieutenant Mage—authorized to select his escort from among the entire French garrison at St. Louis, confines his choice to negroes—Africans *pur sang*—assistant-engineers, boatswains, soldiers—all of them, ten in number, remarkable for their intelligence, speaking French perfectly, besides several African tongues, and (some) the Arabic! Could we obtain as much linguistic acquirements among ten American diplomats taken as they come? The result of three years' (one continuous) exploration in the heart of the Senegambia-Niger country is here given in a handsome volume, profusely illustrated with engravings and maps—a treat for amateurs in African discovery.

From barbarism in Africa we turn to one of its European phases in "Madame Montespan et Louis XIV. Etude Historique, par Pierre Clément." It is matter of notoriety in French history that the Duc d'Antin, a son of Madame de Montespan, with a keen sense of his mother's dishonor, religiously burned every document connected with her history, and especially every letter, billet-doux, and scrap of writing from Louis XIV. The title of this book, therefore, somewhat piqued our curiosity, but we find that M. Clément merely undertakes to tell again the too-oft-told story of this *liaison* from scraps of St. Simon, Madame de Sévigné, Voltaire, Bussy-Rabutin, and the despatches of the Grand-Monarque to his ministers—for among his gravest affairs of state was the care of certain women. We had really hoped that this sort of history-writing had gone out of fashion. And yet here is a man of recognized literary merit—a member of the Institute of France—wasting his talents and erudition on the story of the court mistress of her day. People talk of modern degeneracy and the corruption of our nineteenth century. What is it to the picture St. Simon paints us? "Les grossesses et les couches furent publiques. Le salon de Madame de Montespan devint le centre de la cour," etc. Then we behold Montespan clad in a "*robe merveilleuse*"—described by Madame de Sévigné as "d'or, sur or, rebrodé d'or, et par dessus un or frisé, rebroché d'un or mêlé avec un certain or qui fait la plus divine étoffe qui ait jamais été imaginée." Then our Montespan played cards occasionally. Count de Rébenac tells us that losses of 100,000 crowns were common. "Christmas day she lost 700,000 crowns; she played 150,000 pistoles on three cards and won" (the pistole was worth $13 of our money of to-day). Her frequent journeys were in a six-horse chariot, followed by a similar one with six female attendants, two baggage-wagons, six mules, and twelve mounted men, besides officers. In order that she might pass without delay, the miserable roads were, under royal order, expressly repaired by crowds of that wretched, starving peasantry described to us by La Bruyère—their hard work, a *corvée*, being, of course, forced and without pay. What must they have thought, as they saw her rapidly pass, like a brilliant meteor? Possibly what the German soldiers said who saluted her at a review with cries of "*Königshure—hure!*" Montespan told Louis that "the Germans were really too *naïfs*—to call everything by its name." People talk of the insolence of modern vice when they see Pearl and her ponies in the Champs Elysées. What is that to the Montespan, cutting off the queen's carriage and galloping past her Majesty at a grand review in order that she may be the first to reach "the well-beloved" Louis?—and this, too, in presence of army and people. In all this handsome and well-written volume of 450 octavo pages there is but little of edification save the grand letter of Bossuet to the king (July, 1675), and the story of the efforts made by Bossuet, Bourdaloue, and Père la Chaise to save Louis from his degradation. France has brilliant pages in her history better deserving the pen of M. Clément than this story of Montespan and fifty others *ejusdem farinae*. The régime under which they flourished—one of neither civil equality nor of political liberty, nor freedom of conscience—has, let us thank heaven, passed away. And it is significant that so great a man as Montalembert, who is usually counted in the Legitimist ranks, not long since publicly declared of "cet ancien régime, I will merely indicate a single defect —a fatal one. It is dead! Never and nowhere capable of resuscitation."

As something more comprehensive and learned than even "St. Elmo," we commend the "Histoire de la Misère ou le Prolétariat à travers les âges, par Jules Lermina." By the way, the word *misère* is without its precise equivalent in English. It is neither destitution nor want nor poverty, for these are rendered by *dénûment*, *besoin*, and *pauvreté*. And it is more than poverty, for it conveys the idea of suffering, both moral and material. Nor does misery render it, for *misère* includes that also. Our book proves one thing at least—Young France is not dead. Far from it. Our author prefaces by rushing over to London, where, in a short interview with Ledru Rollin, he discusses "mille questions," and converses anent "all men and all things." Dedicating his work to Ledru Rollin, he reconsiders the matter before reaching the end of his preface, evidently perceives there is too much honor for one, and closes with a dedication to him and P. J. Proudhon—and there is really plenty for two. Logically beginning at the beginning, he starts off with Adam, who was the first poor man. Then through Pagan mythology, ancient Scripture, Jewish dispensation, Babylon, Greece, Rome, New Testament, Middle Ages, Christianity—in a curiously composite style in mixed imitation of Voltaire, Lamennais, and Alex. Dumas, he takes us by the hand and leads us down the ages. He finds but little to admire. Of some historical characters he speaks in very handsome terms; among others, of the "Man of Nazareth," with whom he is not altogether satisfied, although he compliments him by citing what we know as the Lord's Prayer and the Beatitudes. Then he favors us with the report, full, true, particular, and moreover *parfaitement inédite* (as a French publisher might say), of a conversation that took place on the hill of Golgotha just after the crucifixion. This conversation was betweeen Simon, his two sons, and an "*inconnu*." This "*inconnu*" we take to have been the author himself. For, short of believing him 1868 years old, there is no way of accounting for his limitless erudition. He thinks Jesus "d'une habileté extrême"—exceedingly clever, smart. It was very acute in Him, he thinks, to divert the attention of the poor from their sufferings in this life by holding out to them the prospect of an eternal recompense in heaven.

With the cross, symbol of Christianity, he is much disgusted. It is *sombre, sinistre, effroyable*. "The time has come," he tells us, "when the poor are no longer willing to allow it to stand—that cross whose shadow chills and oppresses them." But although dissatisfied with Christ and his apostles, it is good to find in our author's pages one character we may feel at liberty to contemplate with respect and veneration; Barrère is the venerable being. Jules quotes that virtuous citizen approvingly, and adds, "*car Barrère fut un honnête homme.*" And yet there are people who think that guileless patriot was not done entire justice by Macaulay! It would be very difficult to concentrate within an equal number of pages so much vanity, frivolity, cynicism, and revolting treatment of ideas that by well-mannered atheists are usually treated with some consideration, as we find in M. Lermina's work—which is of but little importance except as the exponent of a class of works which, while noisily advocating progress and freedom, frighten the timid and make the judicious grieve.

Of quite another school is the book of Dr. Evariste Bertulus. "L'Athéisme du Dix-neuvième Siècle devant l'Histoire, la Philosophie Medicale, et l'Humanité." A very formidable indictment, too, bristling with learned citations. In the name of his fellow-men, the doctor protests that he is descended neither from a vegetable (Schmidt), nor a fish or seal (Dr. Lamel), nor, finally, from a monkey (Drs. Vogt and Filipi). The monkey question is well treated, and the conclusion is that we are not "singes sans queue perfectionnée." The author maintains that Cabanis and Fourcroy were not atheists and materialists. We believe it is Carlyle who attributes to Cabanis the saying that the seat of the soul is in the smaller intestines. What Cabanis did say was that the brain secretes thoughts as the liver bile, or the kidneys urine. Gall, with his "Organologie Phrénologique," continued the school of Cabanis, and successfully vulgarized science, until extinguished in France by serious researches in mental alienation and the fun of Gavarni, who showed in one of his most laughable sketches, "que le système des bosses est né de la bosse des systèmes." Then came the overthrowers of Cabanis—Bichat and Pinel. Bichat, unconscious of his genius, unconscious that he had founded a school, sells his great work on anatomy for 25 louis d'ors to a publisher who

made half a million out of it. The question is raised as to the sole cause of mental alienation being lesion of the brain; stress is laid on the corollaries of Esquirol. 1. Organic lesion in insane is found in sane. 2. Autopsy of insane shows no alteration of brain. 3. Autopsy of sane shows alteration, suppuration, and even partial destruction. Granting the march of science since Esquirol's day, it is claimed that his conclusions are sound. The question of duality of man is admirably discussed. The existence of the vital principle is discussed. Is it or not inherent in organized matter? Then come Cudworth and Cousin; progress of medical science in France; Comte and his positivism, chemistry, galvanism, doctrine of spontaneous generation, etc.

And here comes another of the same school. Dr. F. Morin, with his "Bréviaire du Médecin: Précis de Médecine Rurale, d'Economie et de Philosophie Médicale." One of Balzac's most charming novels is his "Country Physician," "Le Médecin de Campagne." One might almost imagine that his hero had survived in Dr. Morin, and written the book before us—a book that such a man as Dr. Oliver Wendell Holmes might read with pleasure, and all young physicians with profit.

Philarète Chasles, a French writer of distinction, is somewhat known in this country by his work—by no means his best—on "Anglo-American Literature and Manners," an English translation of which was published in New York in 1852. M. Chasles stands high as a critic. The volume before us, "Voyages d'un Critique à travers la Vie et les Livres," is the second of a series of three—the East, Italy and Spain, and (in press) England and the United States—and made up of fragments of history and criticism—literary recreations—in which M. Chasles talks always agreeably, and often with erudition, of Charles of Anjou, Borgia, Machiavelli, Beccaria, William Penn, the Cid, Cervantes, Ignatius Loyola, Quevedo, Ximenes, etc. He adds an interesting chapter on Spanish literature, in which he amply recognizes successful American labor in that field. After complimentary tribute to Irving and Prescott, he devotes several pages to Mr. Ticknor's admirable "History of Spanish Literature," qualifying his volumes as "d'une valeur inappréciable et auxquels tous ceux qui s'occuperont de littérature Espagnole seront désormais forcés de recourir." "Its notes," he continues, "are full, its citations correct, its dates irreproachable, its details infinite. Written in marked sincerity (la bonne foi y règne), no divagation, no declamation—in short, no humbug (*sic*), no display, work everywhere, conscientiousness, too—affectation nowhere." M. Chasles regrets that they have in France no translation of Mr. Ticknor's work.

On opening "Les Ecrivains Modernes de l'Allemagne, par H. Blaze de Bury," we are somewhat startled to find Immerman, Achim von Arnim, Novalis, Jean Paul, Rückert, Bettina Brentano and her brother Clement, all cited as *modern* writers of Germany. And yet the title-page says 1868 with the candid air of being the first edition. Running over a few pages we readily recognize the same book we read one long summer's day at Baden-Baden, years ago. There is little in it new to the average American student of German literature, except some few of the author's appreciations, which are frequently poetic, and sometimes eloquent.

Two handsome 8vo volumes give us "La Vie et les Travaux du Baron Cauchy, Membre de l'Académie des Sciences." Cauchy began his scientific career as assistant engineer on the great public works ordered at Cherbourg by Napoleon I. He was highly thought of by Cuvier and La Place. Biot said of him, "His life presents an admirable example of Christian virtue joined to the highest faculties of the intelligence. He is one of the most eminent mathematicians France has produced, and his personal character was not less remarkable than his mathematical genius." We can best convey an idea of his scientific position in France by stating that it is similar to that of Gauss in Germany. Cauchy died in May, 1867. He was specially distinguished for his successful labors in pure geometry and on the theory of light. With Arago, he was in 1852 exempted from obligation of taking the oath, and continued to hold his professorship at the Sorbonne. Outside of his scientific career, Cauchy was known as one of the very few men who had the moral courage to brave the fury of a political fanaticism that, at one time, raged in France very much as Knownothingism raged in the United States. We mean the anti-Jesuit warfare. Newspapers, pamphlets, and novels had for several years but one inspiration—denunciation of the Jesuits. Eugène Sue's "Wandering Jew" was the most remarkable of the novels. Baron Cauchy was not alone in the breach. Among others equally bold and prominent were Vatisménil, the jurist, Count Montalembert in the Chamber of Peers (it was then he uttered the famous "*We are the sons of the Crusaders and fear not the progeny of Voltaire*"), and in the Chamber of Deputies, the noble Pierre Berryer—the same who died the other day.

Somewhat too soon for history comes M. Theodore Juste's handsomely typed and amply margined "Leopold Ier, Roi des Belges." It reads like an old file of modern newspapers. We looked through it in vain for some word concerning Leopold's special agent to the United States during the rebellion, whose mission was to obtain such reliable information as would enable the Nestor of European monarchs to decide in which direction lay victory and wisdom. From statements of leading men, "bankers and others," here in New York, the agent concludes that the rebels must triumph. His report decided Nestor's policy. And when came news of Lee's surrender, "an angry man was he." So ran the story, well vouched for; but nothing of it is to be found in M. Juste's book.

Sermons on the Failure of Protestantism, and on Catholicity. By the Rev. Ferdinand Ewer, S.T.D. (New York: D. Appleton & Co.)—These sermons have made a good deal of noise, and several worthy ministers have devoted themselves to the task of refuting them; but their principal, if not their only, claim to notice, at the hands of either historian or logician, is the fact that they are in form an attack on Protestantism, made from the pulpit of a Protestant church by a Protestant clergyman; for the amusing fact is that Dr. Ewer is himself as stout a Protestant as any of the sects he denounces, and talks as scornfully of the Church of Rome, and stands in exactly the same relation to her. The sermons are, in fact, a striking illustration of the injurious influence on the understanding often exercised by pulpit oratory, and, owing to the complete exemption from criticism which it usually enjoys, an influence which nothing but constant watchfulness and severe and sustained training will enable a minister to resist.

Dr. Ewer's discourses are, in reality, an elaborate attack on Christianity, and, if they prove anything at all, prove that the attempt of the Church to evangelize the world has turned out one of the most preposterous failures in the history of mankind. He shows that in the first five centuries at least 115 sects, "some of them of enormous size," grew up in the Church; that in the seventh century the whole organization split in two, owing to the *successful* attempt of the Romish Church to usurp dominion in the West; that is, to use Dr. Ewer's words, "to impose her yoke," "to add novel doctrines to the Catholic faith," to "incrust" it with "Romish errors," and "force upon it improper customs." This split and usurpation lasted six hundred years, the majority of Christians remaining on the side of Rome, till in Henry VIII.'s time there occurred a third, and the Anglican Church arose, which, Dr. Ewer says, was the Catholic Church reformed, but which the majority of Christians pronounce a ridiculous heresy, without priesthood or sacraments. Then even this new organization has split also, and that portion of it which he calls "the Catholic Church" is now confined, eighteen hundred years after Christ's death, to one corner of the globe, and contains, all told, perhaps at the outside a quarter of a million of the thousand millions of living men. Dr. Ewer sets down the "Anglican Catholics" at twenty millions; but he gets these figures solely by counting in the majority of the English people; the fact being that the "Anglican Catholics," in the sense in which he uses the phrase, constitute an infinitesimal minority of the nominal Episcopalians; the great majority of the population of England and Wales being either dissenters or pagans. The Roman Catholics being ruled out of Dr. Ewer's church, and the other Protestant sects and the indifferents and rationalists being ruled out also, all that is left us of the Church, as established by Christ for the salvation of the world, is the few congregations here and in England, largely made up of women, who heartily concur with Dr. Ewer, and the Greek Church, with its eighty millions of degraded, ignorant, and half-heathen priests and believers, with whose condition he can hardly be personally acquainted. His triumph and delight, as displayed in the pamphlet before us, at having carried his disciples to this conclusion, and the lofty confidence with which he promises, with the aid of his "Catholic" brethren, to make short work of the unbelievers against whom, according to his own account, the Apostles and Fathers and the whole body of believers have for nearly nineteen centuries warred in vain, make the sermons, we do not like to say amusing, but certainly curious reading, for any student of the religious phenomena of the day.

A Summer in Iceland. By Professor C. W. Paijkull. Translated by Rev. M. R. Barnard, B.A. Illustrated. (London: Chapman & Hall. Philadelphia: J. B. Lippincott & Co. 1868.)—The author of this work is a Swede, and professor of geology at the University of Upsala. His chief motive in visiting Iceland was to study the formation of its east coast, particularly as being more interesting in a mineralogical point of view, and having been less explored than the rest of the island. In reporting his experiences, however, he has chosen to address a wider circle of readers than could have

been obtained for a purely scientific monograph, and the result is a singularly thorough account of the country and its people, containing, so far as we know, more and better information than is to be found in any other book on the same subject—at least in English. The frank and easy style of the original has been well preserved by the translator, except that occasionally he becomes too colloquial, as when, for example, he uses "invite" for "invitation."

A foreigner in describing the customs of Iceland cannot fail to employ a great many negatives. He will observe, first, if you please, that "there are no snakes there;" and then that the houses have no chimneys, and no fireplaces for warmth; no ovens, no floors, no ventilation, no light, and no cleanliness; no security against damp and vermin; that the farmers have no agricultural implements, and nobody any carts; that the graveyards have no tombstones; that there are, with one exception, no public schools, and no poor-houses, and no executioner; no woods, in the common acceptation of the term, and consequently no timber for building or fuel; no thunder in the summer time; no prejudice against homœopathy, but the contrary; no male tailors. Bread is baked in an iron pot, and is not a constant article in an Icelander's diet. If he be poor, he will eat dried fish smeared with butter instead. Meals are taken sitting on beds in place of chairs. The horses refuse oats. Turf and dung, and even fish-bones and seaweed, are used for fuel. Children are taught at home, and examined there and at church by the minister; there are no illiterate Icelanders, and few who are not proficient in history and geography. There are also few who do not drink brandy with considerable frequency, at sixpence the quart; importation of which increased nearly eighty per cent. from 1849 to 1862. Add the universal habit of snuff-taking; the common need, but not use, of insect powder; and a more than German practice of kissing among the men, and you have a people with whom a protracted stay, or even a brief entertainment, would seem intolerable. The professor recommends, in fact, that the traveller carry a tent, and, as far as may be, his own provisions.

Not the worst part of Icelandic diet is horseflesh, eaten by some of the inhabitants of the south coast, who "thrive on it." It is said to possess the quality of imparting a good complexion. . . . "Possibly," continues our author, "it may have been this fare which gave our ancestors those beautiful complexions for which they are renowned in the Sagas; for they were regular gluttons when horseflesh came in their way. The three commandments of the Catholic priests to their proselytes were, 'Not to have more than one wife;' 'not to expose their children;' and 'not to eat horseflesh.'"

Whatever effect these injunctions may have had on the Scandinavian and German worshippers of Odin, the Icelanders not so readily abandoned along with their paganism a wholesome and symbolic article of food. According to the Kristni Saga, as cited by Ampère, Thorgeir, the lawgiver and chief of the republic, was obliged to concede to his subjects that if they would be baptized and worship God, they might still expose infants and eat horse, which must, however, be sacrificed in private. This was in the year 1000, and Iceland was until recently almost the only country in Christendom in which Catholicism had not suppressed hippophagy, which philosophers and philanthropists are just beginning to revive.

But if the now Protestant Iceland has cause to reproach Rome for what it has lost of carnal indulgences, on the side of literature and political independence it bears little affection for the memory of Luther:

"The zenith of Iceland's glory was from the beginning of the twelfth to the middle of the fourteenth century. . . . After this brilliant era . . . a period of enervation succeeded, during which the country gradually retrograded, so that at the end of the last century the nation was hastening with rapid strides to meet its downfall. The introduction of the Reformation is assigned to be the great cause of this retrogressive motion; as the only counterpoise to kingly authority which then existed in the country was thereby done away with; while at the same time, by the suppression of the Roman Catholic priesthood, its wealth was dispersed; and education, which it was the special province of the clergy to disseminate, was driven out of doors. From a political point of view, therefore, the Icelanders do not regard the introduction of the Reformation into the country with any feelings of self-congratulation; on the contrary, they look on it as the greatest misfortune that could have befallen them."

The religion most needful for Iceland at the present time appears to be that of a board of health rather than of a board of foreign missions. The first blow should be struck at the native architecture, as the nest of the frightful epidemics (not wholly unconnected, perhaps, with volcanic disturbances) which have ravaged the country in such thick succession. A down-east schooner that should ply steadily between Maine and Iceland for a few years, taking pay for lumber in wool and eider-down, would do more to regenerate the people than a fleet (say) of tract-distributing *Rob Roys*. The woody growth of the island consists almost exclusively of common and dwarf birch; on the north coast a few mountain ashes, twenty-five feet high, are the "big trees" of Iceland. One would naturally imagine that the absence of these from the landscape must be seriously felt, but such is not the testimony of our author:

"Though the expression a 'treeless country' conveys rather a depressing impression to the mind, still this is far from being the case with Iceland. Uno von Troil correctly remarks, in his description of Iceland, 'that there is not a tree to be found beneath which friendship and innocence can meet.' But woods are not really missed here. And this is, of course, owing to the physical appearance of Icelandic nature. When, for instance, one stands on some eminence, and looks towards a mountain some nine miles distant, which is clad in its dark blue summer dress, or whose summit is enveloped in a cap of snow; or else if one sees it all aglow from the rays of the setting sun, the absence of forest tracts does not strike the mind. Or if one gazes over a grassy plain, where no disfiguring fences obstruct the view, but where either a river winds along in its sinuous course or a lake reveals its shining surface to the eye, the senses do not feel the want of forest land, for a plain such as this is not the forest's proper home. Neither is their absence noticed when gazing on the barren sandy waste, which one knows to be periodically deluged by the destructive waters of the Jökul, or when wondering at some rigid lava stream. And again, if one directs the eye up toward the mountain slopes, which properly should be the forest's home, it finds them covered with such a brilliant carpet of mingled grass and flowers that no wood is needed; or else they are so steep and inaccessible that it would be childish to wish a forest to grow there. Wherever one turns the eye one finds an ample compensation, and the impression which the mind receives is, 'I do not miss the forests.'"

A Hand-book for Travellers in Syria and Palestine; including an account of the Geography, History, Antiquities, and Inhabitants of these countries, the Peninsula of Sinai, Edom, and the Syrian Desert, etc. New and revised edition. In two volumes. (London: John Murray. New York: John Wiley & Son. 1868.)—This is one of the few hand-books of travel which, though destined to serve as guides, can be enjoyed by the general reader. This is owing partly to the nature of the countries described, almost every spot of which has a permanent historical interest, while they hardly possess anything of importance to the traveller which is not marked with peculiar features, characteristic of Eastern life, and apt to excite the curiosity of the reader; and partly to the merits of the author—known, though his name is not given, to be the Rev. J. L. Porter, author of "Five Years in Damascus" and of "The Giant Cities of Bashan"—who is not a mere book-maker to order, like most authors of guides, but a Biblical and Oriental scholar of great attainments, and an able writer. Animated by the conviction that "Palestine is the stage on which the most wondrous events of the world's history were enacted," he has attempted to "group on the old sites the chief actors in the sacred dramas," overlooking "no known Scripture locality," and omitting "no incident of Scripture history which would tend to enhance its interest." His diction, enlivened by well-selected quotations, is far from being dry, but at the same time free from the absurd pathos into which less learned describers of the same scenes are so apt to fall. He tells, and often very minutely describes, what he has himself seen and closely examined, and expresses his opinion, whenever it conflicts with the results obtained by other investigators of note, with the conscious independence of conscientious research. He sketches the past and present jointly, and sheds the light of the latest enquiries—including the excavations of Lieutenant Warren—over the ruins of old, now held by the Arab and Turk, Druse and Maronite. Introductory historical sketches, maps and plans, remarks on the pronunciation and meaning of Arabic names and words, a general index, and an index of places not identified, serve to explain or complete the descriptive portions. These are most ample on Jerusalem, Petra, Damascus, and Palmyra. The author's criticisms, within the narrow limits drawn by his orthodoxy—an orthodoxy of the strictest kind—seem to us generally sound, though many a positive statement might be disputed. But we must confess that his inclination to accept ancient Jewish statements as historical facts goes even beyond the demands of the most exacting orthodox criticism. Even he who, like the author, unhesitatingly declares his belief in miracles wrought "by a direct exercise of Divine power temporarily overcoming the laws of gravitation" must feel perfectly free to reject any part of the so often exaggerated or colored narratives of Josephus, not copied from the Bible. Yet our author, in an exceedingly brief sketch of the history of Palestine, is anxious minutely to relate after that Jewish historian how Alexander of Macedon was received by the high-priest of Jerusalem, "arrayed in his gorgeous pontifical robes," etc.; how the conqueror "saluted him, and adored the sacred name inscribed on his mitre;" and how he explained this singular conduct to his followers by telling them that in a dream "at Dios in Macedonia, pondering how to subdue Asia," he had seen that figure and received from it divine encouragement, which he now saw confirmed,

The same disposition, so favorable to the traditions concerning the Hebrew people, makes the author, in his "Chronological Table," accept, as established, several dates for which there is either no sound critical basis or no basis at all. He not only knows, for instance, the precise years when the various judges and King Saul commenced their rule over Israel, but also the year—(2224 B.C.)—as if the events could take place in a twelvemonth—in which "Aram's family colonize Syria, or Aramea, and found Damascus—Canaan's family colonize Palestine, and found Sidon." The latter date is probably not meant to be understood as precise, but then the reader ought to be informed by an "about" that this is the case. Nor can the following be defended, which contains one date for two events upward of two years apart: "588. Zedekiah rebels. Nebuchadnezzer, after a two years' siege, burns Jerusalem," etc. On the whole, however, the book is elaborated and revised with a painstaking care such as is rarely bestowed on books of its kind. As a guide to the Holy Land and adjoining regions, it has probably no equal; as a literary work on the geography of those countries, it deserves a place among books of higher pretensions.

Memoires de Griscelli. Par l'auteur des "Révélations" et de "À Bas les Masques." (Bruxelles—Genève—Londres. 1867. 16mo, pp. 243.)—The fact that no man is a hero to his valet does not prevent the valet from seeming very heroic in his own eyes; and it has seldom been our fortune to find a more striking illustration and realization of this possibility than the autobiographical record contained in the "Memoirs of Griscelli." The author and hero-errant of this little volume was a Corsican peasant, and born at Vezzani, "near the centre of the isle which gave birth to the great Napoleon." The first seven chapters of the book are devoted to a sketch of his youth, and the manner in which he passed through the several stages of infant, school-boy, goatherd, agriculturist, and soldier, until he became, in 1850, the secret agent of Napoleon III., an office which he filled for eight years with no less satisfaction to himself than to the Man of December. His description of the *coup d'état* is brief but graphic. The most significant page in it is the simple column of figures showing the amount of money distributed among the soldiers, from twenty thousand francs to each general of division down to five francs to every private. This money (fifty million francs in all) was advanced by the Bank of France, on condition that that establishment should have the right to increase its capital six hundred millions. Griscelli says that Napoleon was for some time in anxious doubt as to the issue of his enterprise, and that he had twenty-five million francs secreted in a carriage, with which he was ready to cross the frontiers of France in case the *coup d'état* should fail; thus justifying the pasquinade of a distinguished French poet:

> "Des deux Napoléons les gloires sont égales,
> Fort bien chacun le sait; ce ne sont faits nouveaux:
> D'Europe le premier prenait les capitales;
> Le troisième aux Français prenait leurs capitaux!"

The author interweaves the story of his own exploits with brief characterizations of Persigny, De Morny, St. Arnaud, Fould, Troplong, Rothschild, Palmerston, Prince Menschikoff, and other prominent public men of Europe, well known to the world in their court costumes, but exhibited here for the first time *en déshabillé*, and that, too, of the narrowest and scantiest pattern, and spices it with several chapters of scandal, the headings of which—"Miss Howard," "Duchess Castiglione," "Countess of Gardonne," etc.—are sufficiently suggestive.

In 1859 Griscelli passed from the service of Napoleon to that of Cavour, and remained in this position till the death of the Italian statesman in 1861, after which he became successively the secret agent of Antonelli (1861–1862), Francis II. (1862–1864), and the Emperor of Austria (1864–1867). During the war of 1859 he was sent by Cavour to watch the movements of Napoleon III., and this espionage continued during the entire campaign, which ended with the premature peace of Villafranca. One of the most interesting chapters in this "Second Part" of the volume is entitled "Ricasoli," and gives an interior view of the rapid series of revolutions which dethroned the Grand Duke of Tuscany, the Grand Duchess of Parma, and the Duke of Modena, and in which Griscelli represents himself as playing the chief part. Griscelli's narrative is piquant, but his speculations on political affairs are of very little value. The most amusing portions of the book are his moral reflections on the deplorable depravity of the human race, as exemplified by the scenes in which he himself acted the principal and by no means most honorable rôle. It is amusing in its way to hear praises of honesty and rectitude, and denunciations of treachery, from a man whose livelihood depends upon systematic falsehood, whose very existence is a disgrace to Christian civilization, and whose most brilliant deeds (as recorded in his "Memoirs") are such as would stain the memory of a galley-slave.

In chapter xxxiv. Griscelli describes his interview with Pius IX. and Antonelli, the object of which was to devise means of assassinating Napoleon and Garibaldi. The proposal was first made by Cardinal Altieri, "minister of the Holy Church." Two brigands, Ortoli and Mariani, who had been sentenced to the galleys for murder, were released from prison by order of the Sacred College, and promised five hundred thousand francs for killing Napoleon and one hundred thousand francs for killing Garibaldi. To Griscelli were confided the general supervision and execution of the project, which, however, he did not intend to carry out, not because he felt any conscientious scruples about committing murder, but because he was at that time in the pay of Cavour, and wished to do nothing that would tarnish his "professional honor." The plot failed, owing to the loquacious indiscretion of the two cut-throats who were employed to do the work and the vigilance of the French police at Rome. Ortoli and Mariani were arrested and proved guilty of alleged designs, but escaped through the influence of Cardinal Antonelli.

Griscelli's judgments of public men are not worth much and are often very far from the truth. Thus he depicts Garibaldi as "a hero for some, an adventurer for others—in fact, a political chameleon, donning to-day a monarchical dress-coat, to-morrow a revolutionary cassock; an ambitious harlequin whose career terminated worthily at Aspramonte." So far as he has any convictions, Griscelli is a papist of the ultramontane type, and a bitter enemy of New Italy. His sentiments on this subject may be found in a brochure published by him a few years ago, and entitled *Révélations, ou La Vérité sur les hommes et les choses du royaume d'Italie.* That this pamphlet won for its author the title of "Baron of Rimini" conferred upon him by the ex-King of the Two Sicilies is in itself sufficient to condemn it. We may say here—what we did not know when we spoke of the magazines last week—that the article entitled "The Secret Agent," in the January number of *Lippincott's Magazine*, is borrowed from the memoirs of Griscelli a fact of which the writer of that paper makes no mention whatever. In justice to Griscelli, to the reader, and still more to himself, he ought to have given the source of his information.

A Modern Historical Atlas, for the use of colleges, schools, and general readers. By Rev. William L. Gage, editor and translator of "Ritter's Palestine," author of the "Life of Carl Ritter," etc. (New York: D. Appleton & Co. 1869.)—The purpose of the author "has been to present the configuration of the leading countries of the world at each of the epochs of modern history," which, with him, begins with the first year of the Christian era. Dittmar's "Historischer Atlas" served as a basis for his elaboration, numerous other authorities being consulted, and due acknowledgment is made in the preface to Mr. Charles B. Odiorne "of the valuable assistance . . . . which his skill as a topographical draughtsman" has rendered "in bringing this volume to its present mechanical perfection." This praise—of the assistant as well as of the volume—is decidedly undeserved. It would be hard to find more carelessly executed maps than the sixteen constituting Mr. Gage's "volume"—a volume indeed, for the thickness of the pasteboards on which the maps are mounted more than counterbalances their paucity and smallness. Both cartographer and author seem to have had a very faint idea of the task before them. The three first maps, representing "The Known World in the Augustan Age, A.D. 1," "The Known World at the Death of Constantine, A.D. 337," and "The Known World at the Division of the Roman Empire, A.D. 395," are all drawn on the same plan, and yet the "Grecia" (*sic*) of each has an almost entirely different shape, and that whimsically drawn. Cilicia, on the first map, is placed south-west of Phrygia, to occupy the place of Caria, Lycia, etc., Pergamos crowds out Lydia, extending as far as the Halys; and Galatia (Galatia) is all on the east of that river. Palmyra, on the same map, is marked NNW. of Damascus, and Susa on an invented large river, flowing through Carmania and Persis; the Celtæ of Gaul are placed north of the Seine, and the Catti on the upper Elbe; Hispania Tarraconensis and Lusitania are made to cross each other, the latter being stretched to the Ebro; and Aquatani, Norbonensis, and Sarmoe stand for Aquitani, Narbonensis, and Sarmia. China is given with the barbarous names of its provinces, Shantang, Kiangnang, and Footchien (*sic*), as if they were all of ancient origin; but no room is found for the names or the courses of the Borysthenes, Tanais, and Tyras, as if these rivers were of post-Augustan discovery. On the second map, Cilicia occupies its right place, and Lydia takes that of Caria and Lycia; Galatia extends to the Euphratus, and Palestina is all south of Jerusalem; the great central river of Persia has disappeared, and Susa is the nearer to the Tigris, as this river has in the meanwhile considerably changed its course; Ctesiphon (Ctesiphon) appears on the same river, Epirrus, side by side with Grecia, and

near the headwaters of the Vistula, *Corrochiuaim*, which, in spite of its Hebrew termination, designates no Jewish town, for it stands for Carrodunum, just as *Sucwin* stands for Suevi, and *Lazyges* for Jazyges. Lusitania, however, no longer extends to the Ebro, which has also changed its course On the third map, Lusitania is again extended beyond its historical limits, while its metropolis, Olisippo, modern Lisbon, is changed into *Obisippo*, and its neighbor, Bætica, into *Raetica*. More distant Rhætia changes both name and position, being called *Rethia*, and stretched across Northern Italy, from which it was separated by the Alps. Noricum is pressed eastward, and wedged between Pannonia and Illyricum. Pergamos, Galatia, and Lydia hold their wrong positions, while the Halys disappears. On the other hand a nameless river, or canal, is made to connect the Euxine with the Caspian Sea. Jerusalem is marked near the headwaters of the Jordan. The Jazyges continue to be *Lazyges*. On all of the three ancient maps Macedon is placed north, instead of west, of Thrace, between this province and Mœsia. On none of them is either Sarmatia or European Scythia given. *Brutti*, *Ampulia* (Apulia), *Epirius*, and Pelopon(n)esus, all in one group without another word between them, may suffice to characterize the "perfection" of the fourth map, representing "Europe about the End of the Fifth Century," which, as regards correctness, is neither worse nor better than the following mediæval and strictly modern maps. The latter, however—we mean both mediæval and modern—are remarkable for their extraordinary omissions. For, though this atlas is destined to teach the general reader "to understand distinctly the political divisions of Europe during the memorable epochs of which our Prescotts and Irvings, our Motleys and Carlyles have written," there is not a single map in it on which could be discovered—were it only in parentheses—the name of Castile or Aragon, of Navarre or Provence, of Maine or Normandy, of Picardy or Artois, of Brabant or Hainaut. Of France as it existed between the years 814 and 1763 there is only one map, and that contains no name besides Paris and Avignon, Seine, Loire, and Garonne. Had Mr. Gage merely borrowed from Spruner—say, by means of the cheap photo-lithographic process—he would have rendered not only greater service than by his present compilation, but *some* service, which, as it is, he can hardly be said to have rendered anybody.

La Géographie du Talmud. Mémoire couronné par l'Académie des Inscriptions et Belles-Lettres. Par Adolphe Neubauer. (Paris: Michel Lévy Frères. New York: John Wiley & Son. 1868.)—The task set by the Paris Academy which crowned M. Neubauer's book was "to collect all the geographical, topographical, and historical data concerning Palestine which may be found scattered in the two Talmuds, the Midrashim, and other books of Jewish tradition (Megillath Taanith, Seder Olam, Siphra, Siphri, etc.)," and to arrange them systematically, critically revised and compared with the corresponding contents of "Josephus, Eusebius, Jerome, and other ecclesiastical and profane writers." He who has an idea of the vast literary field embraced in these few words, of the more or less intentional disorder which pervades the Talmud, as well as the more purely "haggadaic" writings of the ancient rabbis, and of the uncritical manner in which those scholars of the Synagogue treated, or rather played with, everything not strictly belonging to the laws of their people, will at once perceive the extraordinary difficulties with which the author had to contend. His work is the product of rare erudition, painstaking research, and able criticism. But the author himself acknowledges—and in reality it requires no particular modesty to do it—that a large portion of the results of his critical examination rests on a rather slender conjectural basis. The little gained, however, will be highly appreciated by all interested in biblical geography. M. Neubauer's merit consists in compiling and systematically arranging the critical contributions of others rather than in valuable discoveries of his own. In sifting the views of recent rabbinical critics—such as Rapoport, Geiger, or Grätz, to mention some of the most conspicuous—he is generally considerate and judicious, but his decision seems to us to be more than once rendered in too apodictical a shape. Thus, for instance, Harkavy's numerous arguments for reading "Iberike," in certain passages which are generally understood to mention "Africa," appear to us to be rejected on too trifling grounds (pp. 411–413). Iberia could not have been a "pays presque inconnu" in the great rabbinical schools of Babylonia, which were frequented, as we hear elsewhere (p. xxiii.), by so many pupils from Armenia and Asia Minor. The Talmudical passage quoted (p. 402), concerning the promise of Sennacherib to take the Israelites to a land like theirs, is certainly in favor of the Iberian hypothesis, for in what could Africa be meant to resemble Palestine? Altogether, we believe M. Neubauer to underrate the geographical knowledge of the rabbis, and on the other hand to attach too much importance to some of their sayings, in spite of the equivocal character of the "haggadaic" talk—so well defined by him—and the corrupt condition of the talmudical texts. The sayings quoted, however, are very felicitously interwoven with the dry geographico-critical material accumulated in the book, and may be said to bestow on it a peculiar charm. Side by side with such childish exaggerations as these, "Between Gibthon and Antipatris there were formerly sixty ribbos (myriads?) of towns," "Now there is no room there for sixty *ribbos* of reeds," we find the noble anecdote of Dama, the pagan Ascalonite, who refused to make an immense sum on the sale of certain jewels because he could not fetch them without awakening his sleeping father. To this last is attached the following: "Rabbi Eliezer was asked, To what extent is one bound to honor one's father and mother? He answered: Go and ask the pagan, Dama ben-Nethina, at Ascalon." What besides the talmudical play-talk is apt to render the book interesting to those to whom the geography of Palestine is no special study, is its "Preface," which contains a sketch of the origin, the development, and character of talmudical and kindred literature, a sketch confessedly written "without any pretension of teaching anything novel to scholars," but well apt to enlighten on many an interesting point "those who know the Talmud merely by name." This introductory work, however, is decidedly too brief for its purpose, and, we believe, also too hastily done. The division of the contents of the Old Testament into legal, narrative, and mystical parts—unexplained as the reader receives it—must certainly appear both arbitrary and strange. From the passage in Deuteronomy (xii. 21), which is quoted after the rabbis in support of "Sinaitic tradition," the principal part in this connection is omitted, to wit, the words "as I have commanded thee," referring to a command not to be found in any part of the Mosaic writ. The chronological dates, too, are rather loosely given. This is the more surprising as the author has in preparation an historical volume of "Études Talmudiques," which general title covers also the "Géographie du Talmud," as first part—a volume which every friend of Jewish history and literature will be glad to see published.

La Philosophie en France au XIXe. Siècle. Par Félix Ravaisson, Membre de l'Institut. (Paris. 1868.)—This is one of the reports "sur les Progrès des Lettres et des Sciences en France," published as a supplement or complement to the Exposition Universelle. M. Ravaisson, whose competence for the work of preparing the report on philosophy was established by the publication of his (unfinished) essay on the metaphysics of Aristotle, thirty years ago, has since then rarely been heard from by the public. His report shows him to have remained no idle or uninterested observer of events in the philosophical and scientific worlds. It is made with great soberness and fairness. His judgment of the celebrated Eclectic School is not different from that now generally passed on it, that it was superficial, *à la mode*, and a matter of popular *entraînement* rather than thorough-going and based on severe, impartial thought. M. Ravaisson defines it as "a brilliant development of the demi-spiritualism inaugurated in France by Royer-Collard." He agrees with Taine in his designation of Cousin as an "orateur philosophe." The disciples of the Eclectic school "were the most often not convinced" but persuaded "by the seductive influence of the words or style" of their master. The account of Comte and positivism is just and sufficiently full, and points out distinctly the radical changes which took place in Comte's philosophical stand-point from the beginning to the end of his career. Of peculiar interest to English and American readers are the developments or modifications of positivism made in England, especially by Mill and Spencer, which are succinctly pointed out and discussed by M. Ravaisson. After naming, characterizing, and briefly discussing all the French works of the present century on philosophy in its various phases and connections, especially the peculiar idealism of Renan and Vacherôt, who make God the "category of the ideal" but non-existent, the position of Claude Bernard and the "experimental school" of scientific men as to the relation of philosophy and positive science, where he finds, with M. Caro, the signs of an accommodation between the two, and also works on psychology and mental physiology, M. Ravaisson concludes that the recent history and present state of philosophy and general science in France point to a displacement of the "pseudo-positivism" and "semi-spiritualism" of the first half of this century by a *positive* yet idealistic philosophy, recognizing intelligent will, the root of which is love, as the rational and essential factor of all existence.

VALUABLE NEW ENGLISH WORKS,

JUST IMPORTED BY

SCRIBNER, WELFORD & CO.,

654 BROADWAY

(Between Bleecker and Bond Streets).

CHESNEY'S NARRATIVE OF THE EUPHRATES EXPEDITION. 1 large vol. 8vo, maps and engravings, $12.

PRINCIPLES AT STAKE: Essays on Church Questions of the Day. By various eminent Theologians. 1 vol. 8vo, $6.

MOMMSEN'S HISTORY OF ROME. New Library Edition, in large type. 4 large vols. 8vo, $36.

REED'S SHIPBUILDING IN IRON AND STEEL. 1 large vol. 8vo, numerous engravings, $15.

WHYMPER'S TRAVELS AND ADVENTURES IN THE TERRITORY OF ALASKA. 1 vol. 8vo, map and engravings, $8.

MAX HAVELAAR; or, The Coffee Auctions of the Dutch Trading Company. An Historical Novel. 1 vol. 8vo, $7.

WILLIAMS'S THE ORTHODOX AND THE NONJURORS. 1 vol. 8vo, $3 75.

MEMOIRS OF LEOPOLD I., KING OF THE BELGIANS. By THEO. JUSTE. 2 vols. 8vo, portraits, $12.

MARYAT'S HISTORY OF POTTERY AND PORCELAIN, MEDIÆVAL AND MODERN. Third edition, revised and augmented. 1 handsome vol. large 8vo, full of engravings, $21.

ESSAYS IN DEFENCE OF WOMEN. 1 vol. crown 8vo, $3 75.

VOLCANOES AND EARTHQUAKES. By Messrs. ZURCHER and MARGOLLÉ. Translated by NORMAN LOCKYER. 1 vol. crown 8vo, engravings, $5 25.

DR. SYNTAX'S THREE TOURS: in Search of the Picturesque, Consolation, and a Wife. By W. COOMBE. New and cheap edition, with all Rowlandson's colored engravings. 1 vol. crown 8vo, only $3 75.

SMITH'S ATTRACTIONS OF THE NILE; or, Travels in Egypt and Nubia. 2 vols., maps and plates, $9.

GREG'S LITERARY AND SOCIAL JUDGMENTS. 1 thick vol. crown 8vo, $6.

——— THE CREED OF CHRISTENDOM; its Foundations and Superstructure. 1 vol., $3.

COX'S RECOLLECTIONS OF OXFORD, 1789 to 1796. 1 vol. crown 8vo, $5 25.

DE ROS (Lieut.-General). The Young Officer's Companion; or, Essays on Military Duties and Qualities. 12mo, $4 50.

BROWNING'S NEW POEM—THE RING AND THE BOOK. Vol. I. (to be in 4 vols. 16mo) $3 75.

SWETE'S ENGLAND VERSUS ROME. A Brief Hand-book to the Roman Catholic Controversy. 18mo, $1 25.

KEYSER'S PRIVATE LIFE OF THE OLD NORTHMEN. 12mo, $2 25.

LESSING'S LAOKOON: An Essay on the Limits of Painting and Poetry. Translated by Beasley. 1 vol., $2 50.

THE INGOLDSBY LEGENDS; or, Mirth and Marvels. A very cheap edition complete for $1 25.
Another cheap edition in 1 vol. 16mo, extra cloth, $3.
Or, the handsome 4to edition, finely illustrated, extra cloth, $10 50.
Or, the very scarce edition in 3 vols. crown 8vo, with Cruikshank's Illustrations, cloth, $21.

COX'S WHIG AND TORY ADMINISTRATIONS DURING THE LAST 13 YEARS. 1 vol. 8vo, $2 50.

BURKE'S REFLECTIONS ON THE REVOLUTION IN FRANCE—1790. New edition. 12mo, $1 75.

HOLMES'S RELIGIOUS EMBLEMS AND ALLEGORIES. Illustrated. 12mo, $1 75.

FRASER'S SEA-SIDE NATURALIST: Outdoor Studies in Marine Zoölogy and Botany. Illustrated. 12mo, $1 75.

ENGLISH REPRINTS, NO. XI. The Steele Glas and the Complaynt of Philomene. By George Gascoigne. 12mo, paper, 60 cents.

*** All the preceding volumes on hand.
Any of the above works sent by mail on receipt of their price, with ten per cent. addition.
Full and complete Catalogues of our extensive English Stock can be had gratis on application. Send for the "Book-Buyer," a Monthly Summary of American and Foreign Literature.

PUBLISHED THIS WEEK:

RIVES'S LIFE OF MADISON,

VOL. III.,

AND BATCHELDER'S

Massachusetts Manufacturing Corporations.

I.

HISTORY OF THE LIFE AND TIMES OF JAMES MADISON.

By WM. C. RIVES.

VOL. III.

8vo, cloth, $3 50.

The present volume completes this work, of which Hon. Geo. Bancroft has said, "It may certainly claim to be considered as one of the fairest and most complete histories—perhaps it can more justly be said that it is the *best* history of the formation of the Federal Constitution."

II.

A MANUAL OF THE LAWS OF MASSACHUSETTS IN RELATION TO MANUFACTURING CORPORATIONS.

Together with a Summary of the Laws affecting Corporations generally in that Commonwealth, especially those Organized for Business Purposes.

By SAMUEL BATCHELDER, JR.

12mo, cloth, $2 50.

NEW PATENT PIANOS.

RAVEN & BACON
(Established 1829),
Warerooms 644 & 646 Broadway, N. Y.,
MANUFACTURERS OF
PIANO-FORTES, WITH THEIR PATENT COMBINATION SOUNDING-BOARDS.

Patented August 14, 1866.

This invention, introduced exclusively into our Pianos, is of the greatest advantage to the tone of the instrument, as it affects the sounding-board, the very soul of the Piano, and produces thereby a pure liquid tone greatly superior in quality and power to that of the ordinary Piano. The sounding-board, released from its connection with the piano-case, and resting upon under sounding-boards, is relieved from the rigidity caused by such connection, and its vibratory quality increased.

Our Pianos are first-class in every respect, and purchasers will have not only our own guarantee as to their quality, but also the guarantee of the reputation of the instrument, obtained from the experience of our patrons who have used them for a generation. All lovers of this eminently household instrument, as well as parties proposing to purchase new Pianos, are invited to call and examine our assortment.

AGENTS WANTED.

$75 TO $200 PER MONTH! Or a Commission from which twice that amount can be made by selling the latest improved COMMON-SENSE FAMILY SEWING MACHINE. Price $18. For Circulars and Terms, address C. BOWERS & CO., 320 South Third Street, Philadelphia, Pa.

TWO TERMS, beginning February 22 and September 13, 1869. The resident Professors are THEOPHILUS PARSONS, LL.D.; EMORY WASHBURN, LL.D.; and NATHANIEL HOLMES, A.M. Gentlemen of distinction in the profession lecture from time to time on special topics. Application may be made for circulars or further information to either of the resident Professors.

The Nation.

This Journal commences its *Eighth Volume* with the first issue of January, 1869. It has a well-established character as a political, social, and literary force, a medium for the best talent of the country, and a representative of national principles; while its absolute independence has, the Publishers believe, won it the respect and confidence of men of all parties. Its increased circulation among Clergymen of every denomination is proof of its value for the class of public teachers; and for the sake of its still wider diffusion among them the Publishers offer to send the paper free, and postage prepaid, for one month, to any clergyman wishing to make a trial of it with a view to subscribing.

The Publishers are constantly assured by Advertisers of the profitable returns from their advertisements in the *Nation*, the circulation of which is considerably larger than that of any similar weekly published in this country. Book publishers in every part of the Union, principals of schools, makers and exhibitors of works of art, will find it peculiarly to their advantage to advertise in the *Nation*. Full particulars of terms, etc., given by circular.

ADDRESS, PUBLISHER OF "THE NATION," BOX 6732, NEW YORK.

PUBLISHING OFFICE, 3 PARK PLACE.

The Week.

THE week began in the Senate with the presenting of a memorial by Mr. Frelinghuysen, in which certain capitalists set forth that the proposed subsidies to the Northern Pacific and Union Pacific (Eastern branch) Railroads will amount to $125,000,000. This is saying nothing about the land-grants, which, if we recollect, are to the extent of 12,000 acres for every mile of rail. The capitalists above mentioned offer to do the work for a subsidy per mile of $15,000. This is but two-fifths of what the present builders are getting. The memorialists agree to give surety in $100,000,000 that the work shall be properly completed at the stipulated price, and $75,000,000 saved to the Treasury. Mr. Buckalew, on Wednesday, offered a bill, which we hope he may live to see adopted, giving to every man who votes for representatives as many votes, divided as he pleases, as there are representatives sent from the State in which he resides. After a little confusion and some severe study on the part of the party managers, this system would leave us exactly where we now are. On the same day a bill was passed authorizing the removal into the Federal courts of all suits where action is brought in the Southern States to recover damages for property destroyed by rebels. It seems that the Southern State judges have a way of declining to consider the late Confederate soldiers and authorities as public enemies. On Thursday, a bill was introduced to give Mrs. Lincoln a pension, on the ground that her husband, being killed while in the discharge of his duty (and because he discharged it so well) as commander-in-chief of the army and navy, his widow deserves a pension as much as the widow of any soldier or sailor. There is no doubt of the passage of the bill, and it is a thing to be regretted that it was not done long ago. A pension for retiring Presidents, which might be justified by reasons not very dissimilar to those given in this case, would be hardly more than fair. Mr. Morrill spoke against a reciprocity treaty with Canada; and from the tone prevalent in regard to this matter in the Senate and the House, it seems that Canada must look to our tariff for her relief. On Friday, the Judiciary Committee reported a constitutional amendment, which, in brief, would make it impossible to deny negroes the privilege of voting. All the week the Sue Murphy Relief Bill has been coming up, and was at last referred again to the Committee on Claims, and it is improbable that it will be heard from again this session. It is rather surprising that neither Mr. Fessenden nor Mr. Trumbull, two of the best of the Senatorial lawyers, had anything to say during the fortnight's debate. Our Radical brethren will recollect, perhaps, that both these persons were anti-impeachers. Why not have an investigation into their silence and its relations to the Murphy estate? A man that would "vote No on the Eleventh Article" is capable of anything, as everybody knows.

Tuesday in the House was occupied by Mr. Butler with a speech, which is everywhere condemned and scouted, on the currency and the general financial question. He will be heard of again on these topics in case his faith in the public dishonesty shall prove to be objectively true, and not evolved from his own consciousness only; but we conceive his present scheme to be not dangerous. On Wednesday, Mr. Banks's West Indies Protectorate Bill came up and produced a comical scene, on which we have commented elsewhere. Mr. Spalding, of Ohio, was among the half-dozen members who lost their heads and contributed to the display of the genuine old-fashioned Davy Crockett spread-eagleism. It ought to please Massachusetts to think that she has just sent Mr. Banks to Washington for two years more, and that another champion of the Hayti and St. Domingo measure was Mr. Butler. The debate was fitly closed by "Fenian" Robinson and Mr. James Brooks, who desired to extend protection to Ireland, on the ground, we believe, that it also is an island entirely surrounded by water, and might also like to be protected. The House tabled the whole business by a very heavy vote. It took the same course with an equally sensible proposal made by Mr. Ashley, of Ohio, who signalizes his departure from Congress by a characteristic performance. He wished to make a Territorial government, with judicial officers and all complete, for the Territory of Alaska. We presume to provide the place with people on whom governor and judges might earn their salaries, Mr. Arnell proposed that the new purchase should be made into a penal colony. Mr. Ashley, of Nevada, on Thursday introduced a bill which, if it is passed, will materially help to solve the Mormon question. It gives most of the territory of what is now Utah to the six adjacent States and Territories; confines Brigham Young, in his character of empire founder, to very narrow limits, and exposes him, as an apostle, to a close communion with gentiles. On the same day the Niagara Ship Canal Bill was virtually defeated. The debt must be paid before more money is spent, was the ground on which this action of the House nominally, and perhaps really, was based. The House also passed on Monday, by the decisive vote of 90 ayes to 67 nays, a resolution offered by Mr. Holman, to the effect that Congress ought not to vote any more land or subsidies to railroad companies, but should husband the national resources, so as to relieve the people of the pressure of taxation. Another resolution which Mr. Holman offered at the same time, and which declares that the public lands are to be preserved as a sacred trust and to be disposed of only for homesteads, was tabled by a vote of 110 to 54. The reason of this we do not know.

Half-a-dozen senatorial elections, and caucuses whose action is equivalent to an election, have been held during the week, and it appears that, as the result, we are to have in the Forty-first Congress as new senators, Mr. Fenton from New York, Mr. Carl Schurz from Missouri, Mr. Hamlin from Maine, Mr. Scott from Pennsylvania, and Mr. Cumback from Indiana. It is confidently asserted that the caucus nomination in this State was secured by the expenditure of money in Mr. Fenton's interest, and it is not seriously denied. It is true, too, that Mr. Hastings, editor of the *Commercial Advertiser*, made the most explicit charges of corruption against Mr. Fenton as governor, and challenged the latter to go into court and prove, if he could, that he had not been a taker of bribes. But Mr. Fenton is understood to be a man of as much ability as Mr. Morgan, and we have no information which leads us to suppose that money was not spent on both sides. Some of the country members, too, suspected Mr. Morgan of "Johnsonizing." Mr. Hamlin, who replaces Mr. Morrill, is no doubt an able man; being naturally indolent, he has never used to their full extent all his abilities, unless we may say that he has

done so in pushing his chances for the office which now, after years of all kinds of manœuvring, he has at last got. He supplants an able man, a good senator, and one who, whether he is a politician or not, at least has not the reputation of being so adroit and laborious a wire-puller as his barely successful competitor. Mr. Carl Schurz's abilities as a legislator he has yet to prove. His reputation as an accomplished speaker is already made, and there is no doubt of his sincere belief in republicanism in its wider and its narrower sense. What will be his value in the business of putting sound sentiments into the form of sensible enactments we shall soon be able to see. From Wisconsin we are to have in place of Mr. Doolittle Mr. Matthew Carpenter, which is certainly a great gain. Michigan sends back Mr. Chandler, for reasons best known to herself. Mr. Sumner of course comes again from Massachusetts. Mr. Cumback, an untried man, takes Mr. Hendricks's place as one of the senators from Indiana, and an equally or more obscure man, Mr. Scott, is sent from Pennsylvania with Mr. Cameron's approbation. Doubtless this is the last batch of senatorial elections in which will be felt the effects of the impeachment trial, which still agitates the shallower, and affects too the thicker, heads among the Republicans.

The speculations as to the Cabinet continue, but apparently with as little foundation or real knowledge as ever. The rule followed by the speculators seems to be to take the men who, in the ordinary course of things, would be the most likely candidates, and analyze their claims with the aid of past experience. One very entertaining speculator in the *Tribune* represents Sumner, Wade, Washburne, Rawlins, Schofield, and Stanton as "corner-stones" of the new administration; that is, men for whom it must find places. He mentions Boutwell for the Treasury, but throws dark suspicions on Wells, who, he says, has been too much of late with Sam Ward, and adds that he has no political or executive experience, evidently considering a thorough knowledge of the financial condition of the country and of the science of finance a very unimportant qualification for the place. Some of the conclusions of Mr. Wells's report are evidently considered by one school of politicians such as no respectable man could arrive at. Are his views on pig-iron, we expect to hear asked shortly, entirely consistent with proper self-control in the matter of intoxicating drinks? Wade, all the speculators agree, is the great difficulty of the crisis. The *Tribune's* correspondent thinks he will have to be "taken care of," but considers that a seat for him in the cabinet is an impossibility, and suggests a judgeship or a first-class mission, such as Russia. The famous "interviewer" of the *Cincinnati Commercial*, on the other hand, says great sympathy is felt for the "old wheel-horse," but is unable to say what ought to be done to satisfy his "claims." But why not get rid of the difficulty by putting him on the Spanish throne? The well-informed and careful young gentleman who writes to the New York *Tribune* on Spanish affairs, says the Spanish monarchists are thinking of a United States Senator for the vacant place; and unless we are greatly mistaken, we have got in Mr. Wade just the man they want, and his coronation would be a great relief both to Grant and the Republican party. For Butler nobody seems to be caring. We have lighted on one faint suggestion, that he might succeed Sumner in the Senate, if Sumner were translated to the State Department, but he appears to inspire no enthusiasm. Boutwell is rated high on account of his honesty, but then something more than honesty is needed, and nothing more appears to be claimed for him except "soundness."

The Butler financial scheme is not worth discussion, as it has already passed from the public mind, except as a fresh illustration of the uselessness of hoping for the conversion of the debt at a reduced rate of interest as long as members like Butler are sent to Congress by enthusiastic votes of Eastern constituencies, and their wild nonsense on finance is deemed worthy of being reported at full length by the leading papers. No sane man will lend money at four per cent. to a community in which financial doctors of this kind are allowed to talk with even an appearance of authority, or in which such persons are put in positions of responsibility by the popular vote, for whatever reason. Capitalists are not going to poll the Fifth Massachusetts District to find out how many of Butler's supporters admire him for his financial views and how many for his soundness on "the main question." All they need to know is that he was elected with all his financial follies and heresies fresh in the public mind, and that the first chance he got he proposed to lower the rate of interest for the poor by issuing plenty of irredeemable paper, and that plenty of people think him a fine old fellow who knows what he is about. We may put out four per cent. loans as much as we please; nobody will take them at par; and nobody will submit to a conversion of the outstanding bonds because Butler or Logan or Sherman assures him it will be better for him. People will take their chance with the six per cent. bonds. If Congress can make irredeemable paper serve as money, all we can say is that it is a burning shame to have so many honest men suffering for want of capital, to say nothing of overcoats and hats.

Mr. Jenckes, of Rhode Island, addressed a meeting of the Social Science Association in this city on Saturday last, in explanation and defence of his Civil Service Bill. The meeting, though small, being convened in the main by special invitation, was mainly made up of leading merchants, bankers, and lawyers, who listened attentively for two hours to the story, as extraordinary as any civilized legislator could in our day have to tell, of the way in which this Government is served and swindled. The address was largely—too largely, we thought, as regarded the audience then present, though perhaps not too largely as regarded the reading public—devoted to answering the late snorts of General Logan in the House of Representatives. One fact brought out is, however, in itself a demonstration of the value of the measure. Mr. Jenckes cited the Treasury officials in support of the statement that one hundred million dollars are stolen or lost annually by United States officials, so that the reform would of itself pay off the five-twenties by the time the bonds are due, without adding a cent to the burden of the tax-payers. In other words, out of every four dollars of taxes levied, one dollar is stolen and spent by rogues appointed by Washington politicians, and paid out of the public purse. Yet you will hardly find a "whole-souled statesman" in Congress who won't fiercely defend the present system, and, if you talk of Mr. Jenckes's bill, will not endeavor to change the subject, and give you his views on "eternal justice" and "the rights of man." The measure only needs to be made familiar to the country, we are satisfied, in order to secure its support for it; and, as far as we can judge, the press is generally heartily disposed to do its duty in the matter.

Mr. Reverdy Johnson, after all, seems likely to come home from England with credit, his fraternizations with unworthy persons, his post-prandial oratory, and his difficulties of all kinds about dinners, to the contrary notwithstanding. He has, it appears, contrary to our expectation, and contrary, we suspect, to the expectation of most people, concluded three treaties with the Earl of Clarendon—one disposing of the "dungeon" question, or, in other words, the rights of naturalized citizens, similar in terms to that negotiated by Mr. Bancroft with the German powers; another settling the San Juan dispute; and the third, and most important of all, providing machinery for the settlement of the *Alabama* case. Moreover, in this last he has obtained not only the concession of all he asked for, but of all Mr. Seward chose to ask for in addition. The general question of the liability of England, as well as every other question in the case, is left to a commission of four, two from each country, instead of to an arbitrator, and in case of an equal division of opinion, an umpire is to be chosen by the two Governments, subject, on the American side, to the ratification of the Senate. All British claims finally adjudicated in the American courts of admiralty are excluded, and so are all claims of persons who cannot prove their neutrality during the war. The commission, too, is to sit in Washington. The practical importance of Mr. Seward's great point—the wrongfulness of the recognition of the South as a belligerent—does not as yet, however, clearly appear, because, even supposing the commission found against Great Britain on that point, it would hardly award damages for it to the United States from way of

smart-money. The most it will award, no matter what its finding may be, will be compensation for losses sustained from the Confederate cruisers issuing from English ports, and this it would and could award without considering the question of the recognition at all. If the prematureness of the recognition constitute a claim for compensation, the compensation ought to be the sum-total of the loss at sea sustained by the United States through the war, of which, of course, nobody dreams even as a possibility.

We print, on another page, a letter from our correspondent at Athens, which offers strong confirmation of the view we have all along taken of the essentially farcical character of the Turco-Greek difficulty. Our correspondent is an American, enjoys unusual facilities for observation, and, as our readers know, has been and is a warm friend of the Cretan cause. He now lays the blame of its ruin on the ranters and intriguers at Athens, who have been trying to cheat the world into the belief that they are the men to overthrow the Ottoman Empire and regenerate European Turkey, and who have actually succeeded in cheating a considerable number of good people here into the belief that they are respectable patriots, and deserve the sympathy and aid of Christendom—the fact being that they have succeeded in depriving the little kingdom they represent of all the ordinary claims to confidence and respect. The condition of the Greek mind should afford an awful warning to the wiseacres in Pennsylvania who propose to make the newspaper "editorials" a part of the daily reading of the children in the public schools. The modern Athenians have been fed for the last two generations on this kind of pabulum. The modern Greek literature consists almost entirely of newspapers, glowing with "hope" and "enthusiasm," and overflowing with blatherskite. The people read little else, and extirpate the Turks, and rescue the Holy Sepulchre, and restore the empire of Alexander the Great, in yards of rhetoric; but they display none of the virtues which make a political community either powerful or influential. In short, they are what we might expect a generation of Americans to become if brought up on the Washington *Chronicle*, the *Revolution*, and a few other periodicals of the same kind which we might name.

As far as the news goes, the difficulty appears to be settled. The Conference at Paris has hit on a means of keeping the combatants apart. Greeee is to put a stop to the fitting out of volunteers for Crete, and for incursions into Turkish territory in aid of the Cretan insurrection, while Turkey on her side agrees to withdraw her "ultimatum." At the latest dates, the Turkish minister had signed the protocol, while that of Greece was waiting for instructions. It is not probable he will have to wait long, as the Cretan insurrection being completely over, there is not much to be gained by letting volunteers leave Athens for the island. It is worthy of note that the Greek Minister of Foreign Affairs, M. Delyanni, in his correspondence with Photiades Bey, the Turkish minister—another Greek, by-the-bye—took substantially the same ground as the English Attorney-General in the earlier stages of the *Alabama* controversy, that the duties of a neutral with regard to the participation of its own citizens in an armed conflict were regulated by its municipal law, and that therefore, if there was no law of Greece prohibiting the enrolment of volunteers, Turkey had no right to complain. The speculations of our correspondent as to the secret leanings and intentions of the European powers on the Turkish trouble are worth reading, but we doubt if they have any foundation. There is, in our opinion, no reason for believing that any power wants to bring the Eastern question to a head just now. Every one of them is struggling with internal difficulties—Russia, which bears most of the blame, more than any of the others. Louis Napoleon may want war, but it is an easy war, not a mêlée at Constantinople, in which there would be plenty of hard knocks and little glory.

The Cable announces the outbreak of a quarrel between Turkey and Persia, and the withdrawal of the Turkish ambassador from Teheran, and adds that Persia is "massing troops on her northwestern frontier." The New York *Times* is, we see, disposed to look on this as likely to introduce a new and dangerous complication into the Eastern difficulty. The incident is not, however, half as serious as it seems. The frontier line is almost a desert, and has been always the scene of guerilla operations on both sides, carried on by the Persians, however, with most vigor, as the Shiites hate the Sunnite branch of the Mussulman Church with true theological hatred, and these operations periodically reach a point which interrupts diplomatic relations. The frontier line was first fixed distinctly, by a mixed commission, in 1852, and since then the borderers have been somewhat more peaceable, but the state of things amongst them is still one of perpetual war. The Cable story that Persia "is massing troops" on her northwestern frontier is doubtless one of those jokes in which the wag who makes up the despatches in London occasionally indulges. The whole army of Persia does not amount to 30,000 men, miserably armed and led—a full third of them being Bashi-bazouks, or wild irregular cavalry from the northern desert, not as formidable as our Indians; and as the whole population of the country little exceeds 4,000,000, and the revenue only amounts *on paper* to about $5,000,000 yearly, the "massing" of troops is not a very formidable affair; and as to the coming fight with Turkey, nobody need get out of the way on account of it. The idea that Russia is at the bottom of the disturbance is very improbable. Russia is occupied busily in Central Asia, and any power which has the Emir of Bokhara and Yakoob Kooshbeghi on its hands is not likely to use the Shah as a tool against Turkey. Since Sir James Outram's operations in 1856, Persia is more afraid of the English than of the Russians.

The year closed on Italy with good omens. The Parliament before adjourning for the holidays, supported the Government against the Radicals in favor of administrative reform and of the continued payment of the so-called Pontifical debt—that is, the debt assumed by the kingdom in extending its sovereignty over large portions of the Papal domain. This assumption or transfer was recognized as a natural and proper thing, and as the evidence of sovereignty from the beginning—the Pope being anxious to hinder it for this very reason. The September Convention, in 1864, constrained the Pope to enter into negotiations for the equitable partition of the debt between himself and the kingdom, and the share of the latter has been honored since, as it was before, the Convention. The Radicals urged a suspension of further payment, on the ground of the violation of the September Convention by France, and avowedly as a means of hastening the departure of the French troops from Rome. This absurd and mischievous strategy, involving the direct ruin of the national credit, and undoing the progress of the last ten years, met with the fate it deserved. The ministry, which had come off with 75 majority on the more complex issue of administration, gained without effort 100 majority for maintaining in good faith the national obligations, which neither the obstinacy of the Pope nor the Emperor's breach of promise could impair. Thus the last obstacle to the improvement of the finances has been effectually removed, and the Government may now bend itself to the task which it has undertaken, of getting rid of a paper currency, and to the material interests of the peninsula. The port of Brindisi, we remark, seems fairly awake to the prize which is held out to it by the completion of the Suez Canal; and that this event will excite new life, and revive something of the old passion for the sea in torpid Venice, we judge highly probable if not inevitable.

The result of the elections in Spain, if the Cable can be relied on, is the complete triumph of the monarchists. The Constituent Cortes, it is said, will contain only 35 republicans out of about 350 members. Advice continues to be supplied to the Spaniards plentifully, and with such earnestness that one begins to feel that something horrible will happen if they do not take it. Most of the foreign counsellors, and the more energetic, have never been in Spain in their lives; and when one sees them at work, one wonders how they expect the Spanish people to take charge of its own destinies when they consider it necessary for it to get information as to how it ought to act in a most important crisis from literary men in Paris and London, and from astute Congressmen and sentimental Radicals and far-seeing newspaper correspondents in the United States. Had we not better relieve the poor Spaniards of their misery, and send over the astute and erudite Banks to settle the whole thing for them at once? It is awful to see such a pundit wasting his wisdom on the desert air at Washington, when the whole of the Old World is out of joint, and bellowing for a prophet and deliverer.

THE REVISION OF THE TARIFF.

The public, as regards the tariff question, may be divided into several classes. The first are prohibitionists pure and simple, who would, if they could, put an end to all trade with foreigners and employ the whole capital and whole labor of the country in producing every article the people require; but then these are so few in number, and so deficient in intellect and education, that their opinions hardly repay discussion. Then there are protectionists of the Carey school, who believe diversity of industry to be necessary to sound progress, but are not disposed to trust the creation of this diversity to the spontaneous exertions of individuals, and therefore advocate the stimulation of it by taxation. These may be called the scientific protectionists, and they have a large body of undisciplined followers, who may be called spread-eagle protectionists, and want everything to be made at home for the honor of the flag. After these come the selfish protectionists, who advocate the exclusion of foreign products, really to provide a good market for their own goods, but nominally either on scientific or spread-eagle grounds, or on a mixture of both. Lastly come the moderate protectionists, who comprise by far the greater portion of the sect, who think it necessary and desirable in a new country to tempt men into the foundation of new branches of industry by legislative aid, but would not foster anything that would plainly flourish without fostering, nor foster anything whatever longer than was necessary to give it a fair start.

Turning to the free-traders, we find two divisions, and two only. One may be called absolute free-traders, of the French type, trained by Bastiat, armed with principles and logic, and full of scorn for people who shrink in politics from clean-cut conclusions. They apply the laws of mechanics to the work of government, and having found their rule, refuse to admit that its action may be modified by circumstances. They proclaim the absolute right of men in society to sell the products of their industry where they please, and treat all restrictions on this right as forms of robbery, implying moral obliquity in the person or persons who create them. This division is small in number, but it does most of the work of agitation. The other, while admitting the abstract truth of the great doctrine of free trade, is content to submit to such modifications in the application of it as the state of public sentiment or of the national finances may seem to require; and while maintaining that duties should only be levied on foreign imports for revenue, are willing to have the duties so distributed as to favor branches of industry which protection seems likely to make self-supporting within a reasonable time, and, in fact, generally to give the American manufacturer, wherever possible, whatever advantage over the foreigner may be capable of being extracted from a moderate tariff.

Now, the tendency of opinion the world over is towards the recognition of the free-trade doctrine as the natural law of human intercourse, and towards the reduction to the lowest possible point of all interference with its action. This is due in part to the growth everywhere of individualism, the increasing respect for individual intelligence and freedom, and the increasing confidence of statesmen in this freedom and intelligence as agents in the production of wealth. It is due in part also to the prodigious success which has attended the application of the pure free-trade principle in the United States to the relations of a great number of separate political communities. The absence of custom-houses from the interior of this continent has afforded the first practical refutation of the old delusion on which most government interferences with trade have in past ages been based, that in the exchange of commodities between two separate political communities one is sure to lose, and both cannot profit. The absurdity of this has for the first time been demonstrated by the United States. The result is that though absolute free trade is nowhere else found, the tendency in all civilized countries, except in the British colonies, is towards a lowering of tariffs, and the leading political economists of the world have abandoned the principle of protection as worthless, and the influence of nearly all colleges and places of education is thrown against it.

In the United States sentiment is so divided that the triumph of either principle is not possible, and, if we are to believe Burke's maxim, what is not possible in politics is never desirable. The tide at present, owing to the shocking abuses of their power perpetrated during the last seven years by the selfish protectionists, is running against protection; but, even if it ran twice as strongly as it does, free-traders are not in a position to take advantage of it, nor are likely to be in our time, to secure the absolute triumph of their idea—for the simple reason that in a country like this a very large proportion of the revenue must, perforce, be drawn from duties on imports from abroad. The middle ground, on which both parties may and probably will meet, is such an arrangement of the tariff as will give an advantage over foreigners to interests which are likely to gain strength by being temporarily fostered, and which are now too weak to stand alone, and by whose existence the country seems likely eventually to profit. The free-traders need not hope for the abolition of the custom-house, and the protectionists must give up the hope both of complete or indiscriminate protection, and of all protection for branches of industry the forcing of which is injurious to other and larger branches, or which are never likely to be able to stand alone, no matter how much they are forced.

Indiscriminate protection is an absurdity on its face, because it gives no advantage to anybody. If the Government gives an iron manufacturer the power of raising his prices forty per cent., he profits by it so long as the farmer, butcher, baker, tailor, shoemaker, landlord, and weaver do not raise their prices too; but if, by protecting them also, the Government enables them to raise their prices, its protection to the ironmaster becomes a farce. Nor is it necessary to protect all branches of industry to produce the farce; the leading ones are sufficient; because a rise in a few leading products diffuses itself through all. Yet this is what Congress, for the last seven years, has been trying to do. Having no policy, and apparently no principles of its own, its plan has been to sit and wait for the manufacturers to come and ask for what they want. First comes the ironmaster and gets his forty per cent.; as long as nobody else gets a similar favor, it is clear gain to him. But he has hardly got home when the wool-grower and cotton-spinner and lumber-dealer and coal-miner arrive and claim the same thing, and get it. The result is that all prices are raised forty per cent., and the ironmaster finds at the end of a year he is just where he was before. He accordingly goes back the next year and claims more protection, and gets it; the others, hearing of this, do the same. Members of Congress take each interest's own story as to what it wants as conclusive, and the result is the monstrosity called the tariff. The whole process has been somewhat like an attempt to fill a bucket with a hole in it.

What is wanted to produce any change for the better in the tariff is the adoption, either by bill or resolution, of some principle or rule or policy as to the kinds of industry which shall be protected, and the rigid restriction of the duty to the point, consistent with due regard to the revenue, at which foreign competition, though not felt, may be feared by the lazy or unenterprising, and the absolute exclusion from all protection of raw materials and products which can never hope to stand alone. The facts on which such a principle should be based should be furnished by a long and careful examination, such as Mr. Wells has made, and not on the application of manufacturers. The fact that a manufacturer cannot make money at present prices no more constitutes a claim to protection, or increased protection, than to an appropriation from the Treasury, because it may be the result of his own bad management or the over-protection of some other branch of industry on which he is dependent, or simply the rise of prices to their old level under the influence of the general diffusion of the tax. In one most important branch Mr. Wells found that the effect of a rise of duty was exhausted in about six months. At the close of that time the manufacturers had to go to Washington and begin their lamentations once more.

"PROTECTORATES."

There was a discussion in the House of Representatives last week on the proposition of Mr. Banks to send a ship-of-war to "protect" St. Domingo, which, though it reads like a scene in Molière, is worth the attention of everybody who wants to appreciate at their just

value the efforts which we are now witnessing in some quarters not only to extend "the area of freedom" and the area of American influence, but to convert the United States into a kind of "standing counsel" for all distressed peoples. There is a civil war raging in St. Domingo; it has lasted now for several months, and bids fair to last as long as the combatants can find food or ammunition. There is no great principle or great interest at stake, or at least none which the outside world can discover. The conflict, as far as can be seen, is one born of personal ambition, of ill-regulated desires, of, in fact, a low state of moral and political training. Fighting about nothing, or fighting as the best mode of deciding political differences, or as anything but a last resort in a great crisis, is one of the characteristics of a people who are not yet fit for self-government; and the sole remedy is either long and wholesome experience of the misery of civil war or the rise of a despot strong enough and fortunate enough to hold the contending factions in check, and to provide security and justice until the people have learnt the virtue of self-control. That all peoples have this virtue in a sufficient degree to enable them to govern themselves politically is a theory which derives no support from either reason or experience. The Haytians have a revolution every three or four years for the same reason that a New York rough spends his evenings in drinking and fighting instead of attending lyceum lectures or reading history, and spends his money as fast as he earns it instead of putting it in the savings-bank. But Mr. Banks, who has now for a long while occupied the position of Chairman of the House Committee on Foreign Affairs, thinks that the Haytians are fighting simply for want of good advice, and therefore gravely proposed on Wednesday week to send a man-of-war to the island, with an officer on board whose duty it would be to counsel the belligerents, as a friend, to desist from hostilities and wait till the next election to decide their differences. On being asked the very natural question, What was the officer to do in case his counsels were rejected? Mr. Banks's answer was that he was to report the result to the Government, and, if it were deemed desirable, a "treaty" was to be concluded with Hayti, in which, we suppose, the Haytians were to bind themselves not to fight without a license from our President, or, in other words, the United States were to become responsible to the world for their good behavior.

The proposition was perhaps the most ludicrous yet made in the House, except the one to recognize "the Irish Republic" on the strength of the Fenian operations in 1867, and it is only worthy of notice, even though it emanates from a functionary of Mr. Banks's standing, because it is one of the many expressions one meets with now every day, of the desire with which a great many politicians of a certain school are burning to extend the sphere of Government control and multiply its functionaries, and to increase the number of duties of the nature and value and performance of which the people cannot readily judge. Of course we cannot "protect" or annex Hayti or the Sandwich Islands or Mexico or Cuba without adding a large number of functionaries to the present list, and entrusting them with a large amount of discretionary power and with the expenditure of a good deal of money, and sending them beyond the reach of public opinion; or, in other words, without allowing a "ring" to be formed at Washington for each protectorate. If, for instance, we undertake to "protect" Hayti—that is, restore peace and order—what this really means is, that we undertake to act as arbitrator between the two factions, and enforce our decisions at the point of the bayonet. It cannot mean simply the proffer of advice, for this Mr. Seward can offer any day through the mails without the authority of an act of Congress or a joint resolution. Now, if we enforce our decisions amongst our various protégés, we must stay on the ground and keep them enforced, and this means the creation of a proconsulate in each protectorate, with a military and naval force, a treasury which somebody must keep filled, and divers privileges and pickings by which somebody is sure to profit.

How the thing would work may be seen in the case of Alaska. Nothing could at first sight seem simpler or less likely to afford an opportunity for fraud or peculation or corruption than the purchase of a strip of wild and almost unpeopled territory, in a remote corner of the continent, and from a thoroughly friendly power. The scheme was concocted by the Secretary of State; the Senate cordially approved of it. The chairman of the Senate Committee of Foreign Affairs, Mr. Sumner, wrote a bulky pamphlet on the country, treating it from every known point of view and lauding it to the skies. What was there to do but pay the money? Nevertheless, the money was not paid. The appropriation "hung fire" in the House. The motives of the hesitation were among the loftiest, but in the delay "foreign gold" began to circulate. The Head Patriot, the Honorable Robert J. Walker, who was loudest in his advocacy of the acquisition, was sent for by the Russian ambassador and by him offered money as a bribe to induce him to be as uproarious as he could in advocating this extension of "the area of freedom," and Mr. Walker pocketed the money. A similar offer was made to the Secretary of the Senate and he refused it, but his business partner, when it was made to him, did not. Even the report on Alaska of the House Committee of Foreign Affairs, presented by the illustrious chairman, was at least in part paid for. That portion of it which described the resources and appearance of this priceless region, or, in other words, furnished the people of the United States with reasons for paying their hard-earned, or rather borrowed, money for it—and which the people doubtless supposed was the result of a protracted examination of the subject either by the chairman himself or the chairman in connection with his colleagues, or had at least been evolved by them from the depths of their moral consciousness—was written bodily by a roving newspaper reporter, and from him borrowed and incorporated in the report by the committee. Even this was paid for. Baron Stoeckl was so charmed with the composition that he gave the reporter one thousand dollars. How many more of the Alaska worthies were feed by the Russian Government nobody knows. In fact, the question people now ask themselves is, Who was not paid that ever opened his mouth on the subject?—an ill-natured question, doubtless, but not wholly unnatural. Since the purchase an attempt has been made by some of the disappointed to make a little more out of the transaction by having it erected into a regular United States Territory, with all the machinery of civil government, the white population being hardly large enough to furnish juries in criminal cases.

Now, we can neither purchase nor annex nor "protect" territory, either uninhabited or inhabited by people differing from ourselves in manners, laws, or language, without increasing the number of our functionaries or furnishing somebody with strong reasons for buying somebody at Washington—in other words, without increasing the corruption both in the legislative and administrative branches of the Government—without, in fact, putting our favor and our arms up at auction as Rome did in the latter days of the Republic, and wringing from suppliants and clients of inferior or dependent races, or from shrewd European friends, something very like Jugurtha's very uncomplimentary comment on the morals of the Roman Republic.

How subtle the poison is few can perceive. The proposed reciprocity treaty with the Sandwich Islands, for instance, is a noble-looking thing on paper. It would, it is true, reduce the revenue by about half a million in gold from the first, and very soon by two millions in gold; but then it would strengthen the bonds of friendship with the Sandwich Islanders and spread our influence over the vast bosom of the Pacific. Unhappily, the treaty is promoted mainly by gentlemen who have bought sugar-plantations and set up sugar-refineries in the Islands and in San Francisco. Cases of this kind might be multiplied by the dozen. There is hardly a scheme before Congress, however innocent in appearance, which involves the outlay of money by the Government, at the bottom of which a speculator is not lying hid.

The public functionaries in the civil service have increased in fifty years from about five thousand to fifty thousand, and simply through the growth of the Republic. There is nothing unnatural or unhealthy about this multiplication; they are all needed to do the work of government. But owing to the vices of the system, they steal or waste, it is calculated, one hundred million dollars a year, or, in other words, a fourth of the entire revenue. They are growing every day more knavish and incompetent. The influence of their example on the community is every year becoming more demoralizing. Their mode of getting and keeping their places has converted politics into a disgraceful and paltry game in which it is very difficult for an honest man to engage. Now, all attempts

to increase their number, or, in other words, to increase the number of duties the Government has to discharge, all attempts toannex or "protect" or purchase territory, or to send out propagandist missions for the spread of "seminal ideas," or to spread American influence in any way, except through the force of American example, the public may set down unhesitatingly as attempts on the part of a "ring" to make money. The work of our Government will not bear expansion without a proportionate increase of corruption, unless the civil service be thoroughly reformed. To multiply its cares under present circumstances is simply to multiply the number of successful American rogues. This question of the reform of the civil service really includes all the other questions of the day—even the financial question; for, as Mr. Jenckes pointed out in this city last week, if you add $100,000,000 a year to the revenue, you solve the whole financial problem. You pay the debt and return to specie payments without increasing the tax-payer's burdens.

THE REFORM MOVEMENT.

The indications that we are nearing a period of thorough reform are tolerably apparent to everybody except that exceedingly small number who believe that society is constantly and everywhere retrograding, and are very numerous and striking. In the first place, corruption in every branch of the Government has reached a point beyond which it cannot go far without putting the very existence of the Government in danger. This can hardly be called an exaggeration when competent authorities announce that the stealings amount to a fourth of the revenue, and when repudiation or perpetual paper-money is talked of as the best means of getting rid of the public burdens. Now, we feel quite confident that the people, as soon as their attention has been fairly called to the matter, will not allow the existence of the Government to be imperilled by corruption. In the next place, the whole of the machinery of justice—on the efficiency of which, perhaps, more than any other agency, the maintenance of order and morality depends—has got dangerously out of order. It is acknowledged by all competent observers that the election of judges and prosecuting officers for short terms, introduced twenty years ago, has lowered the character of the judiciary in every State in which it has been tried. In others, such as Massachusetts, in which it has not been tried, the pertinacity of the farmers in paying low wages to judicial officers is slowly but surely driving first-class men off the bench. Massachusetts has lost one of her best judges from this cause within the last year; others will doubtless follow. A Radical writer in *Harper's Weekly*, early last year, when advocating the passage of the act making two-thirds of the Supreme Court necessary to declare an act of Congress unconstitutional, dwelt strongly on what he evidently considered a well-known fact, that the character of the legal profession had been so lowered all over the country by the system of election that it was no longer possible to fill the Supreme Court with first-class men; therefore it was no longer safe to repose that confidence in the wisdom and discretion of the court which had, in the early days of the Republic, been the boast and glory of the country. Moreover, there are few States in which complaints of the inefficiency of the administration of criminal justice are not now heard. In States as old and orderly as Ohio and Indiana supplementary lynching of robbers and murderers on a great scale has had to be resorted to within the last year. We have had the same phenomenon in Western New York. In this city, although the police is perhaps as good as any in the world, their vigilance and faithfulness are rendered well-nigh worthless by the low character of the police justices, the abuses of the district-attorney's office, and the maladministration of the prisons all over the State. The facility with which escapes are effected from Sing Sing shows that the official supervision of the prisoners is little short of a farce; and it could hardly be expected to be otherwise when we consider that the wardens are hack politicians, changed every time a new party comes into power, even if the reports of the Prison Association did not tell on this subject one of the most sorrowful and disheartening tales of the day.

In fact, look which way we will, we find abundant evidence of two things: one is, that the absorption of the mental and moral energies of the country in the anti-slavery struggle, the habits of discussion and of thought bred by the controversy with the South, the love of general ideas, the dislike of detail, the tendency to judge all State questions by reference to Federal standards of expediency, the lofty indifference to all possible consequences or bearings, except one, of every measure which comes up, have exercised a most disastrous influence on the work of what may be with propriety called internal reform. And the other is, that the peculiar adaptation of the democratic principle so generally resorted to since 1846, which consists in the election of nearly all officials by universal suffrage for short terms, on low salaries, has proved a signal failure. This phenomenon is nothing new. Every country which has gone through a great struggle in pursuit of a great object has had much the same experience. But it is of experiences of all sorts, good, bad, and indifferent, that political education is made up. Nations do not prepare themselves either for the work of self-government or work of reform by the study of ethics or jurisprudence or political economy, but by a series of costly experiments and severe trials. The reaction which followed 1848 all over the continent of Europe seemed at the time a tremendous misfortune. The history of the last seven years has shown clearly that it was just what was needed to give Germans and Italians another step, and a most important one, in political education; and we have no doubt that it will be admitted ten years hence that Louis Napoleon has done far more—unconsciously, in spite of himself, it is true—for the cause of free government in France than the constitutional monarchy could ever have done. We shall hit in this country yet on the proper arrangement of the democratic machinery, but it will be through failures and crises such as we are now witnessing.

One of the first conditions of successful and speedy reform is, however, the withdrawal of some of the reforming force of the country from "advanced thinking," as it is called. The discipline of the army of reformers has never been in any country or any age very good, but in this country, at this moment, it is peculiarly bad. As we pointed out more than a year ago, the proportion borne by the bummers, who are looking up the fords, the bridges, the granaries, and the concealed treasure, and ambushed enemy, to the regular battalions, who are guarding the baggage, keeping the communications open, and garrisoning the captured strongholds, and making the march an advance instead of a mere raid, is ludicrously large. A man who keeps his place in line on the day of battle, takes his turn of outpost duty, and is ready for all the obscure and inglorious duties of the service, is getting to be looked on as a contemptible drudge. Most reformers prefer mounting a little mule, arming themselves with some not generally accepted weapon, called a "new idea," and starting off on their own hook, spying out the land, exchanging shots and epithets with the enemy, and shouting out from every rising ground glorious accounts of what they see ahead.

This tendency is fostered by the extraordinary and invaluable amount of hope and enthusiasm with which nearly everybody looks into the future. It so overflows, and finds so much justification in the past, that anybody who endeavors to keep it in subjection and look at the hard facts of the day is treated as morally diseased, and is cried down. But then the consciousness that hope alone will not do, that declamation on the future of humanity must for the present give place to some hard and repulsive work among existing abuses, begins to spread rapidly. The spectacle which may nowadays be frequently witnessed, of "advanced thinkers" delivering impassioned discourses on lofty general ideas, such as "human equality," "equal justice," "the rights of labor," to congregations composed largely of hardened peculators whose pockets are filled with the public money, or who are fresh from the perpetration of some job by which the very foundations of society are shaken and the guaranties of all rights—above all, the rights of the poor—weakened, begins to have its effect on the popular mind. The men whose hands the public should now strengthen are the hands of the working practical reformers, like the Jenckeses and Garfields and Wellses, whose aim it is to bring the real products of "advanced thinking" to the poor man's home, and to give the weak some better protection for their rights than platform oratory. The bummers need no support. They are sure to take care of themselves in all regions and all climates.

THE AUTOTYPE OR CARBON PROCESS IN PHOTOGRAPHY.

THE beautiful results of the recent great step in the art of photography, which has been called by its inventors the Autotype process, are not yet as well known among us as they ought to be. By this new process monochromatic photographs may be produced in any color that may be desired. The process is still in its infancy, but the results already attained by it are such as to warrant the hope of still further progress in the same direction. It has as yet been chiefly applied—and its excellence is most manifest—in the reproduction of original drawings of the old masters. For this purpose it is perfectly adapted. It gives an almost exact *fac-simile*, and in the best examples a perfection has been reached which renders the copy in all important respects, in all respects of art and use, as valuable as the original. Not only is every line and touch rendered with photographic accuracy, but the color of the original, produced by the same material as was employed by the artist, is given also, and with a close approach to exactness in the copy. Thus, if the original be in sepia or bistre, in red chalk or black crayon, these substances are used respectively for the coloring-matter of the reproduction. Any single color may be employed without restriction, the only requisite being that it should be applied with judgment and with something more than mere mechanical skill. The autotypes of Adolph Braun, of Dornach, long known as one of the best artists in photography in Europe, leave little to be desired. The steps by which the process has reached its present perfection have been long and slow. As far back as 1839, as we learn from a pamphlet issued in London by the Autotype Printing and Publishing Company, "Mr. Mungo Ponton discovered that paper impregnated with a solution of bichromate of potassa became highly sensitive to light, and that, by exposing, a brown positive picture could be obtained, and that it could be developed and fixed by simply washing out the soluble bichromate which had remained unacted upon under the opaque, or partly opaque, portions of the negative." The curious fact of the apparent insolubility of the bichromate where it was acted on by the light was afterwards shown by Becquerel to be due to the action of the bichromate itself under the influence of light upon the gelatine in Mr. Ponton's sized paper, rendering it insoluble, so that it held the bichromate by which the paper had been sensitized.

In 1855 Mr. Poitevin mixed a pigment in fine powder with the gelatine paper properly prepared and sensitized, and "found that when the gelatine was rendered insoluble by the action of the light passing through the negative," the pigment remained fixed with it, as it were imprisoned, while under the parts of the negative impervious to light it was wasted away with the gelatine.

"He thus procured a picture of any color, according to the nature of the pigment employed. His results were highly satisfactory, whenever his negative or cliché was that of a subject in line or stipple, and when the sensitive compound was sufficiently thin to allow the light to pass completely through it; or where it was not upon the surface, but in the pores of the paper. When, however, the negative was one taken from a natural object, with all the beautiful gradation and half-tone which we observe in a good photograph, or in a good drawing made by washes, the process failed, and was unequal to the task of reproducing this continuous gradation. Many experiments were made to overcome this difficulty, but with more or less want of success. M. l'Abbé de Laborde appears to have been the first to point out the cause of the loss of half-tone in Poitevin's process. He showed by deductions from his own experiments, made with boiled linseed oil, which he found sensitive to light, and which acts in a manner analogous to the sensitive compound of Poitevin, that the picture was really formed in all its perfection, the gradation being given by the more or less penetration of light into the substance of the sensitive layer. In the darkest shades, the light had completely traversed the layer, and reached the paper or plate upon which it was spread, but in the lightest shades the action was confined to an infinitely small fraction of the thickness; the remainder of the layer beneath it remaining unchanged, and being still soluble in the original menstruum. On this being applied to reveal the image, these attenuated portions on the surface were undermined and carried away by the removal of the soluble substratum beneath, and thus were the delicate shades destroyed."

But though the cause of failure was thus ascertained, a remedy was still to be discovered. Various suggestions were made, but none of them answered the purpose until Mr. Swan, an Englishman, invented the process which is now in use with entire success, and for which letters patent were granted to him in 1864:

"He first prepares what he calls a tissue, by forming a layer of gelatine and sugar mixed with a due proportion of pigment, and which he calls the 'tissue compound,' upon paper. This compound may be mixed at once with the bichromate or 'sensitizer,' and applied simultaneously with it to the paper, in which case 'sensitized tissue' is formed, which has only to be dried to be ready for use; or the tissue may be made without the bichromate, and the insensitive tissue thereby formed may be 'sensitized," when dry, by immersion in a solution of the bichromate whenever it is required for use. Being insensitive, it may, of course, be kept in the light, and when properly prepared may be kept in the dry state for any length of time.

"The tissue is exposed to light under the negative with its sensitive surface in contact with the glass. After exposure for a period which is not more than one-fourth, or at the most one-third, of that required for the complete insolation of the silver paper in the ordinary photographic process, the surface of the tissue is cemented to a piece of paper, which constitutes what is called the 'support;' the picture formed on the surface of the sensitive tissue being thereby transferred to, and supported by, the second sheet of paper. This may be either 'permanent' or 'temporary.' If the latter, the best cement is found to be a solution of caoutchouc (india-rubber) in benzole. The picture, with the surplus tissue compound unacted upon, is now enclosed between two layers of paper, one only of which is permeable to water. On immersing the whole in this fluid, slightly heated, the soluble part of the compound softens and partially dissolves, and the doubled sheet, in consequence, splits into two portions, one taking with it the soluble tissue compound, while the other retains the insoluble portion which constitutes the picture formed by light, and which is rendered perfect by simply being washed in warm water. It is, however, reversed, and must be retransferred to another sheet of paper, which then becomes the permanent or final support. Gelatine rendered insoluble by chrome alum is usually employed as the cement in this case, and when the picture has been thus treated, it is again held between two sheets of paper.

"The temporary support is easily removed, by spreading over its back a little benzole or other solvent of caoutchouc, and the picture is then finished and ready to be trimmed and mounted. Or if trimmed while on the temporary support, it may be at once mounted upon card or plate paper, and the temporary support being detached in this stage, the second mounting is avoided. The finished picture in this case is perfectly analogous to an ordinary engraving on India paper."

The Autotype Printing and Publishing Company in London now hold Mr. Swan's patent for Great Britain, while Mr. Braun holds it for France. The applications of the process are so various that its use, or the use of a similar process, must soon be extended wherever photography is practised as an art.

For artists, especially in America, the reproductions of the drawings of the old masters in the galleries of Europe are of inestimable value. M. Braun has, for three years past, been steadily engaged in reproducing selections from the best drawings in the collections of the Louvre, at Florence, Venice, Vienna, Basle, and elsewhere, and the lovers of art now have an opportunity of obtaining, at a comparatively moderate cost, specimens of the works of the great masters, which are, for all purposes of study, as good as the originals themselves. Deprived as we are of the finished works of the chief painters of the best time of art, and unlikely as it is that we shall for a long time yet to come possess a good gallery of their pictures, limited also as the uses of a gallery must always be in a country of such extent as ours, no better means of supplying a part of our want exists than is afforded by these autotypes. Sketches or drawings by Leonardo, by Titian, by Raphael, Holbein, and the other greatest masters, though they give but an imperfect idea of the pictures of the artists, have a value of their own not only as showing modes of study and methods of execution, but, more especially, often possessing qualities of feeling, of imagination, and of expression which illustrate the action of the artist's mind, and indicate the range and quality of his power quite as distinctly as his more elaborate and completer works. There is often a freshness, life, and vigor about a drawing, and a perfect, however limited, truth in a rapid sketch, rarely to be found in a finished composition.

If one were to select only from the *fac-similes* taken from the drawings in the Louvre, he would have masterly and, in almost every instance, thoroughly characteristic specimens of Michael Angelo, Lorenzo di Credi, Andrea del Sarto, Raphael, Leonardo, Titian, Paul Veronese, and Mantegna (to mention no lesser Italian names), as well as of Albert Dürer, Rubens, and Vandyke; of Claude, of Greuze, and of Watteau. He might have, beside, specimens of fifty other masters, and might form a collection of genuine and permanent interest and worth, at a cost comparatively trifling. The autotypes from these drawings are sold in Europe, well mounted, at a price which ought to allow of their sale here at from one dollar to three dollars a piece, according to their size. We trust that an agency for their sale at the most moderate possible rate—so as to bring them within the means of persons who have but little to spend on works of art—may soon be established in New York.

PICKWICKIANISM.

THERE is probably no more singular illustration of the utilitarian tendency of popular morality than the distinction which has grown up in America and England, and which is sure to grow up in the long run under

all successful constitutional governments, between a man's public and private character—or, in other words, the general recognition which obtains of the possibility of a man's being very honorable, upright, straightforward, truthful, and scrupulous as a private individual, and very base, tricky, tortuous, false, and unscrupulous as a politician. The distinction is one which will not bear five minutes' examination at the hands of a moralist or philosopher, and is one, indeed, which most people, if put down to a deliberate examination of it, would find it impossible to explain; and yet few people ever hesitate to accept it and to regulate their judgments of public men by it. Nothing we know of the workings of the human mind or of the composition of that most composite thing, the human character, warrants us in believing that a man can tell lies in a legislature or caucus and yet bring to private business or private intercourse a horror of falsehood; or deliberately allow a man to remain under a false impression as to a candidate, and yet turn with horror from the sanding of sugar or the sale of a foundered horse; and yet we all believe it, or at least act as if we believed it; and the reason is that if we did not fall in with the pretence the working of free institutions would become well-nigh impossible.

It is under cover of this distinction that there has grown up in parliamentary procedure that most comical theory which Dickens has satirized so well in "Pickwick," that not only can a man have two characters, but that he may use ordinary words in two different senses—the one the common sense, and the other the parliamentary sense; that you may call a political opponent a "deceiver," a "traitor," or "humbug," in a "parliamentary sense," while believing firmly that, from the point of view of everyday life, the application of any one of these terms to him would be grossly unjust and untrue. Perhaps, indeed, the perception of the fact that a man in a large audience is converted by that strange magnetism which seems to lie in numbers into a being in many respects utterly different from the same man at home in his own parlor—a more excitable, credulous, soft-hearted person—has had something to do with the origin of the distinction. There is not an orator in a hundred who could look a friend in the eye in a private room and make to him the statements that he will make with swelling port in his presence five minutes afterward at a public meeting. The concentration on a human being of a few hundred pairs of eyes does really, to a certain extent, transform him both morally and mentally. It seems to supply him, often, with a different moral standard, different mental tests, and a different view of the ridiculous, making, in fact, a different arrangement of his intellectual machinery. Men accustomed to public speaking, therefore, are hardly ever disposed to hold an orator to the same account for what he says in speeches as for what he says in conversation or in writing.

But then, besides this consideration, and far stronger than this consideration, comes the other one, that if the language which politicians use towards each other in political discussions were taken literally it would be impossible, as human nature is now constituted, to work the machinery of parliamentary government. People, therefore, tacitly agree to take what is said of public men, as public men, as if it meant less than it would mean if used of the same persons as private citizens, and it is found in practice that nations are successful in carrying on parliamentary government just in proportion to their readiness to accept this distinction. A general election in France, if conducted as the last one was in England, would be followed by a crop of duels which would make an election nearly as sanguinary as a pitched battle in the streets; and there is nothing more incomprehensible, and at the same time more revolting, to Frenchmen than the liberties which politicians take with each other in the heat of a political contest here or in England. If the same things were said by Frenchmen of Frenchmen it would render it impossible for all concerned ever to meet again on the same platform or in the same assembly, and the game would be brought to a close without result. But it will not do for us to undervalue this sensitiveness, however injurious it may be politically, for it unquestionably keeps alive a self-respect, an amount of personal dignity, a regard for reputation which, in the absence of the highest moral culture, are amongst the most valuable safeguards of society. Anglo-Saxons as completely liberated as Frenchmen are from religious restraints and religious traditions would be brutish in their ways to a degree of which we can hardly form an idea. But our thick-skinnedness enables us at least to meet when the contest is over and go on doing the practical work of political life as if nothing had happened; to greet the traitors, imbeciles, and scoundrels of yesterday cordially, and act with them cheerfully.

But then the thick-skinnedness has its bad side, and the bad side is a very bad one. The tendency of the constant use of language in the "Pickwickian sense" is to drive the other sense out of use. Most people like to speak strongly of things and people they do not like. Nothing but great self-control or extraordinary reverence for accuracy of expression will prevent most men from denouncing their enemies more violently than they deserve—if for no other reason, as a relief to their own feelings. Even clergymen feel frequently inconvenienced by their enforced abstinence from profane swearing. The consequence is that the common run of those who take much part in hot political discussion drift into vituperation which in calm moments they cannot justify, and they save themselves from the necessity of justifying it by treating it as simply a Pickwickian use of language. It is only by treating a large part of what they say in public as Pickwickian that Wendell Phillips and Henry Wilson, for instance, can meet on a platform without giving each other a few hearty kicks. Did they always use language in its ordinary sense, they would owe it to themselves and to society, and especially to the youth of both sexes who have read Mr. Phillips's speeches about Mr. Wilson, to assault and batter each other vigorously. It is only, too, by a rigid observance of the distinction that Mr. Johnson was able to receive General Butler on New Year's Day without pulling his nose. Had the "Pickwickian sense" not been invented, he would have been bound to pull it, and the general would have been one of the first to acknowledge the force of the obligation. Mr. Johnson could not have received the visit simply as a "mark of respect to his office," because no office is so exalted as to require one to honor it by shaking hands with "Caligula" or "the greatest criminal of the age."

But this excessive use of the "Pickwickian sense," in such cases as these, naturally tends to deprive all denunciation of all force. The general public cannot possibly observe the distinction carefully and apply it accurately; and finding that men in public life call each other scoundrels and tricksters and cheats every day, and then shake hands and laugh, they naturally cease to pay attention when anybody whatever is called a scoundrel or cheat—a fact of which the real scoundrels and cheats have become perfectly aware. Hence the complete indifference of the great knaves and swindlers both of politics and commerce—the men who really *do* pocket money that does not belong to them, and *do* take pay for betraying their trusts—to the denunciations hurled at them by indignant reformers. There is not one of them who is now in the least troubled by being held up to scorn as a rogue, because he knows that the public is so familiar with the application of such terms to undoubtedly honest men that it does not heed them when applied to any man whatever. Hence the comfortable way they have of "despising what the newspapers say," and of laughing proudly when they hear that they are being denounced by the reformers. They tell you that the same things are said every day of some of the best men in the country, and actually persuade themselves and their friends into the belief that a scathing attack from a newspaper or reforming orator is simply a kind of rough testimony to their power and importance, and not at all an imputation on their character.

We doubt, too, if it be possible for any people to make a practice of accusing men of great baseness without really meaning it, and continue very long to regard baseness with proper horror. One of the uses of language is to keep moral as well as intellectual distinctions clear and well defined; but if we get into the way of abusing the man who votes against his party in precisely the same terms as the man who absconds with the public money, our minds, however well trained, cannot long retain a very keen perception of the moral difference between the two offences; nor can we, after dining with the "villain who has betrayed the party," continue to feel any great scruple about shaking hands with the villain who has robbed the post-office. In fact, if the present indiscriminateness in vituperation continues much longer, it will become necessary, in order to show a man that society really disapproves of his conduct, for the people of his county to rise as they do at the South, under the superintendence of the sheriff, and burn his house and hunt him with bloodhounds. Any milder indication of popular resentment he will treat as a mere device to push the circulation of a feeble newspaper or rouse a languid audience.

THE FARCE IN THE LEVANT.

ATHENS, Dec. 26, 1868.

AMONG the obituaries of the year we may as well put one which, if a little premature, is not at all, I believe, doubtful—that of the Cretan insurrection moribund, and which will die as soon as the doctors leave it. Its epitaph may briefly be written: born of an intrigue of the enemies, it died of an intrigue of the friends, of Crete. No insurrection was ever before so iniquitously excited, none before so dishonorably suppressed. Its

sickness is owing to the incapacity of the central committee at Athens, and may be said to date its open manifestation from the petition of the Cretan chiefs for an autonomy, a petition written in the royal palace at Athens, and delivered by the King's private secretary to the Cretan chief charged to manœuvre it into effect. For the moment it stopped the *élan* of the insurrection, and produced the first serious disorder among the chiefs; but having no result, the insurrection resumed slightly its vitality, and to re-establish its morale called Coroneos to the general command. From my personal knowledge of things in Crete, and the testimony of all my friends and correspondents there, I am persuaded that at that time the insurrection had sufficient force to resume an activity greater, in proportion to the force Turkey could bring to bear on it, than it had ever had. The Bulgaris ministry, fearing that it might recover, and anxious to appear to support it, sent Petropoulaki and a thousand Mainotes and desperadoes, and the committee, fearing the loss of its functions and stipend, accepted the substitution, although well assured from Crete that it would be fatal. In effect, the better part of the Cretan chiefs withdrew at once from hostilities; the old and new bands of foreign volunteers fell into quarrelling at once; Sphakia seceded from the measure in great part, and although all the strongholds of Crete were, at last writing from there, still in the hands of the Christians, the war may be said to be ended.

This result would have been instantly fatal to the Bulgaris government but for the sham row it got up with the Porte. The conviction is almost universal "in well-informed circles" here that the whole thing was prearranged with the Turkish minister before the ultimatum was communicated, and that the Porte did now what it never dared do when circumstances were far more favorable—menace Greece with war; a menace it dares not now carry into effect unless assured of the co-operation of Austria in the Principalities. War would be disastrous to Greece, but fatal to Turkey; it would be the beginning of a general Eastern war, if not Western as well, and it is perfectly well understood here that the great Powers with the exception of France and Austria, are determined not to let Turkey go to war with Greece. The Porte and M. Bulgaris, thus assured that they were well held back, rushed at each other with the vehemence of bull-dogs. The ultimatum, a most absurd state paper, was replied to by a ridiculously defiant denial *in toto*, which, considering that every gamin in Athens knew that Petropoulaki was called from Maïna by Bulgaris, received his instructions from a member of the cabinet, and was paid from the public treasury, beside being furnished with mountain guns from the national arsenal (which, however, he sent back in the *Enosis*, they having only been put on board for effect), and that the enrolment and organization had been as ostentatious as possible, even to driving in carriages past the Turkish minister's with the Cretan flag flying, old Petropoulaki in the leading carriage, was a piece of impertinence a respectable statesman could only have committed in comedy.

These two blows delivered in air, and David having assumed the proper melodramatic *pose* with the stone (only a cream-cheese he brought with him from his sheep-fold) in his sling ready to smite Goliath in the forehead, the innocent people takes to applauding the plucky ministry, beginning with a demonstration of gamins and university boys, who went to the King's palace and zittoed vociferously half an hour without anybody noticing them, when they went to all the legations on the same melodious errand. I took the trouble to walk through them, and see if I could find a respectable or well-known man. I could not. The most were boys and loafers, many drunk. They went to the Russian legation and yelled awhile, but nobody was at home; so they went to the American, next door, and zittoed again, "for the great America." A waiting-maid came and adorned the open window with a not ill-looking head; they zittoed the servant and America alternately, and, as the minister did not show himself, they were moving away, when the door opened and some appendage of the legation appeared and murmured some words, which I, being twenty feet away, could not hear; then the boys, zittoing again, went back to the Russian, which seemed the favorite, and thence shouting down Hermes Street to other fields, died away in the distance.

Encouraged by this enthusiastic demonstration, the ministry allowed Photiades Bey to take his passports and leave; called on the chamber to support it, and asked for a loan of a hundred million drachmas, which were calmly voted, remembering that of the loan of 28,000,000 voted the year before last only 12,000,000 has as yet been taken, and that there was no chance of any of the new one being taken. The ministerial organs are still busy shouting zitto and something about the national dignity and war to the—well, not exactly knife, perhaps, but at any rate to diplomatic extremes; and we go on, not a step having yet been taken to put the country in a state of defence. All the safe measures of defiance are, however, adopted, and the dust so raised obscures the stage, and hides the last struggles of Crete dying in the background.

As pretty a play as if Aristophanes had written it; but after, the reckoning. Bulgaris by a stage trick has kept his place through the session of the Chamber, which adjourned last week, and will not meet again except by special call until November, so that from constitutional aggression he has nothing to fear. The public is already aware of the trick, and when the dust shall have cleared away, and it is perceived that the Government has trifled with the irrepressible Hellenic patriotism, and that there is no probability of a war with Turkey, and that Crete is gone, I think that the chances of a revolution are pretty good, and that as George I. has forced the obnoxious ministry on the country, the chances of his going with it are fair. It is probably for this contingency that a Danish frigate has just arrived at Piræus.

The affair at Syra has come just in time to excite the people still more and lay the foundations of a real quarrel by-and-by. So that though the ministry, in a childish, short-sighted way, are rid of the Cretan affair and the foreign pressure it caused, or, as the Greeks put it, have obeyed their foreign masters (and it may be said that they begin to class the King in this category), they have only deepened their future difficulties. The whole imbroglio will have to be judged and settled by foreign diplomacy, and as, in the meanwhile, Crete will have succumbed, the Porte can be content with some slight concession to the Hellenic dignity.

The Porte does not want war, and knows well that it is not ready for it; but it is believed in high official quarters that the French Government in spite of its pacific protestations, is secretly pushing it to war measures. War is clearly not far away, and once begun it will probably become general; indeed, it is generally believed in the legation here and at Constantinople that the conflagration following the first spark will be rapid and widespread, involving all Europe. The position of the Emperor of France is such that he must fight somebody, and if he can so arrange matters that hostilities shall commence in the Turkish Empire, Austria will step in first, then Russia; and then France, having kept the peace so far, will have the advantage of appearing to act for the general good and in the interests of the balance of power, and hopes to draw England with her on this war-path. If, however, war should begin by a French movement on the Rhine (as otherwise it must), the Emperor, being the aggressor, will have against him not only England, but all the peace party of Europe and the Germanic feeling in Austria, which will ill brook Germans fighting with France against Germans. It becomes all-important, therefore, in the French interest that the war should commence in Turkey, and in the Russian that it should commence in Prussia. It is not surprising, then, that the Russian influence should be exercised in favor of peace in the East until war shall have broken out on the Rhine, or that of the three or four insurrections actually ready and waiting orders in Turkey none should be showing a sign of life. Epirus and Thessaly are ready and have called for Coroneos; the Bulgarians are only waiting a word from further north, to say nothing of the Principalities; while the Lebanon is thoroughly mined, waiting for Karam, who is now here waiting the moment, and what the moment waits for is more than I know; may be, more than anybody knows. The position reminds one of Holmes's one-horse shay, so well kept in condition and protected at all weak points that, like that famous vehicle, it is to be apprehended that it will give out everywhere simultaneously. Of one thing we may be sure, that as long as the Alabama question is unsettled England will have to keep out of the fray.

Notes.

LITERARY.

Messrs. D. Appleton & Co. announce that, in case a sufficient number of copies is subscribed for, they will publish large-paper editions, consisting of one hundred copies each, of the "Life and Letters of Fitz-Greene Halleck" and "The Poetical Writings of Fitz-Greene Halleck." The volumes will be printed on tinted paper, with pictures not found in other editions—four portraits of Halleck and one of Drake, and pictures of the home and monument of the former at Guilford—and will be handsomely bound. The subscription price is ten dollars.——The latest of the translations from the German, which, just at present, are beating in our American fiction market the translations from the French and the republications of English novels, is a book announced by Messrs. Kelly, Piet & Co., of Baltimore. It is the "Eudoxia" of the erratic, poetic Ida, Countess von Hahn-Hahn, who once made a greater noise in the world than she will ever make again. So far as we hear, "Eudoxia" has

never before been put into an English dress; it is now "freely translated," the publishers say. Another work just issued by the same house is a volume of miscellaneous essays by Dr. Richard McSherry, who, among other things, treats of "Mexico and Mexican Affairs," the "Early History of Maryland," and "Homœopathy."——Mr. A. Eyrich, successor to Blelock & Co., announced that on the 15th of the month he would have ready a novel with the title, "The Heroine of the Confederacy; or, Truth and Justice," by Miss Florence J. O'Connor.——What we have said above of the relative popularity of English, French, and German novelists is, of course, to be taken with some qualifications. We imagine that even Miss Mühlbach would not beat Mr. Dickens in our circulating libraries, and Victor Hugo, too, when he comes with his "Par Ordre du Roi" will beat her and her compeers with ease. It is equally certain that among those readers of fiction whose taste for it is not of the coarser varieties, while at the same time they are numerous enough to make an audience of thousands, no living English novelist, not excepting George Eliot, could compete before Americans with Mr. Charles Reade—when he works alone. The announcement that the current volume of the *Galaxy* would contain his new story doubled the number of that magazine's subscribers in the course of the single month of December, and no doubt will still further and largely lengthen the list. This vigorous writer, who has already shown in some of his novels that he has a pretty good eye for the American type of character, and that he does not dislike it at all, but who evidently has studied his Yankees at second-hand or—just as bad—from some incarnated exaggeration of Yankeeism, ought to put into practice an idea that we believe he has for some time entertained, or half entertained, of coming over to this country, as Thackeray and Dickens came. It would give him new admirers and friends, and besides and more important, would offer him fresh material, which he would probably be able to use with good effect. ——Messrs. John Wiley & Son, acting as agents for Samuel Bagster & Sons, of London, announce a new and fine edition of the Bible known as Bagster's Polyglot Bible. It is to be contained in two volumes folio, and is in eight languages, namely: the Hebrew of the edition of Van der Hooght, with vowel points and accents; the Greek of the Septuagint, and the Greek of the New Testament (the received text); the Latin of the Vulgate; the English of the King James version; the German of Luther's Bible; the French of J. F. Ostervald's version; the Italian of Diodati's; and the Spanish of Patre Scio's. To these is added the New Testament in Hebrew, by William Greenfield (Wilhelm Grünfeld), which is, we believe, a version for missionary purposes, and the work of a converted Jew. To this, again, by way of appendix, there will be added the Syriac New Testament, the "Peshito" (which is wrongly spelled with the German *sch* in the prospectus before us); the Samaritan Pentateuch, according to the edition of Kennicott; Various Readings of the Septuagint and Variations in the Reading of the Greek New Testament drawn from the notes of Griesbach. This work public institutions receive free of duty. Private individuals must pay for it eight dollars more, or sixty dollars in gold.

—Mr. A. R. Spofford, the librarian of Congress, has recently issued his annual report, in which, among other things, he notes the additions to the national library made during the year ending with the first day of last December. By operation of the copyright law there have been added to the whole number of books 1,682; by purchase, 3,208; by deposit of the Smithsonian Institution, 1,921; by presentation—from Russia, Sweden, Norway, and Hamburg—903; by exchanges, 784—which make in all new volumes to the number of 8,498. In this statement no account is made of about 2,500 pamphlets. We cannot tell by looking at the report whether, in this 2,500 pamphlets, the librarian means to include "1,421 pamphlets and periodicals" which accrued under the operation of the copyright law, but we presume he does. The law in question provides that of every book for which a copyright is granted one copy must be sent by the publishers to the national library; and in accordance with such provision that institution, during the last twelve months, has received, besides the volumes and pamphlets above-mentioned, 1,561 pieces of music, 80 maps, and 347 engravings and photographs. If we were to suppose that every publisher complies with the law, we should from this list reach the conclusion that the whole number of publications in the United States between December '67 and December '68 was 5,091. But it is to be supposed that of all our publications no more than three-fourths find their way to Mr. Spofford. This is due to more causes than one. Many works are copyrighted by persons, other than the publishers, whose residences, it is impossible to ascertain; some States make no return to the Patent Office of copyrights issued; some publishers or copyrighters may be supposed ignorant of the law, and no doubt some are dishonest. We would, however, remind Mr. Spofford of a circumstance which we do not see that he has taken into account, namely, that a certain number of copyright works are entered in the various clerks' offices by a printed title-page merely, and of these a certain number never see the light. Such title-page works generally belong to the class of books entered by persons other than regular publishers. Mr. Spofford reports the annual catalogue as passing through the press, that the catalogue of pamphlets is about half made, that the general alphabetical catalogue of subjects is so far carried on as to the letter G (512 pages already printed), and that the four annual catalogues of 1864, 65-66-67, have been combined in one alphabet with the general catalogue (of titles).

—All Sanskrit scholars, whether in Europe or India—or as we may, we suppose, venture to add, in America—are invited to put themselves into communication with the Indian Government for the purpose of suggesting what manuscripts should be looked for by certain Government agents who are to be appointed to make tours of investigation throughout India. They are to examine old manuscripts, and to seek for new ones. We presume they may also properly be called on to make such reports as may be desirable on any matter connected with the study of any of the fast-vanishing relics of a civilization long passed away, and of a literature much of which will be irrecoverably lost unless immediate effort is made to rescue its monuments from destruction. The work of cataloguing the manuscripts, those already known as well as those to be discovered, has been committed to competent native and European scholars—Dr. Bühler, Mr. Burnell, Baloo Rajendra Lal Nutta are mentioned—who also will act as editors whenever it is decided to reproduce any work. The Government of India has made an annual grant of £2,400 for carrying out this enterprise. The Secretary of State of the Government of India is the channel through which foreign scholars may address the editors.

—Some good judges might be inclined to give to Gerald Griffin the highest place as a delineator of Irish life and Irish character, but judges who could be called really good would all, we imagine, pronounce in favor of awarding the second place to William Carleton, whose death at the age of seventy is just reported. It is a point on which the best opinion is that of an Irishman, and anybody's else may properly be received with some grains of allowance; but this being said, we for our own part do not hesitate to put Carleton above all competitors in the special field of which we have spoken. Griffin was an intenser and more powerful genius, and could move in regions of passion not sought by Carleton when the latter was doing his best. Miss Edgeworth's Irish are conventional, and Lover's, in spite of some successes, are of a conventional farcical type. As for Lever's Irish characters, they are, when distinctively Irish, apt to be little more real than the Yankees of our comic papers—a remark which, however, ought not to be made without its being said at the same time that the other character-drawing of that author is often of a high order, and also that some of his pictures of Irish manners of the unconventional type are pronounced good. Thackeray's Irish nobody forgets who knows the book of miscellaneous poetry, who thinks of Captain Costigan, and that slashing writer, Shandon. But the Irishman in Thackeray is apt to be sketchy, or else to be partly swallowed up in the man, with the effect, to be sure, of giving the latter an almost overpowering fragrance of the former. Moreover, Thackeray's range was narrow. But Carleton was always racy of the soil—as much at home in the bog, at the mountain still, at the Whiteboy's midnight meeting, at the assizes and the horse fair, at the midnight mass and the turf-covered hedge school, at the station, and the distraining, and the attack on the gauger, and the faction fight, and the wake, as his peasant father; and almost as much at home with leprachaun and fairy and banshee as his peasant mother, who taught him the songs and traditions of her mother's and grandmother's people. Dealing with the life of the peasant and small farmer and country priest, Carleton was unequalled; and we should say without much fear of being contradicted by the event that a careful perusal of his admirable and most entertaining "Traits and Stories of the Irish Peasantry" would be almost a better means of becoming acquainted with our own Irish, and of learning how to get on with them, than reading everything else that has ever been written about the Irish here or at home. Professor Goldwin Smith's little book about Ireland, also, is a work that we always feel inclined to mention whenever mention is made of the Irish. Professor Smith's work has not, we think, been reprinted in this country; Carleton's works have been, we believe, but are now out of print, though doubtless sure of revival sooner or later. Carleton was born at Clogher, in Tyrone, Ulster, in 1798, and consequently was a little more than seventy years of age at the time of his death. His long life was rather an active one, as far as literary work is concerned;

but towards the close of it he unfitted himself for labor of any kind. He wrote a first and a second series of the "Traits and Stories," a novel entitled "Fardarougha, the Miser," which has been republished here and has enjoyed a considerable popularity, six or seven other long stories, and very many short tales. At the time of his death he was in receipt of a Government pension of £200 a year. It is a characteristic of his writings that they always discourage the chronic revolt, more or less secret, against their governors which the author's countrymen carry on, and this is not the literary merit which English governments of past days were slowest to perceive in Irishmen's works, and to reward with pensions and places.

—The latest of the French attacks on the great Corsican is, as most of the later ones have been, from the republican side. It is by M. Piérart, and it may be doubted if even transporting that gentleman beyond the limits of France would be as efficacious as it is in the case of so many French Reds in turning him into a worshipper of "the matricide of Democracy." "It is time to give this man his proper rank," says M. Piérart, in beginning a book that he has written about the Waterloo campaign. So he reminds his countrymen that Napoleon at Jaffa butchered prisoners of war; that he murdered the Duc d'Enghien; that men superior to himself who differed with him on political questions he shot; that when he was beaten in the field he more than once or twice fled from it like a cur. Then M. Piérart goes on to the consideration of the military history of the Hundred Days, and makes against the Emperor many charges, supported by documentary proof, of folly and carelessness and wilfulness, and of lack of spirit as well as of intelligence. He chose for confidence and high places, says his accuser, officers like Soult, who had made himself extremely odious to the army by the most overstrained expression of loyalty to the Bourbons, and by ridiculous hypocrisies in the matter of paying deference to the priests; he slept during hours of the utmost value—coffee could no longer keep him awake—and showed none of Blücher's activity of mind; for hours together he left Ney and Grouchy without orders; for sixteen hours after Ligny he neglected to pursue the defeated Prussians—defeated, but unrouted—and could not be persuaded that they had not retreated on Namur, whither they should have gone according to his preconceived notion, but had retreated in the direction of the English; he sent Ney to attack the British at Quatre Bras, and gave him two battalions of the Guard, but at the same time gave him orders not to use them; after Ligny, when at midnight Grouchy desired to see him for consultation, he had to wait till half-past eight in the morning, and then the emperor appearing, took Soult with him in his carriage, and rode over the battle-field, instead of giving any attention to the whereabouts of the English or Prussians, thus giving "Old Forwards" eight inestimable hours. Wellington, on the other hand, does not come out of M. Piérart's hands entirely unscathed. His dilatoriness is, however, ascribed in part to Fouché's secret assurances that the French army would assuredly not move till July; but this explanation leaves it to be explained why a person of Fouché's character should have been relied on with what seems like blindness. Among other new things, we are told that at the Duchess of Richmond's famous ball Wellington was playing with a little child upon his knees at the moment when the news came; hearing it, the Iron Duke lost so much of his composure as to let the infant drop to the floor. As for the strength of the English army on the day of the battle, M. Piérart sets it, truly, as the English writers have done, at 70,000 men, and a hundred or two more; 17,000 men detached at Hal, for fear of operations on the right, took no part in the battle. "So then," says Piérart, "the Emperor had in front of him an army inferior in number, especially in artillery and cavalry;" and this he follows up with a statement still better calculated to set frantic almost all Frenchmen, no matter how ardent their aspirations after liberty and their hatred for military despots. "Napoleon," he avers—and we may imagine him averring it with an air of determined satisfaction at having now, beyond a doubt, accomplished the French unpardonable sin—"Napoleon, *even had Blücher not arrived*, would have been unable to dislodge the English, and consequently he was beaten; for in his situation not to remain master of the field was equivalent to defeat." Of course the book is full of bitterness, and not without its exaggerations, but it will help to give the reader the truth. The touch about the *café noir* and its inability, although taken in much more than the usual extraordinary quantities, to keep the Emperor awake, is alone worth heaps of the O'Meara "table-talk" talk about Grouchy and British gold. It suggests what seems to be the truth of the matter, that in the Waterloo campaign Napoleon, not then at all the Napoleon of old days, was fighting better soldiers than he had fought before.

—M. Piérart's book will do no more than help to give the reader the truth; for the purpose of still further enlarging his view it is indispensable that he should know some late writing by an able and impartial critic, an Englishman, Lieutenant-Colonel Charles C. Chesney, who now first renders the Prussians the credit due them for their services at Waterloo. We know how the ordinary English books of history treat this question. Wellington disposes his army in squares with artillery between; the French are drawn up on the opposite heights; the battle begins by cannonading, and mainly consists of charges by French foot and horse on the British squares, the French advancing under cover of a heavy fire, which ceases as they come to the British lines; the British artillery, meantime, playing on the advancing French till the British musketry is about to begin, when it goes to the rear. At the close of the day, according to Pinnock's Abridgment and the rest of the text-books, the Guard makes its final famous charge; General Cambronne doesn't make his famous reply to the British officer who demands the Guard's surrender; the whole British line moves forward, and Blücher, just as the French rout is completed, embraces the Duke and requests that his fresh troops may be allowed to pursue the flying enemy. Colonel Chesney shows that the Prussians on the actual field of battle occupied much of Napoleon's attention from three o'clock till the end of the day; that they relieved Wellington a good deal; that they lost not less than 7,000 men in the course of the afternoon; and that they thus very materially contributed to Napoleon's defeat. Napoleon's errors Colonel Chesney as well as M. Piérart points out very clearly. The Prussian Minister of War, Count von Moltke, has conveyed to Colonel Chesney the thanks of the Prussian Government. The full title of the book is "Waterloo Lectures: A Study of the Campaign of 1815," and its publishers are the Messrs. Longmans.

—The literature relating to the composer Mendelssohn, which has had already a remarkable popularity, has just been increased by the memoirs prepared by one of his most intimate friends, Eduard Devrient: "Erinnerungen an Felix Mendelssohn-Bartholdy, und seine Briefe an mich" (Leipzig: J. J. Weber). This, together with the letters published by his family, will almost complete the material for a good biography of the great musician. The author was eight years his friend's senior, and knew him first as a boy of thirteen, already evincing genius in the musical soirées at his father's house. The peculiar relation between them, as they grew up together, gives the key to Mendelssohn's career. Devrient was the first to co-operate with him in an attempt to produce an opera, the great ambition and equal disappointment of his life. The elder crony wrote with this view the libretto of "Hans Heiling," which failed, however, to inspire Mendelssohn, and was reserved for another composer. Later, on his return from England, when he had become a near neighbor and daily companion of his friend, Mendelssohn's operatic desire revived afresh, and was the subject of constant discussion between him and Devrient, but he could not conclude upon anything. His letters are full of this subject, and prove that he never forsook it his life long. On his last visit to Devrient, in February, 1847, he brought him Geibel's "Lorelei," with a melancholy confession that he could not compose it. Leaving presently for England, he promised his sister Fanny to rejoin her on her birthday, the 8th November. Before he could return he got news of her sudden death, which was followed by his own on the 4th of November. On the 8th his body was laid beside hers in the family vault. No man was ever more truly a victim to overwork, an almost insane and wicked inability and unwillingness to take rest.

—Among the statues of the Luther monument at Worms the artist Rietschel placed, as one of the precursors of the Reformation, that of Savonarola, which is one of the most admired of them all. The fitness of this conjunction has been generally recognized, but a French Catholic has undertaken in a pamphlet, since turned into German, to prove that the Florentine martyr was anything but a protestant against the Church, though burnt by order of a Pope, and though Paul IV. condemned his writings as Lutheran. An Italian writer of much merit, Pasquale Villari, in a history of Savonarola and his times, has sought not indeed to separate him from Luther, but to place him above the latter as a reformer, dividing the honor of the Renaissance between him and Columbus, Italians both; attributing to his doctrines a broader logic than Luther's, and claiming for him that he first linked faith and reason, religion and freedom. These views, with some others not perhaps perfectly consistent with them, are based on ten years of diligent study and research of documents at Florence, by Villari, himself a Neapolitan; but they naturally have not found favor with the countrymen of Luther, though one of them, Moritz Verduscheck, has translated his history into German, and done it well. An able writer in the *Weser Zeitung* has traversed the question in a very thorough and con-

clusive manner, proving, as against the French writer alluded to, that Luther recognized Savonarola as engaged in a common cause with himself, and, as against Villari, that the Renaissance kindled no new religious life in Italy, and that Savonarola was no spiritual Columbus leading to new worlds, but rather a prophet of the good time to come.

—An unusual and seemingly highly valuable work, undertaken by Professor Angelo Messedaglia, of Padua, has been published at Venice and bears the title: "Criminal Statistics of the Austrian Empire, 1856–59, with particular reference to Lombardy and Venice, and in comparison with later dates to 1864, inclusive." The introduction treats at some length of the function and method of statistics, and proceeds to examine the criminal process in its successive stages. Then follows a brief exhibition of the Austrian penal procedure, prior to a thorough examination of penal cases from prosecution to conviction, which affords opportunity for observations on the goodness of the laws and the character of courts and judges. Crimes and penalties make up the second part of the work, giving rise to enquiry concerning the effects of penal systems and the prevailing tendencies of the masses, and concluding with a careful study of the moral condition of the country, with analysis of the personal relations of the condemned as to age, sex, condition, political status, etc. The political economists of any nation will probably find instruction in this cautious and intelligent survey and digest.

—Some of our playwrights might do worse than borrow for an English dressing a four-act drama, "Lo Spiritismo," by Leopoldo Marenco, which was enthusiastically received at the Royal Theatre in Milan for several successive nights, and which appears to contain the elements of a genuine sensation. Of the plot we cannot say more than that an excellent young girl, having lost her mind with her lost first love, becomes a spiritual medium, and among other evil consequences of her trade fastens upon an innocent woman the charge of having murdered her husband. Fortunately the real murderer is apprehended in season. It would thus appear that the ridiculous phase of spiritualism has less engaged the attention of the author than its to him serious and perilous tendencies, which, we may say, on the authority of the *Perseveranza*, are not so much to be dreaded in Milan as in Turin, Naples, and other cities of the peninsula, where proselytes are more numerous. Marenco's style is praised for its poetical merit, and his audiences have testified to the working qualities of the play.

MORAL USES OF DARK THINGS.*

A MORE appropriate title for this series of parenetical essays, so instructive and devout, would be "Divine Intentions in Dark Things." The two topics are quite distinct, and should not be confounded. To discover the moral uses of dark things is a wise and profitable task, always legitimate and timely. It is wholesome to mind and heart alike, for it helps us to adjust our thoughts and feelings to the order of the world as it is. But to say that the moral uses we discover are the uses which God proposes to himself as ends in the ordering of the world, is to make an unnecessary and a perilous assumption. Yet this Dr. Bushnell, in his character of a theologian, does. He assumes without argument the reality of final causes, disclaiming all sympathy with the "pantheistic literature" and the "philosophers" that disallow them. "This whole frame of being," he says, "is bedded in mind. As it belongs inherently to mind that it must have its ends, the All Present mind must have reference to ends, and the whole system of causes must at bottom be a system of final causes." These final causes, or deliberate intentions of the Infinite Intelligence, it is the purpose of this volume to conjecture. It has never hitherto been possible to do this without incurring the danger of presumption in representing His thoughts to be as our thoughts. In venturing to suggest that he knows what God means and purposes the writer at once claims an unseemly intimacy with Deity, and more than hints that Deity holds an extraordinary familiarity with him. The inevitable result is the belittling of the Supreme Being, who is thus reduced to the order of mechanics. The Creator becomes a carpenter; Providence, a system of domestic economies; the arrangement of the universe a neat plan of social convenience. Not only is the Supreme Intelligence credited with "mental operations" precisely similar to our own, but they are constrained to fall within the orbit and run along the line of our own. The reflection of the moon in the water-pail is judged to be the moon.

Dr. Bushnell perceives this danger, but he does not wholly escape it. At the opening of the chapter on "Animal Infestations" he notices "a difficulty encountered by the Bridgewater school of theologians, that what they gain by their argument from design they sometimes appear to lose by the discredit they bring on the ends for which the designs were made." He then proceeds with merciless logic to expose the fallacies of Kirby and Paley when they justify beaks and talons, claws and cuspidal teeth, fangs and stings and bags of venom as necessary to prevent the undue increase of species or to let out superfluous blood, or to scourge men for misdoing, or to carry off accumulating poisons and excrements, or to perform some other medicinal purpose in the animal economy. The foolishness of this whole style of argument, which assumes that physical uses are the decisive tests or objects of God's contrivance, nobody has ever more keenly exposed. But does he save himself from criticism by setting up moral uses as the decisive tests and objects? He places the argument on higher ground; his discussion deals with finer substances; his illustrations are richer; his tone is more elevated; he addresses the higher, not the lower, nature of man; he pays a deeper respect to the divine attributes; he leads the thoughts up into the mountains and makes us contemplate God as the Father of Spirits. Still it is *he* that undertakes to say what God made the world for; and *his* moral uses, however consoling to us, and however conducive to faith and hope, are sadly inadequate as an account of the Eternal designs. On this very subject of animal infestations his own reasonings, though far more subtle and beautiful than those of the Bridgewater school, far more satisfactory to thoughtful minds, are hardly more philosophical. When, for example, he accounts for the existence of mosquitoes by surmising "that unmolested sleep might settle us at length into lethargy;" that "God lets in upon us, on our face and hands and whole bodily skin, such numberless troops of hostile infestations" in order that we may be worried and stung away from the notion that the world is meant for sensuous happiness; that creatures of prey are given to be our kinsmen, "the cousins-german of our sin," being "the moral furniture of a world in selfishness and evil," having "a kind of bad litany in them, howling congenially with all wrong feeling and doing;" when he declares it to be the office of all the venomous animals to furnish a "living, biting, stinging, burning vocabulary of evil," and asserts it as "necessary to a true understanding of our responsibility that we should be tormented and maddened by the most absurd insects," symbolizing as they do, and as nothing else could, the fact that "we can sting the immense sensibility of God's goodness"—the surprise excited by the ingenuity does not incline us to think more reverently or devoutly or adoringly of the Great Being in whose behalf it is exercised, and to whose intelligence such curiously astute devices are ascribed. In fact, after reading a few of these chapters, the reader is tempted to throw the book down, and to rush away from the world of bewildering contrivances to the sphere of the philosophic mind, whose God contemplates no special ends whatever, but fulfils all ends by the necessity of His being, drawing all the particles of matter and mind along in the wake of his perpetually creating will; or to the still purer sphere of the musing reason, which is satisfied to lose itself unquestioning in the infinite deep.

In Dr. Bushnell's volume we meet not infrequently passages like the following: "It is of the greatest consequence that such a being as God should have images prepared to express him, and set him before the mind of man in all the grandeur of his attributes. These he has provided in the heavens and the sea, which are the two great images of his vastness and power." This is as if God were a scene-painter or a showman, who lights up the firmament and tosses about the billows, as being the best means of producing an effect on the human imagination. The eager apologist even allows himself to be betrayed into the mistake, which may be fatal to all belief, which may even be a provocative to atheism—the mistake of answering objections in one department by raising a host of similar objections in other departments, as if to leave the questioner no choice, but either to believe entirely or utterly to disbelieve. Faults like these might have been avoided had the author, disclaiming all purpose to reveal God's intentions, contented himself with a modest attempt to teach men how they might live believing lives and extract benefit from the world they live in.

But for these defects, which provoke a criticism the author is anxiouss to escape, Dr. Bushnell's book would be very good. It is good in spite of them. The author is a man of genius as well as a man of piety. He is a man of poetic sensibility, we should say something of an artist but for certain eccentricities and literary perversities that mar his work. His mind bubbles over with thoughts, and his fancy teems with illustrations. His exuberant vocabulary supplies language for every shade of meaning, and even suggests meanings where there are none, refining sense till it is refined away, and then refining the shadow it leaves as it departs. But the beauty of the book is its spirituality, the truth of its moral senti-

* "Moral Uses of Dark Things. By Horace Bushnell, D.D." New York: Charles Scribner & Co, 1868.

ment, the charm of its faith. A hundred will be warmed and comforted and elated by this for every one who detects the logical imperfections in the argument. Few will read these pages without being instructed. None but uncommon minds can read them without being enriched by thoughts that will help them to live more trustingly and bravely. The value of the book consists not in its philosophical, but in its practical character. On the mysteries of creation and providence it throws but little light; and the light it throws is so colored by the theological lenses it passes through as to be of doubtful utility to untheological thinkers. But sincere people who are unable to discover in creation any beneficent intentions whatever, may find themselves aided in the search by these honest and earnest pages; and they that wish to find an alchemy potent to turn poisonous metals and minerals sometimes into gold, and sometimes into seeming gold, may be recommended to Dr. Bushnell's laboratory, as being better furnished with appliances than any we know.

THE DISCOVERY OF AMERICA BY THE NORTHMEN.*

The design of this volume is to present in an English dress to the historical student every portion of the Icelandic Sagas relating to the Pre-Columbian discovery of America by the Northmen. These Sagas or narratives are translated, with the needful explanations added in regard to persons and places. The value of the work may be estimated when it is considered how much controversy and confusion have grown out of the subject from the method adopted by previous authors in their writings, and from the doubtful passages in the original texts. On the one side it was claimed that these Sagas were not only truthful records of the facts stated in them, but that by liberal construction, justified by contemporaneous history of the deeds of the Northmen in other countries, much more might be reasonably inferred of their daring adventures, and of the discovery, settlement, and civilization of the Western Continent. It was maintained that they were the pioneers by whom Columbus was instructed in cosmography, and from whom he learned the route which led to his great success. It was further intimated that vestiges of this prior discovery and occupation still existed in mounds, ruins, and inscriptions on rocks.

On the other side, it was contended that these pretended Sagas were specious fabrications, produced to deprive Columbus of his fair fame; that at best they were only a collection of fables, resting upon superstitions of a dark age, with nothing of authentic history to support them. It was admitted that in Greenland some few architectural monuments might be found; but they were of a later date; while in Vinland, or New England, not one mark could be pointed out to prove that a European had placed his foot on its soil before the fifteenth century.

On this general denial of title an historical issue was joined which, on some points, is left undecided to the present day. But in the progress of the discussion the contending parties were compelled to abate their original pretensions, or to make partial admissions of that which in general had been denied. The one conceded that some fables might be seen in the Sagas; the other acknowledged that some truths might appear in them. On this understanding a reconciliation between the disputants was finally effected. The Sagas were received as historical testimony; but their worth, when so received, was still open to future speculation.

The conflict of opinion, in the first place, might have been much simplified had the disputants been more cautious in the adoption of their premises for the debate. It was known that the Northmen, a most maritime and martial people, were sufficiently indued with courage, and advanced in seafaring skill and general intelligence, to embark in almost any scheme of discovery; and it was further taken for granted that the Icelanders who first landed in America were Northmen. This conclusion did not necessarily follow; indeed, the facts are the other way. The white inhabitants of the arctic circle had, for more than a century, ceased to be a part of the primitive nation, and should not be spoken of as Northmen. They were a branch broken off with violence from the parent tree; they had been driven forth as outlaws or expatriated as outcasts, and exiled beyond the northern line of the supposed habitable globe to a zone whose latitude was not laid down upon charts. There they were left neglected to find sustenance how they might, to contend with sterile nature amid fiery volcanoes bursting from snow-mountains, and boiling springs gushing from frozen seas. Intercourse with the mother country had nearly, if not entirely, died out; and if they had been buried beneath an avalanche they could not have been more effectually forgotten in Europe, nor achieved less social improvement. Ignorant, heathen, barbarous, brutal, when banished from Scandinavia, they were equally debased when, long afterward, venturing westward, they reached the shores of Greenland and Vinland.

It would seem that when this worthless, or rather this vicious, element was ejected from the original national family, as no longer fit for a common habitation, a portion of the remaining mass of the people prepared to migrate in an opposite direction. This more numerous and more powerful part of the population appear to have possessed in excess the virtues, as the other had in excess the vices, of the nation. From the time these emigrants to the south reached foreign shores their progress in the arts commenced, and their prowess in arms was acknowledged. They relinquished their exclusive predilection for the seas; they embraced Christianity; they changed their language; they abandoned their coarse habits, manners, and customs to become the most refined, courteous, and polished of statesmen and warriors. They subdued France, they conquered England, they invaded Sicily and Africa, seized cities in Italy, spread terror through the Greek empire, led armies in the Crusades, and have left the vigorous salutary impress of their genius upon the most civilized portions of mankind. While thus exhibiting their supremacy in peace and in war, dethroning kings, despoiling the church, and demanding princes in marriage, they ceased to be Northmen and became Normans. On the other hand, their despised kindred in the polar ocean, but little superior to the aborigines, sought in their open boats, amid bears and icebergs, for fossil ivory, fish, and furs. When the grandson of Rollo the Marcher was ruling a kingdom carved out of France, they were bartering strips of red cloth with the Esquimaux and the naked Indian for whalebone, seal-skins, and blubber. Now they were no longer called Northmen; they were known only as Icelanders; and the European Normans were as far in advance of them as they were in advance of their immediate neighbors, the savage American tribes. Finally, these colonists of Greenland and Vinland disappeared, and in the course of two or three centuries their former existence in New England was generally deemed fabulous. Yet in the end of the tenth century they no doubt made settlements.

The Sagas, and some vague talk of the Jesuits who tried to settle Maine, are now the only memorials left of them or of their exploits; and it is these narratives which, for the first time, have recently received a proper translation at the hands of Mr. De Costa. The wish had often been expressed that this literary task should be undertaken by some competent person; it was strenuously urged in an able article which was published in the *North American Review* in 1838. The work has been well done, and affords general satisfaction as a useful addition to historical literature. The author, it is true, is still somewhat under the influence of the spell that lingers round the name of the Northmen, which dazzles his imagination and obscures his vision, preventing him from setting some facts in a clear light. We may notice, too, as a minor fault, that he is needlessly profuse in his explanations or extenuations of the accounts of supernatural events that are not infrequent in the Sagas. But he has one great merit seldom found among translators with strong prepossessions—he suppresses nothing and conceals nothing. He renders the old writings as they were first recorded, leaving the labor to the intelligent reader of separating the miraculous and incredible from the natural and credible.

* "The Pre-Columbian Discovery of America by the Northmen. Illustrated by Translations from the Icelandic Sagas. Edited, with Notes and General Introduction, by B. F. De Costa." 1 vol. 8vo, pp. 118. Albany: Joel Munsell. 1868.

THE NORTH AMERICAN REVIEW FOR JANUARY.

The January number of the *North American*, without being one that especially invites perusal, is one that will excellently repay it. Almost every one of the papers is profitable for instruction and reproof, and several of them compel the wish that they may be read with care by all who desire to establish and strengthen the foundations of the national prosperity. Indeed, it is almost deserving well of the Republic to do even so much as to urge editors and legislators to take a look at papers such as Mr. Adams's on "Railroad Inflation" and Mr. Derby's on "The Tariff of the United States." Both deal lucidly and carefully with matters of which no American is practically ignorant, and of which, so far as theory goes, and the understanding of them by anything except their ill effects, almost all Americans are entirely ignorant. That is to say, the average voter and the average man who is voted for, and the wife and children of each, every day and in a thousand ways suffer almost innumerable evils inflicted by bad and wasteful taxation—a part of it, and the part best understood, but very ill understood, being the work of ill-informed legislative bodies; another and more dangerous part being the work of ill-informed legislatures conjointly with ill-informed and deliberately iniquitous railroad corporations. Mr. Adams means two things by his forcible metaphorical term—first, the increase in volume of the stocks and bonds of the companies, and secondly, the increase beyond what is sensible, and almost beyond what is sane, of the number of competing lines of road. He begins by calling attention to

the fact that railroads—which neither produce anything nor by any manufacturing process add to commodities any fitness for consumption—levy a tax on all consumption. Their charges are as much a tax as if the increase on the cost of commodities were assessed and collected by revenue officers. Of this impost a portion is, of course, necessary; railroad companies put their money into the creation of means of transportation and must be paid for doing it. Of the $350,000,000 which American railroads annually earn in the gross, $245,000,000, or thereabouts, represent the expenses of operating the roads and paying for their annual wear and tear. The other $105,000,000, or thereabouts, are a tax of about thirty per cent. which we pay the owners of railroads for the use of their capital. How it is that while the law in most cases sets a limit on the percentage of railroad profits, the companies have yet been able to tax us thrice as much as the law allows, and to get everything in train for continuing and increasing the tax, is what Mr. Adams proceeds to show next; and his course leads him through a full account of the various modes of cheating which to-day constitute so great a part of the business of the immensely powerful and almost perfectly irresponsible "railroad men." We have no space to spare, or we would follow him through the work and through his proposed remedy—the appointment of national and State commissioners for the collection of statistics on which something like intelligent legislation may be based—which is the same remedy as was proposed in Congress in the last session. But Mr. Adams's own presentation of the case is within the reach of our readers. It contains, we hope, the matter of a good many future editorial articles in the journals of all parts of the country.

Mr. Derby takes neither the theoretical protectionist's nor the theoretical free-trader's view of the tariff. Indeed, he points out that the question never, and in no country, has been anything but a question of greater or less protection; that absolute free trade with foreigners has never been any nation's practice or preaching. Our so-called protectionists will find in his article much of which they will approve, though with his view as a whole they will no doubt quarrel; the advocates of protection for revenue, and for that merely, will be more likely to be pleased with his scheme, in general and in detail; the great mass of the public who have yet to begin their thinking on these matters will be apt, we should say, to accept his conclusions fully.

The purely literary portion of this *North American* is to be found in the critical notices and in Mr. Tuckerman's essay on 'Steele"—"Sir Richard Steele," as history and Mr. Tuckerman style a natural-born "Dick," if ever there was one, whom posterity knows better by his nickname and the traits by which he got it than by the official services that got him his title, or the literary labors that constitute his best claim to be remembered. Steele had the misfortune, after inventing a new kind of writing, to be at once and decidedly surpassed in the use of it, and, as we may say, superseded; and we suppose it is true that, excellent as his best things are, little would be known of him to-day if it were not for the faults of his, on the whole, lovable character, and the errors of his not very admirable life. If he had not been "Dick," it may be doubted if anybody but students of literature would have known him, and if these would not have known him, chiefly as the inventor of the "social article." Mr. Tuckerman had a well-worn subject to handle, and has handled it with his accustomed workmanlike neatness. His essay exhibits him as he usually is—not very forcible; making no bad mistakes and few of any kind; showing ordinary acumen, and, generally, giving one at first the impression of a writer who is about to rise, a very little, to something really good, and at last of a writer all whose writing one has somewhere read before.

Mr. Kroeger's "Gottfried Wilhelm Leibnitz" is not an article in the perusal of which we were able to take great pleasure. It does not confine itself to being descriptive of its remarkable subject, the busiest-minded of modern men, a prodigy of labor well and ill applied; but it undertakes to-day the advocacy of Leibnitz's philosophy—a task that might profitably have been left to the shade of the builder and maker of it. Speaking for a moment purely from the point of view of the "periodical," it seems a sin to have made such a use of so admirable a subject for a review article as Leibnitz furnishes. It is on review articles, too, that he is now mainly dependent for recollection and regard. His good things have been bettered in the lapse of time, his whimsies and his profounder speculations have lost importance while retaining some interest, his life and character are highly interesting, and one would say, having an eye to the increase of the sum of human pleasure, that the meeting of a judicious general reader, a judicious quarterly-review writer, and "Leibnitz, a Biographical Essay," would be a very fortunate conjunction. It has not taken place in this instance, however.

Mr. Henry Villard has put into orderly arrangement the current account of Bismarck's political life. The article is useful, as all articles are which help to fill the gap between history as it has appeared and disappeared with our newspapers, and history as it is more fully and intelligently told in books. But there seems not very much reason why such résumés should be merely résumés, as they almost always are. This paper on Bismarck is full and intelligible in its array of facts, but it might have been much enlivened had the writer used some of the information which he has, but has suppressed.

Professor Goldwin Smith's essay in this same number is the work of a hand made skilful by practice in this branch of literary labor, and is, moreover, the work of a mind of philosophic power and of rare literary gifts, so that it would not be fair to compare the "Bismarck" and the "Revolution in England." The writer of the former had, however, in his possession many of the little anecdotical and biographical details concerning the great count which it would have been advisable to use just as Mr. Smith has used similar ones, or less allusively. It would be worth the while of young writers to institute a comparison between the two essays—both excellent, as regards their relative readability and power to instruct. For the rest, the "Revolution in England" will be read with satisfaction and assent by most of its American readers, and with pleasure, we should suppose, by all. It exemplifies its author's well-known ability of statement and reasoning, and contains some examples of his characteristic vigor of thought, joined with force of feeling, expressed in appropriate language, and turned to purposes of invective, which, however, is usually not to be quarrelled with; for it is apt to be, and always it is intended to be, truthfully descriptive. There is something to be said against the argument contained in this passage, but that it is good of its kind will be readily admitted: it speaks of Carlyle's anti-reform railings and wailings as exhibiting "the philosopher of the celestial immensities and infinities in a state of rather terrestial panic, clinging to the knees of wealth and power for protection against the democracy, and praying for the maintenance of a Christian church to guard a free-thinker's spoons." Better than this for its quietness—though one is permitted to be somewhat noisy in dragging the uncouth Thomas in his terror before the audience—is a remark on Mr. Disraeli, which that gentleman will enjoy in a way. When the reform bill was first brought in, he used to denounce Mr. Gladstone as a new Tom Paine seeking the overthrow of all institutions. Afterward, as everybody knows, he himself brought it in again, and was forced to pass it in a much more unlimited form than it had had before. He, however, expressed his thorough satisfaction with the result, and said that all the time when "he was securing the support of the Adullamites by assurances of inflexible resistance to reform, he himself meditated a far more extensive measure, and was 'educating' his party up to that mark." But in this he probably does himself, according to our view of the relations between politics and morality, more or less than justice.

What Mr. Smith does for England and Mr. Villard for Germany, Mr. Lowell does for the United States in his "Look Before and After," where he treats all the current questions in our politics, to which he proposes answers from which there is, as far as we can see, no reason to dissent. Mr. Cary's "Mental Faculties of Brutes" will be found agreeable reading, and of the soundness of his views there will be not much doubt among people that know more of brutes than of metaphysics—a remark not meant to be particularly civil to the metaphysicians. Mr. Cutler's article on the "New Catalogue of Harvard College Library" is valuable to all guardians and owners of libraries, and the general reader will find it a little field of curious knowledge, presenting to him new considerations. The literary notices contain a very good piece of writing in the shape of criticism on Hawthorne, which seems true, though perhaps it is not the whole truth; and besides this there is some score of other reviews, which are all good, except, we should say, the one on Dingelstedt's "Amazon," which slight performance, with its ginger-beery effervescence, seems to us very far from deserving the lavish kindness of the German critics quoted in the preface.

Madame Thérèse; or, The Volunteers of '92. By Erckmann-Chatrian. (New York: Charles Scribner & Co. 1869.)—This story, which pretends to be nothing more than a story—a tale of almost no love, some war-making, and some good character-drawing—is told in a sprightly, pleasant way. The tone which needs to be maintained—that of a man narrating in his old age the recollections of his youth—is well maintained. And this is true of the English version as well as of the French original. There is in the original none of that charm of style which is almost infallibly lost in a translation. An English reader, reading Miss Forten's translation, has all the enjoyment which a French reader of the original can hope to have.

This is true not only because the book has been easy to translate, but also because the translation has been made upon sound principles, and the translator has tried in every instance to reproduce the sense of the original; that, at least, is the impression left from an examination of the whole work, in spite of numerous minor errors, which, for their part, seem made rather in haste than in ignorance. A thoroughly accurate translation is possible to but very few writers. To seize the precise signification of the original, and to express it exactly in classical English, is no easy task; but many of the errors in the book before us might, by a little more watchfulness, have been avoided. In the middle of chapter x. the words "ils tiennent dans leurs rangs comme des clous" signify "they keep their ranks like nails," *i. e.*, like nails driven into a board—a vigorous expression, conveying an idea not given in the translation before us, which says, on page 169, "they hold in their ranks as firmly as if they were nailed." A few lines below, "ils avaient une division sur le dos" does not mean "they had a division at their backs," but, militarily, precisely the contrary, that is, "they had a division opposed to them, or on their hands. In the next sentence, "Avec des soldats pareils, il y a de la ressource" means "with such soldiers something may be done," and does not mean "such soldiers are men of expedients," which would be comparatively a weak and irrelevant statement. In the next sentence again it is worthy of remark that young dogs are not helped by growing in the shade of large ones; the original has "young oaks." *Chênes*, not *chiens*. These mistakes, occurring in the course of one small page, are certainly errors of haste. These, and others like these, have the effect of taking away from the dialogue its colloquial tone, and from the story something of its verisimilitude. We do not know whether Miss Forten has made a practice of translation or not. If this is her first work of importance she has it in her power to succeed.

The closest translation will always be, *cæteris paribus*, the best. We mean, of course, the closest translation of thoughts, not of isolated words. Carlyle, in his youth, proved himself one of the most skilful translators. In his hands popular slang, catchwords, jokes, even puns, were distilled into their English equivalents. His judgment of meanings seemed infallible. Even the mere rendering of word by word in his translations is the work of a master. How to find the exact English synonym for *humeur?* one might search the vocabulary in vain. It is hard to say by what mental process it is discovered to be *spleen*. Or consider the opprobrious epithets, *scélérat, lâche*, and *coquin*, and the difficulty hidden in what seems so easy now it is done—the putting for them their precise synonyms, "scoundrel," "dastard," and "knave." To one who works with this conscientiously directed skill translation is a delicate art; and the resulting English version has a freshness and vivacity equal to that of original work, while recalling, by some unexpected and unaccountable quaintness of tone, its foreign origin.

Elements of Political Economy. By Arthur Latham Perry, Professor of History and Political Economy in Williams College. Fifth Edition, revised and rewritten. (New York: Charles Scribner & Co. 1869.)—We took up this fifth edition, "revised and rewritten," with the hope that we should find the whole book, in its new shape, as good as some parts of it—that its decided merits would be preserved and its defects supplied. The *rewriting*, however, we find to be the recasting of a paragraph here and there, generally to its improvement; the *revising*, the addition of a moderate amount of valuable matter. The new edition is therefore an improvement, but not so great as might be desired. The general character of the book is not altered. There is the same diffuseness and repetition, the same feebleness in the treatment of difficult points, the same lack of close analysis joined with a clear perception and forcible presentation of certain important fundamental principles, which make the book on the whole well suited to the general reader, although it will be of very little service to the careful student. The very inadequate chapter on taxation remains as it was before—taxes on property are not even mentioned, and Mr. Mill is still credited with the opinion which in fact he controverts at some length, "that persons of a large property, or of a large income, should pay taxes higher than the due proportion of their properties or incomes to more moderate properties or incomes."

If the book as a whole has not been materially improved by its revision, the chapter on value is actually not so good as before. This chapter never was an entirely satisfactory one. It undertakes to explain all cases of value by one rule, and, as a necessary result, is forced to keep pretty much on the surface, in the region of mere generalities. It contained, however, in its original form, a very clear exposition of the workings of supply and demand, and had the great merit of bringing out the purely relative nature of value and of its independence of materiality more fully and perspicuously than we remember to have seen elsewhere. In the present edition the treatment of this subject becomes confused, and indeed contradictory. To be sure, the inconsistencies are caused by the insertion of some passages which show that the writer is beginning to accept certain sound views which before he has denied, or at least ignored; but he has not taken the pains to reconcile these new views with his old expressions. He permits himself now, for instance, to speak of "ownership or property" being exchanged—not merely services—and quotes approvingly Macleod's definition of value, "the value of any economic quantity is any other economic quantity for which it can be exchanged;" at the same time still maintaining, as before, that value rests solely in services and not in economic quantities, and, further, that unless an exchange actually takes place there is no value.

Professor Perry appears, therefore, in this edition, to have taken a step toward the old accepted analysis of value, which rests on a recognition of the independent workings of those two elements which De Quincey calls utility and difficulty of attainment, and the principle that only one of these at a time can be operative in determining value. In striving for simplicity he has heretofore ignored this fundamental doctrine, and, indeed, now takes only one short step in the direction of it, being still far from any distinct recognition of it. But short step as it is, it just serves to destroy the unity of this chapter, the new views being mixed in with the old without much regard to consistency. It is certain that if his old definition of value, which he retains, is correct, that of Macleod is not.

Fair Play; or, The Test of the Lone Isle. By Mrs. E. D. E. N. Southworth, author of "The Widow's Son," etc. (Philadelphia: T. B. Peterson & Brothers. 1868.)—As first published in the New York *Ledger*, this novel rejoiced in a different title from that it bears at present—"Britomarte, the Man-Hater," we believe, or something equally felicitous and suggestive. In changing the name the author and the publishers have, in a manner, succeeded in killing two birds with one stone. The implied charge of plagiarism on the part of Charles Reade which the preface and the new title conveyed was doubtless a successful advertisement which caught some readers not to be attracted by Mrs. Southworth pure and simple, and the large public which is inevitably interested in her was like enough deluded into buying and borrowing from the circulating libraries the bound volume, under the impression that it was getting its money's worth of something new and thrilling. What amount of disappointment the latter class may have suffered is a problem for which our moral consciousness refuses to evolve a satisfactory solution, but as to those who looked into it to see what shadow of likeness existed between it and "Foul Play," we imagine they may have been moved to great laughter. It is, of course, impossible to affirm boldly and without fear of contradiction that Mr. Reade does not devote his days and nights to the study of the *London Journal*, or that it is impossible that he may sometimes get valuable hints from that vast low-lying region of periodical writing which exists and finds multitudes of readers, and is yet in no sense literature. There is certainly a "lone isle" in both of these stories, and on it is wrecked in each case a pair of lovers. If Mrs. Southworth's pair suggested, as she implies, Charles Reade's, she should be congratulated on having done so much good to a public which ordinarily she could not hope to touch.

The Wizard of the Mountain. In two vols. By William Gilbert, author of "De Profundis," "Dr. Austin's Guests," etc. (New York: Geo. Routledge & Sons.)—Of the ten or a dozen stories which form the contents of these volumes there is not one which is not more or less injured by the author's over-fondness for realistic details. This fault was even painfully apparent in his "De Profundis," which was an attempt to render with literal exactness some of the lower phases of London life. To read that book is, by reason of its unrelieved dulness, an almost impossible task; but to Mr. Gilbert, with his excessive love for facts in themselves, without reference to any use to be made of them, writing it was doubtless a thorough pleasure. His "Dr. Austin's Guests," which has been well spoken of, we have not read, and it may possibly exhibit qualities not displayed in such of his work as has fallen under our notice; but as far as we do know him he is only a moralizing statistician with a decided bent toward story-telling. His love for facts is accompanied by almost no discrimination as to their relative values. The least one that falls under his notice holds him as tenaciously as the greatest, and utterly refuses to be omitted from his statement. He is never master of his situations, and what his work gains in apparent truthfulness from the mass of details with which he crowds it, it loses in artistic breadth and power—in essential truth, that is to say.

In his present volume he had what seem for him unusually promising materials, though we confess to an inclination to doubt their coming to him by a process of natural selection. Two or three of the stories are amusing and tolerably well handled, but for the most part he has succeeded in rendering flatly prosaic inventions which apparently deserved a better fate. A vein of supernaturalism runs through them; and with, perhaps, one exception—"The Magic Flower"—they all illustrate a moral, and one moral—the one which is probably most likely to be apprehended by a mind so occupied with obvious facts and so blind to their significance—that there is no way of bettering one's condition. This truism his stories illustrate with more or less ingenuity, and with various degrees of success. "Tomaso and Pepina" is the best of them; and "Don Bucefalo and the Curate"—which is, however, somewhat tediously prolonged—is still well-told and amusing. Mr. Gilbert's supernatural properties are, however, for the most part pretty well-worn and threadbare; his ghosts and vampires and devils are to the last degree decorous and conventional. What merits he has come from his love for story-telling in itself; the appearances of things interest him, and he likes to describe them; but the psychological and analytical puzzles which perplex most writers nowadays appear never to trouble him. At character-painting in the best sense he makes no effort; and it is true enough that, for the purpose he has in view, puppets answer as well as real beings. His difficulty is, that even the ends he contemplates are not outlined in his mind with sufficient distinctness—that, at all events, he does not know the shortest roads to them. He works at haphazard, and his strokes do not always tell, because he is not always certain at what he aims them. Apparently he was dimly conscious that this fault might be found with his present work—at least his prefatory account of the genesis of these stories may be understood as a deprecation of such a criticism. But it looks, too, like an afterthought, and moreover it does not cover the ground. Mr. Gilbert's previous efforts tell against him, and one does not credit a constant artistic mistake to intentional art in him who makes it.

A Treatise on Physiology and Hygiene; for Schools, Families, and Colleges. By J. C. Dalton, M.D., Professor of Physiology in the College of Physicians and Surgeons, New York. (New York: Harper & Brothers. 1868.)—No one has done more to reflect credit on his country in physiological research than Professor Dalton. His great treatise on this subject is a standard work, everywhere quoted and respected. The present volume is an attempt to popularize physiology, to reduce its leading truths to their simplest form, so that they may be easily learned in a succession of chapters or lessons to which a series of questions are appended. This process has been tried with all the leading sciences, and we think with doubtful success. The reduction is fatal to the life and spirit which attach to a fresh statement in which an investigator tells all he knows of a matter which interests him. Physiology, like history, treated in this dry and summary way, makes no impression, and is apt to be forgotten as soon as learned. As a book of reference for facts such books are useful to those who cannot afford better ones.

The present volume can in no proper sense be regarded as a treatise on hygiene, and in giving it this title we think injustice is done to a department of education of the highest practical value, which has hitherto been neglected in this country by men of science, and which is in some danger of falling into the hands of mere book-makers. Ventilation is discussed in three pages of commonplace remarks, having no special reference to the fatal deficiencies which are known to exist not only in dwelling-houses, but in school-rooms, work-rooms, and in all places of public assembly. The diseases directly caused by the habitual inhalation of foul air are not referred to. The general principles of diet are disposed of in a very summary way; cooking and bread-making occupy a few paragraphs in which there is nothing to arrest attention; and the influence of alcohol on health is entirely ignored. Climate, dress, sewerage and drainage, the influence of soil, the proper modes of warming houses, the prevention of special diseases—all these important subjects, which constitute the subject-matter of hygiene, are neglected.

A Comparative Grammar of the French, Italian, Spanish, and Portuguese Languages. By Edwin A. Notley. (London: Trübner & Co. New York: John Wiley & Son. 1868.)—This work does not pretend to be a complete grammar of the four Romanic tongues according to the common system. It is chiefly designed to enable students familiar with one of them easily to acquire a sound knowledge of the others, and that purely in a practical way. Grammar, as an abstract science, it does not teach. It gives no definition of the parts of speech, contains no philological remarks, and has no separate "syntax." The real "object aimed at is to indicate the principal features in the grammatical construction of the French, Italian, Spanish, and Portuguese languages; this is endeavored to be explained by a collection of all of the most important rules, each one illustrated by an example or examples taken from classic writings, from newspapers, or from any modern literature showing the prevailing phraseology, and all translated into English." The rules are given in parallel columns, beginning with the French, as the most universally known. A vocabulary, consisting of about two thousand five hundred words in each language, is appended. We should hardly recommend this "Comparative Grammar" to any one who has still to acquire a knowledge of his first Romanic language, but for the purpose indicated it will be found a very useful hand-book. It is evidently elaborated with great care, just as carefully revised, and very handsomely printed.

BOOKS OF THE WEEK.

SCIENCE VERSUS PREJUDICE.

TOBACCO AND ALCOHOL.

I. IT DOES PAY TO SMOKE.

II. THE COMING MAN WILL DRINK WINE.

By JOHN FISKE, M.A., LL.B. 16mo, cloth, $1.

"This little 16mo of 163 pages, beautifully printed, is the most thorough popular statement ever made of the scientific arguments made in favor of moderate smoking and drinking."—*New York Evening Post.*

"A clear exposition of scientific conclusions. Not the work of a partisan, but that of a careful and impartial scholar whose sole object is truth."—*Boston Transcript.*

"Mr. Fiske's pleasant and profitable little book. Whoever read Mr. Parton's articles on their first or second appearance should now take Mr. Fiske's antidote."—*Nation.*

MADAME DE BEAUPRE. 16mo, cloth, $1 25.

A PSYCHE OF TO-DAY. 16mo, cloth, $1 25.

LEYPOLDT & HOLT, Publishers,

451 Broome Street, New York.

A CHARMING NOVEL.

THIRD EDITION NOW READY.

BLINDPITS:

A STORY OF SCOTTISH LIFE.

Large 12mo, $1 75.

"But the merit of the book is in its vivid pictures of life, its accurate delineation of character, showing a keen insight into motives and springs of feeling, and above all, in the shrewd and sly, yet kindly humor which breaks out on almost every page, and which invests many of the minor scenes and personages with an indescribable charm."—*Portland Press.*

"Not only does the writer exhibit delicacy as well as power, but the story is characterized by tenderness and pathos, and enlivened with the rarer quality of humor. We do not often meet with a story that trusts so much to naked merit, or that takes so marked a line of its own."—*London Saturday Review.*

"It is a novel which will achieve a great and lasting popularity. Its humorous portions contrast with the dramatic episodes admirably, making them all the stronger."—*Philadelphia City Item.*

"There is not in the whole 516 pages one that is dull nor one that is bad."—*Ithacan.*

The Biblical Repertory

AND

PRINCETON REVIEW

FOR JANUARY, 1869.

This able and influential Quarterly will hereafter be published by

MESSRS. CHAS. SCRIBNER & CO.

The Rev. CHARLES HODGE, D.D., the original founder of the *Princeton Review*, and its constant editor from the first, has now associated with himself, as co-editor, the Rev. LYMAN H. ATWATER, D.D., who has been known for a quarter of a century as a leading contributor to it, and the author of a large number of its standard articles. With this increase of editorial strength and supervision, it is intended that this Review shall not only retain the attributes which have made it a great power for good in the past, but that it shall be constantly improved and amplified in the future.

The January number, which is now ready, contains articles by Rev. Charles Hodge, D.D.; by Rev. J. McCosh, D.D., President of Princeton College; by Rev. Dr. Irving, of New York; by Rev. Dr. Patterson, of Chicago; and W. H. Lord, D.D., of Montpelier, Vt.

TABLE OF CONTENTS:

I. Agassiz on Provinces of Creation and the Unity of the Race.
II. A Manual of Foreign Missions of the Presbyterian Church.
III. Christian Work in Egypt.
IV. Method of Teaching Religion in Colleges.
V. Romanism in Rome.
VI. Baird's History of the New School Presbyterian Church.
Short Notes on Recent Publications. Literary Intelligence.

TERMS:

$3 per annum. Clubs of Six, $2 50 each; $5 for two years, if paid in advance. Single Numbers 75 cents. *Hours at Home* and the *Princeton Review* for one year, $5 50; or the *Review* sent free for one year for three *new* subscribers ($9) to *Hours at Home*.

IMPORTANT THEOLOGICAL WORKS.

Messrs. SCRIBNER, WELFORD & CO.,

654 BROADWAY, NEW YORK,

Have Just Received and Published Two New Volumes of the

Ante-Nicene Christian Library

Translations of the Writings of the Fathers down to A.D. 325. Edited by Rev. Alexander Roberts, D.D., and James Donaldson, D.D.

Each 1 vol. 8vo, red edges, price per vol. $3 50.

THE NEW VOLUMES ARE:

IRENÆUS. Vol. 2. Translated by Rev. H. Roberts and Rev. W. H. Rambaut.

THE WRITINGS OF ORIGEN. Translated by Rev. F. Crombie, M.A.

The writings of the early Christians are allowed on all hands to be of great importance, and to be invested with a peculiar interest; and regrets have often been expressed that it should be so difficult to know their contents. To supply this great want is the object of the Ante-Nicene Christian Library. All the Christian writings antecedent to the Nicene Council have been put into the hands of competent translators. These will make it their principal aim to produce translations as faithful as possible, uncolored by any bias, dogmatic or ecclesiastical. At the same time, they will strive to combine with this strict accuracy and faithfulness as much elegance as may be consistent with the main aim. Short biographical and explanatory notices will be prefixed to each translation; and in every case where there is variety of opinion the writer will abstain from expressing his own sentiments, and confine himself simply to an impartial statement of the opinions of the most noteworthy critics on the point.

The preceding volumes of the ANTE-NICENE LIBRARY are:

THE WRITINGS OF THE APOSTOLIC FATHERS. Translated by Rev. Dr. Roberts, Dr. Donaldson, and Rev. F. Crombie.

THE WRITINGS OF JUSTIN MARTYR AND ATHENAGORAS. Translated by Rev. Marcus Dods, A.M., Rev. George Reith, A.M., Rev. B. B. Pratten.

THE WRITINGS OF TATIAN AND THEOPHILUS: AND THE CLEMENTINE RECOGNITIONS. Translated by B. P. Pratten, Rev. Marcus Dods, A.M., and Rev. T. Smith, D.D.

THE WRITINGS OF CLEMENT OF ALEXANDRIA. Translated by Rev. W. Wilson, M.A.

THE WRITINGS OF IRENÆUS. Translated by Rev. A. Roberts and Rev. W. H. Rambaut.

THE REFUTATION OF ALL HERESIES BY HIPPOLYTUS. Translated by Rev. J. H. Macmahon, M.A. With fragments from his Commentaries on various Books of Scripture. Translated by Rev. S. D. F. Salmond.

THE FIVE BOOKS OF TERTULIAN AGAINST MARCION. Translated by Peter Holmes, D.D.

THE WRITINGS OF CYPRIAN, BISHOP OF CARTHAGE. Vol. I., containing the Epistles and some of the Treatises. Translated by Rev. E. Wallis, Ph. D.

Each 1 vol. 8vo, red edges, price per vol. $3 50.

N.B.—Any of the above volumes may be purchased separately. They will be sent post-paid to any address upon receipt of the price. Subscriptions to the ANTE-NICENE LIBRARY received and prospectus furnished by

SHELDON & COMPANY,
498 and 500 Broadway, New York.

UNPARALLELED SUCCESS.

THE SUBSCRIPTION LIST OF

THE GALAXY

DOUBLED IN ONE MONTH (DECEMBER), AND IS STILL INCREASING AT AN UNPRECEDENTED RATE.

This unusual increase is owing to the following facts;

I.

THE GALAXY now stands at the head of American Literary Magazines.

II.

It offers in each number a greater variety of entertaining reading matter (to interest each member of the family), and, with a single exception, a greater amount, than any other Magazine.

III.

At whatever cost, the GALAXY will contain articles by the leading writers of this country and Europe.

IV.

The GALAXY is not only instructive—it is also brilliant and entertaining.

V.

The GALAXY has secured for its pages *the great literary attraction of the year.*

Charles Reade's Serial Story.

It will begin in the March Number.

CLUBBING TERMS.

NOW IS THE TIME TO SUBSCRIBE.

NEW PATENT PIANOS.

RAVEN & BACON

(Established 1829),

Warerooms 644 & 646 Broadway, N.Y.,

MANUFACTURERS OF

PIANO-FORTES, WITH THEIR PATENT COMBINATION SOUNDING-BOARDS.

Patented August 14, 1866.

This invention, introduced exclusively into our Pianos, is of the greatest advantage to the tone of the instrument, as it affects the sounding-board, the very soul of the Piano, and produces thereby a pure liquid tone greatly superior in quality and power to that of the ordinary Piano. The sounding-board, released from its connection with the piano-case, and resting upon under sounding-boards, is relieved from the rigidity caused by such connection, and its vibratory quality increased.

Our Pianos are first-class in every respect, and purchasers will have not only our own guarantee as to their quality, but also the guarantee of the reputation of the instrument, obtained from the experience of our patrons who have used them for a generation. All lovers of this eminently household instrument, as well as parties proposing to purchase new Pianos, are invited to call and examine our assortment.

AGENTS WANTED.

$75 TO $200 PER MONTH! Or a Commission from which twice that amount can be made by selling the latest improved COMMON-SENSE FAMILY SEWING MACHINE. Price $18. For Circulars and Terms, address C. BOWERS & CO., 320 South Third Street, Philadelphia, Pa.

THE

UNION PACIFIC

RAILROAD COMPANY

OFFER A LIMITED AMOUNT OF

Their First Mortgage Bonds

AT PAR.

NINE HUNDRED AND SIXTY MILES

Of the line west from Omaha are now completed, and the work is going on through the winter, and there can be no doubt that the whole

Grand Line to the Pacific

Will be open for Business in the Summer of 1869.

The regular Government Commissioners have pronounced the Union Pacific Railroad to be FIRST CLASS in every respect, and the Special Commission appointed by the President says:

"Taken as a whole, the UNION PACIFIC RAILROAD HAS BEEN WELL CONSTRUCTED, AND THE GENERAL ROUTE FOR THE LINE EXCEEDINGLY WELL SELECTED. The energy and perseverance with which the work has been urged forward, and the rapidity with which it has been executed, are without parallel in history, and in grandeur and magnitude of undertaking it has never been equalled." The report concludes by saying that "the country has reason to congratulate itself that this great work of national importance is so rapidly approaching completion under such favorable auspices."

By its charter the Company is permitted to issue its own FIRST MORTGAGE BONDS to the same amount as the Government Bonds, and *no more*. These bonds are a First Mortgage upon the whole road and all its equipments. Such a mortgage upon what, for a long time, will be the only railroad connecting the Atlantic and Pacific States, ta[illegible] the highest rank as a safe security.

PAY THE

PRINCIPAL AND SEVEN PER CENT. INTEREST, 1st FEB. and 1st AUG.,

IN GOLD COIN,

Free of Government Tax.

The Bonds are offered at 97½ and accrued interest in currency. Persons subscribing now will save the premium on the coupon payable February 1st, proximo, equal to a reduction of one per cent. in the price of the Bonds.

Pamphlets, with maps, giving full information, sent on application.

All Bonds subscribed for sent by Express free of charge.

The Bonds may be had of

H. H. BOODY, Treasurer,

12 WALL STREET,

OR OF

HENRY CLEWS & CO.,

BANKERS,

32 WALL STREET, NEW YORK.

STAMFORD INSTITUTE FOR BOYS.

A family school founded 1850. With a limited number, special encouragement is given to backward or timid pupils, and unusual attention to individual peculiarities. Physical culture a specialty, including Military Drill, Gymnastics, and Boating. Ample grounds, with buildings and appointments complete, in every respect. Boys fitted for College, business, West Point, or Annapolis. Circulars with references sent on application.

W. C. WILLCOX, M.A., PRINCIPAL, Stamford, Conn.

NATIONAL LIFE INSURANCE CO.

OF THE

UNITED STATES OF AMERICA,

WASHINGTON, D. C.

CHARTERED BY SPECIAL ACT OF CONGRESS.

CASH CAPITAL, $1,000,000,

PAID IN FULL.

BRANCH OFFICE:

First National Bank Building,

PHILADELPHIA.

To which all general correspondence should be addressed.

OFFICERS:

CLARENCE H. CLARKE, President.
JAY COOKE, Chairman Finance and Executive Committee.
HENRY D. COOKE, Vice-President.
EMERSON W. PEET, Secretary and Actuary.

This Company, National in its character, offers, by reason of its Large Capital, Low Rates of Premium, and New Tables, the most desirable means of Insuring Life yet presented to the public.

JAY COOKE & CO., of 216 Broadway, new Park Bank Building, are General Agents for this vicinity, with D. C. Whitman and J. U. Orvis, Managers, where applications for insurance on the most favorable terms will be received.

The Week.

THE week has not been a lively one in the Senate, that body having been busy in discussing railroad affairs, and having brought to a conclusion nothing of importance. It looks as if the Air-line Bill, which provides for a government road between this city and Washington, would pass. It is opposed by some senators who doubt the constitutionality of such an exercise of Congressional power over States, and also by some others. Mr. Pomeroy, Mr. Harlan, and the rest having, however, denounced the newspapers for some late talk about railroad "rings" in Washington, only the constitutional objections need be mentioned. But for that matter it seems pretty clear that a majority in the Senate have no doubt of the constitutional right of Congress to override, if necessary, the will of the States in this particular. The bill giving relief to the central branch of the Union Pacific, which asks for $2,400,000 more, is pushed by a powerful lobby, and seems to command the assent of honorable senators; Mr. Sumner and Mr. Fessenden announce their intention of voting for it. But, on the other hand, Mr. Conkling, who is rapidly becoming a senator of weight, promises to make good a pretty long list of accusations against the company, and opposes it strongly. Mr. Frelinghuysen proposes to show that his State, New Jersey—which makes the railroad companies pay it so much a head for every passenger they carry through, which tax the companies, of course, collect of the passengers—is defensible for this part of her railroad legislation; Mr. Morton pushes his bill for the removal of the capitation tax. On Saturday the joint resolution was agreed to that all civil officers in Mississippi, Texas, and Virginia, who cannot take the test oath, shall be removed at the expiration of thirty days, and their places shall be filled by appointees of the military commanders.

On Monday the Judiciary Committee reported that Mr. Joshua Hill, of Georgia, is not entitled to a seat in the Senate. What may be the opinion of the majority of the committee on the general question of Congressional power of interference with the refractory Georgia Legislature cannot be gathered from this report. Mr. Trumbull sent in a minority report maintaining, so far as we can tell by the telegraphed synopsis, that Georgia is reconstructed according to the prescribed forms, and denying the right of the Senate to traverse the united action of House and Senate. This is what the Senate would do, he maintains, if it were to go behind the act admitting the State. Then, too, Mr. Frelinghuysen and Mr. Conkling, both good lawyers, although they do not sign the minority report, yet assent to only the "conclusion" of the majority report, and the conclusion is merely a recommendation that Mr. Hill be not admitted. On the same day a petition was presented by the President of the Senate, who had received it from Mrs. Lincoln. Why he read it instead of taking the responsibility of withholding it, and informing her that a bill, sure to pass, granting her a pension is already introduced into the Senate, we do not know. He read it, however. Mrs. Lincoln is too poor, she says, to live in Germany, as her physicians advise her, in a manner befitting the widow of the magistrate of a great nation. She is ordered to winter in Italy, she says. That she cannot afford to do, although she lives as economically as she can. The petition appears to be of her own writing. It would seem that she has no advisers, or not the best. Mr. Edmunds introduced, on the same day, a bill amending the Tenure-of-Office Act, and giving to the President power to remove or suspend his Cabinet officers during recesses of the Senate, and to suspend other civil officers during such periods, without giving specific reasons therefor. To this bill there appears to be no objection.

On Tuesday, Mr. Schenck introduced in the House a bill defining the mode of paying the interest on the national debt—in gold coin, namely. On the same day Mr. Farnsworth brought in a bill in two sections, one of which ordains that nothing shall pass as franked matter unless the franking member himself writes his name. This passed, but the other section, forbidding the receipt of free matter by persons invested with the franking privilege, was lost. Mr. Washburne wished to have all franking abolished, but that was too much for the House. Yet the British Parliament contrives to do without it, and the English post-office is not a department constantly in arrears either. On Thursday, Mr. Shanks introduced a wild bill, to the effect that all national Government offices should be divided among the several Congressional districts and organized Territories, in accordance with the population of each. Mr. Shanks said nothing about the fitness of the man for his place; but he holds the Buckle theory, apparently, that within a given space as many fit men can be found as can be got in any space of equal size and equal density of population. But the Buckle Providence becomes entirely unreliable in regions where they "gerrymander" the Congressional districts—and in Mr. Shanks's own State they are not bad hands at that, as he knows. On Saturday, Mr. Boutwell made a speech on his suffrage amendment, which cannot pass, and on a bill which he would therefore have passed as a substitute. On Monday, Mr. Paine, of the Reconstruction Committee, tried to bring up the case of Georgia, but it is a business that representatives are evidently in some doubt about, though it will have to come sooner or later in this session. The House seems disinclined to touch the telegraphs. Members think, if the correspondents tell the truth, that it would be dangerous to entrust any political party with such a power as the control of the telegraphic system of the country. Mr. Orton, of the Western Union, could probably give a better reason for the hesitancy. It does not seem to occur to these gentlemen that in more than one country of the world the servants of the government are superior to party hopes and fears, and that they might be so here.

A most amusing controversy between the New York *Tribune* and a Kansas correspondent about the Indians appeared in the columns of that journal last week, in which the correspondent not only attempts to get at the root of the Indian difficulty, as a Western man sees it, but displays very well the mode in which a good deal of political reasoning is done by the general public. He asks the *Tribune* whether "if a company of white men should band together, refuse to work, go naked, and roam over the plains," they might "rely on the favorable

influence of the *Tribune* in getting their subsistence from the Government?" to which the *Tribune* replies, frankly, that they could not; but then, though it goes on to say some very comical and pertinent things, hardly settles the question for the pioneer mind. The pioneer judges the Indian by the white standard of morality and propriety, a process which, though on its surface fair enough, is the cause of nearly all the tyranny, cruelty, and injustice in the world. It is impossible, and always will be impossible, to get the pioneer to change his views of the Indian's mode of dressing himself and getting his living; and yet the Indian policy of the Government seems to be based on the idea that it *is* possible, and accordingly, instead of trying to get the Indian to accommodate himself to the pioneer's standard, which would not be very difficult, we have gone on trying to get the pioneer to "accept" the Indian as an accomplished fact, and to regard him as an ethnological peculiarity, and not as a dirty, lazy loafer and vagabond; which is simply out of the question. It is what is best and most valuable in the pioneer which prevents him from respecting the Indian, and what is worst in the Indian which prevents him from making himself agreeable to the pioneer. But we have acted as if one was as good as the other, and our business was simply to keep them from fighting and make up to the Indian in alms what he lost in game by the advance of population. It is high time the farce came to an end, and that we informed the Indian in plain, even if figurative, language, that he will have to work for his subsistence and live within easy reach of the sheriff, and arrange his difficulties with that functionary and not with the Government at Washington. There is no more excuse for keeping the peace on the plains by "treaty" and the distribution of old clothes, than keeping it in this way in the Sixth Ward of this city.

Senator Yates, of Illinois, has introduced a bill doing away with "the probationary feature" of the present naturalization act and giving every immigrant a vote as soon as he gets ashore. The arguments in favor of this probationary feature are familiar to everybody. Considering that on landing he finds a government in full operation, with an immense stock of accumulated power at its disposal, created by the courage, industry, and self-denial of past generations, as well as of the actual citizens of the country, it has not been thought unreasonable that the newcomer should, before taking part in wielding this power, afford *some* proof of his intention to make a *bonâ-fide* change of residence. Continued residence in the country for five years is very properly set down as the best and only proof of this that an unknown man can give. Moreover, in view of what is actually known of the mental, moral, and political training of the great body of European emigrants, it is believed that five years is not too long a period to allow them to make themselves acquainted with the laws and institutions under which they are to live, and which they are to help to administer, with the language in which the political and legal proceedings are conducted, and with the manners of the society into which they are to be absorbed. What happens when this probation is evaded through fraud, or through peculiar circumstances does not produce its proper effects, is well illustrated in this city, where at every election hordes of emigrants are driven to the polls with as little understanding of what they are doing, and as little appreciation of its responsibilities or consequences, as if they were cattle.

Senator Yates's mode of meeting and disposing of these arguments furnishes a good illustration of the muddled state of mind into which the habit of using high-sounding phrases and gorgeous general ideas to solve great political problems has reduced many of our politicians, and particularly Republican politicians. The principle of his bill, he says, in a letter to a friend in Springfield, Illinois, is this: "That the probationary feature of the present law was born of fear, and the false idea that the measure of men's rights is a certain standard of intelligence, that we must arrogate to ourselves certain peculiar privileges on account of birth. I am opposed to all such ideas. Manhood is the magic word which opens the door to all progress, all excellence, all privileges." Now, *all* laws "are born of fear;" judicial and official oaths are born of fear; jails owe their existence to fear, and so do all magistrates and rulers—the fear, namely, which experience justifies, that *all* men will not do right, or will exercise their rights in such a manner as to injure other people, unless society restrains them. The assertion that "manhood is the magic word," etc., as applied to the measure before us, is simply nonsense. Mr. Yates might as well say that "manhood was the magic word that opened the door" to mathematics, architecture, real estate, railroad stock, steamboats, fashionable churches, and cranberry farms. We doubt very much whether Mr. Yates himself had more than a faint glimmering of what he meant when he said this, and that he had no glimmering at all, his friends are bound to hope. He then declares that he would, under his bill, meet the emigrant on his landing with the following address:

"You have abandoned the home of your youth, the graves of your sires, the associations of a lifetime, to join the grand army of this progressive Government. Welcome! The same Creator who gave us this fair land sent you, though a little later than our fathers came, to the Western wilderness, to join us in the great march to glory and renown."

Most emigrants, on hearing this discourse, would either button up their pockets or make preparations to join the senator on a spree. It has no more bearing on the "probationary feature" than on the resumption of specie payments. Such an address would do no more to prepare the emigrant for his new duties and responsibilities than an invitation from the quarantine officer "to meet him by moonlight alone," or "come to his bosom" in the character of a "stricken deer." The whole performance deserves attention, we repeat, as an illustration of the state of mind in which many of our legislators approach some of the most serious questions of the day.

A good example of the way the tariff works is afforded by the contest which is now going on in Congress between the Lake Superior miners of copper and the Atlantic shore smelters of copper. The Lake Superior miners produce pure copper, but say they are starving, and ask for an increase of the duty, which Congress is disposed to grant; in fact, has just granted. But here come the Atlantic smelters, who say that any increase of duty will be ruinous to them; that they, too, are American laborers, and carry on a respectable and useful national business; that they smelt the sulphuret ores, which are the only copper ores of the United States; but to do this profitably they have to use in the process an admixture of carbonate ores, which they import from South America, and that they can with this assistance and the use of economy and hard work produce copper from native sulphurets more cheaply than the Lake Superior miners can extract the pure copper from the quartz, and have, therefore, just as much right to Government encouragement as anybody else. They show, moreover, that while Lake Superior only produces nine millions of the twenty-four million pounds of copper the country requires, the smelters with their sulphurets and carbonates produce the remaining fifteen millions. To all of this Congress makes no reply; offers no statement as to the comparative value of the Lake Superior copper mines to the country, as to the relative numbers of men engaged in mining and smelting, or as to the importance of the price of copper to other branches of the national industry. It simply says that copper mining, as at present conducted in the Lake Superior region, does not pay, and on goes the tax without other argument or exposition. Our advice to the smelters now is, to go to Washington, engage a good strong lobby, and not give up the struggle till they get the carbonates in free of duty. Then it will be the turn of the Lake Superior men to try their luck again, and so on. What is most remarkable about this struggle is that it is really between two branches of native industry.

The conference on the Greco-Turkish difficulty has met and arranged the matter very much in the manner mentioned by us last week—that is, Greece is to stop sending volunteers to Crete and making raids into Thessaly, while Turkey is to withdraw her "ultimatum." Turkey has already accepted, but there is a newspaper report that Greece refuses. All fear of hostilities has not yet vanished from Europe, but there is plenty of evidence that it is very much diminished. The great difficulty of forecasting the political future in Europe is due to the fact that in two of the great continental states—France and Russia—the power of fighting or not fighting is practically confined to the monarch,

and therefore personal whims, caprices, and ambition play a large part in setting armies in motion, and the political speculator is compelled to treat a large portion of his problem with mere conjecture. But supposing France and Russia to be under the influence, just now, of the ordinary political considerations, there does not seem the least likelihood of war. The *Economist*, perhaps the calmest and most perspicacious of the English papers, finds cause for uneasiness in what it considers the striking similarity between the diplomatic uneasiness which it perceives on the Continent now and that which preceded the Russo-Turkish war in 1853. But this latter outbreak was preceded by formal demonstrations of hostility to Turkey on the part of Russia, such as the presentation of insulting demands by her ambassador at Constantinople, and the occupation of the Principalities as "a material guarantee," and the revelation by Sir Hamilton Seymour of a long-standing design on the part of the Czar to force on a rupture with Turkey at the earliest possible moment. Nicholas, moreover, approached more nearly to the Asiatic type of monarch than any now to be seen in Europe.

In a country in which the machinery of popular agitation does not exist, the press being bridled, and the right of meeting for discussion surrounded with difficulties, even if the people had the habit of exercising it, "the signs of the times" are almost always what more advanced political communities call trifles. This is particularly true of France. One has to get at the drift of popular feeling literally by watching feathers and straws. Small incidents, that in America or England might furnish material for a newspaper paragraph, are in Paris grave political events, and have to be treated as such by anybody who occupies himself with contemporary French history. For instance, it is a serious matter that some twenty-seven pictures, taken from the gallery of the Louvre, and therefore the property of the nation, should have been burnt up in Madame de Troplong's apartments, and that the outcry about this should bring out the fact that other pictures from the same collection have been adorning the walls of the Cercle Impérial, a club of which the members are mainly devoted adherents of the Emperor; and that when the late M. de Morny went to Russia as ambassador he took a good supply of the same pictures with him to hang in the salons of the embassy. Frenchmen will stand a good deal of what we consider oppression, but the treatment of public property as if it were the private property of the reigning house is something they are awfully sensitive about; so that, though the Government is not afraid to refuse to permit the prosecution of the most insignificant functionary for the most outrageous abuses of power, it is carrying the outlying pictures back to the Louvre with great haste and making very lame apologies for their abstraction.

Another event, and it is to be hoped more significant one, has occurred to disturb the repose of the Government at Toulouse, where Baron Séguier, the Procureur-Impérial, or district attorney, has sent in his resignation, and, more horrible still in French official eyes, has published the letter in the newspapers, because the Minister of Justice urged on him, in overbearing language, a more vigorous prosecution of the offences of the newspapers than his own judgment dictated, and employed spies to report on his official conduct. The Baron says that if he cannot serve the Emperor "with moderation and dignity," he will not serve him at all. Baron Séguier belongs to what used to be called the "noblesse de robe;" that is, belongs to a kind of family found rarely anywhere out of France, the men of which have for many generations filled high legal offices. A fresh lustre has been added to his resignation by its bringing to mind once more a famous phrase of an ancestor of his, a judge, who, when an attempt was made by the crown to bully him into giving a judgment to suit it, replied: "La cour rend des arrêts, et non des services"—the court renders judgments, not services. This affair has brought M. Baroche in for a share of the odium which overpowered his successor, M. Pinard. The writer of the late description of the Dutch Admiral Verhuel, the Emperor's reputed father, in the *Diable à Quatre*, goes to jail for four months and pays $600 fine, and the publisher and printer are also condemned, but to lighter penalties. The admiral seems likely to become as delicate a subject in Parisian circles as Captain Kidd in the Fifth Massachusetts District. Baron Séguier's example has been followed by M. Turquette, the Procureur-Impérial at Varins.

The decision of the Spaniards as to the form of government they will adopt being considered nearly settled by the vote on the election of the Constitutional Cortes, the Provisional Government is said to be at last looking about for a candidate, and the Duke of Aosta, Victor Emanuel's second son, is more talked of than he has yet been. He has everything to recommend him. He is a Catholic, but not a Papist; inherits his father's and grandfather's respect for constitutional government; has the sober, brave, austere type of character which has made Piedmont the seed of the new Italy, and has served with distinction on the battle-field. But the Italian ministry seems to be dead against his occupying a foreign crown, and will probably advise the King in this sense. At least this is the conclusion generally drawn from an article in the ministerial organ, the *Nazione*, strongly arguing against the scheme in advance. The duke's withdrawal would leave the Spaniards in a position of continued and increasing difficulty, as it brings the Duke of Montpensier, a Bourbon, and otherwise objectionable, into prominence and activity. The republican manifesto issued immediately before the election has reached us, and is full of good political sense and moderation. We doubt very much whether anything quarter as good was ever produced by any of the foreigners who have undertaken to give the Spaniards advice; and it ought to satisfy those counsellors that the cause of republicanism in Spain may safely be left in the hands of the Spanish republicans themselves. One of the former, Victor Hugo, we observe, writing to a Greek friend in reference to Crete, says: "Crete asks of me what Spain asked of me. Alas! I can only sigh. *I have done so before, yet I shall do it again.* You may reckon on me." As long as this sort of stuff passes among radicals for wisdom, radicals may rely on it they will never rule the world. The world has always been, is now, and ever will be ruled by brains, and the fight between progress and conservatism is to decide not whether sloppy sentimentality or selfish tyranny shall get the upper hand, but what order of ideas brains shall serve. The reason why the whiskey ring is so powerful among us is, that they have applied brains to the business of stealing and swindling, and good people have opposed to them nothing but rhetoric.

The *Pall Mall Gazette* gives some interesting statistics with regard to the composition of the new House of Commons, which enable us, perhaps better than anything else, to appreciate the result of the late election. It appears that the House actually contains 45 eldest sons of peers, who, of course, represent their fathers rather than anybody else. Add to these the younger sons and nephews, brothers and sons-in-law of peers, the baronets and heirs of baronetcies, and we find that one-half the House is made up of members of the aristocracy in the strict sense of the word. There are about 120 "business men," properly so called, including bankers, and 121 railroad directors; while the professional men, including two professors, number only a little over fifty; in fact, there are fewer of this last class in the new Parliament than there were in the old one. To crown all, the commercial and professional men are mostly nearly fifty years old or older—the only young men in the House being found amongst the aristocracy. We may safely infer from all this that it is not the present Parliament, at all events, that is going to tear up the constitution by the roots and plant the cabbages of the future in its stead. But then, as our English correspondent pointed out a fortnight ago, there are plenty of reasons for believing that no such House of Commons will be returned again, and that during the next few years the unchained democracy will find out its strength, and learn to use it. One of the signs that the upper classes do not feel easy is the articles in the *Times* and *Standard* maintaining the general devotion of the English public to primogeniture and aristocracy. As the *Spectator* well points out, this is plainly the whistling of timid people in the dark. The *Pall Mall Gazette* says "prudence ought to suggest to those who are deeply interested in keeping things as they are, the wisdom of letting the subject alone," and maintains that "it is not well to challenge too loudly an investigation of the question, whether 'America, for the bulk of the people, is on the whole a better place to live in than this country?'"

THE REMAINING WORK OF THE REPUBLICAN PARTY.

Mr. Boutwell, the other day in the House, in advocating the suffrage amendment to the Constitution, spoke of its adoption, if we may judge from the brief report of his speech in the morning papers, as if it would prove the consummation of the labors of the Republican party, the completion of the work it has undertaken, and a full discharge of the responsibility the party has assumed towards the nation. This impression is not so prevalent now as it was two years ago, but still it is prevalent enough to make it desirable that it should be corrected. It is quite true that the Republican party was formed for the express purpose of preventing the extension of slavery; that in the legitimate prosecution of its task it was forced to defend the very existence of the Government; and that, in defending the existence of the Government, it became, partly through the necessities of its position, and partly through the legitimate and natural development of the idea to which the party owed its origin, the foe of political discriminations based on race or color or creed. Its career, in fact, has been marked by great continuity and consistency. It was forced into fighting the South by its hostility to slavery; into emancipating the blacks by its fighting the South; into providing guarantees for the civil rights of the freedmen by the emancipation of the blacks. It has given them the suffrage under the influence of the same mixed motives which impelled it to give them their freedom—that is, expediency and a sense of abstract justice. It now feels itself, in view of the proofs which have been afforded during the past year of the frailty of the tenure by which the blacks hold their rights under the Reconstruction Act, obliged to provide a still stronger guarantee for those rights in the shape of a constitutional amendment applying the same rule to all the States of the Union.

Now, nothing could be more unfortunate than for the party leaders to get it into their heads, or to preach, that the passage of this amendment, or of any similar measure, is either the sole or even the chief work which remains for it to do; and yet we are led to fear from Mr. Boutwell's speech that some such opinion still lingers, at least in the Radical wing of it. The amendment now before Congress proposes to deal with an abuse, and an abuse which nobody seriously defends; but then it proposes to deal with it by withdrawing from the States a power which, rightly or wrongly, they have hitherto supposed to be essential to their dignity and safety, and the surrender of which for the benefit of a despised and distrusted race will naturally only be effected by the conquest of a host of deeply-rooted prejudices. To give up the right of regulating the suffrage will be very hard, as we know, with a very large proportion of the States; to give it up simply as a mode of admitting the negro to the suffrage in the North as well as in the South, will be harder still. The party, therefore, which proposes such a measure needs to draw on every source of influence for its support. There is no form of aid it can afford to reject, and no mistake it can afford to commit. We do not say that the errors of the Republican party can make political discriminations based on color a permanent feature of American polity; they are sure to disappear before long; but we presume their deadliest foe will admit that it makes a great difference whether they disappear next year, or after ten years or twenty years.

Though, therefore, the final removal, at least from the Federal Constitution, of all trace of the color distinctions between citizens, is a part of the work which still remains for the Republican party to do, and a legitimate consequence of the work it has already done, to treat it as the principal part, or the only important part, or to rely on the reputation or past services of the party for its accomplishment, is not only to endanger its success, but to endanger the very existence of the party itself. In the first place, those who talk so much about "the great party which has saved the nation," or rely on popular gratitude to "the great party" to cover up its defects and shortcomings, seem to labor under a strange delusion as to the nature of political parties and the nature of popular gratitude. However useful or convenient it may be, about election time, to talk of a party as a person or an army with banners, to base a policy on any such fictions would be the height of folly. A party is really a mere abstraction, an agreement of a great number of people in certain opinions; the administration, or the majority in Congress, are simply a certain number of men chosen to embody these opinions in legislation. When the great number of people cease to agree, the power passes to other agents for other purposes. But the party has never existed as a person or determinate body of persons, and therefore never becomes the object of popular gratitude, even if popular gratitude were ever lavished on large bodies of persons. When we talk of the Republican party as worthy of admiration or respect, we merely mean that the agreement of a large number of people in various parts of the country on a certain day to have certain measures enacted by Congress was a very gratifying circumstance. But nobody feels "grateful" to the Republican party, or thinks of feeling grateful to it, any more than to civilization, or the mariner's compass, or the art of printing. Attempts to personify it, and excite love for it, may pass as rhetoric; as premises in a serious political discussion they are the merest twaddle. The public recognize the real state of the case perfectly. When the question of retaining certain officers in power comes up, the voters—the sensible voters, at any rate, who decide the fate of parties by going from one side to the other as their support is deserved—may allow themselves to be influenced by affection for particular men, but would laugh if you appealed to their "love of the party." What guides them in voting is not the consideration of what the party has done in the past, but the inferences they draw from what its agents have done in the past as to what they are likely to do in the future. In this method of judging, "gratitude," we need hardly say, has no place; for gratitude is simply a sense of obligation for favors received, and if it looks to the future at all ceases to be gratitude. The one condition on which party agents hold power is the constant display of fitness, or what seems to be fitness, for it.

The Republican party, besides putting down the rebellion and abolishing slavery, has called into existence an enormous army, created an immense debt, and covered the country with the great network of functionaries known as the civil service. Its continued possession of power after the war, therefore, logically imposed on it—besides the duty of securing the freedmen in the enjoyment of their newly acquired rights—the duty of reducing the army, providing for the punctual and faithful payment of the public obligations, the proper and scientific distribution of taxation, and the decent, honest collection of the revenue. These duties are all so important that the neglect of no one of them can be atoned for by extra zeal in the discharge of the others. Energy in supporting the black man's rights will not compensate for indifference to the national credit; and the prompt payment of the public debts will not satisfy people, if a quarter of the money raised for the purpose is stolen, and every United States officer continues to pass, in the eyes of the world, as a presumptive knave. The army has been reduced; but the debt is not paid, nor has any distinct provision been made for its payment. Three years have elapsed since the war, and the party has fixed on no financial policy. It has not made up its mind when or how it will redeem its legal-tender notes, or even whether it ought to redeem them at all, and it allows some of its prominent members to go about not only preaching the non-redemption of these notes, but advising employment of them in paying the Government bonds. It talks in very fine language about keeping "the national faith inviolate," but has carefully avoided pledging itself in distinct terms to the payment of the debt *in gold;* and though Mr. Edmunds has for months been trying to get it to declare its mind distinctly on this subject by resolution, it shrinks from the resolution, and, on one pretext or another, puts off passing it from week to week. Nay, the majority of the members of the party in the House joined Butler in trying to break faith with the public creditors by taxing the interest on the bonds, and no punishment was inflicted on the ringleader in the movement.

As regards the taxes, it has reformed the internal revenue as far as the distribution of the imposts is concerned, but has well-nigh neutralized this reform by refusing to deal with the mode of appointment and the discipline of the revenue service, although the condition of this service has for the last four years been a notorious scandal and disgrace, and has caused and still causes the loss to the Government of one-third of the internal revenue taxes. With the tariff it has resolutely refused to deal, and it has made no attempt whatever to arrange

it on any known principle or doctrine of any school of economists, but has imposed duties, recklessly and indiscriminately, without any attention to their number or effects, under the dictation of bands of interested or corrupt lobbyists, and, as one of its own officers has pointed out within the present year, to the ruin of our foreign commerce and the serious injury of many branches of domestic industry. Though last, not least, a system of corruption has grown up under the party administration such as has never been witnessed in this or any other civilized country. Washington swarms with jobbers and peculators of every kind and degree, and the time of Congress is largely taken up with the consideration of their schemes; nearly every branch of the public service is, or is believed to be, under the control of "a ring," or administered in its interest; and the faith of the public in the honesty—the mere pecuniary honesty—of public men has declined and is declining to an extent which, considering what a part confidence in the character of public men must always play in politics, it is certainly no exaggeration to call alarming.

Under these circumstances it is safe to say that the ability of the party to discharge its obligations to the colored population depends on its success in dealing with the other problems of the day. People will not much longer accept devotion to "human equality" or "the rights of man" as an excuse for the condition of the finances and the civil service. He must be a very blind person who does not see how largely the popular interest in the question of "equal rights" has declined during the past year, owing to the increasing concentration of attention on the prevailing corruption, and the increasing anxiety as to Grant's ability to abate it. In other words, people are more concerned about the kind of government in which the black man is to share than about the precise mode or time in which he is to share in it, and are occupied rather with the question who is to collect the taxes, and what is to be done with them after they are paid, than with the question of who is to vote them or pay them. The continuance of the present abuses would, every one is agreed, leave little in American politics in which a decent man of any color would take much pride or satisfaction, or from which he could derive much benefit.

THE ALABAMA CONVENTION.

The text of Mr. Reverdy Johnson's convention with Lord Clarendon, providing machinery for the settlement of the *Alabama* and similar questions, has been published during the past week, and is now before the Senate, with which body the discussion of it might safely and fairly be left. But as it probably will not be left with it, and the propriety of ratifying a treaty is a question on which the Senate may be fairly expected to listen to public opinion, and no doubt will be influenced by public opinion, it is desirable that the public should know exactly what it is that is now under debate.

Amongst the things which do *not* come before us in examining the convention is Mr. Johnson's character and antecedents. With the goodness or badness of the arrangement into which he has entered his personal qualities have nothing to do. He has said many foolish things, and has been guilty of great indiscretion and great want of dignity, and may even, as the *Sun* says, have been "bribed by the enemies of the country" to preside at a dinner party of wicked men and give them a legal opinion; but these things are not incompatible with the supposition that he has made a good treaty. Some of the most foolish and immoral men have produced or advocated excellent lines of policy. Charles James Fox, John Wilkes, and even the lamented Thaddeus Stevens, would have worn a sorry look on the "moral platform," but they nevertheless supported or brought forward some very wise measures in their time. Marlborough was a liar and a traitor, but he won Blenheim and Maplaquet, while Frémont, a model of political virtue, somehow never led his "grand army" out of Missouri. It is true that the fact that a treaty has been negotiated by a reputed enemy of the Government, or by a servant only moderately careful of its honor, should be closely scrutinized; but it is also true that *all* treaties should be carefully scrutinized, because the best diplomatists may, through carelessness or stupidity, commit the errors which bad ones commit by design. A convention such as that which Mr. Johnson has negotiated, involving many millions of money and a difference of exceeding delicacy between two great nations, should be examined both by the public and the Senate with the minutest attention, no matter by whom framed. That is to say, that there should be just as much time and pains taken to weigh the bargain if made by Mr. Sumner as if made by Mr. Johnson; no more, but no less. The character of the negotiator will, of course, in some degree influence every senator's mind in judging the result of the negotiation, because senators are but men; but the senator who least allows his judgment to be influenced by it will discharge his duty most faithfully.

Another consideration which ought not to affect the national judgment on the convention is the spirit of the English nation during the war, or the moral complexion of Laird's share in the destruction of American commerce. There are things which might fairly influence American judgment in deciding on the form of satisfaction the United States should ask for or accept. There are heights of national indignation and depths of national wrong for which there is no remedy but war. In other words, there are injuries and insults, happily more rare as the world advances in civilization, which no nation can submit to arbitration, on the proper compensation for which it can allow nobody to decide but itself. But once a nation agrees to submit to arbitration, it passes at once out of the domain of feeling into that of reason; or, to speak more literally, lays down its arms and goes into court. Once there, the understanding takes complete jurisdiction of the dispute; therefore, when Mr. Seward agreed to allow other persons than the United States Government to say whether the United States had suffered wrong at the hands of Great Britain, and if so, what damages they ought to receive, he agreed that sentimental considerations should no longer weigh in the case, and that the rule of decision should be furnished by the law of nations, the principles of equity, and the common sense of educated men.

What Mr. Johnson has been doing, is trying to provide a tribunal, and rules for its guidance, which shall apply this law, these principles, and this common sense to such facts as may be submitted to it; and the question now before the country is, whether his tribunal is as perfect a one as human nature and the gravity of the case with which it is called on to deal will admit of. The dispute itself between England and America is not now under discussion. That has been canvassed until most people are thoroughly familiar with it. What we are considering is whether a good means of ending it has been hit on. It is nothing against the proposed tribunal that it will not, under any circumstances, award the full amount of damage the United States has sustained at sea, or take from England the full amount of the gain which has accrued to her through the rebellion. Even after all the damage actually done by Confederate cruisers has been paid for, Americans will be many millions out of pocket, through the fear inspired by Confederate cruisers; while even if England had compensated the ravages of these cruisers fourfold, she would still be a great gainer After the commission has done everything that can be expected of it, a great deal of wrong will still remain unatoned for; but then those who condemn it on this ground have to produce some other instrument that will do better. There is no human mode of exacting of everybody who participates in or instigates a great war the proper amount of retribution. No court is adequate to any such task. Nobody can say exactly who is responsible for a great war, or to whom it was owing that it was attended with such and such atrocities or did not end at such and such a time. We have within the jurisdiction of the United States courts at this moment plenty of men who are known to have committed dozens of murders during the rebellion, but no attempt has been made to punish them. Granting that the English recognition of the South as a belligerent contributed to the prolongation of hostilities, it is impossible to say *how much* it contributed, or what proportion of the losses sustained by the North were due to her agency. We might as well attempt to put the Democratic party on its trial for complicity in the rebellion, and force it to pay the national debt, as to put England on her trial and force her to pay for *all* the damage sustained by American commerce through the military operations of the Confederates. So that, if the commission fails to do exact justice, we have only to ask ourselves whether war would do better; whether,

after having fought England, we should be less out of pocket than we shall be after receiving payment for all losses sustained by the *Alabama* and her coadjutors.

The flagrant and patent fault of the convention, as it has appeared in the newspapers, is the mode of appointing the umpire who is to decide in case the four commissioners cannot agree on the same person. This umpire is to be chosen by lot out of two previously selected by both parties, so that even the question of England's liability might be decided at the outset by an Englishman or a person selected by England. If the arbiter may be chosen by lot under such circumstances, the whole question might as well be decided at once by tossing up a cent. The object of the commission is not simply to give a decision, but to give a decision which both parties are likely to respect, and a decision arrived at, even in part, by blind chance would command nobody's respect, and probably would not be enforced. But then the Senate is at least as likely to see this, as well as other weak points of the convention, as anybody out of doors, and we may feel assured that it will be satisfactory in any form in which it issues from their hands. Even Mr. Seward's great point, the submission to the commission of the propriety, in point of time, of the concession of belligerent rights to the insurgents by Great Britain, would hardly give trouble, even if England had refused to agree to it, because nobody has ever been able to see how that, or any other notorious fact, could be kept back from the consideration of the commission. When two disputants ask an arbitrator to pass on the culpability or liability of one of them, what they really submit to him, no matter what they put on paper, is what he himself knows of the case. What they withhold from him is simply what they can keep from his knowledge. So that the controversy on this point has always seemed to us one of those airy discussions which sometimes precede reconciliation between intending duellists of a pacific disposition. If the question of recognition had been likely to exert any influence on the amount of damages, the point would have worn a different aspect; but this, we believe, has never been maintained by anybody. What is gained, therefore, now by showing that the Queen's proclamation was prematurely issued, is a sort of quasi-proof that Lord Russell was at that date an evil-disposed man. The English liability for the *Alabama* ravages has been practically admitted by the English government, and is believed by publicists here and on the continent at least, to flow from its violation of its legal status as a *neutral*, and not from a misdirection of its moral sympathies.

The New York *Tribune's* suggestion that the claims of the Confederate bondholders may be admitted by the commission, under the agreement to adjudicate British claims against the United States as well as American claims against England, is of course worth attention, as is the possibility that Semmes may claim damages for the loss of his personal baggage in the *Alabama*. But the remedy in case either of these claims is allowed by the umpire is very simple—break up the commission and bring its proceedings to an end. There is little difficulty in excluding these claims by a special clause; when Great Britain insists on advancing them, it will be time to get into a proper state of indignation over them.

INTERVIEWING.

So far as a journal is made good by its editorial writing, European journals are, no doubt, better than American. There is as little doubt, we suppose, that so far as the goodness of a journal depends on the labors of reporters and collectors of news our papers are superior to those of the older countries. So far as concerns the production of the "able article" in politics or in literature, the *Times* of New York will admit itself behind the *Times* of London. But if we take our American *Times*, with its heavy Atlantic Cable bills and its long account with the Associated Press, and institute a comparison between it and its English namesake, with its scanty dole of telegrams from M. Reuter and his Continental confrères, the result will be far from unfavorable to us. Leaving out of consideration these special points of superiority and inferiority, it is safe to say, by the way, that foreign newspapers and our own are much the same thing; plainly, the new, indigenous original American literature that they speak of, is not going to be a periodical literature; it is not in essentials that the American journal is unlike the European; the main differences are differences not of kind, but of the degree of ability with which the same or very similar topics are handled.

Nevertheless, there is a new path or two that we have struck out; and, as might have been expected, it is "our reportorial staff" that may claim the credit of the invention. "Interviewing" is confined to American journalism. At all events, it was among us that it had its origin, and it flourishes among us with a luxuriant strength that is nowhere else equalled or emulated. Occasionally an enterprising German or Frenchman gets admission to the presence of Von Beust or Von Bismarck or Thiers, and sends to some paper an account of what he saw and what was said; but usually his report is a mere bit of narration or a little gossip, and has none of the profound political significance which our own interviewing is supposed to have. And now and again a delegation makes a politically significant visit to Mr. Gladstone or Mr. Disraeli, and the papers print the spokesman's address and the minister's reply. It is, however, never observed that the English delegation makes its visit without having in view the furtherance of some specific object to which the attention of the official must be called, or else it wishes to make known to a favorite leader, for his encouragement, that his course in regard to this thing or that has the approval of his constituents. The American interview is another affair altogether. The reporter who seeks an interview with Mr. Wade or Mr. Butler or Mr. Ashley does not, as the Frenchman does, make his visit because of some matter of personal business, and then incidentally, for the gratification of a natural if rather trivial public curiosity, put down on paper a description of the statesman's rooms and dress and appearance and manners, and a record of what chanced to be said. Still less does he go as the English visitors do, for the purpose of himself saying something to a public servant. His part in the conversation is merely to put certain leading questions designed to draw forth in the directest way the views of the statesman on all political questions that may at the moment be exciting attention, and, more particularly, a good deal more particularly, to elicit an explanation of some passages in his career which probably may come up for discussion in the nominating caucus of the next week. "Governor," the reporter says, "I see that some of the Radical sheets are saying that you are in favor of the forcible annexation of Cuba and the establishment of the Coolie trade. How is it about that?" Or, "Governor, I suppose you have noticed that an opposition paper in your district alleges that you voted twice against the bill giving two hundred dollars bounty to the soldiers and sailors, and that on its passage you got leave to change your vote; and that afterwards you altered your speech in the *Globe* before you began to circulate it down there. Is that so? Some of your friends think you ought to say something about it." The Governor then thus replies to the reporter, or gives him a written statement to this or the like effect: "He had been long enough in public life to know that if a man undertook to answer every calumny that was heaped upon him he would have very little time left to attend to the affairs of his constituents. Jefferson used to say that a lie travelled across lots, but truth had to go round by the dirt road, and he had found it to be about so. His grandfather having fought through the Revolution, and his father having been a sailor in the war of 1812, and he himself having left his business to recruit men to help to put down the late rebellion, it might be that he had been a little too ardent in his desire to see the Stars and Stripes spread over an island which, by the laws of nature, was designed for a part of this country, and which was cursed by a European despotism. His chief idea, however, in connection with that matter had been to run the sugar plantations on Government account for two or three years, till the Territorial governments could be framed, hypothecating the staple crops for the purpose of lightening the burden of taxation now resting on the poor man. His plan was to base a new issue of greenbacks on the sugar bonds and give every man a fair chance; at present the rich had it all their own way. As for the editor who made the charge, he was not worth notice. The governor had been obliged to have him arrested during the war for discouraging enlistments; he never forgot it. His wife, he believed, left him years ago; she was now in Illinois somewhere. The story about his vote on the bounty bill was a good specimen, he remarked, of the way the Copperheads attacked a man's record, if he had been true to his country while their friends down in the Confederacy had been putting our men into their Andersonvilles and Libbys. It was true he had wished the defeat of that bill and had voted against it. He had framed a substitute bill himself, having for its object to give every soldier and sailor who had been honorably discharged one quarter section of good land in place of giving him a money bounty, most of which would be got by speculators and agents. After all, history proved that the principal reliance of any country must be its honest, hard-working farmers. His former private secretary had taken it on himself to make some slight changes in the governor's speech on that occasion,

and as soon as the governor discovered the fact the secretary was discharged."

The political bearing of the merely descriptive and other seemingly incidental parts of the "interview," as we get it in print, is not less marked than that of the rest of it. It is not in the spirit of idle gossip that the correspondent tells us of the great man's surroundings and his habits when at home. The first surprise was, he is likely to tell us, "when he got off the cars" and enquired where the old senator's residence was situated, for he had been expecting to see a mansion whose appearance should be in proportion to the national fame of its owner. The house was a plain frame structure, a little the worse for wind and weather, with a large barn behind it; near by were two men and a boy at work. The ill-dressed man was the old champion himself, feeding a pig; the boy was his youngest son, sawing wood. The room into which the correspondent was invited was very plainly furnished, without pictures, except a photograph of the Capitol at Washington and a portrait of the senator. Noticing the absence of a piano, the correspondent was told that the senator "believed in a churn." His wife did her own washing, he said. The dinner was very simple, and the stories about the senator's drinking at Washington and on the cars were not confirmed by the pitcher of remarkably cold and clear water which stood on the table. The first thing he did, the senator said, when he got that lot, was to dig a well. He had always voted for a prohibitory law when in the State Legislature. The well and the cellar he dug in the day-time, and at night did sums on his slate by fire-light. He preferred a rag-carpet, he said. As for a big library, he thought if a man had one or two good books and made himself master of them he was more likely to turn out successful than if he spent his time looking up dead men's thoughts. Past ages were not progressive; and what might do well enough for Europe would not do for this country. In his judgment a good newspaper like the *Tom-tom* contained more information in a week than most books do in ten years.

In short, the "interview," as at present managed, is generally the joint production of some humbug of a hack politician and another humbug of a newspaper reporter. The one lives by being notorious and the other by seeking out notorieties and being "spicy" by stringing together personalities about them. Sometimes, of course, it happens that the opinions given are those of an able and respectable man, but this is very rare; and it is still rarer that when this does happen, they have been honestly learned by the person who gives them to the press. Usually he has made a rascally use of a chance opportunity, or in some indirect manner has learned what So-and-so has said among his friends, and this he puts down, mixed with other matters, as having been said to himself. A notorious instance of this latter kind has recently been much talked about—Grant being represented to have held a confidential conversation with a writer for the press, who fabricated half of what professed to be a true report and picked up the rest from people unsuspicious of his intention. In general there is really not very much objection to the interviewing's being done in this manner. It is not worth while for the reporter to pay hotel bills and railroad charges for his personal transportation over many miles in order to get hold of the talk of an average "old war-horse" or "old wheel-horse." A look at the distinguished man's stump speeches or his performances in Congress shows what he will say on any given subject, for when he is at the end of the platitudes or the ravings that make up his verbal activity as a statesman there is nothing more in him, and any "member of the press" is fully as competent as he to put "views" into his mouth. The men who really have something to say which it would be worth while to hear do not suffer themselves to be made the interviewer's prey, and assuredly never collogue with him for the purpose of "keeping themselves before the public." That trade has plenty of followers, however; and some of the senators and representatives from our oldest and most respectable States are occasionally to be found among the number. We think of one who, under the temptings of one of the most skilful, as well as most pushing and impertinent, of Eastern interviewers, permitted himself to speak of his fellow-legislators in language for which they might justly have made him rise in his place and apologize. Imagine somebody with a taste for being spicy approaching Monroe or Adams or Webster to get out of him and into the note-book what he thought of the private motives which dictated the vote on a particular occasion of either one of the others, his colleagues.

But the worst offender of all engaged in the preparation of "the interview" is one whom we have not mentioned—the editor who pays for its concoction and publishes it. He will very likely admit when off duty, or for that matter when on, that his correspondent is a blackguard and a gentleman of no doubtful character as regards veracity. In fact, he may acknowledge that he is aware that that worthless and bad man is at the moment confined in the back office, on limited rations, fabricating imaginary remarks to be made by General Grant to "a well-known conservative gentleman, who has ever been of opinion that the General meant to be the President of a party and not of the whole country." But this confession, and the fact that he lays claim to the title of an honest man and gentleman, will not prevent the editor's giving his assistance, if necessary, to his ingenious employee, and paying him high wages for his services, and publishing whatever rascality may result from his efforts. The paper must have "spice" and something sensational. Conscience or common decency in its editorial management is less necessary; at all events, if it is necessary, its existence is somehow not found incompatible with a cool disavowal of responsibility for these petty villanies. Sometimes, even, it is not found incompatible with a labored defence of them when they are exposed. The *World*, the other day, when Grant convicted it of a story that looked particularly malicious, occupied a column in an attempt at showing that, no matter what he chose to pretend, Grant must, after all, have reviled certain nominal party friends of his in the manner set forth in the fabulous interview; or must, at any rate, be all ready to break with them, because otherwise he would not "have been driven into a course so out of character for him, and so unexampled in the conduct of any President elect," as to say that there was no truth in some disgraceful falsehoods of an anonymous correspondent, whose performance, of course, could have done no harm if some respectable person had not made himself an accessory of the fabricator. In its best estate, when it merely serves to make some politician clumsily ridiculous in the eyes of all discerning people, the "interview" is bad enough; but in that form of it exemplified in the instance we have been commenting, on the press could hardly have a worse disgrace or a worse enemy. The lesson that there are limits to people's endurance of printed impudence is one that should be taught the conductors of the press by their own sense of moral responsibility for all the damage done by anything to which they give publicity. It is because "interviewing" helps to establish the curious device of looking on the correspondent, whether interviewer or not, as a person who may be disgusting, to be sure, but who is his own keeper fortunately, and not at all under editorial control, that it is chiefly to be condemned.

ENGLAND.

LONDON, January 8, 1869.

THE columns of the newspapers will, for some time to come, be filled with the reports of some remarkable legal proceedings. The case of Overend, Gurney & Co. will be known by name, at least, to some of your readers. The firm had, for some years, been one of the largest discounting firms in the City. In 1865 they transferred their business to a limited company, some of the directors of which had been already partners in the original firm. After nine months, the company was wrecked in the financial difficulties of 1866, and it has since appeared to have been hopelessly insolvent from the beginning. The unlucky shareholders have had to pay up large sums beyond their original investments, and many of them have been ruined. In such a case, it is naturally the rule to make things as pleasant as possible, and to avoid the loss and trouble of exposure. On the present occasion an indignant shareholder has arisen who is not disposed to take things so quietly. He has attacked the directors in the criminal courts, and a long investigation has begun, of which it is difficult for uncommercial persons to follow the exact ins and outs. The general nature of the complaint, however, is simple enough. It is to the effect that the directors cheated the public by issuing a prospectus in which they entirely misrepresented affairs, and, well knowing that they were, in fact, insolvent, and that their liabilities exceeded their assets by £3,000,000 or more, declared that they were in a flourishing condition, and estimated the goodwill of the business at £500,000. They further induced the new directors to take over, as good assets, about £4,000,000 of debts which they knew to be bad, and concealed the transaction by a secret deed. I know not how far this accusation may be substantiated, and it will doubtless involve a somewhat intricate investigation. The result should, at any rate, be favorable to commercial morality, which, under its recent developments, is certainly in need of some purifying agencies. The case having come before the criminal courts, there is no danger of its being interrupted, and the battle will be fought out to the end.

Another series of cases in which the courts are brought into conflict with pecuniary corruption will begin in a few days. Amongst the actions for which Mr. Disraeli may fairly claim credit, one was the institution of a new system with regard to Parliamentary elections. Hitherto it has been the law to investigate petitions against a return of members before a Com-

mittee of the House of Commons. In the last session, after some rather doubtful manœuvring by members of both parties, Mr. Disraeli succeeded in passing an act, of which it was the main feature that such cases should, in future, be tried by judges sitting on the spot. Next week, accordingly, the judges will go down to the various towns from which petitions have been received, and proceed to the trial of some sixty cases. There is a great deal of speculation as to the probable result of this system. Hitherto the Committees of the House of Commons, though desirous in a general way of doing justice, have not shown all the energy desirable. Liberal members have found it rather harder to believe in the guilt of Liberal than of Conservative candidates, and Conservatives have taken the opposite view of the relative purity of the two parties. Moreover, both sides have felt a certain tenderness towards gentlemen of their own class, and have been more inclined than a court of justice should be to adopt the Christian rule of putting a charitable construction upon everything. In short, there has not been that energetic prosecution of every clue to the discovery of guilt which is necessary in the case of a crime so easily concealed. Besides this, the expense of bringing witnesses up to London, and keeping them waiting for days or weeks, has, amongst other things, made the proceedings so expensive as to be of itself a considerable obstruction to justice. The judges, it is expected, will have no tenderness for the accused. They have given every proof of a desire to make the investigation as strict and searching as law can make it; and every one will sympathize with a vigorous ferreting out of the evil. They will, moreover, be able to take a more independent position than the committees, and, if any suspicious circumstances appear, to send for witnesses, whether voluntarily produced by the parties to the suit or not. Being on the spot, they will be able to enforce attendance with greater facility. I have only heard it urged on the other side that the necessity of laying down strict judicial rules will tend to hamper the court, and that future agents will, as it were, have an exact chart laid down of the various shoals upon which they are likely to be wrecked, and regulate their future proceedings accordingly; whereas, from the costly mode of procedure of a committee, and its comparative disregard of precedent, it was comparatively difficult to be guarded at all points.

The general opinion, however, is that the new method of trial will prove to give a great increase in efficiency. It is generally said that scarcely any member can be safe against a petition. Legally, it is sufficient to prove any case of treating, bribery, or intimidation—even without the knowledge of the candidate—to invalidate the election; and an indiscreet friend may, therefore, ruin the cause. I know, at least, of one gentleman of the very highest character, not only in private life but in a judicial office, who would not be suspected for a moment, even by his antagonists, of any corrupt proceedings, not merely from implicit confidence in his character, but because from his position it could not be worth his while to run the risk of exposure. Yet I am told that there is a considerable prospect that he will be turned out, on account, as I presume, of some dealings over which he had no control. In short, it is said that no one is safe, unless he has reached an ideal of purity scarcely to be expected in an election. We shall, however, soon be able to speak from experience; I may be able to give you a few specimens of English electioneering on the highest authority.

Meanwhile, even if bribery and corruption should be effectually put down, a consummation much to be desired, the influence of wealth would not necessarily be greatly diminished. It is suggestive of the sums which members are prepared to spend on their elections, that one barrister engaged in the present prosecutions receives £500 as a retaining fee, and fifty guineas a day, whilst the case lasts. This of course implies that a member thinks a seat worth some thousand pounds, and if he may not spend his money in directly corrupt ways, he can easily obtain influence by his expenditure. I have known a man elected for building a church, and a rich man who lives amongst his constituents has no difficulty in causing his money to flow through appropriate channels to their pockets. A letter which has just been published from Mr. Goldwin Smith bears upon this point. He tells us that the influence of money is far greater in England than elsewhere, greater for example than in France or the United States; that he consequently could not afford to stand for Parliament; and justifies his departure from us to you by the extent to which we are under the power of a plutocracy. The question is far too large a one for me to discuss in this place; but I may venture to claim for this money-ridden country that at least we are endeavoring to bring the highest judicial authority to bear against the corrupt use of wealth, and that there is a sound public sentiment prepared to support it to the utmost. Money will have influence and, in many ways, a very bad influence here for some time to come; possibly it may not be without influence elsewhere; but I am sanguine enough to hope that we shall improve the tone of public opinion as to some modes of using it, and that rich men will at least not feel themselves to be above the law.

I mentioned briefly in my last letter the recent decision against the Ritualists. They seem to be hesitating as to the right course to pursue, though, I think, with a disposition towards accepting the judgment. They are now endeavoring to prove, I cannot say with what success, that it hurts the evangelical party as much as themselves. A strict interpretation of the rubric, for example, would, as they argue, compel the officiating priest to stand in front of the communion table instead of at one side, when consecrating the sacrament. This, it appears, is a matter of great importance. Also it would necessitate the use of more elaborate vestments. In short, if a rigid interpretation of the rubric is henceforth to be the law, as the recent decision would seem to imply, the Prayer-Book, which was a compromise between two parties, would subject both to annoyance. I am really incompetent to decide, and will only say that the main point appears to me to be the submission on whatever grounds to an ordinary court of law. To acknowledge its authority appears to be inconsistent in the long run with the priestly claims of the ritualists; and if they submit, *they* abandon to some extent their pretensions. Meanwhile, they seem to have a considerable share of the sympathies of the Liberal party. They have all the advantage of apparent martyrdom—though not very severe martyrdom. They have been prosecuted on trivial matters about candles and millinery, and people who laugh at them for attaching so much importance to those matters think it equally wrong of antagonists to prosecute on such slight grounds. If, it is naturally said, these observances are objectionable on account of the doctrines which they are supposed to symbolize, prosecute ritualists for the expression of the heretical opinions—not for the mere ornaments and gestures which indicate the opinions. Prosecute them for preaching the Real Presence—not for lighting candles or kneeling before the table; for teaching the efficacy of confession absolute—not for dressing in many-colored garments.

I shall simply mention these opinions without discussing their propriety, and add that everything seems to me to indicate that we are at the beginning of church difficulties to which the present lawsuit is a mere trifle. And whilst noticing these quarrels over vestments and altars, it may not be out of place to add that an intelligent person much employed amongst the London working-classes told me the other day that, in his opinion, at least nine out of ten were infidels. I cannot give the proportion amongst the educated, but they are not so different from these as people might guess who judged from expressions of public opinion. Altogether we form a nice audience for the discussion of ecclesiastical questions about candles and vestments.

Ministers have not yet showed their hands; but they profess great eagerness for retrenchment. Mr. Cardwell, the new Minister of War, has cut down the number of postage-stamps used in volunteer corps. This fact has been duly chronicled in the papers. This kind of cheeseparing is ridiculous enough; but we have hints at more sweeping measures. One plan hinted at has been the withdrawal of our 12,000 (if I mistake not) troops from Canada, and the subsequent reduction of the strength, though not of the *cadres*, of the army by that amount. Of course we assure the Dominion that removing our army from them does not in the least weaken our connection with them. This is at present a mere report; but if any sensible reduction is made, it will be by some such measure, not by cutting off postage stamps and stationery.

Correspondence.

DR. HAYES AND THE NORTH POLE.

[A CORRESPONDENT, whose education and whose business have led him to take a particular interest in the subject of arctic explorations, writes thus in regard to Dr. Hayes's renewed proposals of research, which were referred to in our number for January 14.]

"I trust Dr. Hayes will succeed in starting another expedition. His difficulty, however, will be in procuring sufficient money to properly equip the same. He needs a stout steamer and one, or, if possible, two sailing vessels. He should be fitted to pass three winters, if it should be deemed advisable, in the arctic country. There is no trouble about men's enlisting for this time, if properly commanded and fed. We have had one crew from Cumberland Inlet this season, who had passed *two winters there, and no heartier, healthier set of men ever came into port.*

"I am quite confident that Dr. Hayes will be able to reach the very pole if he can only start right and stay long enough. An intelligent

whaling-master who was in the Pacific Arctic Ocean in the summer of 1867 (which was, as you are aware, a very open season) told me that he believed he could with a stout steamer have pushed through that summer to Spitzbergen. Any expedition fitted for arctic research is liable to lose an entire season if the weather should be especially severe. My only fear is that Dr. Hayes will be so anxious to go on another expedition that he will make the venture without securing sufficient means to accomplish his object properly." B.

Notes.

LITERARY.

MESSRS. SHELDON & Co. announce "John Ploughman's Talk," by the Rev. Mr. Spurgeon.——Messrs. E. J. Hale & Sons announce a tale of Southern life, one founded on fact, entitled "Miron Place," and written by Miss Anna Frederic.——The Providence (R. I.) Press Company will publish "Carthage and Tunis, Past and Present," by Mr. Amos Perry, who not long since was our consul in those parts.——"A List of the Most Important Books for a Minister's Library" is a work that will soon be published by Mr. W. F. Draper, who, being of Andover, Massachusetts, will perhaps satisfy the stricter Evangelical clergymen better than any others. He will publish, too, these works: a (Greek) "Harmony of the Four Gospels," according to Tischendorf's text; Dr. Joseph Haven's "Studies in Philosophy and Theology;" a treatise entitled "Classical Study: Its Usefulness illustrated by Selections from the Writings of Eminent Scholars;" and some Greek and Hebrew and historical text-books, to which we need not call the attention of the general reader.

—In discussing (see the *Nation* of June 18, 1868) the reform movement among the Jews, we stated that it had its centre in Germany, but was "felt with more or less force from Odessa to San Francisco, and from Stockholm to Algiers." Evidences of that movement in this country have just reached us in the shape of two prospectuses of Jewish publications. The first, announced by M. Ellinger, of this city, will be a weekly paper, sixteen pages quarto, called the *Jewish Times*, and will be "devoted to the interests of Judaism, and to advocating the cause of Reform and Progress." Beyond the unity of God, it does not clearly appear from the circular what is comprehended in "true Judaism" as understood by the parties to this enterprise, but we judge they would not disagree with M. Hippolyte Rodrigues (*L'Idée israélite en France en* 1868) in proclaiming "three dogmas: the unity of God, the immateriality of God, the immortality of the soul;" and "three essential principles, derived from the laws of nature: free-will, the brotherhood of man, the liberty of interpretation." Four of the sixteen pages of the *Jewish Times* will be printed in German, and the subscription price will be five dollars. Among its advertised contributors are several citizens of Chicago, including Dr. Chronik, pastor of the reform-congregation of "Sinai," who himself notifies the public that he will edit a monthly periodical, *Zeichen der Zeit* (*Signs of the Times*), devoted to religion, philosophy, and society in their correlations. He is supported by a committee of his congregation, who announce that they have assured the material success of the enterprise. It is to be published in German, at the price of two dollars per annum. Of the editor we are sorry to say that we have no personal knowledge. His address to the Spaniards, which is sent out with his prospectus, indicates his attachment to republican ideas, while he believes that no government will be so good for the Spaniards as that which they deliberately choose for themselves.

—Book-buyers of means and taste will do well to get a priced catalogue of "an amateur's collection" of luxurious books which Mr. Bouton now has on sale. It describes many very superb volumes, masterpieces of binding and typography, and rich in engravings. The collection has been made within the last three or four years, and embraces some of the spoils of many celebrated European libraries which have been dispersed within that period. Perhaps the gem of the collection is a copy of Longus's famous "Daphnis and Chloe," the original of so much pastoral romantic fiction, illustrated with twenty-nine original pen-drawings by Martini and a duplicate set, colored, by the same artist, who followed the designs said to have been made by the Duke of Orleans, at whose press the work was printed. The work is in quarto, two volumes in one, magnificently bound, and in typography said to be an unsurpassed specimen of printing on vellum. $2,600 is the price set upon it. Other noticeable works are these: A "Martyn's Universal Conchologist" with 161 colored plates of shells, the figures colored by the author himself, mounted within ornamented borders prepared expressly for this copy, is offered at $480. It is a very rare book. There are quite a number of works relating to the theatrical profession, notably Boaden's "John Philip Kemble," a two-volume work extended to six by the insertion of 350 portraits ($225); Raymond's "Life of Elliston," two volumes extended to four by the insertion of 500 views, portraits, and autographs ($262 50); lives of Matthews, Mrs. Jordan, Charles Kean, and others. Among the rarest books are two very unlike each other. One is a large-paper copy of old Dibdin's "Tour in France and Germany," crammed full of pictures in all stages, and in fact running over with illustrations, the original three volumes having been made into six, bound by Charles Lewis in the richest of morocco bindings, and valued as it stands at $1,800. It is said that it was the pride and pleasure of Sir G. H. Freeling to make this copy the very best in existence, and it is to be hoped that he died happy, for he spent twenty years and nobody knows how much money and study and labor in collecting engravings in pen-and-ink, in pencil, in chalk, in colors, on steel, on wood, on copper, and in having made for his special purpose what he did not find in existence. The other book we have mentioned is a copy of the third edition of the Marquis De Sade's atrocious "New Justine, or the Misfortunes of Virtue; followed by the History of Juliette, the Sister of Justine." This is the book of which they relate that the infamous Saint Just used to read it for the purpose of inciting his ferocity to new cruelties. It is erotic, but sanguinary rather than anything else. As a specimen of ancient printing and ancient engraving we may mention a sound and perfect copy, in royal folio, a foot wide by a foot and a half high, of the "Nuremberg Chronicle." It contains more than 2,200 wood engravings. But the catalogue—which, by the way, sells at twenty-five cents—should be seen, as there are not many of its thousand volumes that are not in some way highly interesting; it is a catalogue of a library with very little dead wood of any kind in it.

—Two or three of our most distinguished American authors have recently been faring among the English critics, and on the whole they have fared well and been treated nearly as they deserve. Mr. Longfellow has met with a very warm reception. The appearance of Hawthorne's "Note Books" has given occasion for passing a new judgment on him, and the general verdict seems to be what his admirers would claim should be passed on him, that he was a genius and a very rare one, whether or not he was a very great one; "dreamy predilection for the mysterious and moonlight aspect of things," "intellectual grace, and, it must be added, weakness of intellectual bone and sinew." These are the words of a critic in the *Pall Mall Gazette*, who seems to be a person of rather too downright cast of mind to see just what Hawthorne was and wherein his strength lay. His mental bone and sinew were not obvious and asserted; but to call him intellectually weak is to go as much out of the way as to call him a distinguished reasoner. Nor is it a very happy use of language to describe Hawthorne's predilection for the mysterious as of a dreamy kind. The critic goes on praising freely, and not giving one the impression of being the best man in the world to talk about Hawthorne. For instance, one of Hawthorne's suggestions for a story is "a man living a wicked life in one place and simultaneously a virtuous and religious life in another;" and it can be imagined by sympathetic readers what the sombre result would have been if the author of "The Scarlet Letter" or "The House of the Seven Gables" had taken up the theme. The reviewer reminds us that the hint "has been worked out by Arsène Houssaye;" the Frenchman's story being of a woman who lived a devout life at the same time that, under another name, she was a light of the French *demi-monde;* which sounds not much like Hawthorne. Our author's English style seems to be that quality of his which is most fully appreciated by his British critics. Mr. Lowell's "Under the Willows" is everywhere praised. Our friends of the *Publishers' Circular* say that "he has a style of his own, like and yet unlike that of any of our English poets, and not to be mistaken for that of his own countryman and contemporary Longfellow." Furthermore, the same authority says that "his verses are redolent of the mountain, the sea, and the prairie." The *Saturday Review*, however, comes to the business of criticising the book in one of its best moods, we were going to say; in a mood of very unusual goodness, we will say; one where its ability, good taste, and good feeling make it highly admirable. Of "The Commemoration Ode" it is said that alone by itself it ought to silence those grumblers in America who think their country has no poet. The "Darkened Mind," too, a strong poem, of sad gravity and just pain, is spoken of as it deserves. So, in fact, is the volume generally. The same author's advice to Englishmen, in the December *Atlantic*, furnishes a theme on which the *Pall Mall Gazette* discourses at some length, and not with the utmost good grace, perhaps. However, it promises straightforward, manly behavior for the future. But the Springfield *Republican*, in its last issue, informs the Britisher that

he may as well spare himself the trouble of trying to be civil or agreeable; the fact of the matter being that his only way of recommending himself to our people, and he may as well know it first as last, is to cease to be an Englishman altogether. But his case is not so bad as that, quite.

—"How the thing is done," in the matter of getting "first-rate notices," has been painfully revealed in the *Independent* of last week. The *Watchman and Reflector* wrote to it privately, it seems, for an encomium, which the *Independent*, feeling kindly towards the *Watchman*, at once prepared to "set up." But before it appeared, the interval being long, the *Watchman* seems to have lost patience, and began uttering loud laments over the *Independent's* "fall" from "evangelical religion," and spoke also, in another part of the same issue, and in a dismal manner, of the domestic arrangements of that paper, and predicted severely that the *Independent* would find "a vital Christianity" too strong for it. Seeing this, the *Independent* ordered its forthcoming "notice" of the cowardly *Watchman* to be stopped, but the printer, mistaking his instructions, kept it standing, and it appeared. Hereupon the *Watchman* found itself terribly embarrassed. On the one hand, the *Independent*, on the *Watchman's* own showing, had "fallen," and was in difficulties with regard to "vital Christianity;" but then the "notice" of the *Independent* was on its head like coals of fire. So it produced a second and reverberatory "notice" of the *Independent*, acknowledging the *Independent's* praises and expressing gratitude for its heterodox approval. But the *Independent* had by this time got its blood up, and formally retracted "Notice No. 1," explained how it came to appear, and chastised the *Watchman* savagely—would we could say undeservedly. As the matter now stands, four "first-rate notices" have been utterly wasted, "all gone afay in de evigkeit," as Hans Breitmann says, and, what is worse, the public has been admitted to an inside view of the laboratory in which these articles are manufactured. To say nothing about the arrant humbug of them, we have always wondered how an adult of ordinary education could be so silly as to engage either in the solicitation or the production of them. They are one of the most ridiculous, as well as most odious, of the small impositions which our very pretentious fraternity practises on an innocent public, and the religious papers ought to set an example of dropping them. There is something highly impudent in selling people, as an honest and impartial opinion of a man or his work, something the man himself has privately solicited you to say.

—The Chinese are said to be considerably interested in the five newspapers that are now published in China, in the Chinese language, by foreign publishers. Of the two—one a weekly and one a tri-weekly—that are published at Shanghai, the Rev. Mr. Y. J. Allen, of the Methodist mission, is the editor, and he devotes them in good part to science; the Chinese paying a good deal more attention to that than to religion, and more, it may be presumed, to the religion than if it were presented without the science. The work that is being done is, at any rate, good, and it is of greater extent than one would suppose. As an evidence that the papers are read and appreciated, the Shanghai *News-Letter* says that a high official of Shanghai employs a clerk to copy out Mr. Allen's tri-weekly paper into Chinese. This copy is often sent to the higher mandarins in the interior and is eagerly read, especially when it treats of Political Economy, Chemistry, and Natural Philosophy. A literary chancellor has recently declared his intention to reform the Chinese mode of printing, and to that end has applied to Mr. Allen for information in regard to the *modus operandi* of electrotyping, typefounding, and so on. How to produce refined sugar was another question as to which he was very curious. All this may very likely be proof rather of the curiosity concerning new things which is common among the less civilized races, and which may rest content with a glimpse without ever going on to study and practice. But there seems little doubt that the old stagnant peace of the Flowery Kingdom is in process of breaking up. The five Chinese papers, one would say, are safe to exercise a great influence, and ought to be in good hands, as indeed they seem to be by the sensible course that two of them, at any rate, are pursuing.

—One of the most eminent representatives of the historical or comparative study of languages, Professor August Schleicher, of Jena, died a little more than a month ago, at the age of forty-eight. His life, although thus early cut short, has been rich in works of general and acknowledged value. The first of these to win wide circulation and high reputation was his "Languages of Europe in Systematic Review" (Bonn, 1850), a detailed classification and sketch of all the tongues of Europe, with analyzed specimens; a book which, in its line, has not yet been superseded. For some years, between '50 and '60, he devoted especial attention to the Lithuanian, publishing a valuable series of volumes respecting that curious and interesting tongue. In 1860 appeared his "German Language," the extended and elaborate preface to which contains a fuller and more connected exhibition of his linguistic philosophy than he has made elsewhere. Next year, however, was put forth his most important production, the "Compendium of the Comparative Grammar of the Indo-Germanic Languages," of which a new edition, considerably altered and improved, appeared a couple of years ago. As a text-book of study and instruction this is the best work of its class in existence, decidedly more practical and manageable than Bopp's great grammar; it well deserves translation into English. Besides these more elaborate works, Schleicher has published many essays of noteworthy contents; in his "Morphology of Language" (St. Petersburg, 1859) he suggested a mode of notation of the phenomena of speech which has attracted much attention—of which, for example, Müller's last pamphlet contains an (unacknowledged) imitation. To the conclusions of his paper on the distinction of noun and verb (Leipzig, 1865) much exception may be taken; as also to those of the little pamphlets he has published at Jena on the relations of the study of language to that of the natural sciences. He is, namely, a vehement champion of the paradox that a language is a "natural organism," growing and developing by internal forces and necessary laws; and his statement and defence of this doctrine are so bald and extreme as to be self-refuting. He was not unskilled as a naturalist, and his studies in natural history, by some defect in his logical constitution, seem to have harmed his linguistics. With Dr. A. Kuhn, of Berlin, he was editor of the highly important linguistic periodical, "Beiträge zur vergleichenden Sprachforschung." In person and manner he is said to have nearly answered to the common idea of a German professor: somewhat awkward and angular, a little helpless outside his own special studies, and very absent-minded; withal, a most indefatigable worker, and a sincere and enthusiastic Liberal. His death, in the midst of what should be the period of a man's most valuable activity, is deeply to be deplored; there are few of his contemporaries who could not be better spared. He had promised as his next work an Indo-European chrestomathy, with full notes and glossaries, and happily brought it to completion a few days before his death.

—Of Schleicher's absent-mindedness the story is told that he once appeared in his lecture-room not, as usual, in a grey coat, buttoned to the chin, but in an open black overcoat. He did not discover the impropriety of his costume till he had searched in vain for his manuscript, which was not about him, and, begging pardon of his audience and promising short delay, he ran home, took the papers from his gray coat, and put them in the pocket of his surtout. Then it occurred to him that he might without loss of time resume his proper garb as a lecturer, and accordingly he exchanged the black for the grey. Of course when he returned he was again minus his manuscript, and was obliged, after an explanation which convulsed the audience, to dismiss them till another day. The concentration of thought which absent-mindedness commonly implies had, in Schleicher's case, perhaps the best example when he contemplated composing an entire tale in that mother-tongue to which the languages of Europe all refer—the *Ursprache*, as the Germans call it, of which not a word has come down to us unaltered. This was almost the knight-errantry of science.

—Any one interested in the discovery of antique silver-ware at Hildesheim, to which we have already twice alluded, should purchase of Mr. L. W. Schmidt, in this city, the third number of the fourth volume of Dr. Lützow's *Zeitschrift für Bildende Kunst*. In it Prof. Unger, of Göttingen, describes minutely the principal pieces of the collection, with the aid of four engravings, which, while merely suggesting the richness of the originals, justify the high esteem in which these are held. Especially is the ornamentation of the vessel represented in Fig. 1—a huge bowl or "crater," under which, inverted, a number of small pieces were concealed and preserved from injury—remarkable for grace and freedom, recalling, as the professor notes, the painted tracery on Pompeiian walls. Fig. 2, also, a deep circular dish with a Minerva in the centre in so high relief as to preclude the idea of ordinary usage, and a chased border of elegant design, is strikingly beautiful. A beaker with two handles, and a drinking bowl of hemispherical shape, adorned with bas-reliefs of masks, vines, and bacchic emblems, are represented in Figs. 3 and 4. In the dish referred to, the helm and ægis of the goddess, as well as the plough-tail in her right hand, are gilded; in others there is an ivy decoration in *niello*, with green enamelled leaves, artifices which in one instance are combined with pearls. That the pieces came from different workshops, and are in a great measure the product of Greek skill, seems certain. The ownership, if not assignable to Varus, is still obscure, though some light is expected from a parchment said to have been dug up with the treasure trove. Many of the pieces were so fragile—apparently those in *repoussé*—that they have suffered greatly in transportation to the Museum at Berlin. The crater

here delineated has unhappily crumbled away, though not before it had been photographed and reproduced, with several other pieces, in plaster. The electrotype process can now give us absolute fac-similes of them all; and our schools of design should have little difficulty in procuring duplicates, if so disposed. Perhaps Messrs. Tiffany & Co. would do the public taste that service.

—Among the noticeable illustrations in this periodical is also a large and (with the exception of the clouds) finely-executed etching after a painting by Rottmann, whose bust accompanies the descriptive text. The remains of this picturesque cradle of art are well exhibited from the painter's point of view, which includes also Parnassus, as another picture of the same place embraced the Acrocorinthus. M. Thausing contributes a second article of a biographical nature, on Dürer's *Hausfrau*, whose portrait, as drawn by her husband in 1521, with a Dutch head-cloth, is shown on page 78. In the *Beiblatt*, or Art-Chronicle, will be found letters on art, with current intelligence, personaland otherwise. Prang's chromos get a "flattering notice." Herr A. Glaeser, secretary of the U. S. Consulate at Frankfort, is said to have translated into German the speech in which Mr. Sumner unsuccessfully opposed the aspirations of Miss Vinnie Ream, and to have added some account of the state of this country in regard to art, with sketches of American artists of both sexes (Frankfort: Hermann.) A more important announcement is that Julius Thäter has etched anew in copper Giotto's portrait of Dante recovered in 1840, taking for his model the drawing made by Seymour Kirkup immediately after the discovery, and prior to Marini's somewhat damaging restoration. Barthel, in Halle, is the publisher.

HUNTER'S RURAL BENGAL.*

By "rural Bengal," Mr. Hunter means the country and the country people, the masses of the native population, as distinguished from the city and its inhabitants, the government, the ruling classes. His aim is to depict the condition and fate of the real people of the land during and since the period of transition from Mohammedan to English rule. Forsaking the beaten track of so-called history, he regards everything from the point of view of the lowly, and ignores the deeds of the great save as those are affected by them. The very idea of such a work is worthy of high praise. And its realization no less commands our admiration. Mr. Hunter writes under the impulse of the broadest humanity, with full appreciation of Hindu rights and claims. He gives us the results both of a long practical acquaintance with the Hindus, gained in the management of their affairs, and of studies, profound and minute, into their institutions and history. He is a representative Indian official of what is, or ought to be, the new régime in India—one of a class who are not the mere continuers of the old Mohammedan machinery for collecting revenues and amassing wealth, but who thoroughly feel the responsibility laid upon them as custodians of the happiness of a vast nation, and mean to do their duty well. We have read no recent work on India of which the tone has so satisfied us. It concerns, of course, first and especially, the English, with whom we hope that it will become a household book, and contribute powerfully to the education of public opinion. But it also possesses quite enough of general interest to justify the American edition. A well-conceived account of the inner life of a community like the Hindu, or of any part of it, has an importance limited by no country boundaries. And the volume contains also a store of materials valuable to the ethnologist.

Although not so styled upon its title-page, this is the first volume of a series. It deals with only two or three of the little provinces into which Bengal is divided, namely, with the higher lands south of the Ganges—inhabited by a mixed population of Santals, aborigines of the soil, and Hindus—with Beerbhoom (ugly mutilation of Vīrabhūmi, "land of heroes") and Bishenpore. Its first chapter, on the transition from native to British rule, is mainly occupied with the story of the great famine of 1769–70, in which it is said ten millions of human beings died of starvation in nine months! Mr. Hunter's exposition of the causes and the results of this dreadful calamity—results which have exercised a dominant influence on the whole history of the country since—is very instructive. One of the most striking circumstances attending it is the helplessness and ignorance of the new rulers in presence of it. It is compared and contrasted with the somewhat similar affliction of two years ago, of which the dire effects were chiefly limited to a single district, the one least accessible and least affected by the new ways which European civilization has introduced into India.

The return of repose after the desolation of the famine and the disorders to which it led, suggests to Mr. Hunter a review of the constituents of the population he is dealing with, and an estimate of the mutual relations and influences of its different races and classes, and with this he occupies the largest division of the book. In the course of it he touches upon some of the deepest and most obscure problems of Indian history, such as the origin of caste and of the worship of Siva. In treating them he exhibits the same keenness of mind and force of thought as elsewhere in his work, and he succeeds in setting them in new aspects and casting valuable light upon them; but it must be confessed, at the same time, that he walks here with a less certain step, and gives way in some measure to that exaggeration and over-confidence which are so natural to one who applies himself with intensity to a particular portion only of the evidence needed to settle a difficult question.

The same criticism applies also to the linguistic parts of his work. Along with praiseworthy acuteness and general good sense, he shows a want of mastery of his subject by undue dependence upon certain authorities, and occasional slips which even reach the dimensions of a blunder—as where he ascribes to Schleicher the doctrine that the Sanskrit-speaking race borrowed nineteen articulate sounds from the aborigines of the peninsula, wherewith to supplement its own scanty alphabet (p. 180, note). His view, too, of the joint agency of "pronouns and roots" in producing the organism of speech (p. 139), is radically unsound and untenable. The sketch of Santal grammar is welcome, and Mr. Hunter's view of the structure of the language well taken; but many of the further consequences which he would fain draw from his study of it betray not a little of fanciful exaggeration. Not to dwell upon other points, we are at a loss to see how the Santal "points to the north-east" as the home of the aborigines of India. The Sanskrit does, indeed, point to the north-west as starting-point of Aryan immigration; but this "pointing" consists in the evidence afforded by a mass of historical documents running back almost to the time of entrance into the country, and by a well-understood and firmly established affiliation of languages. What beside vague surmises, on the other hand, is to be drawn from the obscure legends of a collection of barbarous tribes, occupying a limited region of India, and not yet proved connected with any of the more widely-spread races, either on the north or on the south? We heartily wish, moreover, that Mr. Hunter had spared us those worthless comparisons of Santal with Indo-European roots, from which he ventures to conjecture an ultimate relationship between the two classes. These, however, are comparatively unimportant blemishes in a work that we read with continual enjoyment and profit.

What remains of the volume is devoted to a series of sketches illustrative of the Company's career as sovereign authority of the land, and its gradual conversion from tax-gatherer to real governor and administrator of justice. Among the principal topics treated are the currency, the land-rent, the rural police, and the manufacturing interest. The pages are replete with instruction. The next volume, we are told, will discuss the rights and legal status of the various classes owning or cultivating the soil. Perhaps it may not prove interesting to so wide a public as the present one, but it will undoubtedly contain a vast deal of curious information, having the most direct bearing on the welfare of the Indian population. The question of tenure and rent of the soil is the one which has most taxed the learning and wisdom of the country's masters, and as yet with no very satisfactory result.

* "The Annals of Rural Bengal. By W. W. Hunter, ... of the Bengal Civil Service." Second edition. New York: Leypoldt and Holt. 1868. 8vo, pp. xvi., 475.

FISH-FARMING.*

Every lover of the craft of Izaak Walton should thank the author of this book, for he teaches how the depopulated brooks and streams may be made alive again with the graceful tribes that

> "——sporting with swift glance
> Show to the sun their waved coats drop't with gold."

It makes the mountain-streams ripple and gurgle again in the ear of the city-pent angler, and leafy shadows struggling with the sunshine fall upon his soul as it goes back lovingly to long summer days of delicious idleness or to the golden light of October suns. And even those of our readers who Gallio-like care for none of these things, and choose rather to enter into the labors of others, may learn from these pages the happy certainty of salmon and shad swarming in the markets as well as in their native waters, and contending with each other for the honor of a place at their tables. And oysters, too, may feel the beneficent influences of a more careful culture, and, multiplied in number, improved in virtues, every excellence developed which

* "American Fish-Culture: embracing all the details of Artificial Breeding and Rearing of Trout, etc. By Thaddeus Norris, author of the 'American Angler's Book.' Illustrated." Philadelphia: Porter & Coates. 1868.

commends them to the love and admiration of mankind, gratefully expand their valves, eager for their metamorphosis into human nature. The dwellers in the greater rivers and in the lakes, too, are all susceptible of the advantages of a judicious early training, and the delicate white-fish and Otsego bass (which, however, is not a bass) and their lovely companions may be increased and multiplied almost indefinitely, and induced to take up their abode in waters that now know them not and to smoke upon tables yet ignorant of their charms.

The art of increasing the propagation of fish by artificial means was for a long time a lost art to modern Europe. But it is by no means a new invention. Those exasperating Chinese, who claim to have discovered all our inventions centuries before we thought of them, of course have known all about it these thousands of years, as well as about gunpowder, printing, and the mariner's compass. The early Romans also practised it, though it seems to have gone into disuse, oddly enough, in the later days of luxury, when the passion for fish almost amounted to a vice. In the middle ages, though there was no artificial propagation, fish were protected during the spawning season by severe penal laws, and it was once even a capital offence in Scotland to catch a young salmon. And still on the Continent the police care for the safety of the fish as well as of the lieges, so important a political as well as an economical matter is the abundance of food—it being impossible, according to Cobbett, to make "a fellow with a full belly" a rebel. Some attempts were made in the last century, and in this, in the direction of fish-hatching, but with no enduring results. It is to a simple fisherman of La Bresse, on the banks of "the blue Moselle," while it yet lingers in its native France, that the world will owe the miraculous draught which it is yet to have. This fisherman, Joseph Rémy by name, associating himself with another, of the name of Antoine Géhin, were guided by their personal observation of the ways of the fish with whom they lived in daily converse into the same line of experiments, without having ever heard of them, which the philosophers of France and Germany had been trying, and with a success which had not attended the wisdom of the wise. The French Government at once saw the importance of the discovery, and instituted a commission charged with stocking the rivers of France with fish. And—a circumstance which might well astonish Red-tapedom and the Circumlocution Office—they placed these two peasants at the head of it, having first decorated the former with the Legion of Honor, for the preposterous reason that they knew more about the matter than anybody else! "They manage these things better in" England. There, a cabinet minister, a noble lord, and a right honorable privy-councillor would have led the enquiry with becoming dignity, if not with answerable success.

The process is this: The female and male fishes are taken out of the water and the spawn gently squeezed by hand from the former and the milt from the latter, into a vessel containing water of the proper temperature, and then gently mixed together. If the natural conditions are observed, the discovery of which we owe practically to Rémy, the eggs are thus vivified and in due time hatched. The infant fish are then protected against all assaults of their enemies during their nonage, and they are not turned loose into the rough world of waters until they are supposed to be able to take care of themselves. How many valuable lives may thus be saved we may judge from the calculation of Sund, a Swedish naturalist, founded on observation, that one hundred mullets produce four millions of young fish! Still a care more than parental has to watch over the tender infancy of these interesting nurslings. Their nurseries have to be contrived and conducted with a scientific care which might well be emulated by the breeders of young human fry. Nothing but the purest element and the wisest diet is allowed in them, and warmth and all other conditions essential to the rearing of young creatures are most carefully studied. And due attention must also be bestowed on the moral character of his infant charge by whoever undertakes that delicate office. For it is a painful fact that such is the natural depravity of a young salmon or shad that he will not hesitate to devour a younger brother that comes in his way, if he feels a good healthy appetite and is the stronger of the two. He has no more notion of fair play than a bullying sophomore when he hazes a freshman. This immoral propensity is guarded against by keeping their pupils as much as possible of a size, and also by observing Cobbett's rule as to rebels, and keeping their bellies full of meat of a less profligate description. The rising generation, thus brought up in the way they should go, when arrived at salmon's or shad's estate, and prepared to encounter the perils and temptations of finny life, are dismissed into the world by their careful tutor with his blessing, in the faith that in due time they will, in common gratitude, return to indemnify him for the pains bestowed on their nurture and education.

The bearings of pisciculture on political and domestic economy are most important. We have seen no recent calculations as to the annual value of the fish crop of France. But ten or a dozen years ago it was put down at $1,200,000, and it was estimated that in a few years it would amount to $180,000,000! We do not imagine that the profits can have come up to this figure as yet, but there can be no doubt that they have been very great, and that the diet of the poorer class has been very favorably affected by this cheap addition to it. The careful cultivation of the waters of the sea and the lakes and the rivers that replenish them, will certainly now become an industry remunerative beyond all past experience in this country, and physiologically and psychologically we believe that a larger admixture of lenten fare in the dietary of our too carnivorous countrymen will be for the advantage of both their bodies and their souls. And then we shall be able to exchange ichthyologic favors with Europe. There can be no reason why the impregnated ova of the most illustrious of the inhabitants of the Eastern waters should not be brought to these Western shores. The imperial turbot and the royal carp and the ministerial whitebait shall not disdain our republican coast, and mullets and lampreys and soles shall yet adorn first our seas and afterward our tables. The magic art of a Delmonico shall not be long invoked to conjure a *filet de sole* out of a halibut; nor yet to compel that same honorable fish to put on the fraudulent disguise of a *turbot à la crême*. That great man shall not lack authentic materials for his admirable works, nor be forced to resort to his dazzling spells to cheat the eye with blear illusion and give it false presentments.

In every point of view, therefore, public and private, we rejoice at the attention which has been drawn to this most important industry, and that so many States have taken measures to promote it. It gave us the sincerest pleasure to learn from a foot-note to page 22 of Mr. Norris's book that Mr. Seymour is warmly and actively interested in the good work of multiplying the fishes that haunt our sea-coasts. He may rest assured that it is a more useful and honorable occupation than the artificial propagation of voters in our sea-ports. We congratulate him on his ceasing to fish in the muddy waters of politics, and on his exchanging his dealings with the loose fish that swarm therein for transactions with creatures so much more valuable and cleanly. If anything could increase the satisfaction with which we have seen the cheerful zeal of the American people in excusing him from the public service he so much dreaded, it would be the knowledge that that would have withdrawn him from a pursuit so innocent and laudable. We conclude our discourse by again commending this treatise of Mr. Norris to our readers, and advising such of them as live in the neighborhood of river, pond, or brook to lay his instructions to heart and reduce them to practice according to their opportunity.

MAGAZINES FOR FEBRUARY.

THE February *Putnam's* begins with a chatty and agreeable article on "The Ass in Life and Letters," by Mr. Tuckerman. The ass is the quadruped so designated, and there seems to be an unsuspected amount of literature on the subject, with which the writer shows a wide acquaintance and out of which he has made an agreeable article of the familiar, discursive order. "A New Œdipus" is by Mr. Leonard Kip, a story-teller with whom *Lippincott's*, we think, first brought the public acquainted, and who is having average success in telling that sort of marvellous story which imposes on no one, being addressed not to the imagination but to the judgment, which refuses credulity. It is a better line, however—or it is one in which the reader accepts a less successful tale more willingly—than that of the mock-realistic tales which are in fashion and which have about them nothing so agreeable as even ingenuity somewhat wasted, and which never achieve the higher results of the story-telling art. Late in the day, but not so late that we have forgotten its spirited beginning, comes the continuation of a September article, "In the Saddle—On the Plains," by Mr. F. W. Gedney. Perhaps the best thing in the number is "Substance and Shadow," a carefully finished "phantasy" by Mr. Eugene Benson—a writer who would be oftener to be praised if he would always, as here, confine himself to what he can do. His artistic feeling seems to be strong, and the expression of it naturally allows a sort of warmth of coloring and a proper vagueness of meaning which are out of place when the things of reason are dealt with. "Substance and Shadow" is restrained in wording and general manner, shows some fancy, and contains as its best portion some well-depicted landscape-painting. The catastrophe, however, is without much impressiveness, as may be permissible in phantasies—even when they are intended to have beauty and impressiveness—and is rather unfortunately suggestive of a certain young prince in a popular poem. "A Sermon at Notre-Dame," with one strong situation, is weak and, so to speak, causeless; and "To-day" is of a sort to account for Mr. Kimball's periodical droppings out of public recollection. A sensible and well-done hortatory and dehortatory

essay on "Men's Rights" is by Mrs. Harding Davis, and is profitable above nine-tenths of the "woman question" instruction and reproof. The miscellaneous articles at the end of the magazine are also good in comparison with what they have been hitherto. Before taking leave of the magazine we should mention "The Gallows in America," a humanitarian essay which, with a little more care, might also have been made a sociological essay of value to the general reader. We know pretty well about the horrors of hanging; though it is well enough, too, to have the bungling cruelty of hangmen, as they are, brought forcibly to the public perception; but it is the business of the anti-hanging party—and that is a party that everybody nowadays would belong to if he could—to show by actual statistics, carefully collected and handled, and of intrinsic weight, that we are less or as little murdered when we cease to put murderers to death. The quotations of murderers' dying speeches, to the effect that the hanging seemed to them horrible, the horror itself with which it inspires Mr. Stedman, show it to be, as yet, the most effective of usable punishments, to the imagination of the individual, at any rate. As we have said, it is the business of statistics to bring us to a final judgment as to what is society's best means of self-preservation against murderers. Meantime, while the figures are getting together, it is proper for Mr. Stedman to reflect whether he himself, say, would or would not commit murder, or be more likely to commit murder, in case the death penalty were not inflicted for that crime. We trust to his candor for an affirmative answer to the question, and feel justified in our wish that he had tabulated the returns on this subject from hanging and non-hanging countries. And on further consideration we feel inclined, and indeed impelled, to withdraw anything we have said that may be taken to mean that we approve of touching appeals to the prevalent sociological weakness of the day—the humanitarian feeling which at times seems to be softening the fibre of modern humanity more than is very well. Ways of punishing crimes are subjects for a pretty purely scientific consideration. The religion of love, to which knock-down appeal is made on these occasions, was, sure enough, meant for the regeneration of the individual man, for operation on the individual, rather than for direct application to the social machine.

"Probably you have a patronizing pity for him," Mr. Benson says in the *Atlantic* of "Baudelaire, Poet of the Malign," "and think he was weak." "No man would have more quickly resented your pity, for his pride was colossal; and as for his weakness, I cannot recall a writer whose thought or feeling has seemed to me so strong." Let us hope that it only "has seemed," and seems so no longer. That is to say, so far as the poet's thoughts are concerned. He is not spoken of as a thinking person in any sense in which all people of rather more than ordinary ability are not also so spoken of. His feelings were strong enough undeniably, and he took a diseased pleasure in the intellectual contemplation of the evil in sensuous things, being essentially a creature of the senses, which at the last turned and rent him. But what a school-girl's conception of "strength" is that which attributes it to the weakness of pride, and contempt, and license—makes a hero of an unhappy slave to the passions of the flesh, and the images raised from voluptuousness of mind and from hatred of himself. We have seen nothing that our essayist has written which is more to be reprehended than this exhibition of his tendency to confound the immoral with that unmoral which, as an artist, he may be supposed to have a special belief in. The matter becomes serious when the confusion is too complete and too long continued, the immoral being falseness and feebleness in the case of the artist as much as of other men and women.

"Our Postal Deficiencies" is an article that ought to be widely read. Particularly we advise all, legislators or laymen, who have been listening to what the telegraph companies have been saying in their presidents' speeches and in some of the papers, to take a careful look at the figures of Mr. Derby's very readable and useful little essay. There remains but little doubt in the minds of any one who has looked into the matter at all that the telegraph ought to be, and can profitably be, in the hands of the Government, as the post-office business is. Mr. Derby sums up the latest European information on this subject, and on various other subjects connected with our postal arrangements, and will surprise those who are ignorant of the system in vogue in foreign countries, notably in Great Britain, by what he tells of post-office insurance, post-office banks of deposit, and cheap postal telegraphing.

Professor Eliot, in an article on "The New Education"—which is not, in his opinion, to be looked on as hostile to the old or as superseding it—treats with his accustomed force and pointedness—which once in a while is what may be called sharpness—of the scientific schools of the country. Of his theory we hope to speak on another occasion; of the rest of his paper we may say here that it is a full comparative survey of the numerous schools with their various courses of teaching, and is of especial value to instructors.

We do not know that there is much else to be said of the February *Atlantic*. "Malbone" is very thin; there is an occasional witticism that is rather small but not bad, and an occasional more or less faded, or rather washed-out, shred of poetry or poeticalness; but there seems to be nothing to come to, and little by the way. "Comparative Housekeeping" is a little in the clouds in this set of chapters, but is spirited; "Love in Mount Lebanon" is slight but lively, and rather entertaining; "Proud Music of the Sea-shore" is an almost meaningless roar of sound from Mr. Whitman; "The Door-Step" is a clever and very pleasant little scrap of verse, by Mr. Stedman. "Ritualism in England" is uninteresting, as is all talk about Ritualism which does not bring the reader to the real point—which is the question whether a preacher is or is not a mysterious and awful priest. We observe in more than one Ritualist writer a disposition to shirk meeting the issue, while others of them—and perhaps most, but we doubt it—are bold enough, and candid. The article before us gives the new school the praise, which ought not to be refused it, of doing more to awaken the religious sentiment in the English lowest classes than all other English religious communities put together; and surely any lightening of the heathen darkness of that class, though it were with a profusion of candles and not much besides, is a thing to rejoice over. The "Tribute of a Loving Friend to a Noble Woman" is by Mrs. Stowe, and relates to the late Duchess of Sutherland, the Duke of Sutherland, the vast estates of that noble family, and its manner of life.

The *Galaxy* has no very noticeable paper this month, if we except three chapters of Mrs. Edwards's Susan Fielding, which we have not begun to read yet, having been born too late—to borrow a reason—or too early; there was a time when novels in instalments were odious to novel-readers, and the serial was an experiment. And there may be such a time again; but certainly it is not now, when novel-readers either actually prefer their novels bit by bit, or else are so fond of them that they must have novel all the time, and devour it even though they can get but scanty mouthfuls. Our own appetite lets us wait in patience till after the chapters have made such a book as they can. Theatre-goers will be glad to read Mr. C. W. Elliott's account of Miss Charlotte Cushman's early history, which was full of brave struggles, it seems. It is necessary, we suppose, that there should be a tone of exaggeration, or rather one-sidedness, in such accounts; they are like the grave-yard literature, devoted to the good qualities of the subject. But Mr. Elliott was hardly proposing to himself a criticism of Miss Cushman's acting. Professor Draper writes about the adulterations of our New York coffee, and the story he has to tell is anything but agreeable. However, everybody has his remedy in his own hands; whoever can afford to drink coffee can afford his own roaster and coffee-mill. Mr. Parke Godwin, of the *Evening Post*, is the "*New York Journalist*" who is brought up for examination in this month's *Galaxy*. We are not sure, we may say, that "original minds are not found among journalists." It begins to be time, if this is so, to insist on Mr. Emerson's view of minds. He does not know, he says, that he wouldn't say—if he were a writer for the press he would know he would say—that in proportion as a man is a true genius he is not a strictly *un*original mind. On this view of the matter we may, perhaps, accept the further statement that "an original leading article would send confusion among newspaper-readers." That would, however, depend on what originality is. "Queen Victoria and Her Subjects" is a good contribution by Mr. Justin McCarthy, takes an extreme liberal view of the British crown and the aristocracy, and prophesies republicanism for England Holding the doctrine, however, that "an uninspired prophet is a fool," he is wisely silent as to the time of the change, which, perhaps, looks a little nearer from this side of the water than from the other. That it is to be seen in the distance is not, we imagine, to be disputed; and, too, it is worth while remembering that the English literature, periodical and other, that we read is the writing of the decorous classes, who say something less than they think on such topics. The "Galaxy Miscellany," "Driftwood," the department of "Literature and Art," and the "Nebulæ" are well-varied and interesting light reading.

Hours at Home opens with an article by Professor Noah Porter, who is to write a series of which this paper is the second, on "Books and Reading." They will, no doubt, contain some sound general remarks on reading, the goodness of good reading and the badness of bad; but Professor Porter, like many other men of ability, does not seem a good literary critic. A man should tell a young reader a great many good things if he is going to compensate him for being told that Bulwer is a genius. It is with Shakespeare, we believe, that Professor Porter names the novel-writer We marked some other such indications as we read along. "Sevastopol in

May, 1855," begins very well indeed as a story, though it reads a little stiffly in places as a translation; but it promises to be interesting in itself, and certainly will interest those who wish to make the acquaintance of Tolstoi. "The Fountains of Syria" and Professor Fisher's "Glimpses of Old Authors" are two other articles that will be read with pleasure.

In *Lippincott's*, "Beyond the Breakers," Mr. Robert Dale Owen's American novel, goes on, or, rather, it stands still. The author is evidently an unpractised novel-writer. In this instalment he introduces us to a woman who has nothing to do with the story, for the mere purpose of letting us see her die, which she does at too great length, and not very well in other respects. Perhaps, though, the author of "Footfalls on the Boundaries of Another World" was led astray by the incident of the presentiment, and brought in the lady on that account. These, however, are liberties with his readers and his characters which the novelist takes at his great peril. "Mr. Thackeray" is not very bad criticism; portions of it are, indeed, very good, and all of it is well written. But the writer seems to have failed to conceive of Thackeray as he no doubt really was—very much of a sentimentalist, namely; as fond of gushing, if only he could have let himself do it, and of all sorts of soft things and fine things, as any boy or girl. The cynicism, so called, was mostly sentimentalism reversed. We do not say that underneath both there was not something a little more real than either. The critic having made a fundamental error of this kind, is, of course, often wrong in special judgments, as Thackeray put into his men so much of himself. The "Secret Agent in Foreign Parts" continues to be published without acknowledgment of the writer's indebtedness to Griscelli's memoirs.

Harper's contains more about the "Chivalrous and Semi-chivalrous Southrons;" and four more chapters of Mr. Justin McCarthy's pleasant story, "My Enemy's Daughter," which has a good deal of a certain sort of freshness. These are, perhaps, the best of the contents of the February number. The rest of it is in part made up of a sketchy and amusing illustrated paper entitled a "Sleigh-ride through Russia;" of an illustrated paper on "Zanzibar," by a lady who visited that little known region and seems to have used her eyes well; of various short pieces of various degrees of readability; and of the four editorial departments. Thoreau, Mr. Curtis speaks of this month; and our old friend T. T., the art critic; and the propriety of buying good copies of good pictures, instead of buying poor originals; and, of course, there is "Easy Chair" talk about Christmas.

The *Catholic World* is pretty much all controversial this month, and of no interest to the general reader.

CURRENT GERMAN LITERATURE.

THERE is a strong tendency among Rationalistic writers in France and Germany to treat Christianity as an outgrowth of Essenism, and to regard Jesus himself as a peculiarly spiritual-minded member of that sect, differing from his brethren only in his broader sympathies, higher aims, and richer intellectual endowments. A few years ago Dulk published, at Stuttgart, a drama of formidable dimensions in which the life of "*Jesus der Christ*" was delineated entirely from this stand-point. And now Fr. Clemens gives us what claims to be a critical and historical work in which "Jesus the Nazarene"* is portrayed in the same light. The volume begins with a *Vorrede* of fourteen pages explaining the scope of the book, a general introduction and three chapters on the "Character and Tendencies of the Jewish Priesthood," the "Political Situation of the Jews at the time of Jesus," and "Further Political Relations of the Jews during the Childhood of Jesus," before it comes to the real theme as described by the title-page. Herr Clemens is the author of several other works of a similar tendency, such as "Manifest der Vernunft," "Friedensschluss zwischen Vernunft und Christenthum," "Dass Allbuch, eine Bibel," etc. He writes in a clear, earnest, and vigorous style, that leaves no doubt as to what he means, and his narrative is often naïve even to irreverence.

"Administration, Law, and Legal Procedure, State-Administration and Self-Administration in England and Germany,"† is a work by Dr. Rudolf Gneist, Professor of Law at the University of Berlin, one of the chief German authorities on the subject of the English Constitution and English Law. He has previously published a work on "English Administrative Law," and another on "The Constitution of English Communes." The present work compares the correspondent methods, laws, and institutions of England and Germany—especially Prussia. It is divided into two main sections, entitled "The Foundations of the English State," and "Law, Administration, Self-Government, etc.," with the following chapters: Foreign Affairs; War; Admiralty; Exchequer; Home Affairs; Board of Works, Health and Poor-Law Board; Board of Trade; Administration of Justice; State Church and Dissenters; Education and the Professions; The Colonial and Indian Offices. The author's aim is obviously rather practical than scientific, though he follows it in a scientific way. He wishes to point out to his countrymen, by the light of English experience, the path they will have to pursue if they are to realize the liberty of action and movement, both in private and national matters, after which they are yearning. With true practical insight, he calls attention to the fact that the freedom of the individual subject depends primarily on the laws regulating the *administration* of affairs. A people which has the administration of its affairs in its own hands, or which, by its representatives, exerts a direct control over that administration, is in a very full sense free, even though the constitution of the state may be very defective; whereas the very best constitution, *theoretically*, is no guarantee of real liberty—nay, is almost an instrument of despotism—so long as there is no self-government in detail. It is needless to say that that state is, as far as this goes, the highest in which constitution and administration go harmoniously and completely hand in hand. Ultimately, however, all depends on having good men in the right places. The great defect under which the German States labor is, that there is so little connection between the constitution and the administration. In a theoretical point of view, the Prussian constitution and the constitution of the North German Confederation may be very good; both contain provisions which closely resemble some of the best in America and England; but the control over those who have to carry out these provisions is in the hands of bureaucrats—bureaucrats either in principle or in practice, or both. In other words, a good constitution on paper does not ensure good institutions in life. We might adduce numberless illustrations of the futility of good constitutional provisions, so long as the administration is in the hands of men who are, *taken as a whole*, only responsible to each other—that is, irresponsible—if space permitted. A careful study of Dr. Gneist's book will give the reader a good notion of the inner politics of Prussia, and throw considerable light on various problems remaining to be solved both in America and England.

The first volume of "The Politics and Politicians of German Austria at the Time of the French Invasion" appeared in 1862, and was at once recognized as a valuable contribution to the history of Germany, and indeed of Europe too. The second volume,* the author, a son of the celebrated bookseller, Perthes, and Professor of Law at the University of Bonn, did not live to publish himself; but his manuscripts were found in so complete and forward a state that his friends, the Professors Springer and Mendelssohn, felt no hesitation in printing them almost as they found them. After briefly describing the state of the various provinces of Austria and their relation to each other under Charles VI.—that is, from 1711 to 1740—in the first book, he narrates, in the second and third books, the efforts put forth by Maria Theresa and Joseph II. to introduce reforms of government, improvements in agriculture and trade, and a better condition of things in church and school. The fourth book discusses Austria's relation to the German Empire; the fifth and last delineates the political leaders and parties in Austria at the time of the wars of Napoleon. The facts, anecdotes, conversations, and sayings given, especially in the last chapter, are very characteristic, and make it very piquant reading.

The author of "The History of French Calvinism"† is one of the notabilities of the university town of Halle—Major von Polenz, an old Saxon officer, who fought in the wars of Napoleon, along with the rest of his countrymen, on the French side. He is well known to many American and British students who have attended the University of Halle, drawn by the great names of Tholuck, Müller, Hupfeld, and so forth. Two or three years ago the degree of Doctor of Theology was conferred on him, by, we believe, the University of Breslau, in consideration of that part of his history which had then appeared—a mark of respect very rarely displayed towards a layman. A major who is also a D.D. is a *rara avis* in Germany. The volume before us is the fifth of the entire work, and narrates the history of the political Calvinism of France from the death of Henry IV., in 1610, to the Edict of Nimes, in 1629. We entertain the unpalatable opinion that very few Germans are capable of really *understanding* the history of Calvinism. Major Dr. von Polenz is, however, we

* "Jesus der Nazarener. Des Weisesten der Weisen Leben, Lehre und natürliches Ende. Von Fr. Clemens." Hamburg. 18mo, pp. 284.

† "Verwaltung, Justiz, Rechtsweg, Staatsverwaltung und Selbstverwaltung, nach englischen und deutschen Verhältnissen, mit besonderer Rücksicht auf Verwaltungsreformen und Kreisordnungen in Preussen. Von Dr. R. Gneist." Berlin and London: Asher & Co.; New York: Steiger. 1869.

* "Politische Zustände und Personen in den deutschen Ländern des Hauses Oesterreich von Carl VI. bis Metternich. Von Prof. C. T. Perthes." Berlin and London: Asher & Co.; New York: Steiger. 1869.

† "Geschichte des französischen Calvinismus bis zur Nationalversammlung in 1789. Zum Theil aus handschriftlichen Quellen. Von Gottlob von Polenz." Berlin and London: Asher & Co.; New York: Steiger. 1869.

believe, an exception. One reason of our belief is a remark he makes to the following effect: "The words of Merle d'Aubigné, 'C'est Edimbourg qui est maintenant la métropole de la Réforme,' have worked in me and produced *this* point, that I now find the old genuine Calvinism in English and American *Puritanism*," a remark whose full significance those only can appreciate who know how most German theological writers shrug their shoulders at, in particular, American Christianity. Other reasons are too personal to be here alluded to. Major von Polenz's style is heavy, and the entire work, when complete, will be almost too large; but it is written in a manly, fair, and Christian spirit. We heartily wish that the now aged, almost decrepit author may live to accomplish this literary task of his life.

The name of Droysen, the celebrated Berlin Professor of History, is in itself almost a sufficient guarantee of the worth of the latest German translation of Aristophanes.* Critical opinion has stamped it as one of the best, if not the very best, German translation in existence. This is the second edition. The volume before us contains the "Acharnians," "The Knights," "The Clouds," "The Wasps," "Peace." To each play is prefixed a careful introduction, giving an account of the circumstances under which it was written and acted—a kind of key to its characters and fun.

The study of the Zend language,† the language of the Avesta, or, as it is without sufficient reason often termed, the Ancient Bactrian, is only thirty-five years old. It would, therefore, seem almost presumptuous, as Professor Haug himself hints, to talk about a Zend *Philology*, especially as the only known book in the language is the so-called "Zend-Avesta." But owing to the close affinity between the Zend and the great Indo-Germanic family of languages, particularly the Sanskrit, the term is not so improper as would at first sight seem. Still very much remains to be done, notwithstanding the fruitful labors of a Rask, a Burnouf, an Anquetil Duperron, a Spiegel, and others, German, French, and English. Dr. Haug, now professor at Munich, was formerly Professor of Sanskrit in India, where his "Essays on the Sacred Language, Writings, and Religion of the Parsees" excited great attention, both among the Parsees and the English. The present pamphlet—for it is not much more as to compass—is mainly a critical examination of a "Lexicon of the Zend Language" published by Ferdinand Justi, which comes in for many terrible and apparently richly-deserved blows. It is also a contribution to the explanation of the "Avesta."

The new book, "Germany and Europe in the Light of Universal History,"‡ written by the learned and able Berlin general superintendent and court preacher, Dr. W. Hoffmann, is a supplement to his "Germany, Formerly and at Present, in the Light of the Kingdom of God." He styles it a reserved chapter; but it is rather a long one, seeing that it extends over 253 pages. The design of the former work was, in brief, to show that the mission for and in Germany originally entrusted to the House of Hapsburg, and then offered at the Reformation to Saxony, has been gradually transferred to Prussia, with its head and creator, the House of Hohenzollern—a transference which culminated in Bohemia in 1866. Its supplement is essentially a glorification of the mission of Germany in Europe and the world. Much that is advanced is true, for the intellectual influence of Germany has been and is mighty. But many things are simply absurd. The author's description of the Anglo-Saxon element of the United States, for example, is highly colored, and we are sure our readers will smile, if not laugh, when we tell them that Dr. Hoffmann looks forward to the time when the Western States, having become predominantly German, will be stirred up by the course of events in the Fatherland to establish a separate monarchical state; and that the German element is to purge out the ecclesiastical disorders and eccentricities of the Anglo-Saxon, or rather, as he terms it, *Anglo-Indian* element. Deducting these and other mistaken speculations and descriptions, the work will be found suggestive, instructive, and interesting. Its ten sections are headed, The Work of Europe in Universal History; Spain and Portugal; Italy and Germany; France and Germany; England and Germany; Germanic States (Holland, etc.); Russia and Germany; the Oriental Question; Beyond the Seas (America, etc.); Germany in its European Work.

An edition of the collected works of the celebrated Kant is now being issued in Leipzig; and to accommodate such as do not wish to take the whole, the *Critique** is offered separately. When we say that the volume is admirably printed on excellent paper, under the superintendence of a reliable editor, we have said enough to attract to it the attention of intending readers of this great philosophical work.

What used to be more contemptible than a fiddler? And here—"The Violin and its Masters†"—we have a history of fiddles and fiddlers in all countries, and from the earliest times down to the present day. Some persons find mention of the fiddle in the Old Testament; others trace its existence to a period prior to the Christian era; but there seems little reason for doubting that the violin proper was first invented early in the sixteenth century in Italy. The author of this work has the violinist's usual opinion of the instrument. He says: "For two centuries it has reigned without a rival in the domain of instrumental music." One thing is certain, that no other instrument is so capable as the violin of incorporation (as it were) with its player, and of thus becoming a direct medium for the expression of the soul's musical feelings and sentiments. In its pliability, and in the immediateness of its relation to the mind and heart of the musical performer, it stands next to the human voice itself. The work fills up a gap.

Outlines of Physiology, Human and Comparative. By John Marshall, F.R.S., Professor of Surgery in University College, London. With additions by Francis G. Smith, M.D., Professor of Institutes of Medicine in the University of Pennsylvania. (Philadelphia: Henry C. Lea. 1868.)—In no department of knowledge has greater progress been made during the past twenty years than in physiology. The use of the microscope and direct experiments upon the lower animals, and sometimes upon the living man himself, made possible by the advance of organic chemistry and other collateral sciences, have thrown a flood of light upon the mysteries of life—have brought within the domain of pure science processes which before were only explicable by what was called, in our real ignorance of its nature, vital force. In this progress our own countrymen have borne a worthy part, and many of the recent demonstrations which have passed into the general fund of physiological fact are due to their labors. No one, of whatever profession, who desires to keep himself informed concerning the general advance of science, can fail to be interested in what is now known of the functions of the human body, as illuminated by modern researches; and the treatise of John Marshall brings the whole subject, as it stands in 1868, before the reader in as intelligible a form as can well be given it. In original research and the addition of new facts and experiments, it is surpassed by others of recent date; but in the presentation of the subject it is original, and its method is strikingly useful to the unprofessional reader. In making this remark we would by no means imply that any effort is made to bring the subject down to popular apprehension at the expense of scientific accuracy and completeness. This is not the case. But the view of physiology proper, complete and comprehensive in itself, is illustrated and made far more telling by the side-lights of kindred and collateral science. Incidental remarks upon descriptive anatomy, the anatomy of tissues, and comparative anatomy and physiology, organic chemistry, physics, and the relations of man with external nature, and a general breadth of treatment, add greatly to the value and interest of the book.

The Spectator. With Introductory Notes and Index. By Henry Morley. (London and New York: Geo. Routledge & Sons.)—It is as true to-day as it ever was that nobody can do without the *Spectator*. There is still no better quiet humor than Addison's; the essential thing in him is not a whit diminished in value, but weighs as much as it did two centuries and a half ago. Even the losses that as critic and moralist he has undergone by reason of the world's growth since 1711, have been in good part made up for, as is apt to be the case with the second and third rate immortals, by the new element of interest which his work has acquired in becoming "a map of busy life" for times that possess for us the charm of remoteness. And it has acquired, too, a value which, of course, it could not have at birth, as representing better than any other work a certain marked period in the history of the literature of our tongue. But putting aside considerations of this kind, there is, as we have said, sufficient reason for the *Spectator's* continued life and fame in the fact that for quiet, kindly humor it must still be said to be not yet surpassed, when at its best, by anything in English; and that is something like saying that it never will be surpassed. We doubt, indeed, if it has not more admirers to-day—more in proportion to the whole number of its readers—than it has ever had before since the time when it first appeared. It was

* "Des Aristophanes Werke, übersetzt von Joh. S. Droysen." Second edition. Vol. I. London and Berlin: Asher & Co.; New York: Steiger. 1869.

† "Ueber den gegenwärtigen Stand der Zendphilologie mit besonderer Rücksicht auf F. Justis sogenanntes alt-baktrisches Wörterbuch. Ein Beitrag zur Erklärung des Zendawesta. Von Dr. M. Haug." Berlin and London: Asher & Co.; New York: Steiger. 1868.

‡ Deutschland und Europa im Lichte der Weltgeschichte. Von Dr. W. Hoffmann. Berlin and London: Asher & Co; New York: Steiger. 1869.

* "I. Kant's Kritik der reinen Vernunft." Herausgegeben von S. Hartenstein. Berlin and London: Asher & Co; New York: Steiger. 1869.

† "Die Violine und ihre Meister, von Jos. Wilh. v. Wasidewski." Berlin and London: Asher & Co; New York: Steiger. 1869.

then read by many who did not at all "taste" it, as they used to say in those days, but read it for its gossip, its cheaper satire, its criticisms, and so on. Afterwards it was put into reading-books and into the hands of youth, who were ordered to like it at a time of life when the sense of humor is not developed, and who learned to look on it as a low deep of wearisomeness. In our times, on the other hand, men generally come to its perusal with their eyes purged by a succession of criticisms to an easy perception of its merits; and memories of school-boy yawnings do not now deter. Moreover, it could be proved, we dare say, to be highly probable that the number of people with a sense of humor is now much larger than it used to be, and that year by year it is happily increasing.

This edition of Mr. Morley's is, then, opportune; it merits a great deal of praise. The editor's introduction is full, acute, and suggestive in its literary and critical remarks, and very readable. In all Mr. Morley writes there is a simplicity of manner that is very attractive. But perhaps a little more might as well have been said of the unpleasing side of the character of the editor's two heroes. To be sure, the genesis of the *Spectator* is what Mr. Morley is undertaking to give; and further, to convey some idea of the world into which the paper was born, and of the work which it was intended to do. But Mr. Morley does not wholly confine himself to this; he narrates the lives of the two men pretty fully. What we are disposed to find some fault with him for is that he suppresses some facts, which being suppressed, the ignorant reader gets a rather better opinion of the men than the true one.

We think, too, that it is a mistake for our author to give Steele so much of the credit for the success of the *Spectator*, unless he means its success as a publication, at the time when it was published. Steele was doubtless a better editor than his more gifted friend; but for the *Spectator's* continuing success no doubt we are to give most credit to Addison.

Mr. Morley in this edition reprints the work exactly as its authors left it; that is to say, it contains the revisions of the original folios that were made when the first book edition appeared, and also those which Steele made just before his death. These revisions are enclosed in brackets that their extent may be seen. The reader thus has what may be called the two original texts of the *Spectator*, with the spelling, punctuation, and capitalization of the authors' day. The volume contains good notes, not too numerous; a full enough index; a table giving translations of the mottoes; and a curious and interesting appendix, consisting of a selection from the advertisements that appeared in the paper from day to day. Many of them, we regret to say, were advertisements of cosmetics; and the moralizing Mr. Spectator's ladies of quality, like his Cato, had their bane and antidote both before them at their tea-table.

On the whole, this edition of the most classic of "British classics" we should call the best that we know of, if it were not for the fact that, in order to make it cheap, Messrs. Routledge & Sons have put it into a single small volume of some 950 pages of thin though good paper, and have been compelled to use fine type, which we will not take it on ourselves to recommend. The same edition, in three or four volumes of larger print, would be admirable. This is admirable for persons who, while very poor in money, are very well off in eyesight; and it is a very handy reference *Spectator* for anybody.

A Fourteen Weeks' Course in Astronomy. By J. Dorman Steele, A.M., Principal of Elmira Free Academy, author of "A Fourteen Weeks' Course in Chemistry." (New York: A. S. Barnes & Co.)—As an elementary text-book in astronomy this book deserves favorable notice. The subject is presented in an attractive form, and the author has evidently endeavored to adapt his explanations of the phenomena of astronomy to the understanding of the students whom he is addressing. The book certainly has the merit of simplicity, and the treatment of many of the subjects is both novel and ingenious; but in some instances there has been a sacrifice of truth for the sake of an apparent simplicity. In text-books for beginners the error is frequently, and sometimes intentionally, made of substituting for the full demonstration of a difficult problem an apparently easy solution, which is really unsound, but which is so presented that the fallacy escapes the notice of the young reader. The book before us is not entirely free from this defect. Thus, in referring to the cause of precession, the author says: "We have noticed the sun as producing precession; the moon has, however, treble its influence; for, although the moon's mass is not one-twenty-millionth part that of the sun, yet she is 400 times nearer, and her attraction is correspondingly greater." As the attraction varies inversely as the square of the distance, the attraction of the moon upon the earth is evidently less than one-hundredth part that of the sun. The cause of precession is the unequal attraction at the centre and surface of the earth; and this difference is greater in the moon's force than in the sun's. The same error occurs again in the comparison of the lunar and solar tides.

In explaining the apparent retrograde motion of an inferior planet, the author represents the planet as having retrograded through an entire sign, by placing, in the diagram, the zodiac sufficiently near the solar system—thus diverting the attention of the student from the important principle that apparent motion among the stars is a change in the apparent direction alone, and that an apparent change of place upon a background comparatively near might not exist when referred to the distant celestial sphere of the stars.

Notwithstanding these defects, the book is one of the best we have seen for beginners. The logical arrangement of subjects, the classification of the definitions belonging to the celestial sphere, as the horizon system, the equinoctial system, and the ecliptic system, the chapter on the spectroscope, and the allusion to the discoveries already made by this wonderful instrument, are all valuable features. The announcement on the title-page that the author had also prepared a work on chemistry did not prepossess us in his favor; but the present work is certainly an exception to the safe general rule, that a series of text-books on different scientific subjects by one author may be expected to be of low quality.

ITALIAN SCULPTORS;

Being a History of Sculpture in Northern, Southern, and Eastern Italy.

BY CHARLES C. PERKINS.

Illustrated with Etchings by the author and Engravings on wood from original drawings and photographs.

In one vol. imperial 8vo, cloth, $16.

"Mr. Perkins's 'Italian Sculptors' is a contribution of the highest value to the history of the noblest of the fine arts. Historically and critically it may claim to be almost complete; its style is agreeable and hearty, without any extravagance or forced enthusiasm; and its illustrations, above forty in number, are of the utmost interest. All but about a dozen woodcuts are Mr. Perkins's own etchings, and are admirable for their truth and suggestiveness. We can call to mind, for instance, no etching whatever which more satisfactorily reproduces the solidity and texture of gilded marble than that which forms the frontispiece to the volume."—*Pall Mall Gazette*, Dec. 15, 1868.

Also, by the same author,

TUSCAN SCULPTORS,

Their Lives, Works, and Times.

With Illustrations from original drawings and photographs.

2 vols. imperial 8vo, cloth, $22 50.

UNPARALLELED SUCCESS.

THE SUBSCRIPTION LIST OF

THE GALAXY

DOUBLED IN ONE MONTH (DECEMBER), AND IS STILL INCREASING AT AN UNPRECEDENTED RATE.

This unusual increase is owing to the following facts:

I.

THE GALAXY now stands at the head of American Literary Magazines.

II.

It offers in each number a greater variety of entertaining reading matter (to interest each member of the family), and, with a single exception, a greater amount, than any other Magazine.

III.

At whatever cost, the GALAXY will contain articles by the leading writers of this country and Europe.

IV.

The GALAXY is not only instructive—it is also brilliant and entertaining.

V.

The GALAXY has secured for its pages *the great literary attraction of the year.*

Charles Reade's Serial Story.

It will begin in the March Number.

CLUBBING TERMS.

NOW IS THE TIME TO SUBSCRIBE.

Terms, $4 per year; 35 cents per number. A sample copy will be sent on receipt of 15 cents.

We offer liberal terms for clubbing with other periodicals. We will send

The *Galaxy* and *Harper's Bazar* one year for $6; regular price $8.

The *Galaxy* and *Harper's Weekly* one year for $6; regular price $8.

WINER'S

NEW TESTAMENT GRAMMAR.

A GRAMMAR

OF THE

Idiom of the New Testament,

Prepared as a Solid Basis for the Interpretation of the New Testament.

By DR. GEORGE BENEDICT WINER.

Seventh edition, enlarged and improved. By Dr. GOTTLIEB LUNEMANN, Professor of Theology at the University of Göttingen. Revised and authorized translation. 8vo, pp. 744, price $5.

This valuable standard work is perfected in this edition. It contains the last revisions of the author, edited by Dr. Lünemann, a former pupil of Dr. Winer, and is presented by Professor Thayer, of Andover, in a translation as strictly literal as is consistent with the English language. It is also furnished with an Index of Principal Subjects, a Greek Index, and a Complete Index of Scripture Passages, thus furnishing at once a Grammar and a Commentary on the New Testament. Figures are so arranged in the margin that any reference to either the sixth or seventh German editions, or to Masson's English translation, can be readily found in this edition.

TOO TRUE:

A STORY OF TO-DAY.

12mo, $1 25; 8vo, paper, 60 cents.

"Whoever has written 'Too True,' and modestly omitted to put a name on its title-page, he or she is a true genius, and a skilful limner of characters, both humorous and dramatic."—*Mayne Reid.*

"It is a thoroughly good tale, written with unusual simplicity and originality, and possessing a fresh and vigorous plot."—*Philadelphia City Item.*

"There is real power and an easy, graceful style displayed in this story, which shows that the author has genius of a high order, and the ability to write something more pretentious."—*Cincinnati Chronicle.*

II.

THIRD EDITION NOW READY.

The Amazon.

(From the German of Franz Dingelstedt.)

Translated by J. M. HART. 12mo, $1 50.

The *North British Review* devotes 53 pages to a review of Mr. Hart's translation of this book, and places Dingelstedt among the leading writers of fiction in Europe.

"The plot is developed with much artistic feeling, the characters are drawn with clearness and spirit, and the narrative is animated and brilliant."—*N. Y. Leader.*

"Spirited description, clear characterization, a firm eye for physiognomy, a glancing wit, light, airy satire, and a tempered gayety of tone, combine to make this an uncommonly agreeable novel."—*Commonwealth.*

III.

BLINDPITS:

A STORY OF SCOTTISH LIFE.

Large 12mo, $1 75.

"It is long since we have read a novel which so greatly interested us, or one in which the springs of human action were so skilfully touched."—*Portland Transcript.*

"We may pronounce it one of the most artistic and readable books of the season."—*Philadelphia City Item.*

"There is not in the whole 516 pages one that is dull nor one that is bad."—*Ithacan.*

EDITED, WITH MEMOIRS, BY MRS. SARAH J. HALE.

In two elegant 12mo volumes. Price of each, $2.

LADY MARY WORTLEY MONTAGU.—"The female wit of the days of Pope; benefactress of the species. Thy prose is admirable, better than acute, idiomatical, off-hand, conversational, without inelegance, fresh as the laugh on the young cheek, and full of brain. Admirable thou wert, and ever wilt thou be thought so."—*Leigh Hunt.*

MADAME DE SEVIGNE.—"The moment her name is mentioned, we think of the mother who loved her daughter; of the most charming of letter-writers; of the ornament of an age of license, who incurred none of its ill-repute; of the female who has become one of the classics of her language without effort andwithout intention."—*Leigh Hunt.*

Sold by all booksellers; mailed, post-paid, by the publishers,

ROBERTS BROTHERS, Boston.

HUDSON RIVER INSTITUTE,

AT CLAVERACK, N. Y.

A first-class Boarding-school for both sexes.

TERM OPENS DECEMBER 28, 1868.

REV. ALONZO FLACK, A.M., Principal.

BURNSIDE FAMILY SCHOOL

$1,000 PER YEAR GUARANTEED AND STEADY Employment. We want a reliable agent in every county to sell our Patent White Wire Clothes Lines (Everlasting). Address AMERICAN WIRE CO., 75 William Street, New York, or 16 Dearborn St., Chicago, Ill.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON-SENSE FAMILY SEWING MACHINE. This Machine will stitch, hem, fell, tuck, quilt, cord, bind, braid, and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., PITTSBURGH, PA.; BOSTON, MASS.; or, ST. LOUIS, MO.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured.

WANTED—AGENTS—To Sell the AMERICAN KNITTING MACHINE,

Price $25. The simplest, cheapest, and best Knitting Machine ever invented. Will knit 20,000 stitches per minute. Liberal inducements to Agents. Address, AMERICAN KNITTING MACHINE CO., Boston, Mass., or St Louis, Mo.

1,000 MILES

OF THE

UNION PACIFIC

RAILROAD

ARE NOW COMPLETED.

As 500 miles of the western portion of the line, beginning at Sacramento, are also done, but

267 MILES REMAIN

To be finished, to open the Grand Through Line to the Pacific. This Opening will certainly take place early this season.

First Mortgage Bonds

AT PAR.

By its charter, the Company is permitted to issue its own FIRST MORTGAGE BONDS to the same amount as the Government Bonds, *and no more.* These Bonds are a First Mortgage upon the entire road and all its equipments.

THEY HAVE THIRTY YEARS TO RUN AT SIX PER CENT., and both PRINCIPAL AND INTEREST ARE PAYABLE IN GOLD.

The entire amount of the mortgage will be about $30,000,000, and the interest $1,800,000 per annum in gold. The present currency cost of this interest is less than $2,500,000 per annum, while the gross earnings for the year 1868, FROM WAY BUSINESS only, on AN AVERAGE OF LESS THAN 700 MILES OF ROAD IN OPERATION, WERE MORE THAN

FIVE MILLION DOLLARS.

As the supply of these Bonds will soon cease, parties who desire to invest in them will find it for their interest to do so at once. The price for the present is par and accrued interest from January 1, in currency.

Subscriptions will be received in New York

AT THE

Company's Office, 20 Nassau St.,

AND BY

JOHN J. CISCO & SON, Bankers,

59 WALL STREET,

And by the Company's advertised agents throughout the United States.

Bonds sent free, but parties subscribing through local agents will look to them for their safe delivery.

NEW PATENT PIANOS.

RAVEN & BACON

(Established 1829),

Warerooms 644 & 646 Broadway, N.Y.,

MANUFACTURERS OF

PIANO-FORTES, WITH THEIR PATENT COMBINATION SOUNDING-BOARDS.

Patented August 14, 1866.

This invention, introduced exclusively into our Pianos, is of the greatest advantage to the tone of the instrument, as it affects the sounding-board, the very soul of the Piano, and produces thereby a pure liquid tone greatly superior in quality and power to that of the ordinary Piano. The sounding-board, released from its connection with the piano-case, and resting upon under sounding-boards, is relieved from the rigidity caused by such connection, and its vibratory quality increased.

Our Pianos are first-class in every respect, and purchasers will have not only our own guarantee as to their quality, but also the guarantee of the reputation of the instrument, obtained from the experience of our patrons who have used them for a generation. All lovers of this eminently household instrument, as well as parties proposing to purchase new Pianos, are invited to call and examine our assortment.

AGENTS WANTED.

$75 TO $200 PER MONTH! Or a Commission from which twice that amount can be made by selling the latest improved COMMON-SENSE FAMILY SEWING MACHINE. Price $18. For Circulars and Terms, address C. BOWERS & CO., 320 South Third Street, Philadelphia, Pa.

PUBLISHING OFFICE, 3 PARK PLACE.

The Week.

THE business of Congress during the past week (and, for that matter, for the major part of this session) has consisted more in defeating impracticable or mischievous measures than in enacting good ones. The one thing of public interest which the Senate has accomplished has been the passage of the bill effecting a reduction of the army. It does away with several inferior grades of officers and with fourteen regimental bands, and there is an express prohibition of any present appointments by Mr. Johnson to the two vacancies among the brigadier-generals. On Wednesday week, as the work of repression, the Judiciary Committee reported adversely on bills of Senators Howe and Sumner in support of law and order and the Fourteenth Amendment at the South, and substituted for Mr. Stewart's another to punish office-taking in wilful violation of that amendment. The penalty may be imprisonment for five years and a fine of $10,000. The same day, Mr. Sherman got the floor for a speech on his bill in relation to public finance and the currency; but it is not likely that he has gained anything by it for this session. On Thursday, Mr. Chandler's bill "to prevent the collection of illegal imposts under color of State authority"—that is, State taxes on inter-State railway passengers—was reported back from committee with amendments. Mr. Rice introduced a bill for the construction of a Government telegraph between New York and Washington under the control of the Post-Office Department, a measure which, on a small scale, would seem likely to afford the means of judging the expediency of Government taking possession of all existing lines. The debate on the suffrage amendment to the Constitution was interesting chiefly because of the addition Mr. Buckalew would have made to it. He wished Congress to require the people to select Presidential electors and then to prescribe the mode of this selection; thus leaving no room for interference by the State legislatures. Mr. Sumner opposed it, because it left intact the Electoral College, and Mr. Frelinghuysen, because it might open the way too suddenly to minority representation; and it was rejected, because in the general opinion it was out of place as offered. On Friday, Mrs. Lincoln's pension was shown to have met the disfavor of the committee. On Monday the Committee on Commerce gave a lift to the American and Asiatic Telegraph Company, which is to finish its line in three years from this time.

The one thing done by the House, after a liberal amount of speech-making and the voting down of everybody's pet phraseology intended to effect the same object, was the passage of the suffrage amendment to the Constitution, by 150 yeas to 42 nays. As this, if concurred in by the Senate, will share the wandering fate of most amendments and be debated long after its wording and almost its substance are forgotten, it may be as well to record it *verbatim:*

"Art. —, Sec. 1. The right of any citizen of the United States to vote shall not be denied or abridged by the United States, or any State, by reason of race or color, or previous condition of slavery, of any citizen or class of citizens of the United States.

"Sec. 2. The Congress shall have power to enforce by appropriate legislation the provisions of this article."

Mr. Boutwell has been the manager of this measure, to which it is a *prima facie* objection that it affords no protection to the colored office-holder, or would-be office-holder, in case any State chooses to exclude the blacks from all offices. Senator Wilson's amendment, offered on Tuesday, covers this point with an additional article. On Thursday the House put itself the awkward question, If the Senate rejects the Georgia senators, what shall we do with the Georgia representatives whom we have taken in? The Reconstruction Committee is to answer, if it can. On Monday, by a vote of 110 to 62, the House put its foot on the scheme for West India aggrandizement, and did well.

The Virginia Committee, who have come to Washington to try to bring about a compromise between the conservatives and radicals of the State as regards the constitution under which the State is to present itself for admission to the Union, have addressed a very business-like and moderate statement of their case to the Judiciary Committee of the Senate. In it they express their willingness, in spit of their conviction of its dangers, to accept negro suffrage, but ask for certain changes in the constitution, calculated, as they think, to guard against these dangers—one of which is greater concentration of power, so as to give the majority of the whole State more weight and local majorities less, even in the management of local affairs. They deny all hostility to the common-school system, but are anxious to reserve its management to the State, and not to trust it to the separate districts. It is a long while since a public document of equal gravity and good sense has emanated from the same quarter. General Grant is understood to have given the committee a very favorable reception.

The condition of the Georgia difficulty, as it affects reconstruction, we have commented on elsewhere. There is talk of following up the refusal of the Senate to admit Mr. Hill by expelling the representatives already admitted to the House, which would certainly be a vigorous, if not a wise, measure. We take leave to say that none of these things will help reconstruction one iota. They will exasperate the whites at the South more than ever against the negroes, render the impartial administration of justice more and more difficult, postpone the return of order and confidence, and prevent the negroes betaking themselves at once to that to which they must betake themselves sooner or later for their protection—their own industry and intelligence and thrift. It was preached by the supporters of the reconstruction measures that, the ballot once in the negro's hands, he would be left, as all men are under the American system, to work out his salvation by his own exertions, and avenge himself on his oppressors in the American way, by voting against them. We hope the country has not been deceived on this point. There are, doubtless, outrages and abuses at the South, but keeping Southern representatives out of Congress will not diminish them. Another objection to the prolongation of the transition state

is, the opportunities it offers to unprincipled adventurers to push their fortunes as "Union men" at Washington. If the stories be true which some of the Republican senators and representatives tell of the morals of these gentlemen and their influence on legislation, the sooner the tinkering of the South is given up the better, at least as regards the States already admitted to the Union. We trust we shall soon see the end of it in the passage of the Fifteenth Constitutional Amendment.

General Webb and Admiral Davis have had an old-fashioned row over the Washburn difficulty with Lopez, "the wild beast of Paraguay," as he has been forcibly and picturesquely styled. The correspondence, however, is nearly all on the general's side, the admiral remaining provokingly cool and reticent. It originated in the unexplained, and as far as we can see inexcusable, refusal of the latter to insist on the Brazilians permitting a vessel to pass up the river to bring down Mr. Washburn and his suite, who reported that they were in danger of their lives. The admiral, however, insisted on taking a light view of their situation and treating the danger as imaginary and the prohibition of the Brazilian commander-in-chief as insurmountable. In the correspondence, however, General Webb, we need hardly say, is not concise nor moderate, and the admiral is not much damaged in the encounter. Curiously enough the English minister, who is, or ought to be, the general's natural enemy, appears in the correspondence as his bosom friend, urging him on to uphold the honor of the flag and punish the monster Lopez. As the general sensibly remarks, he and the admiral cannot both be right, but this only removes the difficulty one degree further back.

The St. Domingo business has been again before the House, but this time in the form of downright annexation, instead of Mr. Banks's protectorate scheme. Mr. Orth introduced a bill providing for the annexation of the whole island, with its two republics, or whatever they are, with all their appurtenances, and providing for the conversion of the new acquisition into a Territory, with a view to its ultimate admission to the Union as a State. Characteristically enough, we do not mean of him personally but of his type of politician, the minute he presented his bill he moved the "previous question," being desirous that this mighty plan should not even be discussed. It was rejected by a large majority, so there may be little use in saying anything more about it. But then it is not impossible that some sage in Congress will still cherish the idea, and perhaps reproduce it, and it is, therefore, perhaps proper to remind the public that annexation will do Hayti no good, unless we also undertake to govern it by Federal authority. The notion that it would give the people their first taste of freedom and self-government, is simply a delusion. They are now as free as they would be in the Union, and have charge of their own affairs with even less control or hindrance than they would experience in the Union, and have enjoyed every variety of political experience, including a massacre, a servile war, a war of independence, and plenty of civil wars, and have lived under every form of government from a military dictatorship to a double-extra democratic republic. In Hayti they have even tried a Cæsarist empire with Tiberian debauchery. In fact, there is no member of Congress who, politically considered, is not a mere tyro compared to the youngest Haytian or St. Dominican voter. Sending them "free institutions," therefore, would be about as sensible as the venture of the celebrated Yankee trader who sent a cargo of warming-pans to Jamaica. What they want is a supply of character and ideas to enable them to work the institutions they have got, and character and ideas cannot be supplied by act of Congress. Therefore, when we are asked to annex Hayti, we ought to ask ourselves whether we are prepared to govern an island of this size as a dependency, and its government as a dependency is really what the annexationists are aiming at. The sly fellows know perfectly well that the people would behave no better in the Union than out of it, and would have to be handed over to Meade or Thomas; but then what a magnificent thing the "Hayti Ring" would be, with its mahogany, satin-wood, divi-divi, coffee, indigo, and tobacco, and the assessment and collection of taxes in the recesses of the tropical forests.

There appears to be little doubt that the Clarendon-Johnson convention will be rejected by the Senate, on the ground, taken it is said by General Grant, that the injuries sustained from England during the war are of such a nature that they cannot be adequately atoned for by compensation in money for the loss of a certain number of ships; that the sympathy extended by England to the South "prolonged the war for at least a year," and that she is, therefore, "directly responsible for all lives lost and money expended during this time." The opponents of the convention do not propose any present substitute for it, and do not contemplate a resort to war. Their plan is to leave the controversy open *in terrorem*, either until England has been reduced to a more contrite mood, or until she is engaged in war with some other nation and can be subjected to exact retaliation. It does not seem likely, however, that any peaceful settlement of the question can ever be effected on the basis indicated in General Grant's objection. If an apology is what is wanted, no apology England is likely to put on paper will be any better compensation for the losses of a year of war than payment of the *Alabama* damages; nor is she likely to pay all "the money expended during a year of war," unless it can be shown that the prolongation of the war for this period was the result simply of English sympathy; nor is she likely to pay smart money for having sympathized with the wrong party in a contest to which she was a stranger. These are conditions to which nations have sometimes submitted at the close of a bloody and disastrous conflict, as the price of their existence, but they are not conditions of which diplomatists talk before a shot has been fired. So that, though it may be the wisest thing to reject the Clarendon-Johnson convention and keep the controversy open, it is hardly wise to present to the public as the only proper basis of negotiation one which no lawyer or statesman familiar with foreign affairs believes to be in the least likely to be finally adopted. If everybody who exercised an unfavorable moral influence on the South during the war ought to pay a portion of the total expenses of every kind of putting down the rebellion, France ought to be mulcted heavily also, and all persons who voted the Democratic ticket in 1864 ought to pay double taxes.

The mode of disposing of Mr. Wells and his report to which the New York *Tribune* is resorting, is worth attention as an illustration of the part the press sometimes plays in the work of reform. Mr. Wells is a man of thoroughly scientific training, with a cultivated aptitude for the collection and collation of facts. He has been for four years engaged in the laborious examination of the state of the national industry, has taken evidence upon it in all parts of the country, has visited Europe for the purpose of the careful comparison of the labor and administrative systems of the two regions, and has been throughout his enquiries provided with all the influence and authority official position can give. He is, moreover, well known to be a man of cool, philosophic temper, without the slightest taste for, or experience in, party politics. In short, his selection for his present work, and the manner in which he has performed it, have been almost universally regarded by intelligent men both here and in Europe as one of the best signs of the times, as regards the financial future of the United States. He has come to conclusions in his last report, however, which are distasteful to a certain school of economists, or perhaps we should rather say of manufacturers, of which Mr. Greeley, of the *Tribune*, is the newspaper champion. These conclusions, whether true or false, he supports by arguments in the shape of facts and figures carefully collected and arranged, and he presents them in temperate and modest language for the popular judgment. Hereupon Mr. Greeley commences to pour on him, in the *Tribune*, from day to day a torrent of abuse, accusing him of "juggling" and other forms of fraud, compares him to "Judas Iscariot," and carefully couples his name with that of Mr. Alexander Delmar, whose unfortunate career in the Bureau of Statistics is so well known, and in fact neglects no means of making him seem base, odious, and contemptible. It is making no new imputation on Mr. Greeley to say that his training, habits of mind and pursuits, especially during the past four years, have been of a nature to make his abuse of such a man on such a theme more than usually foolish and mischievous.

We have had during the week some remarkable illustrations of the condition of the civil service. The collector for this port, Mr. Smythe, became a candidate for the Russian mission, without any special qualification for the position, and without a single claim to it of any kind except his devotion to the President in his quarrel with Congress, and, let us add, without the least chance of being confirmed. This, however, does not prevent his leaving his post here and going to Washington to "lobby" vigorously in favor of his confirmation. Before engaging in this enterprise he had appointed to a clerkship in the custom-house the notorious E. A. Pollard, the historian of the *Lost Cause*, and the most truculent and ferocious of the Richmond journalists during the war. The selection of such a person for a place in the Government employment was too great an absurdity, to use a mild term, to allow us to suppose that Mr. Smythe did it except under strong pressure, and without knowing well both the man and his antecedents. Pollard, as might have been expected, swallowed the oath as if it had been a cocktail, and entered on his duties; but his appointment leaking out, and being used against Mr. Smythe's confirmation, he was unceremoniously dismissed, on the ground that Mr. Smythe did not know who he was when he appointed him, but, Pollard says, under a special arrangement by which he was to send in his resignation and keep away from the custom-house, but draw his salary all the same; the distinguished historian apparently not having the slightest consciousness that such a story, even if true, reflects any discredit on him. While all this is going on, it comes out that the clerks in the drawback department of the custom-house have been for more than a year in a league with swindlers out of doors, for the purpose of cheating the Government out of drawbacks on goods never exported or even in existence, and have succeeded in cheating it out of over a million of dollars. Taken together, the three incidents show that the custom-house, as at present managed, is really a greater disgrace to the Government which sustains it and a greater demoralizer of the community than the public gambling houses of the little German princes, over which we have so often held up our hands and rolled up our eyes. When one considers that, according to the War Horses, we cannot adopt Mr. Jenckes's mode of selecting employees for this blessed institution without establishing an "aristocracy" and imperilling free government on this continent, it will be admitted that the devil has brought his arrangements in this part of the world to extraordinary perfection.

The controversy between Mr. H. C. Carey and M. Benard has been renewed in the *Journal des Economistes* by a reply from M. Benard, in which he alleges that his (M. Benard's) report of Mr. Carey's language with regard to slavery at the meeting of the Economical Society was correct, and that Messrs. Paul Coq and Villiaumé have authorized him to adduce their testimony also in support of the charge. He then goes on to cite passages from Mr. Carey's work on the "Slave Trade," published in 1853, in which the author says that free-trade and slavery are parts of the same system, and that slavery flourishes wherever there is free-trade, and declines wherever there is protection, and that the road to emancipation in the United States lay through a high tariff. He does not add, but we think we cannot be wrong in inferring it from what he says, that he believes a free-trader to be naturally a friend of slavery. It thus appears that while one school of protectionists consider free-traders supporters and promoters of slavery, one school of free-traders consider protectionists to be supporters and promoters of slavery, and we are, as far as authority is concerned, as far from the truth as ever. Would not rigid investigation show that the real bent of the protectionist is towards highway robbery, as being the quickest and most energetic mode of restricting men in the choice of a market, while the free-trader's darling vices are adultery and embezzlement, as affording him the best means of emphatic protest against "the interference theory of government?"

In Ireland there are signs, such as there have never been, not even in the golden age of 1782, of real union, and real progress, both social and political, as the consequence of union. The Protestants seem to have made up their minds that there is no hope for the Established Church, and this conviction seems to be turning the heads even of the Orangemen of the North toward co-operation with the Catholics in favor of tenant right and other reforms which have hitherto failed in Parliament simply because there was nothing like united action amongst the people to oppose to landlord hostility. A steady popular demand, made by all creeds, for a reform of the land laws, and expressed in firm and moderate language, could not be resisted in London; but the co-operation of the Protestants is essential, because, as has been said of the English troops in the Indian army, they are to Irish agitation what the steel point is to the lance. One of the most hopeful signs of the times is the spirit in which the Catholic bishops are meeting Mr. Gladstone, which is frank and fair as well as cordial. They declare their perfect readiness to accept equality of all denominations before the law as the sum of their desires, while agreeing that in disestablishment all vested interests shall be religiously respected. But the educational question is still plainly one of the rocks ahead, as the bishops insist on the public schools being divided amongst the different religious denominations, or, at all events, on having a certain proportion of them, or of the educational funds, handed over to the Catholic clergy; in other words, they seek what they seek here, and would like to get everywhere, but what every government in Europe, even in Catholic countries, now denies them.

On the other hand, it is the confident expectation of some of the best observers of Irish society that, the pressure of Protestant ascendency once gone, the same spirit of resistance to clerical domination and the same growth of the secular spirit in legislation which are to be witnessed amongst the laity of all other Catholic countries, will be witnessed in Ireland. A Catholic Lord Chancellor, Mr. Justice O'Hagan, late of the Queen's Bench, the first in one hundred and fifty years, has just taken his seat in the Court of Chancery, amidst great popular emotion, and one of his first acts was to subscribe $500 to the building of a monument to protestant Grattan, accompanying the money with a feeling tribute to Grattan's memory. O'Hagan is one of the ablest, calmest, and wisest of the present generation of Irishmen, a great lawyer and, what is rarer in the United Kingdom, a great jurist, whose devotion to his own creed and race nobody has ever doubted, but who sees no hope for Ireland but in a more cordial and thorough union with England and a more earnest and skilful participation in English public life.

The Greco-Turkish trouble seems to have at last reached its conclusion in the acceptance by Greece of the recommendations of the Paris Conference. There has been something artistic in the whole performance, both on the part of the Turks and Greeks. The Turkish "ultimatum" was, in its way, a fine piece of bunkum, and so was the lofty refusal of the Porte to take part in the conference if Greece were admitted to it on a footing of equality. Then the gradual but reluctant concurrence of the belligerents in the conclusions of the Conference was a very delicate piece of acting. Turkey had to take time to consider, and the money markets waited in dread suspense while the Divan was meditating. But then it was expected all along that its final decision would be favorable to peace. Greece did better, and robbed the peacemakers of all hope, and filled the newspapers with rumors that at Athens the air was full of blood and thunder, and that no human power could stay the arm of M. Bulgaris. However, even Athens has come down, and nobody will be hurt on the present occasion. The final tableau, in which the Greek cabinet appears divided, with a bare majority of one for peace, was appropriate and picturesque. The affair will, however, probably act as a warning to the Great Powers, and hasten the solution of the Eastern question. The Greeks are not very formidable as a political community, but they have it in their power, clearly, to convulse Europe by resolutely assailing Turkey at an opportune moment—that is, at a moment when one or two of their protectors are ready to fight. We have had no war this time, because no one was prepared for it; but the Athenian politicians might begin their little game again on a signal from Austria or Prussia or Russia, and in a week the Continent would be plunged into a great conflict. Whether the Hellenes will ever become sober-minded enough to play their cards with real skill, as the Italians did, and reap real advantages from the jealousies of the Great Powers, remains to be seen.

THE GEORGIA DIFFICULTY.

As soon as the Georgia Legislature expelled the negro members everybody was sensible that a new and exciting subject of controversy had been opened, namely, the power possessed by Congress to exact from the reconstructed States the continued observance of the conditions on which they had been readmitted to the Union. Suppose any State evaded or repudiated these conditions, was there any remedy for the evasion or repudiation; and if so, what was its nature and where was it to be found? There were very few who did not believe, during the debates on the Reconstruction Act, that once the States were back in the Union the power of Congress over them was gone, and that after the new governments had been organized the negroes and Unionists would, beyond the Fourteenth Constitutional Amendment, have nothing to rely upon, either for ascendency or safety, but their own ability and dexterity and the general progress of society. Few people liked to say anything on this point, however. The Democrats did not care to talk about it, because they feared that by calling Republican attention to it they would prolong military rule at the South; the Republicans said nothing about it, because, though it was undoubtedly the weak point in the whole scheme of reconstruction, they were not prepared with a remedy or substitute. The question, How was the observance of the conditions of the Reconstruction Act to be permanently enforced? was one which went, it was felt, to the very foundations of the Government—down to the very deepest depths of political philosophy and constitutional law, and therefore, by almost unanimous consent, it was let alone. Many of our Radical contemporaries made light of it, but their hilarity was plainly forced. They never seriously believed, and do not believe now, and even begin to confess that they do not believe, that the negro armed with the ballot is going to be able, in a democratic community, to outgeneral and outvote such consummate masters of the electioneering art as the Southern whites have always shown themselves to be. It was hoped, therefore, by all lovers of peace and quiet, that the point would never be forced on public attention in any practical shape; that the machinery set up and put in motion by the Reconstruction acts, if it did not last for ever, would last until the passions and memories which had made it necessary had died out, and the Unionists of the South, whether black or white, had undergone political absorption.

The point, however, *has* come up in a practical shape. Georgia fulfilled all the requirements of the act; was formally readmitted to the Union; sent representatives to the House, who were allowed to take their places; obtained release from military rule; and elected a senator, who now applies for his seat. The Senate is now asked to refuse to receive him, on the grounds (1) that the Legislature of Georgia was not competent to, and did not, "duly ratify" the Fourteenth Amendment and comply with the other conditions imposed by the Act of June 25, 1868, inasmuch as it contained a certain number of disloyal persons not qualified to hold office, and was therefore not the lawful Legislature of the State; (2) that the Legislature and people have committed "such acts of usurpation and outrage" as to unfit the State to be represented in Congress; and (3) that on the whole case, taking the action of Georgia before and since "the pretended ratification of the Fourteenth Amendment," no civil government had been established in the State which Congress ought to recognize.

The whole matter was referred to the Judiciary Committee, from which a majority report has been presented by Mr. Stewart, of Nevada, against the admission of Mr. Hill, to the conclusion of which only Messrs. Conkling and Frelinghuysen gave their adhesion, being apparently ready to exclude Mr. Hill under the discretionary power of the Senate, but also apparently ashamed of the arguments by which Mr. Stewart advocates this conclusion. The report, therefore, though in form a majority report, is in reality that of Mr. Stewart simply, and the ground it takes is that although the Legislature of Georgia was properly elected and convened, and although it instituted a formal enquiry into the qualifications of its members, that enquiry was not properly conducted, and some members were allowed to retain their seats who under the Fourteenth Amendment were disqualified for office. Therefore, he argues, the Legislature was an illegal body, and its ratification of the amendment was null and void. He thus assumes two things which may well be called startling; the first is that the judgment of a State legislature on the qualifications of its own members is not final, but may be reviewed and overruled by Congress, without other evidence than, as in the case before us, a newspaper report of the proceedings; the second is that the presence in a legislature of a small number of members not qualified to sit invalidates all its subsequent proceedings, and amounts to the same thing as if *all* the members were disqualified—a doctrine which would of course throw a doubt over the validity of the proceedings of every legislature in the country, Congress included, for in all of them persons in the first session, at least, take part in legislation who are afterwards unseated. It would probably be difficult to hit on a better plan for promoting anarchy than the deliberate adoption of any such principle, unless it be the doctrine that no man need obey a law till the court of last resort has pronounced it constitutional. The second reason assigned in the report for not admitting Mr. Hill is that, a month after his election, the Legislature expelled all the colored members from their seats—the committee being of opinion "that there is no distinction in the right to hold office on account of race or color," and being "quite confident that such was the opinion of Congress at the time it approved that constitution." Here Mr. Stewart advances one step further, and maintains that the misconduct of the State Legislature on the 3d of September renders null and void what it did on the 28th of July previous, and it is difficult to see why this invalidating power of the "outrages" committed by it should not go back to the very beginning of its sittings and affect *all* its official acts.

But he does not stop here. His fourth reason for refusing a seat to Mr. Hill is that, according to the reports of the Freedmen's Bureau, "there were 336 cases of murder and felonious assaults between January 1 and November 15, 1868, for all of which there had been no legal redress, and hardly any attempt on the part of the authorities to punish the criminals." The proposition here presented for our acceptance is that the failure of the police and legal tribunals of a State to prevent or punish crime with what Congress may consider the proper degree of efficiency will also furnish a sufficient cause for refusing to admit the State representatives to Congress—a doctrine which would place the representation of every State at the mercy of a party majority, inasmuch as there are not many States in which it may bear to be said, just now, that they afford adequate protection for life and property. What did the Indiana senators, for instance, feel, or those of New York, when they heard this argument read?

Mr. Trumbull has presented a minority report, in which he shows conclusively that Mr. Hill, the senator elect, is, and always has been, a loyal Union man; that he was duly elected by the Legislature of Georgia; that the Reconstruction acts provide that "when the people of the said rebel States shall be *by law* admitted by representation in the Congress of the United States" the provisional governments shall cease to be provisional; that on the 25th of June, 1868, Congress, *by law*, declared Georgia admissible to representation on certain terms and conditions; that General Meade officially certified the fulfilment of some of these conditions; that the remaining one—the ratification of the Fourteenth Amendment—was duly proclaimed by the President, and the Georgia representatives were thereupon duly admitted to the House; that members of both the Reconstruction and Judiciary Committees of the House, including Mr. Boutwell, telegraphed to General Meade that the Legislature itself was the proper judge of the qualifications of its members. If, therefore, the Reconstruction acts had any force, Georgia is now as much a State in the Union as New York; and to deprive her of representation on the grounds brought forward by Mr. Stewart is just as great an act of usurpation as it would be to expel Messrs. Morgan and Conkling because of the late election frauds in this city, or the failure of the police to catch the Rogers murderer. If the Reconstruction acts had no force, but were merely a device resorted to to make things pleasant and prosperous preparatory to the Presidential election, then the Republican politicians have been guilty of a great piece of imposture. In fact, if the Democrats are in need of a campaign document, the history of the Reconstruction legislation, with

the majority report on the Georgia senatorship annexed, would be as effective as anything we know of.

If we are asked what we propose as a substitute for what Congress is doing, or whether we mean seriously to maintain that Congress ought not to interfere for the prevention of such outrages as the expulsion of colored members from the Legislature, and such violations of the Constitution as the appearance in it of disloyal persons unpurged of their treason, we reply, in the first place, that nobody has any right to address such questions to *us*, because we never ceased to say to those who cared to listen to us, during the last two years, that the Reconstruction acts could not possibly reform Southern society; that the ballot could not furnish the negro with complete protection; and that, therefore, the hurrying of act on act through Congress under "the previous question," without debate or reflection, was unnecessary and mischievous; that to readmit a State to the Union under these acts was to relinquish all extraordinary control over it, and to leave Unionists to the ordinary sources of safety and prosperity, viz., the sense of justice and love of order of their neighbors, and their own courage and energy and good sense. As might have been expected, however, those noisy and vituperative supporters of the Reconstruction policy of Congress who not only maintained that it was the best policy Congress could pursue, but that it was a perfect political panacea and blackguarded everybody who ventured to criticise it, and shrieked with delight over "the regeneration" of such States as framed constitutions under it, are now among the first to counsel the total repudiation of it and the restoration of military government, or, in other words, the complete stultification of the Republican party before the world. We cannot help feeling that what has been done cannot be undone; that for the government of the South by the whites, in fact, if not in form, there is only one substitute—military force; that this the North has relinquished, too hastily, as we thought, and think still, but no return to it is now possible; and that for the real regeneration of that region we must trust hereafter to education, to popular intelligence, to the growth of industry, and the enforcement of the Constitutional Amendment in the manner pointed out by Mr. Trumbull—penal legislation in execution of it—and not to doubtful and dangerous attempts to destroy the independence of State legislatures.

THE WORKING-MAN'S VIEW OF CAPITAL.

The labor problem—that is, the means of raising the laboring population out of the condition of dependence on the capitalists in which they have always lived, and, in spite of the prodigious advances made within the present century in the means of production, still continue to live—was, until very recently, discussed by members of the capitalist class only. The leading economical writers, even of the French communistic school, have all been drawn from the middle or upper classes of society, and if not capitalists themselves, have been educated among capitalists, or brought up in a position to see the world from the capitalist's point of view. Even the leaders of the great "working-man" movement in France, in 1848, were lawyers or journalists, and the great Socialist leader of Germany, Lasalle, belonged to the same category. Nobody not a Socialist has waged such effective war on the Continent against what the working-man has long considered his great enemy, the principle of competition, as Sismondi, but Sismondi was "a gentleman and scholar." In England the men who have been making most fuss about the wrongs of the laboring classes, in the press and on the platform, have been university men, who never did what working-men call work, who dine with duchesses, and spend their evenings in clubs, and preach political economy, and in various other ways prove their unfitness really to speak for the working-man.

Now, the interest in the working-man's condition, and the general conviction that it was unsatisfactory, could not and did not exist very long without creating a very general desire to hear what the working-man had to say about it, and how the existing social arrangements appeared from his stand-point. This, combined with his own increasing political weight in nearly every community, and his increasing power of organization and combination, created by practice in the formation and management of trade societies, has at last ended in producing labor conventions "composed of working-men only," in which their condition and possibilities form the sole subjects of discussion. We have spoken more than once in the *Nation* of the first great gathering of this kind held at Geneva, in 1867. Others have since followed. In this country they have been very numerous within the last five or six years, but the most important, owing to the high position in point of intelligence generally accorded to the laboring population of New England, has recently been held in Boston, and has been addressed by a large number of the orators, working-men, and others who make a profession of dissatisfaction with society as it is.

From the deliberations of all these assemblies, as well as from the labor platforms which occasionally make their appearance before elections, and the declarations which labor organizations exact of candidates, it is not difficult to extract the economical and political ideas by which the working-classes, at least in the great manufacturing districts, are permeated. Touching the nature and functions of capital, they are utterly at variance with all economical writers. These writers hold capital to be a portion of past production, saved for future use by persons who, had they been so minded, might have spent it in personal enjoyment. For instance, they say, if a working-man saves a portion of his wages and puts it in a savings-bank, it becomes thereupon capital, and the bank lends it as such to persons who use it to assist in further production. Of course the phenomenon becomes a trifle more complicated when we see capital accumulated in large masses in the hands of persons who have not themselves saved it, or who have inherited it or made it by speculation; but the origin of capital and its uses remain the same, no matter by whom held or in what quantity. The absence of capital in a community, such as savage or newly settled countries, means simply that nobody has any savings of past production by him, on which he can live while producing more.

No theory of political economy seems easier to apprehend, and yet the most talkative and agitating portion of the laboring class have not got hold of it. To them capital is simply "money," and need not represent anything at all or be itself the product of any but the most trifling labor. It may, for instance, consist in pieces of paper with a word or two printed on them, such as General Butler wants to have the Government issue as circulating medium, each not worth more intrinsically than half a cent, though called "one thousand dollars." Seeing, therefore, that capital is necessary in industry, and that the possession or non-possession of it, in most cases, decides whether a man shall labor with his head or his hands, and believing the Government to possess the power of manufacturing it in any quantity, they look on the capitalist as a monopolist into whose hands the Government plays, and who selfishly retains for himself a commodity in which all ought to share. This notion crops out, of course, in different ways in different countries. In France, it used to take the shape of a demand that the government should establish banks to supply the poor with "credit"—that is, loans of money—their claim to which was to rest rather on their necessities than on the probability of their repaying it, credit being in the eyes of the Socialists (another of their curious departures from the received commercial ideas) not a thing to be earned by thrift, honesty, and sagacity, but one of a man's "natural rights" which was denied him every time a capitalist refused to discount his bill. In Germany, the source to which the working-man was to look for capital formed the great ground of the celebrated controversy between Lasalle and Schultze-Delitzsch, Lasalle holding to the French theory, that the government ought to supply it—Schultze-Delitzsch preaching, and happily with success, that capital was the product of saving, and that if working-men wanted it they should create it by their own labor, or borrow it from banks set up with their own funds, and maintained, as all banks are, by the honesty and prudence of their customers. At a great labor convention held in this country two years ago, the difficulty was met by a proposal that the Government should supply twenty-five million dollars in "capital" to working-men to aid in delivering them from their employers, and we observe that the recent convention in Boston heartily endorses General Butler in his efforts to get rid of gold and silver, the use of which he and the working-men consider the root

of the monopoly, and substitute slips of paper issued by the Government. Here again the theory that capital is composed of savings, or has any necessary connection with past labor and self-denial, is evidently held in utter contempt.

One of the natural results of this way of looking at capital is intense hostility to interest, the taking of which a "professor" at the Boston convention expressed his hope of seeing one day treated as "a crime." This hostility is, of course, a very old fallacy, with the origin and history of which everybody is familiar, but amongst the working-men it rests on grounds different from those on which it rested in antiquity and the Middle Ages. The objection to it on the part of mediæval moralists and economists was, that money of itself produced nothing, and that therefore to charge for the use of it was to take payment for nothing. The working-man economists acknowledge that money produces—for what is money but capital?—but hold that inasmuch as everybody ought to have as much capital as he needs, the interest on loans of money is simply the form in which the present monopolists extort their gains from the public; in other words, it is not unlike a tax on air or light. It ought not to be, as the economists maintain it is, partly a reward for saving—or, in other words, for self-denial—and partly an inducement to save, because a man ought not to have to save; nor is it an insurance against the risk of non-payment, because nobody ought to have to borrow in such a manner that it would make any difference whether he paid or not.

On the subject of the distribution of wealth, or rather the best means of preventing its excessive accumulation in few hands, the working-men, like other people, seem to be a good deal divided in opinion. Judging from the talk at the labor conventions, however, they tend towards the adoption of the doctrine which is almost a corollary from their theory of capital which we have just been discussing—that, as all wealth is the product of labor simply, and not of labor and capital combined, as the economists erroneously maintain, the laborers ought to divide the results of production between them; so that there would be no large fortunes and no bloated capitalists and big moneyed corporations. This notion gets a good deal of support from the talk of the political demagogues, who always, in and out of Congress, speak of the rich as in some way a blameworthy and disreputable class, whom it would be no great harm to lay a heavy hand on. They are made the objects of excessive taxation, and frequently of pulpit denunciations. Wendell Phillips proposed the other day to make them pay the national debt; and, in fact, to listen both to the working-man agitators and the moral reformers, one would imagine that rich men were a curse to a community—a kind of social excrescence whom it would be well to get rid of, if it could be done without violating the Ten Commandments. At the bottom of this denunciation and dislike lies the working-man's notion that they are made rich by getting hold of money they have not earned, to which the poor were entitled. The term labor, too, is in all these speculations applied to hand labor simply. The labor of planning, contriving, combining, watching, superintending, is treated as if it did absolutely nothing for the country. What is perhaps most curious is, that human nature, as all the orators see it and know it, in themselves and their friends and neighbors, is absolutely excluded from consideration; for that most prominent and striking characteristic of human nature, for instance, dislike of labor, and the desire of leisure and enjoyment, no allowance is ever made. Just as the trades-unions do all they can to put laborers of all degrees of capacity, industry, and ambition on the same dead level as regards wages and hours of labor, the labor conventions talk as if they would like to take away from all members of society all material inducements to do more than their neighbor, either in producing or saving. The desire of saving they would destroy by preventing anybody from holding capital, or, if he held it, from getting anything from it by way of interest or profits. The spirit of adventure which lies at the bottom of all great commercial undertakings they would root out by forcing everybody who successfully encountered great risk to share his reward with the community at large; so that Jones, who, after twenty years of peril, trial, and toil, quickness of eye and soundness of judgment, had accumulated a fortune and proposed to live on his interest, would have to divide his substance with the Smiths, who had passed that period working in a mill on weekly wages, of which the surplus went in bad whiskey. The very growth of civilization itself they would stop, by denying to people of refinement and culture the means of gratifying their tastes or following their favorite pursuits—thus preventing human society as a whole from offering its members the most valued of its prizes, the only prizes which are sufficient to stimulate men to the highest pitch of exertion, both mental and moral.

In fact, we do not know that we could offer to the managers of colleges, of schools, and other places of education, a more profitable subject of examination and reflection than these labor conventions, and the speeches made at them. They illustrate better than anything else could the enormous importance in democratic societies of the diffusion of economical knowledge, and the absolute necessity to such societies of the cultivation of the reason and the bridling of sentiment.

LEGALIZATION OF CAUCUSES.

Some months since the directors of the Union League Club of Philadelphia offered prizes for four essays on the subject of legal organization of parties for the purpose of selecting candidates for office; in other words, on legalizing caucuses. The essays have lately been printed, and their appearance will no doubt do something towards increasing public discontent with the caucus system, but none of them, in our opinion, do much to clear the public mind.

The evils of which these essays treat are the familiar ones which we have so long been accustomed to hear attributed to the caucus—the disappearance from the political stage of men of culture and refinement, and its occupation by ignorant and corrupt partisans, regardless of the public interest, eager for place and utterly unscrupulous in their choice of means for obtaining it, and the selection by bodies of this nature of candidates for office unfit in every way for the positions they are chosen to fill. These two calamities—the deterioration of the character of party managers, and at the same time of the candidates nominated by them—are those which are generally embraced under the term "evils of the caucus system." It is easy to understand the intellectual process by which the conclusion is reached that by bringing the caucus within the pale of the law we can eradicate these glaring vices which beset our system. For it is in the caucus that all the base trickery and corruption which is rife throughout the country, sapping the foundations of law and order, filling the bench, the bar, and the legislature with its subtle poison, festers to a head. Here may be seen what elsewhere may only be suspected; here is visual demonstration that knaves and ignoramuses manage the wires of our machine; there the whole rout of managers, wire-pullers, and log-rollers gather together and make sport of the honest and orderly people whose delegates they are supposed to be. You may suspect, for example, that a good deal of chicanery and humbug enters into the selection of a member of Congress, but it is proved to you when you see a caucus listening without a word of protest to barefaced falsification of public documents, or nominating as representative a man who had openly avowed deceit as his profession; you may have heard it whispered that "politics" had its effect on the Supreme Court, but when a judge opens a bar-room in New York in connection with a Presidential caucus you see that it is so. In short, the caucus furnishes to every one an exhibition of political rascality and hypocrisy in full play and energy. This being so, is it not the most natural thing in the world to pass at once to the conclusion that it is the caucus itself which is corrupting us?

It is much easier to impute the blame of the evils of a state of society to something seen, patent, of everyday occurrence, than to attempt to trace the difficulty to its remote and anterior cause. And having thus decided that the eruption and not the state of the blood is to be considered, that the caucus is not symptom but disease, we proceed to apply the orthodox remedy in the shape of an enactment. It is one of the most curious features of modern society, the era of legislation having fairly set in, that the moment any trouble occurs in any part of the system a dose of law is at once recommended by all the doctors. If people intoxicate themselves, let a law straightway be passed that no one shall sell liquor; if a tax cannot be collected at one dollar, because people will rather cheat than pay it, let a law be passed

making it two dollars; if government bills are below par, make it penal to sell gold; if a respectable business does not pay, make it pay by giving it a monopoly. Or, to take our own case, if voluntary associations for the purpose of choosing candidates for office result in the selection of bad candidates, all that is necessary for a complete reform would seem to be an enactment that the associations should cease to be voluntary. Make them legal, and the whole difficulty is surmounted. Or, in the words of the gentlemen who offered the prizes for these competitive essays, "Whereas, in a republican form of government it is of the highest importance that the delegates of the people, to whom the sovereign power is entrusted, should be so selected as to truly represent the body politic, *and there being no provision of law* whereby the people may be organized for the purpose of such selection; . . . and whereas, there are grave defects existing under the present system of voluntary organization, *which it is believed may be corrected by suitable provisions of law;* now, therefore, be it resolved," etc., etc., etc. It seems to us that those who suppose that, by making the caucus a legal instead of a voluntary body, patriotism and intelligence would resume their sway in nominating conventions, overlook entirely the fact that people cannot be made to do what they do not want to do by an enabling act.

Let us see how such a law would work. Mr. Came's proposal, and his is as good a one as could be suggested, is as follows:

"In all cases let the State make provision for an accurate registry list. At a specified time, previous to any election at which candidates are to be voted for, let the list be put in the charge of any officer of the district whose duties or office facilities best fit him for the purpose, whether it be the warden of a ward, the clerk or treasurer of a city, or whatever officer of a town or precinct the law may designate or authorize each municipality to select for itself. Such officer shall be required, for a certain number of consecutive days or evenings, to provide two ballot-boxes, marked respectively with the names of the two leading parties at the last election preceding, for the reception, under the usual regulations against fraudulent voting, of names of candidates to be voted for at the next subsequent election. As each legal voter deposits his ballot the presiding officer shall check his name in the list, with the letter indicating into which box it was cast, as "R" for Republican and "D" for Democrat. At the close of the voting period said officer shall count the ballots in each box, and the highest number in each bearing the same name shall be considered as designating the regular candidate or, if the ticket embraces more than one name, candidates of each party; and the officer shall so make and publish the sworn returns in any manner which may be directed by law.

"To provide for the exigency of third or new parties, said officer shall be empowered to open other additional ballot-boxes whenever a legally designated proportion of the whole number of voters in the district—one-twelfth—shall so petition him in writing, and he shall label said box or boxes as the petitioners may request. A like petition shall cause him to substitute any party name for that which was used at the preceding election."

Is it not clear that at the election succeeding the passage of any such law the party managers would only have to begin work a little earlier than usual in order to secure their object? A week or so before the quiet citizens of the ward or district cast their nominating ballots, the party leaders would hold their voluntary caucus in the usual place, nominate the regular ticket, and then would solemnly assure every voter, as they do now, that if he bolted he would endanger the success of the party. And so he undoubtedly would. The managers nominate John Smith, and it is found two weeks later that Brown is the choice of the legal caucus. The managers know all about both Brown and Smith. The people do not, and never can, for they have not the leisure to make a specialty of studying the careers of every office-holder in their State. The manager takes you aside and whispers in your ear that Brown was the fellow who in the year 185— made that unfortunate attack on the ballot, or who in 186— pursued such an unpopular course on impeachment, or who was notoriously an aristocrat and addicted to kid gloves. In short, Brown was not an available man, and though personally of the very highest character, and just the sort of man he would like, for himself, to see at Washington, still the interests of the party were, after all, of greater weight, etc., etc. In short, Brown would before the election come to be regarded as a dangerous fellow, and Smith would be triumphantly elected. And the year after we may be sure the "legal" nomination would not draw many persons to the polls. The voluntary convention would have resumed its sway, and one more useless wheel would have been added to machinery already intricate. The true way to enforce the new system would be to make all other meetings than that of the nominating convention, and of the citizens at the polls, illegal and punishable by fine and imprisonment, and by passing at the same time a statute forcing all citizens to take part in the nominations under pain of disfranchisement or whatever other penalty would seem best fitted to the case. By adopting Mr. Came's plan you only make the caucus system a little more complicated than it now is, and complication is what managers delight in.

We have already intimated a belief that the debased condition of the caucus is rather to be considered as affording evidence of the debased state of political sentiment in the community than as itself the prime cause of corruption. The radical difficulty is in the character of the men intimately connected with politics throughout the country. If these were the honorable, the patriotic, and the wise, the caucus would be composed of the honorable, patriotic, and wise. In any country which is divided by parties, there arises the necessity of some consultation before the critical moment arrives in which the parties are to contend for the victory. It is manifestly impossible for a party to vote blindly with any chance of success, and a convention to nominate the man who will at once command most votes among his own partisans and draw away most votes from the enemy becomes a necessity. In the earlier history of the United States such conventions were constantly held and the system received no abuse. But the political class was a different one in those days. Removals taking place for cause, it was impossible to make *a trade* of party service. But forty years ago we introduced the principle into democratic government that offices were spoils, the proper prey of the victor. From that moment the management of party has been growing more and more corrupt. At present fifty thousand offices are open to the competitive rascality of those low enough to be tempted to compete. These are the prizes for which the hungry delegates to caucuses enter the lists. Nor do the aspirants after office only engage in the conflict; the office-holders must do the same, lest their more active rivals outstrip them. The body of the caucus come together for the purpose of defending or attacking particular persons, of removing or relieving from fear of removal their friends and enemies; not, as formerly, for the purpose of nominating fit men for office. Take any country town you please, and you will find the most active man at all conventions, the hottest, most virulent partisan, is some fellow who is perpetually assuring every one that "he don't want no office," and is well understood by all who know him to have been intriguing for the postmastership for years. These are the men who bring the caucus system into discredit. It is not the caucus which lies at the root of the matter, but the system which has produced the class which composes the caucus. So long as we have fifty thousand men trembling from hour to hour for their official life, and two hundred thousand more thirsting for the official blood of the first fifty thousand, so long shall we have mean, petty motives entering into the selection of candidates, and so long will it be impossible for purity and honorable intelligence to obtain control of the Government.

IS THERE SUCH A THING AS SEX?

We propound the above question in no bantering, jocose, or trifling spirit, but in all gravity and seriousness of mind. Some may think it foolish, remembering what point the physiologists make of sex, finding it in trees and plants, and even in organic nature, where elements and gases combine somewhat after the masculine and feminine manner. But while the distinction between male and female is traced through the lowest orders of creation, is there not a disposition to slur it over in the highest orders, as being a fact of secondary and incidental import, a fact apparent in the animal and physical economy, but not pertinent to the social economy or the spiritual; a fact that becomes thin and precarious and insignificant as men and women leave their bestial condition, and is destined to disappear in the fulness of humanity? Apostles of "a-sexualism," if we may so name it, are abroad in this generation, suggesting that the old distinction between men and women may be an ancient delusion doomed to pass away in the new order of civilization. Did not an apostle say, "In Jesus Christ is neither male nor female, but a new creature?" And shall not that crea-

ture be both male and female in one? The orthodox formula ran, "Man and woman are one, but the man is the one." A new reading is, "Man and woman are one, but the one is the woman." The correct rendering will be, "There is neither man nor woman any more. Humanity abolishes both." So seem to say the zealous champions of the hitherto "suppressed sex," persuaded that the admission of sex has been the ground of the "suppression." They see no way of securing for woman her rights short of disavowing the existence of the quality that has all along been supposed to constitute her a woman. She must be educated precisely as if she were a man. She must go into the market and appear in court on the same terms with men. Civil life must recognize no difference between masculine and feminine. In the political world her place must be undistinguished from that of her companion biped, whose extremities are otherwise clothed and whose countenance is otherwise adorned. The intellectual sphere has no separate nook or seat for either a worse or a better half. The soul knows no gender.

We hope that we appreciate the motives that animate the workers in the cause of woman's elevation. We are fully sensible of the fact that they are laboring to throw off burdens of great oppression, to correct the errors of centuries, to place one-half of the human family, and the most interesting half of it, in its true position. We wish them every fair success in their enterprise. But laws are laws, distinctions are distinctions, and facts are facts. Or, haply, are there no such things as laws, distinctions, and facts? Admit that the differences between the sexes are not yet determined with the nicest exactness, is it fair to assume that no differences exist?

Now, it may be a superstition of ours, but we too are inclined to think in this immense field of modern discussion one thing, at least, may be taken for granted—and that thing is, *sex*. Sidney Smith once remarked, with the wit that was not always wisdom, that if boys and girls were taught alike they would soon be undistinguishable from each other; and he said it as if he hoped they one day would be. We are sorry for those parents of large families of unmarriageable daughters who indulge the same hope, but we cannot encourage them in the belief that it will be speedly fulfilled. Sidney Smith died before the era of physiology came in. That era affirms sex more absolutely than it was ever affirmed before. The more deeply human nature is searched, the more sharp and trenchant is found to be the line that cuts it into two halves. The fact of sex is comprehensive, complete and exhaustive. The unlikeness between men and women is radical and essential. It runs through all the spheres. Distinct as they are in bodily form and feature, they are quite as distinct in mental and moral characteristics. They neither think, feel, wish, purpose, will, nor act alike. They take the same views of nothing. The old statements that one is passive, the other active; one emotional, the other moral; one affectionate, the other rational; one sentimental, the other intellectual, are likely to be more than verified by science. Of course these statements, whether verified or not, do not justify the imposition of arbitrary limits on opportunity or enterprise. It still remains to be determined what place each shall fill, what work each can do, what standard each can reach; and these nature should be left to determine. But that both cannot occupy the same place, do the same work, or reach the same standard, ought, we think, to be assumed. Nature has decreed it so. The exigencies of life demand that it should be so. More emphatically still, if that could be, the amenities of life, the sentiment, romance, poetry, personal, domestic, social delight and charm of life insist that the distinction shall be preserved. No doubt it will be preserved if it is decreed. Nothing we can do will impair the force of a predetermined law. But we should be careful to acknowledge it where it plainly appears. We have no right to assume that it ever will be or can be abrogated. To proceed as if such an eternal distinction did not or should not exist is to plunge into all manner of difficulty. Make experiments, but confess that they are experiments. Venture theories, but avow them to be theories. Do not mistake surmise for demonstration, or enthusiasm for knowledge, or desire for insight, or passion for principle, or a wish to improve society for a conviction that the particular change is an improvement. Do not adroitly substitute a conclusion for a premise, and then press reforms as demanded by the "nature of things," when the "nature of things" may be directly against them. So long as the suffrage and other revolutions are regarded as experiments designed to feel after the lines and limits that sex claims for itself—so much and only so much—no harm need follow. The spirit of reform is then scientific. But if it is taken as accepted that sex has no lines or limits, but is a name to which no deep reality corresponds, immense harm will be done; for then the apparent failure of the reform will be traced to the wrong origin, and will yield no fruits but those of fanaticism.

Thus far the element of sex stubbornly holds its own. Nothing has occurred yet to induce the belief that men and women can profitably or successfully exchange parts or perform the same parts. It has been shown that men have been doing some things that women might do as well or better; but it has not been shown that men and women may put on precisely the same equipment or perform precisely the same service. The notion is fanciful that by educating the sexes together they will outgrow the old folly of romantic sentiment, and will live in the undisturbed serenity of a single sex beneath a single roof. The discipline at Oberlin, we are assured, is very strict, and strictly administered, with a view to prevent scandal. At Antioch, Horace Mann was tormented by a ceaseless anxiety. Even in normal schools—where the students are for the most part "out of their teens," past the sentimental period, unusually intellectual, under severe mental discipline, qualifying themselves to teach for a livelihood, with little time or disposition for dreaming—intellectual rivalry does not abolish the distinction between the two sexes of scholars. No scandalous disorders disgrace the institution, but the secrets of hearts are unrevealed, save by an occasional engagement, which discloses the fact that all the ladies are not Minervas, nor all the gentlemen Platonists.

The industries of modern society offer room and opportunity for the genius of either sex to demonstrate its scope. Male and female may divide employments without quarrel or question, nor would it be difficult to assort them even now in advance of experiment. The learned professions have their masculine and feminine aspects. In medicine there is a very broad and well-marked department where the feminine qualities of patience, sympathy, tenderness, tact, perception, nicety of touch and manipulation, administrative care and sensibility, can render admirable service—departments which fairly belong to women. In divinity it is not hard to discover a male and a female side. For the adequate discharge of pastoral offices men and women are required. The Catholic Church provides them both, carefully distinguishing the parts that belong to each. The Protestant minister has a wife whom the congregation adopt as shepherdess, and hold to her duties accordingly. And now deaconesses and Protestant Sisters of Mercy are coming into vogue among the Evangelical denominations, a confession that the law of sex holds in the administration of the Gospel. The feminine side of the law is not so obvious to ordinary vision; but somewhere, perhaps, either in the upper spheres of equity, where the moral sentiment comes into play, or in the lower spheres of technicality, where mechanical assiduity carries off the palm, a place for women may be found.

Politics, it must be confessed, appear thus far to be prevailingly and stubbornly, if not incorrigibly, masculine. There is very little indeed to justify the conclusion that women, we mean the peculiar qualities of women, have a place in primary meetings, party caucuses, public debates, club-rooms, conventions, or any of the ordinary election arrangements. In discussing woman's place in politics, woman's claim to public offices, woman's title to suffrage, the element of sex is left out of view. Her claims are pressed on the ground of her humanity. She is considered as a person, an individual, a social entity, a property-holder, a payer of taxes, a morally responsible being, a creature endowed with reason. Her title is placed on the same ground with man's precisely. The suggestion of a temporal, actual, and radical distinction between the man and the woman, as portions of organized humanity, which may qualify in some degree the terms "rights," "duties," "responsibilities," is resented as an impertinence. The bare mention of masculine and feminine in this connection is regarded as a declaration of war against the reformers. Sex has nothing to do with government or the concerns of government.

We do not regret the movement towards universal suffrage. We do not deprecate the experiment of it. We merely insist that it shall be regarded as an experiment and nothing more, and its failure, if it fails, must be set down to the circumstance that it made no account of the law of sex. At present it is an experiment, and a crude one. That there have been illustrious female sovereigns; that a few remarkable women have displayed no inconsiderable diplomatic ability as counsellors, advisers, executors, is no *proof* that the sex as a sex is qualified for political service. That in some secluded towns and in quiet times, when no stirring movements were on foot and no exciting questions were raised, women have voted peacefully along with men, is no proof that men and women will ever vote peacefully together in large cities, or in times when politics run high. They may and they may not. No *à priori* theories will decide the question either for or against the success of the trial. That the element of sex will crop out somewhere, and will have its dues, there can in our judgment be no doubt. Where it will crop out, it would be presumption to say. Whether it will appear early or late, among the causes or the consequences, in

legislation or in practice under legislation, in the assignment of functions, or the distribution of trusts, or the apportionment of duties; whether it will break out violently in the form of quarrel between the sexes, or will show itself graciously in the shape of new civil arrangements defining woman's place in the civil order, it would be absurd to conjecture. But at some point, in some shape, to some purpose, the old distinction will declare its presence and vindicate its power. Men will continue to be men, and women will continue to be women, in spite of theorists. A careful analysis of the masculine and feminine characteristics might save time and trouble; but if we mean to leave science out, and rush upon the painful and confused methods adopted by the revolutionists, so be it. We shall come at the same results in the end. Only let us not prejudge the results.

THE SOCIAL STATE OF GREECE.

THE social state of Greece at present is peculiarly one of transition; *peculiarly* so, because while society can in no country — not even in China—be said to be stationary, in the case of Greece the movement has begun so recently and gone on so rapidly that the old and the new are brought into strong contrast, and the fact of transition cannot escape notice. The state of the nation is vividly presented to the eye by the city of Athens. It consists of two distinct parts; one Turkish, having narrow, winding streets with no sidewalks, a pretence of a gutter in the middle, and rough, one-story houses; the other European, with broad, well-built, and well-lighted streets. Between these two there is an intermediate space combining the characteristics of each, but the difference of one extreme from the other is greater than can be found in most other cities, and such as marks two stages of civilization. It typifies the extremes of Greek society, and brings almost into one view the starting-point and the goal of the national movement.

This transition is from the enforced barbarism of Turkish slavery to the civilization of freedom. It should be borne in mind that the Greeks were not merely a dependent nation tributary to the Turkish Government, before 1821, but in a state barely removed from personal slavery. In opportunities of education, in control of the profits of their labor, in protection from outrages on their persons and families, they were hardly as well treated as the average of the negro slaves in the South were. When by throwing off the burden of oppression they regained self-respect and motives for effort, an upward movement began in every part of the nation, which is still going on. It has set on foot a general system of education, developed an extensive commerce, built a number of carriage-roads at great labor and expense on account of the natural obstacles, and given opportunity for an indefinite amount of individual enterprise in all spheres of activity. We might say, in other words, that this was a transition from Asia to Europe, from Oriental to Western habits and modes of thought. The position of Greece in relation to the two continents makes it the more remarkable that it has wrought out a civilization so decidedly European. Look at it on the map. Notice how it trends eastward towards Asia and Africa, by how wide a space, nearly equal to the whole width of Germany across from the Adriatic to the North Sea, it is separated from civilized Europe, and remember what almost barbarous and impenetrable countries occupy this interval, and you will appreciate the marvel of modern Greek civilization. There still remain traces of the influence of Turkey in the social state of the people. Such are to be found in the neglect of agriculture and manufactures, in the position of woman, in a general corruption of language and moral sentiments. The recent presence of the Turks in Greece has left its mark also in the results of slavery under such masters: for example, the number of persons above middle age who are without education, the want of roads, the brutish modes of life among the common country people. But in spite of their exposure to Eastern influences, their separation from civilized Europe, and the degradation of their slavery, the Greeks show a very strong tendency to Europeanize themselves and to attain some degree of free civilization.

One of their earliest steps in this direction was to establish a system of education, in which they were guided by certain leading German scholars, and adopted the German system as their model. So they have now the system complete, with university, gymnasia, and, below these, two other grades, the Hellenic and the common schools. In all these the education is free, and the expenses are borne by the Government. The common schools correspond to our primary schools. In the Hellenic schools the study of classical Greek and Latin is begun, and the other branches of study carried on. The gymnasia add to these the modern languages as optional studies. The university is divided on the German plan into four schools, of law, medicine, theology, and philosophy, with a school of practical pharmacy added, and in these schools lectures are given by the professors on subjects of their own choosing. Outside of these, there is in Athens a number of private schools for boys, covering the ground of the common and Hellenic in the national system, and of private girls' schools. The only public school for girls where anything more than elementary education is given is the Arsákeion, so named from its founder, which draws pupils from all parts of Greece, and sends them back to be teachers in the common schools. On the whole, a great effort has been made to secure a general education of the people, and the next generation can hardly fail to reap the benefits of it. Their zeal for this object is perhaps the most creditable point of the character of the modern Greeks. It is true the practical working of the system may be criticised, and the motive which prompts their zeal is not always the love of truth or desire of mental growth; but still such a system tends to correct its own faults, and may lead in time to the higher motives for self-culture. To have made such a beginning is an honor to the people, even though one can hardly help thinking it would have been wiser to have developed their material resources and laid a foundation for their finances first.

While the educational system of Greece is constructed after the German model, their literature has rather a French tone. You find in a catalogue of publications since 1820 numerous translations of such novels as those of Sue, Dumas, and Victor Hugo, with but few of books of any kind from other modern languages. Of original literature they have yet almost nothing. A few collections of popular songs, inferior to those made by Fauriel and Arnold Passow, a few volumes of fugitive pieces by educated modern poets, and some half-a-dozen volumes of essays and stories, are all the productions of the modern Greek mind in the sphere of pure literature. In special departments of study they have supplied their present needs by translations generally, but in philology, church history, and law have produced some original text-books and standard works. A great part of the intellectual activity of the Greeks works itself out in their newspapers, of which there are forty or fifty, including all kinds of periodicals, in Athens alone, none of them dailies, but the smaller ones appearing three, four, or five times a week. Of course, so many papers cannot be very well supported by so small a population (between 40,000 and 50,000), and especially as they contain often no more than one advertisement in a number. The newspapers proper are almost exclusively political, and overflow with rhapsodies about the past and future glories of Greece to a degree which even our old American papers scarcely rivalled.

Society in general shows the same Europeanizing tendency, with lingering traces of Oriental habits and ideas. Among the lower classes and in the country the latter still prevail. The houses are rudely built, generally of stone, and often without glass in the windows. In dress and personal habits many of the people are almost barbarians. On the other hand, every town has its school, and in the larger ones there are newspapers, organized courts, the European dress, and many marks of growing civilization. The more educated classes are generally adopting the European dress; especially in the university, where none of the professors, and scarcely one in a hundred of the students, retain the picturesque Albanian costume which is the national Greek dress. In morals, too, something of the same transition is going on, though the improvement is still rather superficial. The vices born of slavery, such as deceit, want of self-reliance, and idleness, are rife among them. Drunkenness is common, but rather harmful as a waste of time and money than as a cause of crime. The Greek is not maddened by his drink, but excited and noisy. The spread of education and refinement is beginning to raise the people above the grosser vices, but the church does little to teach them positive morality, and it is to be feared that they will acquire only such as respectability demands.

Correspondence.

DR. BOWDITCH ON CONSUMPTION.

TO THE EDITOR OF THE NATION:

SIR: The remarks in your issue of the 7th ult. upon Dr. Bowditch's articles on consumption, in the *Atlantic Monthly*, seem to me to call for some comment, as otherwise they may have the effect to deprive those articles of much of their weight and authority. The remarks referred to plainly intimate that Dr. Bowditch's theory, that dampness of soil is the great cause of consumption, is the result of superficial investigations, which, if more persistently followed up, *might have* shown him that the geological structure of the soil was quite as efficient a cause.

Not to spend time in noticing a style of criticism which, in passing upon articles of so grave moment as those of Dr. Bowditch's, assumes ig-

norance on the part of their writer as to his subject, thereby, unintentionally perhaps, but none the less effectually, weakening their influence, while the critic justifies himself not with well-defined statements of fact, but by vague suggestions of possibilities, I beg leave to correct the impression which your article undoubtedly produced upon the minds of many of your readers by a statement of facts.

Dr. Bowditch has made consumption his study, and specialty in practice, for about thirty years, and in this vicinity, and, we had supposed, throughout the United States, as well as in Europe, he is recognized as an authority on all that relates to that most distressing disease. So that when he deliberately puts forward a theory, even giving it the dignity of a law, touching the causes of consumption or its proper treatment, his views should be received with great respect, whether supported by evidence and argument or not. But in this particular case it so happens that the positions taken by Dr. Bowditch are fortified by the most abundant and satisfactory proof from other highly respectable authorities. In the "Tenth Report of the Medical Officer of the Privy Council" (London, 1868), Dr. Buchanan occupies fifty-three pages with a very interesting account of his investigations, under the auspices of Government, upon the subject of consumption as affected by conditions of soil. This is his preface: "The general sanitary enquiry which was entrusted to me last year having appeared to show a relation between wetness of soil and prevalence of consumption, the subject is now further examined with direct reference to geological considerations," and these are some of his general conclusions:

"The connection between soil and phthisis has been established in this enquiry

"(*a*) by the existence of general agreement in phthisis mortality between districts that have common geological and topographical features *of a nature to affect the water-holding quality of the soil;*

"(*b*) by the existence of general disagreement between districts that are differently circumstanced in regard to such features;

"(*c*) by the discovery of pretty regular concomitancy in the fluctuation of the two conditions, from much phthisis with much wetness of soil to little phthisis with little wetness of soil."

"But," he adds, "the connection between wet soil and phthisis came out last year in another way, which must here be recalled,

"(*d*) by the observation that phthisis had been greatly reduced in towns where the water of the soil had been artificially removed, and that it had not been reduced in other towns where the soil had not been dried.

"(*e*) The whole of the foregoing conclusions combine into one—which may now be affirmed generally and not of particular districts—that WETNESS OF SOIL IS A CAUSE OF PHTHISIS TO THE POPULATION LIVING UPON IT.

"(*f*) *No other circumstances* can be detected, after careful consideration of the materials accumulated during this year, that coincide on any large scale with the greater or less prevalence of phthisis, except the one condition of soil."

And, as indicating that mere geological structure has no influence upon consumption, he shows by tables that the position, as regards consumption of the chalk districts "will, on the whole, represent the order in which they would stand, if they were arranged according to the better or worse elevation of the chalk area on which the population live," and, generally, that, whatever the character of the substratum, the prevalence of consumption will be in proportion to the *water-holding capacity* of the surface soil, which, capacity is due to the nature of the surface soil itself, though it may be affected and modified by *elevation* and *slope*.

In a postscript Dr. Buchanan, after referring in a highly appreciative tone to Dr. Bowditch's experiments in the same direction, says: "Until the end of my own enquiry, I was in complete ignorance of Dr. Bowditch's researches. I should not insist upon this point except for the purpose of giving to the conclusions which Dr. Bowditch and myself have attained the additional weight that they deserve from having been arrived at by a second enquirer, wholly ignorant of and therefore unbiassed by the work of the first."

I should not dwell at such length upon this matter did I not feel that Dr. Bowditch in contributing his articles in the *Atlantic* is conferring an invaluable benefit on our people, which ill-considered and reckless criticism by a paper of the *Nation's* standing might seriously impair.

R. H. B.

BOSTON, Jan. 25, 1869.

[We are really very sorry if anything we have said about Dr. Bowditch's articles has tended to lessen his influence or authority with anybody. The "Literary Note" (*vide Nation* of the 7th ult.) in which we drew attention to Dr. Haviland's labors, and suggested the possibility of Dr. Bowditch's not having examined with special care the geological conditions of consumption, did not profess to be a formal criticism of his researches. It was no doubt rash or careless to suggest in that place his having overlooked anything or made any mistake, but "R. H. B." would have made the offence seem much more serious, and have more fully justified his own indignation and trouble of mind, if he had told us that Dr. Bowditch made formal mention of his geological investigations in the *Atlantic* article, and, furthermore, had not revealed the fact that even such an authority as Dr. Buchanan was as ignorant of them down to the close of last year as we were ourselves.—ED. NATION.]

THE FINANCIAL TENDENCIES OF THE LABOR MOVEMENT.

TO THE EDITOR OF THE NATION:

SIR: As I do not believe in the efficacy of repealing God's laws by statute, either as affecting the value of money, the hours of labor, or the phases of the moon, I suppose I cannot be called, in popular parlance, an admirer or friend of the laboring man. I have recently read, however, Gen. Butler's late financial manifesto, and notice this resolution, passed at a recent "Labor Reform" Convention held in this city, at which Mr. Wendell Phillips made a speech:

"*Resolved*, That the late speech of General Butler in advocacy of the financial tendencies of the labor movement, placing him in the front rank of statesmen and economists, evincing at once profound political sagacity and heroic devotion to right, merits and will receive the unanimous support of all intelligent friends of labor throughout the Union."

Of course no educated or reasoning man would take the trouble to refute General Butler's fallacies or misstatements. They do not surprise any one who has observed their author in court or on the stump. Butler knows better. Whatever he is, he is not a fool, and none but a fool would utter such stuff believingly. Butler, though no fool himself, believes evidently that he is addressing an audience of both fools and knaves. This speech was delivered for the masses, not for educated men, and is probably as mortifying an insult as was ever thrown in the face of people called intelligent. Butler is practically acting on Robert Lewes's theories. In his view the people are ignorant and they are dishonest, and the best way to popular success is to prey upon their dishonesty and their ignorance.

To students of theories of government the problem is an interesting one. If Butler is right; if our boasted system of education has resulted in this chaos of ignorance and knavery on which he lays the foundations of his future political success; if the whole country is as the Fifth Massachusetts Congressional District and the friends of "labor reform" in Boston, then our existing phase of popular government and general education is a hopeless failure. Robert Lewes is right, and mankind is not fit for self-government.

I think myself that Butler has miscalculated. Our people are intelligent enough to see through fallacies too transparent to admit of exposure. At the same time one's faith is somewhat shaken when a really intelligent constituency, as constituencies go, like his, does not resent such barefaced insults to their intelligence and honesty, and the friends of "labor reform" enthusiastically endorse them. Hitherto Butler has shown that he did not underestimate the masses he had directly to deal with; will he be equally successful in his attempt on a larger scale? Is the whole country as ignorant and knavish as the old Essex district? This is to be seen; but even his success so far is a sad incident to the real friends of popular progress.

BOSTON, January 28, 1868.

Notes.

LITERARY.

MESSRS. FELT & DILLINGHAM announce that they will soon issue reprints of five recent English books—namely, "The Life and Career of Lord Brougham, with Extracts from his Speeches and Notices of his Contemporaries"—his own notices of some of them would impart a lively tone to the volume; "The Public Life of Queen Victoria;" "The Life of Benjamin Disraeli;" "The Life of W. E. Gladstone;" and "The Life of John Bright."——Messrs. Hachette & Co., of Paris, have for a good while been publishing, and with very great success, a series of books, written by French writers of good standing, which we may briefly describe as intended to popularize science. They are fit for the instruction of the young, though instruction is not

their formal and avowed object, and not less well fitted for giving a useful smattering of information—for there is usefulness in a smattering if one knows it for what it is and uses it as such—on those scientific topics of which everybody is expected to know more or less, and of which it is not only unpleasant to know nothing, but is pleasant to know something. MM. Radeau, Guillemin, Meunier, Jacquemart, Viardot, and a dozen other capable writers, are among those employed by Messrs. Hachette & Co. in making their little manuals, and the subjects treated of are optics, heat, thunder and lightning, vegetation, astronomy, volcanoes, and many more. We should add that the description we have given of this series would not be complete if we did not say that it is not devoted entirely to science; the arts, both the fine and the useful, have some attention paid them, and one can learn of pottery, of painting, of sculpture, and carving. Some of the books of this series Messrs. Charles Scribner & Co. are going to translate and reprint, and some one or two they will reprint from translations already in the English market. They begin with M. Fonvielle's "Thunder and Lightning," and that will be followed by "Heat," which is the work of Professor Cazin.——Messrs. Leypoldt & Holt are to republish a book which will have something of the value of the books of Messrs. Felt & Dillingham which we have just mentioned, and will have in addition a value which those little works have not; we refer to Miss Harriet Martineau's brief sketches of distinguished men and women, chiefly English, not long since deceased. They give with accuracy, but not with fulness, the facts in the life of the subject of the memoir, and they also give Miss Martineau's opinion—which always is Miss Martineau's opinion, and a pretty decided one—on his or her character. Her criticism is often acute, for she has a woman's way of feeling character, and a good deal of a solid judgment not hitherto thought so common among women as among men. She has, too, it may as well be said, something of the feminine aptness for partisanship; but we do not know that her critical faculty is affected by her likes or dislikes more than most men's, because she is an able and honest person, sincerely desirous of being just. Her obituary notice of Landor is a good example of her fairness, her good sense, her acuteness, and her good writing. The "De Quincey" may be quoted in illustration of some of her other qualities; her friendship for Wordsworth, and her contempt for the subtilizing, unpractical, shiftless scholar, are more evident in it than that she ever understood or cared for the real De Quincey. Still the admirers of that singular and delightful genius will do well to read what may be said against him; truthfully, too, no doubt. Miss Martineau treats of a great many persons, and her social, literary, and political standing has long been such that she had exceptional opportunities for becoming acquainted with the lives and characters of distinguished men and women. She writes about Father Mathew, of both the Napiers, of Brougham, of Macaulay, of Lady Noel Byron—of whom she was a very intimate friend, and so decided an admirer that his lordship, wherever he is, may rest assured that he is better off than he would be with Miss Martineau—of Whately, of Dumas, of Lord Grey, of Amelia Opie, of Croker—who is heartily "paid out" for his bad language about Liberals—of Wilson and Lockhart, and fifty more. The same house announce Kreissle Von Hellborn's "Life of Schubert," and, doubtless for later publication, a book that ought to be a very good Christmas "juvenile," and which it is a wonder no one has thought of before—a monosyllabic "Arabian Nights' Entertainments."

—We spoke last November of a meeting of gentlemen interested in philological learning, which was called to meet at the New York University. At that preliminary meeting it was decided that a national convention of American philologists should be held in the course of next summer. The 27th of July has been designated as the time when this body will begin its sessions, and the place chosen is the city of Poughkeepsie, in this State. Measures will then be taken for completing the organization of a permanent "National Society for the Promotion of Philological Studies and Research in America." This being effected, the convention will proceed to the reading and hearing of papers written by several of our most distinguished linguists, and then what time remains—the session will be several days long—will be devoted to the discussion of various questions which, so far as they are set down in the circular before us, have the look of having been prepared by philologists engaged in the practical work of instruction. First comes the question inevitable, How much of the time in a collegiate course of study should be given to the study of language? Secondly, and thirdly, and fourthly, and on to seventhly, come these related questions which also may pretty confidently be expected whenever two or three or more practical philologists are nowadays gathered together: How much of the time should be devoted to the study of the modern languages? Should the study of the French and German precede that of the Latin and Greek languages? What position should be given to the study of the English language in our colleges and other high schools of learning? What is the most efficient method of instruction in the classical languages? What is the best system of pronouncing Latin and Greek? Should the written accent be observed in pronouncing Latin and Greek? It is to be hoped that the society's conclusions in regard to these matters—if it is going to come to conclusions as a society—may be put into print. There are thousands of teachers who, unable to attend the sittings of the convention, would be very glad to read the opinions of their superiors in learning upon topics which are of such everyday importance, as well as of intrinsic interest. It is almost a pity that all learned associations, when they deal with doubtful subjects, not merely of abstract interest, do not employ some officer whose duty should be like that of the reporter of a court. A synopsis and summing up of the arguments on the questions above-mentioned, with the decision of the society noted at the end, would be a useful book. It would be useful to so large a public, too, that probably enough the society might, by publishing these condensed proceedings, pay some part of its expenses. The eighth and last question put down for discussion is, What more efficient measures can be taken to preserve from destruction the languages of the aboriginal Indians of America? All professors of languages in universities, colleges, theological seminaries, and similar schools of the higher grades, all presidents of colleges in which languages are taught, and all amateurs and patrons of philological studies, are invited to be present at this first convention. Three o'clock on the afternoon of Tuesday, the twenty-seventh of July next, is the time appointed. We see in the list of names appended to the invitation those of Professors Atkinson, Goodwin, Gurney, Peabody, Pierce, and Sophocles, of Cambridge and Boston; Hadley and Whitney, of Yale; Evans and Haven, of Michigan; Greene, of Princeton; Harkness, of Providence; Drisler, Schmidt, Chandler, Barnard, Ferris, and others of our New York professors, and many more, representing all the important institutions of learning in the North, East, and West. Professor De Vere's, of Charlottesville, is the only name of a Southern professor that we observe. Names of amateurs that we observe in the list are those of General Garfield; Judge Daly; Mr. Richard Grant White; Mr. J. Hammond Trumbull, of Hartford; Mr. George Gibbs, of Washington; and Mr. Sumner. The meeting ought to be large. But we have, we must say, heard Poughkeepsie described as the hottest in July of all towns or cities in the United States, which, however, is perhaps an exaggeration.

—We should look in vain in this country for any periodical peculiarly the medium of the higher class of teachers, such as the professors of colleges and the heads of the best preparatory schools. There is no public ground on which the professors at Yale and the professors at Harvard can meet as such and compare experiences, or offer contributions to the development of their special departments, or criticise doctrines new and old, or weigh the merits of recent text-books. In this respect they are less fortunate and less intimately united than the teachers of grammar and primary schools, who find what nearly corresponds to their wants in the State conventions, county institutes, and official educational monthlies, with the names of most of which last our readers are tolerably familiar. Imperfect as are these means, they yet serve to maintain an *esprit de corps* which can hardly be said to exist in the grade above. Or again, to what college catalogue was it ever sought to give more than a local interest and value by attaching some essay or discourse, by a competent authority, on language, or mathematics, or any of the branches taught in the regular curriculum? Abroad the practice is not unknown; for instance, the important research into the Roland legends, by Dr. Hugo Meyer, presented in a paper to the Bremen Historical Society, was published as a sort of preface or introduction to the programme of the Bremen High-School (consisting, as we should say, of College, School of Technology, Latin and Grammar Schools in one). Opportunities would not certainly be wanting here, and we recall as we write a fit article for such a purpose which appeared not long ago in the *North American Review*—an enquiry into the origin of the Italian language with reference to the written and popular speech of the ancient Romans.

—The occasion for saying all this is the sight of the *Zeitschrift für Gymnasialwesen* (Berlin: Weidmann; New York: L. W. Schmidt) for January, which now enters upon its twenty-third volume. It is a handsome, open octavo of about a hundred pages, and in its divisions it corresponds nearly enough with the general scope of our own educational journals already referred to. But this one, as its title indicates, is for the body of Gymnasia—the college fraternity. It gives (1) discussions of questions of instruction and management, with whatsoever more or less immediately pertains to these offices in the gymnasia; (2) critical examination of recent

text-books; (3) Government regulations for the gymnasia, extracts from other periodicals, personal and school notices, etc. Under the first head, in the number before us, is a highly interesting paper on proposed reforms in German orthography, which is also treated at length among the reviews of text-books. We find on page 90, in a report of the twenty-sixth convention of German philologists and pedagogues at Würzburg last October, the latest expression in regard to the Apollo Belvedere. Prof. Henry Brunn, of Munich, exhibited to the meeting two plaster casts, one of the Apollo and the other of the head recently found by Steinhauser at Rome, and confidently supposed to be not only Apollo, but either the original of which the Belvedere is a copy, or else a superior copy from the same original. Prof. Brunn decides it to be the head of a young athlete. In regard to the ægis probably borne in the left hand, he accepts the conclusion afforded by the Pouqueville-Straganoff statuette in bronze.

—The proprietors of the *Watchman and Reflector* call our attention to the fact that the recent squabble between it and the *Independent*, on which we commented jocosely last week, was due simply to its having forwarded a fac-simile of its first number, published fifty years ago, to one of the editors of the *Independent*, "only bespeaking such reference to the fac-simile as might be judged fit," a proceeding which these gentlemen do not consider equivalent to a formal application for "a notice." The subsequent trouble therefore arose, apparently, from the *Independent's* looking on the *Watchman's* comments on its own theological position as in some sort a breach of the condition on which it accords "notices" to its contemporaries. The matter is one of very little interest either to us or the public, and we return to it simply to disclaim all intention of imputing any extraordinary depravity to either *Watchman* or *Independent*, and to confess that the *Watchman's* application does, in the light of its explanation, seem a more innocent one than we had supposed. Any literary phenomenon which deserves notice it is the duty of an editor to notice, as far as his space and means will permit; if he only notices it because somebody interested in it asks him to do so, the notice is an advertisement, and he ought to present it to the public as an advertisement, and not as an honest expression of opinion. The system of mutual puffing, of which there is so much—more elegantly termed "the exchange of journalistic amenities"—owes its origin to the theory, which more than anything else helps to bring the press into contempt, that a paper is, and of right ought to be, the exponent of the editor's or proprietor's personal hopes and fears, likes and dislikes; an instrument with which to punish his friends, reward his enemies, push his fortunes, and bring confusion on those who think meanly of him and his works, report his speeches, and even chant his praises. From this theory the personal broils by which the press is so disgraced and the public so much amused and disgusted flow as naturally as possible. From helping one's friends to castigating one's enemies there is, in the newspaper world at least, but a short step; the editor who in one column describes his friend of the *Light-House* as a model of all the virtues, is pretty sure to have to tell in another of the desperate personal depravity of the conductor of the *Dark Lantern*. In fact, discussions between journals whose editors insist on treating their papers as their private speaking-trumpets, inevitably degenerate into common rows, such as would naturally take place in a meeting composed of rivals in business debating without a chairman. The general result is that there is no body of men exerting the same amount of influence, and really so deserving of respect, who enjoy so little consideration from the public. The members of the other professions look on them as boyish, flighty, irascible, shallow, and slightly unscrupulous persons, whose powers of mischief are great, and who therefore have to be humored, and even flattered, but whose sayings wise men do not mind, and whose ravings and boastings are a favorite subject of merriment in companies in which none of them happen to be present. But their quarrels and their mutual "cawings," as the Scotch say, perhaps do more than aught else to make them ridiculous. Of course the opinion of a professional brother cannot and ought not to be a matter of indifference to any properly constituted mind. There is no editor who ought not to be gratified by seeing in another paper commendation of himself or his work; but then to make such commendation valuable to anybody with a fair amount of self-respect and good sense, it ought to be genuine and hearty; it ought, in short, to possess those marks of thought, discrimination, originality, and sincerity which distinguish honest criticism from common puffery. In other words, no honest, self-respecting man ought to care for praise which he knows is accorded just as readily to an advertising charlatan as to a distinguished publicist, and which he knows, too, the slightest personal difference with the utterer would at any moment convert into dirty abuse.

THE TWO COUNTS MÜNSTER.*

At the beginning of our century Germany was a confederate empire, but an empire tottering towards dissolution under the weight of age and debility, and under the blows dealt it by the armies of the French Republic. The peace of Luneville revealed the fatal exhaustion of its vitality; Austerlitz gave it the finishing stroke; the Rhenish Confederation was formed by Napoleon, and Francis laid down the German imperial crown. During the following seven years Germany groaned under the yoke of the French conqueror or bled under his sword. The battle of Leipzig restored it to independence, and the Congress of Vienna reconstructed it in the shape of a loose confederation, without a central head and with a powerless Diet. This reconstruction, which almost everybody hailed as better, though not much better, than total disunion, was the result of a long and painful travail, being brought about by the discordant exertions of men of varied opinions and tendencies, under the influence of clashing interests, and partly under the pressure of foreign dictation. Its consummation was hastened, if not made possible, by the threatening reappearance of Napoleon on the stage, which commanded harmony and speedy work. The act which created the Germanic Confederation was signed on the 8th of June, 1815, ten days before the battle of Waterloo. It completed the general work of the congress which, under the auspices of Czar Alexander and his Austrian and Prussian allies, and under the chief diplomatic management of Nesselrode, Metternich, Hardenberg, Castlereagh, and Talleyrand, readjusted the map of Europe—the intersecting boundary lines of which Napoleon had so rudely effaced—cast lots, so to say, over countries, and decided the fate of nations without consulting them. Among the principal authors and signers of that "Act of Confederation" was Count Ernst Münster, as representative of the King of Hanover—George III. of England—whose "Despatches to the Prince Regent" have now for the first time been published by his son. With what disregard of all right—human, national, hereditary—the Vienna assembly of princes and ministers disposed of so many countries and peoples; how coolly it sacrificed Poland to Russia, Italy to Austria, Saxony to Prussia, Denmark to Sweden, and liberty to monarchical sway everywhere, has often been told. But no history can convey as clear an idea of the heartlessness and rapaciousness which characterized the repartition of Germany by its princes as we can get from the perusal of a collection of diplomatic correspondence from so well-informed a member of the congress itself as was Count Münster. The following extract will suffice to show how shamelessly the traffic in lands and "souls" was carried on, especially if we consider that the writer belonged to the comparatively upright, fair, and patriotic portion of the assembled diplomats.

"Prussia," he writes, "having taken possession of that part of the Grand Duchy of Warsaw which falls to her share, as well as of her new provinces beyond the Rhine, and even of the greater part of those she is to obtain between the Rhine and the Weser, I charged Count de Hardenberg to represent to the Prussian chancellor that Prussia was in possession of a population of 131,500 souls which belonged to Hanover, this kingdom having only obtained 119,500 souls by the occupation of Hildesheim. It seemed to me, then, just, until the cession of the Hessian possessions and the Duchy of Lauenberg should be arranged, that Prussia should give up to us, in East Friesland, 119,500 souls, and in the town of Goslar 5,500—in all 125,000. This would still leave a surplus of 6,500 souls in her hands. . . . It is not unimportant to us, as the revenue we ought to receive is about 50,000 rix-dollars per month. . . . I have not sufficient confidence in the good faith of the Prussian cabinet to believe that we shall ever receive what is due to us. Now Darmstadt and Baden are very unwilling to enter into the unions sought from them to facilitate the arrangement agreed on between Austria and Bavaria. . . ."

The dealings of the great powers with each other are shown up in another despatch. The ministers of England and Austria, wishing to obtain the aid of Prussia in resisting Alexander's designs on Poland, confidentially offer her, under certain conditions, the whole of Saxony. This communication is betrayed to Alexander, who, in turn, tells Frederic William that Metternich has "offered to concede all his demands if Russia would declare itself against those made by Prussia." Informed of this conversation, Metternich writes to Hardenberg "formally denying the assertion of the Emperor Alexander, and offering to repeat this disavowal in his presence if he persisted." This letter, too, being betrayed, Alexander makes "this affair the occasion of a personal quarrel with Prince Metternich," who tries "warding off the blow by communicating, in his turn, the confidential letters of the chancellor of Prussia." And so great was the mutual distrust of the allies during the very Waterloo campaign that even the position of the Russian forces, which, "according to the

* "Political Sketches of the State of Europe from 1814–1867. Containing Count Ernst Münster's Despatches to the Prince Regent, from the Congress of Vienna. By George Herbert, Count Münster." Edinburgh: Edmonston & Douglas. 1868.

first plans formed at Vienna, were to remain behind the line of the armies on the Rhine—could not fail to cause much distrust and reserve in the movements of the active allied army." Soon after these gentlemen founded the Holy Alliance.

Their principal work, the Germanic Confederation, was far from realizing, in the eyes of Count Münster, that degree of freedom and unity which the German nation had so good a right to expect as the reward of its sacrifices in the cause of the fatherland and its princes. Having long served King George as ambassador and as Hanoverian prime minister, in which capacity he generally resided at the Court of St. James, he had gradually imbibed the principles of Tory constitutionalism, which in Germany were then considered liberal. He was sincerely attached to the common cause of Germany, although in his political affections his monarch occupied the first place and Hanover the second. He had little confidence in the good intentions of either Russia, Prussia, or Austria, and his intimacy with Metternich lasted only as long as the interests they represented were in harmony. When, in later years, Canning became the great antagonist of the Austrian chancellor of state, Count Münster did not hesitate to assail his former friend and instructor and his reactionary policy in a diplomatic note which appeared like a firebrand in German politics, though, in his own sphere, he continued to show an unlimited subserviency to royal desires and schemes. He left office shortly after the death of George IV., and lived his last years in dignified retirement, having refused both a large pension and the title of prince.

Unnaturally constructed, without the means of improvement, but well fitted to check progress and foster rivalries, the German Bund—though representing neither right nor power—managed to live, with a brief interruption in 1848-1850, from the eve of the battle of Waterloo, in 1815, to the eve of the battle of Königgrätz, in 1866, since which it has been replaced, in part, by the North German Confederation, under the lead of victorious and aggrandized Prussia. This violent change cost Hanover its independence. Having ceased to be connected with Great Britain by the ties of dynastic union when Victoria, in 1837, ascended the British throne, and her uncle, Ernest Augustus, according to Salic law, succeeded to the throne of Hanover, it alternately sided with Prussia and Austria in their more or less open conflicts for supremacy in Germany, and, under King George, the son of Ernest Augustus, finally took up arms on the side of Francis Joseph in the war which terminated the existence of the Bund. The Hanoverian troops fought bravely at Langensalza, but were soon after forced to surrender. Hanover became incorporated with Prussia, and the blind king an exile. Among those of his nobles who dared to warn him, though with little prospect of being listened to, against the fatal consequences of his warlike determination, was the young Count Münster, George Herbert, who has since become prominent by the decided readiness with which he accepted the new situation, as well as by his open declaration in favor of a further extension of Prussia's supremacy. The "Political Sketches" which he has issued together with the "Despatches" of his father, and which his lately deceased wife, well known in England as Lady Harriette St. Clair, translated from the German for the benefit of her countrymen, are probably intended to vindicate his course, which seems so little in harmony with the traditions of his house, to persuade his Hanoverian countrymen that, in so momentous a crisis as the present, *Gefühlspolitik* (sentimental politics) will not do, and perhaps also to smooth for him the path to influence under the new auspices.

The "Political Sketches" are divided into four heads, entitled "The Congress of Vienna," "Russia," "Germany"—by far the longest sketch—and "General Observations on the Existing State of Politics." They are sufficiently interesting, and to those little initiated in German politics tolerably instructive, without being either profound, scholarly, or exhaustive. The author passes in rapid, and sometimes very hasty, review the whole history of Europe, from 1814 to 1867. He states his views on almost every subject, but rarely supports them by argument. When he does, his argument is too fugitive to be conclusive. He is an undisguised aristocrat, but a friend of sincere, unadulterated constitutionalism. He abhors anarchy and the Napoleonic régime. He believes in Prussia—which must become Germany—wishes well to Austria's experiments of regeneration under Beust, and almost admires Russia, in spite of her "despotism tempered by assassination." He rejoices at the revival of Italy, laments Poland as lost, is friendly to Hungary, and would like to see Turkey extinct. The most interesting parts of the whole are those concerning the downfall of Hanover and the character and future of the North German Confederation. As his views on the latter subjects have called forth a considerable echo in Germany, we will briefly present them.

The war of 1866, he believes, "has given equal significance to the fortunes of Germany and of Prussia." Prussia might have imposed more centralizing conditions on the states that were in her power; their sovereigns ought, perhaps, to have been compelled "to acknowledge the King of Prussia as their protector, under the title of King or Emperor of Germany." He doubts whether "the experiment of a federal state that is now being made will answer." He should have preferred more distinctness in the new position of Prussia, "a firmer, more visible, and definite central power." The mechanism of the new Confederation "is too complicated, and, therefore, for any length of time, untenable. Federal commander-in-chief, federal chancellor, federal council and ministry, ministries of the separate states, privy council; in Prussia, house of lords, house of commons, provincial diets, municipal assemblies, district diets. This is rather too much." Yet the new constitution has created a ground on which a durable structure may be raised. "Legislation on a large scale, *i. e.*, for all federal concerns, ought to be in the hands of the central government and the Parliament together; the sovereigns being represented in an upper house." The separate state assemblies would then be in the position of provincial diets. A more compact union of North Germany would exercise a more powerful attraction upon the southern states. "Half measures are always followed by whole evils, and it cannot be denied that the annexation of some states, and continued existence of others, however political reasons may have required it, was a half-measure." What has not been done, can and must be done in future. "The present state of things in Germany, the North German Confederation, is nothing but a German empire *incognito*, and the sooner it takes its real position, and acknowledges its sovereign as such, the better."

NEAR-SIGHTEDNESS IN CHILDREN.*

THE author takes for his motto the words of Prof. Donders: "I say, without hesitation, that a short-sighted eye is a diseased eye." Probably four out of every five readers of this page do not believe Donders. Popularly, "a near-sighted eye is a strong eye." Let any one who wishes make the experiment of telling the next man he meets with glasses that his eyes are diseased. We assure him of a cool and incredulous reception. Every one has friends or relations who are near-sighted, but who work long and hard by lamp-light, and endure it as well as anybody; and we are not ready to believe that our friends—still less ourselves—labor under a "chronic organic disease" of the eyes. Still, the words upon the title-page confront us with the disagreeable assertion of this fact. Before examining Dr. Cohn's book, let us state plainly what a near-sighted eye is, and how it merits to be called diseased.

The fortunate possessor of a good eye can read a printed page like this at the distance of three feet. He can bring the page gradually nearer, to within three or four inches of his eye, and still be enabled to read, through a conscious effort—an actual muscular effort—of which the rationale is as follows. The rays of light pass through the lens, called crystalline, placed in the central axis of the eye, and are focused upon the retina, as the picture in a magic lantern is focused by the lens upon the white sheet. *Distant* rays are exactly focused by the normal eye at rest—and therefore vision of distant objects is clear. But to focus a *near* object exactly of course requires a lens of a different shape; and this slight change of shape is actually effected by the aid of a tiny muscle within the eye. When normal eyes are engaged upon objects within a distance of less than a foot, this muscle is constantly at work, adapting the shape of the lens to suit circumstances. Of course, the muscle may become wearied with overwork. It may ache, and set the whole eye aching. More than this, the effort—expressively called "straining the eye"—produces a pressure upon the coats of the eyeball from within; and in young children these coats are delicate, and may easily acquire a tendency to give way before this constant pressure. The pernicious habit of holding the head down to the book tends to the same result, for of course the blood rushes into the eye, crowding it still further, and increasing the tendency—if any exists—to a gradual bulging out of the eye. Here, then, is the whole story. An eye is overworked in such a manner as to make its fluid contents press too severely upon its coats; the pressure is continued, six hours a day, for two or three thousand days; the process is begun at an age when the whole body is soft, when even the bones will bend before breaking; the eyeball begins gradually to lose its correct shape; it yields at the back part, and thus becomes slightly elongated. This condition is near-sightedness. The retina, at the rear of the eye, is too far from the lens to receive

* "Untersuchungen der Augen von 10,060 Schulkindern, nebst Vorschlägen zur Verbesserung der den Augen nachtheiligen Schuleinrichtungen. Eine ätiologische Studie von Hermann Cohn, Med. et Philos. Dr., Augenarzt in Breslau." Leipzig, 1867. 8vo, pp. 171. [An Examination of the Eyes of 10,060 School-children; with suggestions for the correction of certain arrangements in schools injurious to the eyes; by Dr. H. Cohn, of Breslau.]

an image properly focused. Further optical explanation is here out of place; suffice it to say, that this simple change in the shape of the eyeball constitutes near-sightedness, and that this changed condition is not a healthy one, but often tends to a steadily increasing disorganization of the coats of the eye, producing partial or total blindness in the end.

Thus is our author's motto justified. As to his observations, they are truly invaluable, as being really the first of the kind which have been alike wide in their range, ample in number, and minutely careful in each instance. He has examined five schools of low grade in the village of Langenbielau, near Breslau, and twenty-eight schools—of six orders—in the latter city. The ages of the 10,060 pupils varied from seven to twenty-two years. The examination was conducted during the winter term of 1865–6, with all the appliances known to modern science for obtaining trustworthy results. The mode of examination was as follows. Every scholar was bidden to stand in a good light, and read from a sheet printed for the especial purposes of this test; the type being at a distance of four feet from his eyes. Those who could not read rapidly from this sheet were noted, as deficient in visual power. Each one thus noted as deficient was then subjected to a thorough examination by the means of glasses and the ophthalmoscope in the hands of Dr. Cohn himself. The result of this examination gave the surprising total of 1,730 children—over 17 per cent. of all examined—as more or less deficient in sight. We will give a rapid summary of a few of the principal results.

The number of children with defective vision increases steadily, through seven grades of schools, from 5 per cent. in the lowest grade to 31·7 per cent. in the highest. This large proportion, nearly one-third in the highest, is not accidental, for it is obtained from an examination of two *gymnasia* (answering to our American "colleges") containing 1,195 pupils. The proportion in the city schools is nearly four times as great as in the country schools. Of the 1,730 with defective vision, 1,004 were near-sighted, very trifling cases of the affection not being included.

No school was without myopic (*i. e.*, near-sighted) scholars. The village schools, on the average, had 1·4 per cent.; the city schools eight times as many (11·4 per cent.). In the city there was a constant increase in the number of myopes from the lowest grade of school up to the highest; *i. e.* from 6·7 per cent. up to 26·2 per cent. In the two upper classes of the *gymnasia*, 115 were near-sighted, against about 135 who were not so! As to age, among the pupils in the village schools, 243 were found who had attended school not more than six months; of these, *not one* was near-sighted. The proportion rises steadily, in almost every kind of school, from the youngest to the oldest classes. The degree of affection increases in proportion to the age of the scholars and the rank of the school. Less than one-fourth of the near-sighted required glasses between Nos. 6 and 15; the remainder weaker glasses. Near one-half required No. 24, or a weaker glass.

Without going further into Dr. Cohn's statistics, surely here is enough to set us on the enquiry for causes. No near-sightedness before the school age—and nearly one-half of the oldest pupils near-sighted! Our author sums up his results with the remarks: "I am far from attributing the enormous extension of near-sightedness among school children *exclusively* to the school; but a due respect for hygienic laws should compel us to arrange matters so that no one can point out even a possible cause of harm." The points which he would see attended to are:

"1. School desks and seats adapted to support the child's body in a healthy position, with his eyes at a proper distance from the book.

"2. Very well lighted school-rooms, to remove the temptation to hold the book near the face—a prolific source of the increase of near-sightedness.

"3. Statutes to prevent school children from wearing glasses unless ordered and selected by a physician.

"4. Strict disciplinary measures to prevent scholars amusing themselves by *squinting* (a popular athletic pastime!).

"5. Instruction in normal schools, that teachers in future may be aware of the evils arising from bad hygienic arrangements in schools." He adds: "I am convinced that if these suggestions should be attended to by those in authority, the result would be, not indeed the complete banishment of diseased eyes from the world, but *a great diminution of the number of 'diseases of refraction' in children.*"

In a very thorough examination of the school-desks and seats, Dr. Cohn found almost universally prevalent these faults: 1. They did not correspond to the size of the pupils. 2. The feet were unsupported. 3. The book was brought too near the face. 4. The seat was away from the desk (in order to allow the scholar to rise in his place), in consequence of which the body had to stoop forward very much. This was one of the chief faults found. 5. Desk tops flat, instead of inclined. He says, "In every class where I was present during the exercise of writing, I was able to show the teacher that the eyes of almost every scholar were but two or three inches distant from the paper, instead of a foot, or a foot and a half, as they ought to be." His suggestions are, to support the feet; to bring the seat and the desk so near that the edge of the latter shall project an inch over the former; to make the desk from 6½ to 9 inches higher than the seat, according to the size of the scholar; and to incline the desk-top moderately. The windows of school-rooms also received a good deal of attention from Dr. Cohn. He says, in regard to the quantity of light admitted, "The number of near-sighted pupils in the twenty elementary schools is in each case proportional to the narrowness of the street, the height of the opposite houses, and the lowness of the story in the school-house in which the class is placed."

In regard to the use of glasses we find our author reprehending in strong terms the employment of the same pair for reading and for viewing distant objects. It is almost sure to bring on a rapid increase in the degree of near-sightedness. Bad type, fine maps, writing on slates or with poor ink, reading in bed, by firelight or moonlight, fine embroidery, etc., are also more or less potent causes; to which he adds congenital predisposition. We would point out, as another cause, the over-heating of school-rooms. It needs no proof to show that this must cause congestion of the eyes—which is one of the strongest operating causes in producing near-sightedness. But an anecdote (for the truth of which we vouch) will set this in a clear light. A lady, recently visiting one of the colored normal schools in Richmond, found a class of young girls standing against the wall, behind the stove—apparently because there was no other place to stand. They all held their books within a very few inches of their faces, and on being asked why they did so, replied that they could not see to read otherwise (which was really the case). They were sent out of doors to cool themselves, and on returning they could read at the proper distance. Precisely the same state of things was encountered in another school: temporary myopia from standing behind a stove, cured by a few minutes in the fresh air.

Dr. Cohn found the opposite condition to near-sightedness in 239 children—less than one-fourth as many. Nor does the proportion increase in the higher schools, but the far-sighted are distributed without any seeming law. How extensive these evils are in our own country it is impossible to say. But it is safe to say that few persons are aware of their magnitude. It is the duty of our physicians to arouse the public, and we are glad to see from the pens of Dr. Jeffries (*Boston Medical and Surgical Journal*, Nov. 5), and Dr. Williams, President of the American Ophthalmological Society (*Mass. Teacher*, for December), articles bearing upon this point. We refer our readers to the above sources for a fuller discussion than we can find room to give.

Alphabet of Geology; or, First Lessons in Geology and Mineralogy, with Suggestions on the Relation of Rocks to Soil. By S. R. Hall, LL.D. (Boston: Gould & Lincoln. 1868.)—This is one of the numerous well-intentioned efforts to bring science to the level of the childish mind. The common method of making such books is to abridge treatises intended for older persons, leaving out the hard words and the philosophical ideas. Now, roast-beef is bad for sucklings even when it is chopped very fine and administered with a tea-spoon. The diets proper to baby and adult differ in quality, as well as in quantity and mode of administration. Abridgments of books for adults are almost sure to fail as helps for children. A new method is necessary for little children. A mere compiler can never make a proper child's book on scientific subjects. The task is one which befits an investigator in science, and demands a deal of original thinking. The book before us treats of mineralogy rather than of geology. It describes very inadequately some two hundred and fifty mineral and metallic substances. Mistakes and inconsistencies abound. Even the terminology is extraordinarily inaccurate and confused. Thus, on p. 129, we have barytum for barium; on p. 130, carbonate of *barytes* and carbonate of *strontium* are within ten lines of each other. On the same page occurs this sentence, which is but ill adapted to instruct adults, let alone children: "Both sulphuric and carbonic acid [*sic*] unite with a base called Strontium [*sic*], which is an oxide." The term "barytes" is indiscriminately applied to the sulphate and the oxide of barium. The composition of the strontium minerals is wrongly stated, because the author incorrectly says strontium when he means the oxide of strontium. Mistakes in the composition of the minerals described are numerous. Chemical errors abound. Sulphuric acid is said (p. 122) to be "formed by a combination of sulphur, nitrogen, and water." The statement that "potash is a protoxide of potassa" (p. 125) contains as much error and confusion of thought as can well be got into that number of words. In saying (p. 101) that "when strong acids are applied to lead it is converted into an oxide, and forms a beautiful white paint, so com-

monly used for the outside of houses," Mr. Hall misleads his little readers deplorably. Strong acids do not have any such effect on lead, and "white lead" is not a simple oxide at all, in spite of Mr. Hall's categorical statement to that effect on p. 120. On p. 96 we are informed that platinum is dearer than gold, the fact being that it costs less than half as much. On p. 115, barium is said to be of a dark-gray color; it is white with a yellowish tinge.

Of geology there is very little in the book. About twenty pages are devoted to loose and general remarks about rocks and soils, and in a supplement of sixteen pages a few illustrations of fossil vegetables and animals are lugged in; but these pictures are inserted without any connection with what precedes and follows and without sufficient interpretation. Mr. Hall erects clay into a mineral species under the name of "argillite," and makes it one of the nine letters of his "alphabet of geology." No such mineral species as "argillite" is recognized by good authorities.

The author evidently means to have children commit his very inaccurate descriptions to memory. The first hundred pages of the book are divided into thirty-five lessons, with questions appended. We can only hope that mineralogy will not be made disagreeable to many children by this vicious method of teaching it. There is but one way in which to study mineralogy with profit, and that is with minerals, blow-pipe, and test-tubes in hand.

A deal is said nowadays about the badness of Latin and Greek grammars and other classical text-books. They may be bad; but any one who has occasion to read many school-books on scientific subjects will soon come to the conclusion that the scientific manuals are on the average decidedly inferior to the grammatical, both as regards general intelligence of method and adaptation to the end in view.

Life among the Apaches. By J. C. Cremony. (San Francisco: A. Roman & Co.)—This is a book of personal adventures among that which is perhaps the fiercest and most incorrigible of our American Indian tribes. It is full of incidents such as will commend it to those who devour "thrilling narratives," while it gives many facts valuable to the student, and especially valuable to the student of our Indian politics. Indeed, its special object is to "let in such light as may result in bettering our present deplorable Indian policy." The author has earned the right to be listened to, if one may earn this by eight years of intimate and interested contact with his subject. The opportunity for this came, first, as Spanish interpreter to the United States Boundary Commission, for establishing the limits of the Gadsden purchase, in which capacity he travelled extensively in Arizona, New Mexico, and Northern Mexico—the home of the Apache race; and afterwards as Major of California Volunteer Cavalry, in the late war, when he was over much the same ground, engaged in fighting the wild Indians and guarding on reservations those already whipped. According to the author, the Apaches number 25,000 souls, and can or could bring into battle 5,000 warriors. This is exclusive of the Navajoes and Lipans, which are of the same stock. They rule or have ruled with terrible mastery over the whole of Arizona, a part of New Mexico, and parts of the Mexican states of Chihuahua, Sonora, and Durango, or over a territory nearly as large as all of our States bordering on the Atlantic and on the Gulf combined. Over this vast country they roam in small parties without government or leader except such as the occasion may create, and yet by an ingenious system of mountain signals they can concentrate at once large bodies for attack or defence. They build no houses and plant no fields, but live by the hunt and by robbery, chiefly by the latter. "The Apache has become the most treacherous, bloodthirsty, villainous, and unmitigated rascal upon earth." He is, however, no idiot, but smart, quick, and cunning, and sometimes manifesting high intellectual powers. Nor is he destitute of all the virtues. Still, it is the author's conclusion that he is incapable of improvement. Upon this he harps continually.

As might be expected, the proposed cure for the Apache does not contemplate any attempts for his reformation, but plans a vigorous campaign against him for his immediate subjugation, and that after a different manner from the "Regulation" system, for which the major has hearty and perhaps not unreasonable contempt. He would thus remove the Apaches from their country; why, or where to, he does not say; and, having abolished the present Indian Bureau, would put them in charge of the War Department. Now, every one not a "semi-idiot" or sentimentalist will agree with the author that the first thing for the Apaches, or any other marauding Indian tribe, is subjugation, and that the more thorough and speedy it is, the better. But Major Cremony, like all others who study this problem only from the military or police stand-point, can conceive of nothing beyond subjugation, except an enlarged guard-house called a Reservation, where Indians are to be fed at Government expense, and left to rot in swinish laziness. And this seeming incapacity of military men for taking anything but a military view of the matter is a serious reason why the care of the Indians should not be put entirely under the War Department, unless it can be in some modified form, as it has been in the Freedmen's Bureau. He gives a phase of Indian character from what is perhaps the darkest side of the problem of Indian civilization. As such, it is valuable because we have had nothing before it near so good. But this very fact makes the general conclusions of the author less trustworthy. For what may be true of the Apaches is not necessarily true of Indian tribes as a whole.

There are other characteristics of the book and its author which do not add to the credibility of its statements or to the weight of his conclusions. For instance, he makes a statement (p. 293) concerning the law of retaliation for murder, as it exists "among nearly all other of our American tribes," which is exactly the reverse of the truth. It is not the fact that there is generally any trial of a murderer by the tribal dignitaries before he is liable to the attack of the avenger of blood. And it is impossible that there should be, with the general absence among the Indian tribes of anything which can be called government. Equally untrue are his sweeping assertions (pages 96, 192) that all efforts to Christianize or civilize the Indian tribes of our country have been failures. He cites the results of the Jesuit missions in California, but probably never studied far enough to see that their failure to regenerate the Indian lay in the fact that they introduced no new principle of life.

As regards literary character, the book is written in a plain, outspoken style, which is only marred by the frequent announcements of the author that he makes no attempt at fine writing and by the unnecessary use of the egotistical pronoun. The book would have been much better had the author arranged his material so as to bring together his studies in Apache customs and character and his reflections thereon, thus saving much repetition and some inconsistencies. It needs also a good map and index, and on the whole is worthy of them.

Blindpits: A Story of Scottish Life. (New York: G. P. Putnam & Son. 1869.)—Notwithstanding its clumsy and inartistic construction, "Blindpits" is a clever and very readable novel. Its author is a person of great good sense and shrewdness, and of unusual ability in the analysis and portrayal of character. The book, had its merits not been obscured by the lack of anything like a sense of form and proportion, which would have kept inferior interests properly subordinated, might have been much more than clever. There is not, it seems to us, an ill-drawn character in it, and, considering that twenty or more are introduced and that most of them are depicted at full length, and all are very distinctly outlined, that is to say that it has very unusual merit. But there are at least half a dozen of these characters who in no way aid the progress of the story, who, in fact, retard it, and who should have been cut out without mercy. The book, too, is written in an easy, unaffected style which is always sensible, not infrequently humorous, and sometimes pathetic. The conversations are natural and lively, and have the merit of confirming the author's verdict on the characters. Usually, in novels, the reader has to take the writer's word as to the intellect, the wit, or the genius of his personages—when they speak for themselves no such qualities are evident. Probably there is not an unamusing chapter in this book; but it is true that there are chapters in plenty which should have been omitted, on the ground that it is not the business of a novelist to gossip about his characters, especially after he has sketched them so fully and firmly that the reader knows them thoroughly, but to use them for the definite purpose of making his novel a consistent and artistic whole. These faults—of over-diffuseness and unnecessary elaboration of minor points—might, however, have been overlooked had the book been intended only as a study of character, with no pretensions at plot or unusual incidents. But a principal event in the story is a poisoning of one of the personages and an ensuing trial for murder. The person who is poisoned is a prominent character, and the person who is tried is claimed by the author as the heroine. This catastrophe occurs somewhere near the middle of the book; nothing has prepared the reader for it, and it bursts upon one with a startling suddenness which is the less easily forgiven when it is found that no real interest hinges upon it and that it leads to nothing, not even to an additional glimpse worth getting into the workings of character. This blunder, which, on the supposition that the plot is the invention of the writer, would be fatal to any pretensions on her part to do artistic work, may be judged more leniently on the theory, which for various reasons seems to us a probable one, that the story of the supposed murder in all its details

is a true one, by which the author of "Blindpits" has been strongly impressed. Her error has been in not giving it its due place and importance. Occurring where it does, with nothing depending on it, it is simply an ugly blemish, which should have been got rid of even at the risk of a plotless novel. If it seemed of sufficient importance to write a book about, other things should have been kept justly subordinated to it. As it stands, Mr. Dods's poetical aspirations and Mr. Graham Richardson's love-making are quite as important and certainly much pleasanter constituents of the novel.

We have spoken of the truth and vividness of the character-painting in this book, and indeed it would be much easier to understate than to overstate them. The men, it is true, are not quite so well done as the women—a fact which gives a hint at the sex of the anonymous author—but still they are better than the average men of recent novels. The women, however, are transferred bodily from life to the canvas, and every merit, every blemish, shown in the most effective lights. The author seems to have known the characters as well as the story, and to have rendered them with equal literalness—without attempting to transmute them in her imagination into something truer than literal truth. The fidelity to nature which they exhibit is not that highest artistic truth which relates itself not only to the individual under inspection but to universal humanity, but a truth of local coloring, of Pre-Raphaelite fidelity to unessential as well as to essential facts. For this reason also, the book, which is never dull, which is full of well-done realistic details, and which has in Bessie Barclay as pleasant a heroine as we have met in many a day, is a book for which we hesitate to find a verdict more favorable than—clever.

Tricotrin: The Story of a Waif and Stray. By "Ouida," author of "Strathmore," "Idalia," etc. (Philadelphia: J. B. Lippincott & Co. 1869.)—The hero of this novel is the son of an English earl, who in his early boyhood abandons his birthright in a fit of anger with his father, and thereafter lives the life of a Bohemian. He is introduced to the reader as a man somewhere between forty and fifty, still in a state of romantic poverty, in which he owns nothing but a boat, a pet monkey, a priceless violin, and a rare copy of Dante, worth its weight in gold. He lives principally on brown bread and grapes, he fiddles at country dances, and by reason of the nobility of his nature and his "personal magnetism," has such influence over "the people" of all Southern Europe that he is recognized as a "power" among them by diplomatists of all nations. The "Waif and Stray" whose history the novel purports to be is a woman of overwhelming beauty, whom Tricotrin saves as an infant from the death by starvation to which she had been left by a heartless mother. The story of his passion for her and her lukewarm gratitude in return are not, we regret to say, either easy or remunerative reading. What "Ouida's" distinctive stock-in-trade as a novelist amounts to, we are puzzled to say. Her cheap rhetoric, her bathos, her sentimentalizing seem to be easily traceable to the influence of Bulwer; and for her situations she is as often as not indebted to another poor master—Mr. George Lawrence. She improves, however, on the worst traits of both her models, and as a maker of tawdry sentiment and "hifalutin" has few equals and no superiors.

Her present book is prefaced by what purports to be a likeness of herself, intended, probably, as a sort of sop to that Cerberus of a public whose assumed curiosity concerning her personality has been so ruthlessly dealt with. The face, which is a fine one, does not exactly fit in with one's conception of the woman who could have been guilty of "Idalia," and the whole effect of the engraving is suggestive of the idea that it has been borrowed for the occasion from some old annual or "book of beauty" of a date of twenty-five or thirty years back. The attitude, the dress, the figure, are more like the antiquated ideals of artists who studied the picturesque more than they studied anatomy, than like any particular human being.

Afranius, and The Idumean. Tragedies; with the Roman Martyrs and other Poems. By the Rev. Professor John M. Leavitt. (New York: Printed by Hurd & Houghton. 1869.)—Here and there in this volume there is a poetic thought. There is imagination and truthful representation in a line in which Afranius, walking and talking to himself in a soft, beautiful night, and thinking of Zala, who seems to her lover to be all the world—who seems to be, as mistresses do seem to moonlight lovers, the very reason of heaven and earth, asks himself:

"Does love for her, a heathen, make this night?"

The thought is not new in poetry, and the implied, parenthetical confession of faith Afranius might have spared, but the passage is to be praised.

"The Deluge," again, begins with this picture, which has vigor and clearness, if also some age:

"The heavens are chang'd, clouds piled on clouds rush on,
Sweeping in mountain masses o'er the sky,
Then, mingling, stand a roof of angry black."

But on the whole the passages quoted no more fairly represent our author's ability as a poet than this one, which may be said to exemplify his versification:

"Industry subdues its boisterous energy;"

and this one, which is at the beginning of "Faith in its Relation to the Individual," and which may stand as a specimen of his freshness and suggestiveness of thought and force of imagination:

"Hail, smiling Spring! thy life-imparting breath
Wakes dreary Nature from her sleep of death;
When glows thy sun and milder breezes play,
Through secret mazes steals the potent ray."

It is strange that every little while some new writer should come forward to illustrate still once more the truth, that a man may be clever and interesting in prose, and in verse be a source of regrets. And yet not strange; for it is of the essence of this fault that he who has it should be unconscious of it. After having given "Afranius" and the other pieces a more careful perusal than we usually give to verses of the value of these—for apparently this book is the work of a man with the best intentions—we find nothing for it but to say that we have no doubts or misgivings as regards the advisability of encouraging its author to turn his attention away from poetical composition—at least, for the public.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices*

IMPORTATION OF BOOKS

FROM

ENGLAND, FRANCE, AND GERMANY,

For Public and Private Libraries, Booksellers, etc.

The Subscribers have special agents in London, Paris, and Leipzig, and direct correspondence with English, French, and German Publishers. Orders for a single Book or Periodical, or for Books and Periodicals in quantity, will receive their most careful attention.

ORDERS FOR FOREIGN BOOKS, Etc.,

are forwarded as often as once a week, and answers may be looked for within six weeks. *Books, etc. for Public Libraries, College and School Libraries, pay no duty.* Catalogues and Bibliographical Works are kept for reference and may be consulted at all times. Catalogues and Cheap Lists of particular Publishers are supplied gratis on application.

JOHN WILEY & SON,

2 Clinton Hall, Astor Place, New York.

LAWS

OF THE

Last Session of Congress.

LITTLE, BROWN & CO.

PUBLISH THIS DAY:

The Government Edition of the STATUTES AT LARGE AND TREATIES OF THE UNITED STATES passed at the Second Session of the Fortieth Congress, 1868. Containing the Public Laws, Resolutions, Proclamations, Private Acts and Treaties, and Alphabetical List of Persons in the Act for the Removal of Legal and Political Disabilities.

EDITED BY GEORGE P. SANGER.

Royal 8vo, 592 pages, price $2 50.

The Treaties and Conventions in this pamphlet are of unusual interest and importance. There are, in addition to the Indian Treaties, the Postal Conventions between the United States and the principal foreign countries, regulating the rates of postage and the transmission of the mails; treaties with some of the chief European powers, respecting the reciprocal rights of the citizens of each country, including naturalization and expatriation, etc. Besides the ordinary legislation are acts in relation to taxing shares in National Banks; authorizing the issue of loan certificates; exempting certain manufactures from internal taxes; relating to Bounties, Pensions, and the Postal Laws; admitting Southern States to representation in Congress. There are also among the private laws the acts removing political and legal disabilities from persons in the several Southern States, for acts done during the late rebellion, with a full alphabetical list of their names.

WINER'S

NEW TESTAMENT GRAMMAR.

A GRAMMAR

OF THE

Idiom of the New Testament,

Prepared as a Solid Basis for the Interpretation of the New Testament.

By Dr. GEORGE BENEDICT WINER.

Seventh edition, enlarged and improved. By Dr. GOTTLIEB LUNEMANN, Professor of Theology at the University of Göttingen. Revised and authorized translation. 8vo, pp. 744, price $5.

This valuable standard work is perfected in this edition. It contains the last revisions of the author, edited by Dr. Lünemann, a former pupil of Dr. Winer, and is presented by Professor Thayer, of Andover, in a translation as strictly literal as is consistent with the English language. It is also furnished with an Index of Principal Subjects, a Greek Index, and a Complete Index of Scripture Passages, thus furnishing at once a Grammar and a Commentary on the New Testament. Figures are so arranged in the margin that any reference to either the sixth or seventh German editions, or to Masson's English translation, can be readily found in this edition.

WARREN F. DRAPER, Publisher,

ANDOVER, MASS.

THE GOLDEN ROBIN.

Just published. Will be found to be exceedingly attractive for YOUNG SINGERS, at School and at Home. Part I. contains: Musical Notation. Part II. Rounds and Exercises adapted to Physical Action. Part III. Songs for All Occasions; and Part IV. A Fine Collection of Sacred Pieces. By W. O. PERKINS, author of "The Nightingale," "Sabbath-School Trumpet," etc. Price Fifty Cents, on receipt of which copies will be mailed post-paid. OLIVER DITSON & Co., PUBLISHERS, 277 Washington St., Boston. CHAS. H. DITSON & Co., 711 Broadway, New York.

"The most Powerful Temperance Document ever Published."

So a distinguished clergyman characterizes

TOBACCO AND ALCOHOL.

I. IT DOES PAY TO SMOKE.
II. THE COMING MAN WILL DRINK WINE.

By JOHN FISKE, M.A., LL.B. 16mo, cloth, $1.

"Writing, as he does, in the interest of temperance, as opposed alike to the mistaken narrowness of view of the well-meaning teetotaler and the habit of excess found in the unstrung or underbred man, he claims our sympathy, as in all things does he who advocates the use of all things in place of their disuse."—*Liberal Christian.*

"We have no knowledge whatever of the author, but he writes ably, conducts his argument entirely upon a scientific basis, avoids no point pressed on the other side, and cites in support of his views the ablest and latest medical and chemical authorities. . . . We trust that Mr. Fiske's book will be candidly read."—*Chicago Advance.*

"A clear exposition of scientific conclusions—not the work of a partisan, but that of a careful and impartial scholar, whose sole object is truth."—*Boston Transcript.*

"Mr. Fiske's pleasant and profitable little book. Whoever read Mr. Parton's articles on their first or second appearance should now take Mr. Fiske's antidote."—*The Nation.*

Copies by mail, post-paid, on receipt of the price.

IN FEBRUARY.

The Fisher Maiden.

No. 2 of Sabin & Sons' American Bibliopolist,

A NEW JOURNAL AND CATALOGUE FOR BOOK-BUYERS.

Its design is to be a Monthly Register of New Books—a Catalogue of Receipts and Additions to Stock, and Discursive Matter concerning Books, Auction Sales, and Literary Subjects generally.

The Publishers' extensive acquaintance with the trade, literary societies, and bookbuyers generally, will insure a circulation to render it a profitable medium for advertisements. The large circulation of No. 1, of 40 pages, has already verified this statement—subscriptions having been received for nearly the entire edition.

For insertion in this number advertisements should be sent at an early date.

A subscription of one dollar will secure the Journal for one year.

J. SABIN & SONS,
84 Nassau street, New York.

American Cattle.

THEIR HISTORY, BREEDING, AND MANAGEMENT.

By LEWIS F. ALLEN, President N. Y. State Agricultural Society. 532 pages. Price $2 50.

NEW PATENT PIANOS.

RAVEN & BACON

(Established 1829),

Warerooms 644 & 646 Broadway, N. Y.,

MANUFACTURERS OF

PIANO-FORTES, WITH THEIR PATENT COMBINATION SOUNDING-BOARDS.

Patented August 14, 1866.

This invention, introduced exclusively into our Pianos, is of the greatest advantage to the tone of the instrument, as it affects the sounding-board, the very soul of the Piano, and produces thereby a pure liquid tone greatly superior in quality and power to that of the ordinary Piano. The sounding-board, released from its connection with the piano-case, and resting upon under sounding-boards, is relieved from the rigidity caused by such connection, and its vibratory quality increased.

Our Pianos are first-class in every respect, and purchasers will have not only our own guarantee as to their quality, but also the guarantee of the reputation of the instrument, obtained from the experience of our patrons who have used them for a generation. All lovers of this eminently household instrument, as well as parties proposing to purchase new Pianos, are invited to call and examine our assortment.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON-SENSE FAMILY SEWING MACHINE. This Machine will stitch, hem, fell, tuck, quilt, cord, bind, braid, and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., PITTSBURGH, PA.; BOSTON, MASS.; or, ST. LOUIS, MO.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured.

WANTED—AGENTS—To Sell the AMERICAN KNITTING MACHINE.

Price $25. The simplest, cheapest, and best Knitting Machine ever invented. Will knit 20,000 stitches per minute. Liberal inducements to Agents. Address, AMERICAN KNITTING MACHINE CO., Boston, Mass., or St Louis, Mo.

AGENTS WANTED.

$75 TO $200 PER MONTH! Or a Commission from which twice that amount can be made by selling the latest improved COMMON-SENSE FAMILY SEWING MACHINE. Price $18. For Circulars and Terms, address C. BOWERS & CO., 320 South Third Street, Philadelphia, Pa.

OF THE
UNION PACIFIC
RAILROAD
ARE NOW COMPLETED.

As 500 miles of the western portion of the line, beginning at Sacramento, are also done, but

267 MILES REMAIN

To be finished, to open the Grand Through Line to the Pacific. This Opening will certainly take place early this season.

First Mortgage Bonds
AT PAR.

By its charter, the Company is permitted to issue its own FIRST MORTGAGE BONDS to the same amount as the Government Bonds, *and no more*. These Bonds are a First Mortgage upon the entire road and all its equipments.

THEY HAVE THIRTY YEARS TO RUN AT SIX PER CENT., and both PRINCIPAL AND INTEREST ARE PAYABLE IN GOLD.

The entire amount of the mortgage will be about $30,000,000, and the interest $1,800,000 per annum in gold. The present currency cost of this interest is less than $2,500,000 per annum, while the gross earnings for the year 1868, FROM WAY BUSINESS only, on AN AVERAGE OF LESS THAN 700 MILES OF ROAD IN OPERATION, WERE MORE THAN

FIVE MILLION DOLLARS.

As the supply of these Bonds will soon cease, parties who desire to invest in them will find it for their interest to do so at once. The price for the present is par and accrued interest from January 1, in currency.

Subscriptions will be received in New York

AT THE

Company's Office, 20 Nassau St.,

AND BY

JOHN J. CISCO & SON, Bankers,
59 WALL STREET,

And by the Company's advertised agents throughout the United States.

Bonds sent free, but parties subscribing through local agents will look to them for their safe delivery.

ADDRESS, PUBLISHER OF "THE NATION," BOX 6732, NEW YORK.

PUBLISHING OFFICE, 3 PARK PLACE.

The Week.

A DISCUSSION on the consular and diplomatic appropriation bill began the week in the Senate. It was as lively as any debate that has been had for a long time, Mr. Patterson, of New Hampshire, being very angry with Mr. Sumner. The matter in question was whether or not to pay $12,500 annually to certain gentlemen for their services as judges and arbitrators under the treaty with Great Britain relative to the suppression of the slave-trade. The judges on our part reside, it appears, not at Sierra Leone, the Cape of Good Hope, and elsewhere in Africa, where they might be able to render some of the service for which they are paid, but here in New York and other cis-Atlantic towns and cities. Mr. Patterson moving that the appropriation for their salaries should cease, Mr. Sumner compared him to John Slidell of evil memory, and proceeded to eulogize the persons who had labored for the freedom of the negro and the destruction of the traffic in slaves. Mr. Patterson's resentment at being classified with negro-traders and slaveholders was very great, and as he has been a college professor he was able to give full and learned expression to his grievances. "Calling names," he said, "settles nothing. Why, sir, I might select a senator here and call him the most patient of animals with a parcel of books on his shoulders, deeming himself the national divinity; but that would not make him so." To do Mr. Sumner justice, he is never so consciously and deliberately insulting as this; it is his manner which is so trying to his fellow-senators. Then it is true, too, that the structure of his mind is a source of trouble to people of "business habits." The end of the matter, so far as the Senate is concerned, was that the President is to find out if Great Britain is willing to abolish the courts; and if so, we are to dispense with judges and appropriations together.

The Senate has passed, after a severe struggle, decidedly the most important measure of the session, in the shape of the Constitutional Amendment forbidding all "discriminations in the exercise of the elective franchise on account of race, color, nativity, property, *or education*, or creed," and taking the control of "the manner of appointing Presidential electors from the State legislatures, and prescribing their election by a popular vote. The adoption of the amendment would be a fitting close to the great controversy by which the country has been so long torn, but for the provision forbidding any State, no matter what its circumstances or its experience, to demand from any of its citizens an educational qualification for the exercise of the franchise. It is impossible not to regard this as a step backward, because, no matter what the practical operation of the article may be, it will be taken as a solemn national declaration, made by the most progressive people in the world, that intelligence is of no importance in politics, and that a "brute vote" *ought* to count for as much as a human one. All the experience of the country refutes this doctrine. There is not a single department of the Government which popular ignorance has not injured and is not injuring, and nothing better than windy declamation has been offered by anybody in support of the theory that a successful democracy is possible without general, and even considerable, education. There may seem to be something gained for the negro in this provision, but it is only temporary gain.

In the House the business of the week has been various in character, for not many days of this session and this Congress now remain, and everything presses. Indeed, night sessions are held, and there is no cessation of work. Of great local interest is the bill authorizing the construction of a bridge across the East River between New York and Brooklyn. Hitherto capitalists have had their doubts about putting their money into this enterprise, for it was uncertain whether the State had power to grant, as it did a year ago, permission to a company to bridge a tide-water stream. As enlarging the bed room, so to speak, of New Yorkers, as bringing their homes and their working-places somewhat nearer together, this bill is of importance. On Wednesday there was much talk about Johnson and Scannell, the two refractory witnesses, or non-witnesses, who were summoned to testify before the committee for investigating the election frauds in this city. Scannell was without excuse, and was ordered to pay the costs of his arrest by the Sergeant-at-arms. This he was ready enough to do, but some of the Democratic members of the delegation from this State urged him not to pay and then set about making him a martyr—a working-man with a large family oppressed by Radical tyranny. Inasmuch as the ex-alderman has and gratifies a taste for rings and precious stones, and possesses a trotting horse of the reputed value of $14,000, the task of putting him in the light of a person compelled to rot in jail for the want of seventy dollars was not easy, and the Republican members were successfully jocose on the subject. The affair illustrates very well Mr. James Brooks's notion of how to oppose ably the Republican party. In the course of the debate Mr. Robinson, of Brooklyn, was called to order for unparliamentary language. On the following day, Thursday, there was another scene of verbal violence in the House. Mr. Holbrook, of Idaho, is a young man and Western in his manners, and probably not a friend of General Butler's, and possibly he has been an Indian agent, as delegates from Territories are apt to have been. At all events, General Butler, discussing the appropriations for the Indians, was severe on the men who have had charge of our relations with the Tribes, and Mr. Holbrook at once denounced him as a wilful liar. He declined to avail himself of the chance offered him, according to custom, and would not retract; whereupon he was called to the bar of the House and sharply censured. On Friday the most important business was the discussion of the bill reducing the effective force and the expenses of the army. It was recommitted, and there is very little likelihood that the committee will bring it back this session. Mr. Garfield made some just remarks as to the unequitableness of setting adrift men who have been in the national service for perhaps twenty years and are now fit for no other than their own profession. Nothing definite has yet been done about the railroads—either the Air Line or the Pacific and its branches—and it is possible that nothing will be done till the new Congress meets. We say "possible," thinking of the schemes of the Pacific road lobby, which is highly pleased with the action of the Senate committee in consenting to what is called the

Omnibus Railroad Bill. But it is doubtful if the Senate will take the committee's opinion. The minority of the committee has drawn and signed a strong protest.

Mr. Sumner seems, however, to think meanly of the amendment, and urges the passage of a bill instead, on the ground that "whatever Congress enacts for human rights will be constitutional." It is very difficult to deal with a proposition of this sort fairly, inasmuch as it is almost impossible to get at its meaning. If it means that good motives in the legislators are all that is needed to bring an act into accordance with the Constitution, the establishment of a state church might be made constitutional. If it means, on the other hand, that "human rights" are better secured by an act of Congress than by a constitutional amendment, the answer is that the repeal of an act of Congress is a very simple and easy matter, the repeal of a constitutional provision a very difficult one. If it means that Mr. Sumner's proposed bill would necessarily be an enactment for "human rights," it is a gross begging of the question. The question is, whether the leaving of human rights dependent on an act, when a constitutional amendment is possible, would not be in practice a betrayal of them. The argument is in fact worth notice only because, although falling rapidly into disuse, it is a kind of argument of which it is high time we saw the last; and men of education like Mr. Sumner ought to set the Logans and Chandlers an example of giving it up. Nothing but the certainty that a man is inspired will justify him in using it.

The Georgia difficulty, in so far as the share of the State in the Presidential election is concerned, has been met in what is perhaps the most harmless of ways, by a sort of compromise in the shape of a joint resolution which provides that though the State vote may be counted, it shall not be allowed to defeat Grant's election. As Grant is sure of his election in any case, nobody will under this resolution have any reason to complain. No further steps have been taken with regard to the expulsion of the State delegation from the House or the reception of Mr. Hill in the Senate. It is to be hoped that no further steps will be taken, and that instead all Republicans will devote themselves earnestly and energetically to the task of procuring the passage and ratification of a constitutional amendment prohibiting the exclusion of persons in any State from the franchise or from office on account of race, color, or creed. In this we touch bottom; the process of reconstruction as revealed in Mr. Stewart's report on Mr. Hill's case has no bottom, and contains no reason why it should ever come to an end. If his doctrines be accepted, the turning of States out of the Union and bringing them in again would become a regular part of the work of the Congressional majority, every time it was vexed or pleased with State legislation or State justice, and we should have periodical applications for the infliction of the penalty from any party in the State which considered itself unfairly dealt with.

The text of the *Alabama* Convention has been received in England, and, if the telegraphic accounts be correct, the "settlement" is likely to be as vigorously denounced there as here, though for a different reason. The English press finds fault with it because it provides for the submission to the Commission of the whole controversy, including the hastiness and unfriendliness of the recognition of Southern belligerency before the news of the blockade reached England. The history of this point in the controversy is very curious. It was insisted on strongly by Mr. Adams and Mr. Bemis in the earlier stages of the discussion, simply as a means of proving the responsibility of England for the subsequent ravages of the Confederate cruisers issuing from her ports. "You recognized the Confederates as belligerents," they said, "sooner than was necessary, or than is customary, and you thereby not only showed your hostility to the United States, and gave us good ground for doubting your good faith in your subsequent efforts to preserve your neutrality, but you furnished the Confederates with a base for their maritime operations and encouraged them to make use of it. Your subsequent efforts to preserve your neutrality, too, were feeble and futile, and, therefore, on the whole case, you are liable for all damage done to our commerce by Confederate cruisers issuing from British ports." In other words, the prematureness of the recognition of belligerency was insisted on as a part of the proof of English liability for the loss sustained through the operations of the privateers. Now, however, the British Government has virtually admitted its liability for the ravages of the *Alabama*, and in the ordinary course of diplomatic debate nothing would remain but to press for payment of the money, this being the very kernel of the question.

The controversy has, however, partly through the effects of Mr. Johnson's indiscretions, taken an entirely new turn, and it is now proposed to make England confess that the recognition of belligerency was unprecedented and unwarranted, not by way of proving her liability for the actual losses sustained by the cruisers issuing from her ports, but partly by way of proving her responsibility for a large, indeterminate, and indeterminable amount of the total loss sustained through the war, both by land and sea, and partly by way of teaching her a wholesome moral lesson. In other words, the public, General Grant included, is decidedly in favor of keeping the question open, that is, of leaving it where the negotiations found it, and where it will now be left. Even the private claimants of *Alabama* damages support this course, one of the heaviest sufferers, Mr. Upton, of Boston, having signed a petition the other day against the confirmation of the Clarendon-Johnson Treaty. The figure which Mr. Johnson cuts under these circumstances is really pitiable.

Harper's Weekly defends the proposed action of the Senate and House with regard to Georgia, on the ground that "the substance of reconstruction is the essential point." This we take leave to call a dangerous doctrine, because if the substance of any measure was not to be found in the act or resolution in which the measure is embodied, people would never know what the law was, and the control of the public over law-makers, especially in these days of the "previous question," would be completely lost. The substance of reconstruction is or ought to be in the Reconstruction Acts; if it be not there, but was retained by Congressmen in the back chambers of their brains, the acts are traps or puzzles, not laws. Nothing could be better calculated, too, to encourage the reckless, speechless legislation on all subjects which is one of the great evils of the day than allowing majorities, when acts they have "rushed through" fail in attaining their object, to treat them as null and void, and produce an unknown "essence" or "substance" of the law from some secret repository, and make it take the place of the law itself as it stands on the statute book.

Who is to form the cabinet is still as great a mystery as ever, General Grant preserving a real and impenetrable silence on the subject. The veil, it is said, will be lifted soon after the official announcement to him of his election. This extraordinary departure from party usages has naturally, at last, begun to excite a good deal of dissatisfaction amongst the old politicians, who are hurt, and they say alarmed, by General Grant's failure to consult them about his appointments, and there is a good deal of head-shaking over the possible result of his want of political experience. To their chagrin and anxiety the failure of the bill for the repeal of the Tenure-of-Office Act to pass the Senate is said to be in part, at least, due. One of the reasons assigned for doubting Grant's fitness to choose his cabinet himself is that he has always been simply a soldier, and he is reproached for not seeking advice on the theory that the party managers are sagacious men who pass their lives in severe and conscientious study of human character, with the view after each election of getting exactly the right men into the right places in the Government, and that the results of their past efforts, for instance in the construction of the Pierce, Buchanan, and early Lincoln cabinets, had left nothing to be desired, and furnished Grant with models which the poor simpleton will probably try to copy of himself, but will miserably fail.

The week, as usual, has furnished a fresh illustration of the delight-

ful condition of the civil service. Last week we had a row between an ambassador and an admiral on a foreign station. This week we have a row between an ambassador and his secretary of legation, with side hits at the Secretary of State. Mr. Hale, of Madrid, is the ambassador, and Mr. Bliss, the secretary. Mr. Hale has, after years of suffering, made an appeal to a member of the New Hampshire delegation in Congress, which this gentleman has been foolish enough to print, in which Bliss is painted in the darkest colors. Mr. Hale says a history of "the indignities and outrages" Bliss has inflicted on his chief would be a history of the chief's "whole life" in Madrid, and in these atrocities he has been backed up by "Seward" (*sic*), who has been guilty of "duplicity," of "brutality," and of "baseness," and, worse than all, is "a confederate" of Bliss in certain Spanish contracts, for the sake of which the latter has neglected and betrayed his country. Moreover, "a Spanish woman has married" Bliss and "controls him," and, from being a "Channing Unitarian," he has embraced Popery. And yet again, he has had a stand-up fight in Mr. Hale's drawing-room, during his absence, in the presence of Mrs. and Miss Hale, with another visitor, an American doctor named Mackerlain, and the combatants were separated after the first round by one of the servants of the legation. Their meeting was accidental, and the deadly nature of their hostility may be guessed from the fact that, though they were both merely calling on the ladies, they refused to postpone the encounter. The object of Mr. Hale's letter to the New Hampshire Congressman is simply to get the New Hampshire delegation "to recommend General Grant to continue him in his place;" not that he wants the place particularly, but he wants to stay in it long enough "to triumph over these two men who have used him so basely for so long a time;" in other words, "till Perry and Seward are both out of office." We know nothing of the merits of the quarrel except what we get from Mr. Hale's letter, and we know nothing of General Grant's views about the Spanish mission; but, judging from the letter, we should say that if he thinks the United States need just now a prudent, discreet, self-restrained, and well-balanced man, he will bring Mr. Hale home at once.

The St. Domingo annexation scheme, as we feared, is likely to come up again. It appears that at the bottom of the movement is a person named Baez, who is nominally President of St. Domingo, having been raised to that dignity by one of the ordinary insurrections in 1867; but whose tenure of office is probably not worth a month's purchase; in fact, the last news is that a pronunciamento against him has broken out also. His competency to negotiate for the transfer of the island, or any part of it, to a foreign power may, therefore, be guessed. In fact, nobody is now, or is likely to be, competent to conduct a negotiation on behalf of the Haytians or Dominicans for any such purpose, or in fact for any purpose, because there is not enough confidence reposed by the people in any of their temporary rulers even for the maintenance of internal tranquillity. If the United States Government, therefore, engages in any such transaction, under the auspices either of Mr. Banks, Mr. Orth, or anybody else, it will become a party to a wretched little fraud, and an unprofitable one besides, because it will have to conquer the island and hold it by force of arms all the same. The notion that the island contains republics, in anything but the name, or can be decently governed by us except through a military force, is a pure delusion; and those who do not want to see the army increased, a leak of unknown magnitude opened in the Treasury, and a ring formed beside which the Whiskey Ring and the Indian Ring would fade into insignificance, ought to protest against it with all their might.

The news from Greece is clearly peaceful. The Bulgaris ministry resigned sooner than sign the protocol, and are reported to have acquired much popularity at Athens thereby, but the King has found a way out of the difficulty. The protocol is one of the most harmless of documents. It simply lays down certain doctrines of international law which no power thinks of disputing, though hardly any power observes them in practice, the principal one being that it is a breach of international law to aid an insurrection on the soil of a friendly power by permitting the transmission of supplies or reinforcements to the insurgents. The objection of the Bulgaris ministry to signing it therefore was, doubtless, a personal one mainly. They gave out they were going to fight Turkey, and then refused to sign any proposition, though it were simply an affirmation of the revolution of the earth on its own axis, which promised to establish peace with Turkey. Their resignation placed the King in an awkward position, as he had to get somebody to sign, and men ready to take office for this particular purpose were probably scarce, though office-seekers at Athens are plenty.

The exercise of the newly-acquired right of holding public meetings for discussion in France seems to be attended with extraordinary difficulties. The Commissary of Police is legally entitled to a seat on the platform, and he attended a meeting at Belleville accompanied by three shorthand-writers, for whom there was no accommodation. The chairman offered one seat, the Commissary insisted on having four, and, after a squabble, the Commissary refusing to recede from his position, the audience receded from theirs by leaving the hall to him and his reporters. There seems to be a want of practicalness, however, in this way of solving the difficulty. To stop the meeting was what he wanted, and to say their say, in spite of all obstacles, should have been the main point with the audience. An Anglo-Saxon or Hungarian meeting would have sat it out, and provided seats for the reporters. The course of Sunday evening lectures in the Salle Valentino, of which Jules Favre gave one and Laboulaye was to have given another, has also been stopped by what the French police call a "manœuvre," but a manœuvre of their own. The Salle Valentino is a ball-room, frequented in the evenings by the same circle who in summer figure in the Jardin Mabille. The ladies of this circle are not pinks of propriety, but they are now what they have been for the thirty years during which the Salle has been open to them. When the course of lectures began, however, the police became suddenly troubled by their dress and behavior, and intimated to the proprietor that, in the interests of public morality, they feared they would have to shut up the hall. The proprietor took the hint, and has procured immunity for his dancing-parties by shutting out the lecturers. The last popular hero is the Baron Séguier, whose resignation has been an immense success.

There is no change, however, worth notice in the general state of things in France. The financial statement of M. Magne looks well enough, as the financial statements always do, because their estimate of the expenditure of the coming year is never, or almost never, accurate, or intended to be accurate. There is a regular addition made to it later in the financial year, in the shape of "supplemental credits," which the Corps Législatif votes with little question. Deficits, too, ever since the accession of the present Emperor, are met by loans, so that the increase of taxation has been but trifling as compared to the increased ability of the country to bear it. But the impression seems to gain strength all over Europe that the adjustment of the Continent on its new political basis of popular sovereignty, instead of royal or imperial arrangement, cannot be completed without a fresh trial of material strength. Every power is now a little uncertain as to its exact relative weight, the standard set up by the Congress of Vienna having been destroyed, and new states of which the congress knew nothing having come into existence. Of the terrible nature of this struggle when it comes some idea may be formed from the perfection to which the manufacture of small arms and artillery has been brought within the last twenty years, and the size of the force which every Continental power now keeps on foot. The latest and most careful calculations, as produced by Baron Kuhn in the Austrian Reichsrath, give France 1,350,000 men; North and South Germany, 1,229,117; Austria, 1,053,000; Russia, 1,467,000; Italy, 480,461; or over five millions and a half. Deducting one-third for the difference between strength on paper and effective strength, we have still an enormous host left, armed and equipped, except the Russians, with the highest efficiency, and whose combined operations, considering the rapidity with which troops are now concentrated, and the delicacy and complexity of the existing social organization, would be attended with an amount of destruction, both of life and property, such as the world has never seen. The two powers which most dread the struggle are France and Austria, as it is very doubtful whether it would end without leaving France in a second-rate position, and without effacing Austria from the map.

CABINET-MAKING.

We take it to be well understood that any one who pretends to any knowledge of the probable constitution of Grant's cabinet is either an arrant humbug or else is some gentleman unfortunate enough to have to forward daily supplies of news from Washington. Grant, who, as Lowell said the other day, was elected "in spite of both parties," has astonished and confounded both parties by doing what fifty years ago was considered a matter of course by all parties—keeping his own counsel with regard to future appointments.

It is a long time since any President has done as much. Indeed, it is not going too far to say that, from the time of Polk down to the present moment, the custom has been that the party leaders should force into the chief position in the cabinet some one of their number who ran for the Presidency, but was defeated in the nominating convention. There is always some position in the administration (formerly it was the State Department, now the Treasury) which is prominently before the public, and, in consequence, the great object of political ambition next to the Presidency. At present, for example, when people say they really wish they knew who were going to be in the cabinet, all they mean is that they would really like to know who is going to be Secretary of the Treasury. The War, Navy, and Interior Departments are of little importance in comparison. In the same way, twenty years ago the State Department was the important one—was, in fact, the cabinet, in the minds of the office-seekers and the public. So, in Polk's cabinet, Buchanan, who had tried his luck in the Democratic convention which nominated Polk, received, as a reward for his sufferings, the Secretaryship of State. In Taylor's cabinet, or rather Fillmore's, Daniel Webster and Edward Everett had the same place in succession. Need that be explained? When Pierce came in, Marcy supplanted Everett, and Marcy had been balloted for in the convention of 1862. Buchanan again appointed Cass in 1857, and Cass, as the recorded votes of the convention show, and as all the world knows, had been an opponent of Buchanan and for a long time an aspirant to the Presidency. Mr. Lincoln appointed Seward.

But we have only gone over the most important and evident cases. A more minute investigation would, we are inclined to believe, reveal the fact that, in the administration last named, Mr. Chase was offered the Treasury, and Mr. Cameron the War Department, for reasons not unlike those which led to the admission of Mr. Seward. And who shall say why Buchanan thought Howell Cobb peculiarly fitted for the work of finance, or Isaac Toucey for naval administration? And why had Cobb, Cushing, and Jefferson Davis, and Guthrie, of Kentucky, seats in Pierce's cabinet? Or Robert J. Walker, Marcy, and John Y. Mason in that of Polk? In those days, when a gentleman was elected President, he looked cautiously about him for "dangerous" men, powerful intriguers, astute wire-pullers, sagacious log-rollers, who had always acted with the party, yet who were too intelligent not to be willing to change sides in case honorable preferment were offered them by new friends while it was refused by the old, or who were too patriotic not to be ready to abandon their principles if their principles seemed likely to cease to command a majority of votes in their section of country. Such men as these were accordingly sent for. Some one or two of them would naturally have been unsuccessful candidates for the Presidential nomination, and these it was peculiarly necessary to secure. Something must be done for these retainers, heretofore so trusty, henceforth so very likely to be untrusty. Accordingly, some gentleman who had received a heavy vote at the convention was made Secretary of State, the Treasury was given to some one whose name had not appeared in the convention, because there had been an understanding that if it did not appear something nice would be reserved for him; the War Department was given to some one who had been "before the country" as possible President for some time; the Navy was put in the hands of some one who wanted to try his luck next time, and thought the prestige of cabinet service would answer his purpose admirably, while it was privately known among "his friends" (who got him the appointment) that he must inevitably fail in that position and would so make way for another friend, who meantime might be satisfied with the Attorney-Generalship.

In fine, the old way of making up a cabinet was to make it a "political cabinet." The object was to put an end to the rivalry of uncomfortably active political supporters by giving them positions which should prevent them from going over to the enemy, and should at the same time seem to the public an honorable recompense for past services. Under this system, had the Democrats succeeded in defeating Grant last year, we should no doubt by this time have learnt to look forward to Mr. Hendricks as probable Secretary of the Treasury. The principle was to apply the same strategy to cabinet offices which was used in other parts of the political field—to treat them as booty, and distribute them in such a way as to strengthen the attachment of the incumbents to the party. And this was done not by the President, who was nominally in control, but by the party, which urged and advised and remonstrated and threatened until it obtained its will. The President was, until very lately, a mere puppet in the hands of the party managers; the more puppet-like, the better. Polk, perhaps, was as near the "political" ideal of the period of which we are speaking as any one could expect to come—utterly unknown before he was nominated, and the soul of geniality afterwards. It is essential to the existence of Spoil-of-office Government that individuals should be pliant, and "receptivity" might be said to have been the one essential qualification in Presidents of the old school. Every one will recollect how much was said by Democrats in 1856 about the delightful tendency to *compromise* which Buchanan had always shown; it was thought to be just the thing for a crisis.

The war produced a great change in the system. The absolute necessity of having an effective administration made people discountenance purely political appointments, and although Lincoln's first cabinet was arranged under the old system, and the State Department was given to Mr. Seward because he had been a candidate for the Presidency, the cabinet of 1865 was made up on a totally different footing. Every one was continued in office in order to give what was called "continuity" to the administration; in other words, for the purpose of returning to the plan practised by Washington, Adams, and the other earlier Presidents—of making promotions depend upon the merit of the candidate. Every one recollects the earnest determination on the part of all thinking Republicans that no changes should be made while the war went on. The result certainly justified their expectations.

But now there is no war, and the struggle for cabinet appointments has begun again, and one of the most interesting questions of the moment is, whether those who desire to force Grant into forming a "political" administration, or those who simply desire that he should put the best men he can find in office, will succeed. If Grant had been nominated in the ordinary way, by intriguing managers and corrupt rings, there would have been little hope. He would have been obliged to give pledges, and to regard partisan services, and to take the advice of the sages, and the result would have been that we should have seen the reintroduction of the check-and-balance system with this aggravation, that we should have lost one of the best results of the war at the very moment when it seemed secure in our grasp. But Grant was not nominated in the way we have named; he was confessedly the candidate of unbiassed, intelligent patriotism. It is extremely likely that the caucuses would have thrown him over if the constituencies and their newspapers and periodicals had not forced the caucuses into doing their pleasure. He was nominated as well as elected by the people. He therefore stands in the same peculiar position in which Lincoln stood in the spring of 1865, and can, if he pleases, carry still further the reform which was then begun. He can root out the influence of "politics" from the administration.

Though Grant's cabinet may not be an ideal one, there seems every reason to believe that he will remove his administration from the corrupt influences which threaten to poison it. He is silent, but no one supposes that he is sleeping; and to any one alive to the indications of the political sentiment of the times, nothing can be clearer than that every attempt (such as measures for the reform of the civil service, or to arrest the progress of the "rings" by cutting down subsidies) to make the Government intelligent, efficient, and economical, meets with the warm approval of the great mass of intelligent people throughout the country. We have no doubt that

Grant understands who nominated him quite as well as anybody, and that he is not at the last moment to be frightened by the politicians into making appointments of conciliation and intrigue. It is not to be forgotten that Grant served in the army during the war, and there saw a good deal of politics. He has already done a thing which no President has dared before to do, in detailing an officer of his staff to burn office-seeking letters—in other words, refusing to hear the prayers for political preferment of those who imagine his destiny bound up with theirs, and who under that misapprehension lately spent several months of their lives in trumpeting forth his praises with a view to preferment. Such an act does not seem to show that subserviency to the influence of politicians which is likely to lead to a "political" cabinet. Not that it is in the least likely he will attempt anything so utopian as complete independence of party. He has too much good sense to tilt against windmills. But there is such a thing as abuse as well as use of party organization, and against the former it is high time for somebody in power to set his face. Whether Grant is the man for the work remains to be seen. Of the nature of the difficulties he will encounter, we get an inkling already in the news that the repeal of the Tenure-of-Office bill hangs fire in the Senate, pending the appointment of the cabinet. If the appointments are satisfactory to the majority, all will be well; if not, the "traitor" may be sure he will catch it.

HOW ARE THE HIGH PRICES MAINTAINED?

The condition of the leading branches of business activity throughout the country is at this moment most anomalous and entirely unprecedented. With abundant crops of almost all our principal staples, with a year of active production in our important manufacturing industries, with a general business characterized by all persons interested as unprofitable and extremely dull, with a growing economy among all classes of the people and a consequently diminished consumption of all articles produced, we see yet not only no decline in price, but a positive advance in the cost of almost every single article of consumption or of traffic. Readers of the *Nation* may remember how we predicted early in the fall that trade this winter would be dull and unprofitable, basing our prediction upon the natural delay in marketing abundant crops upon a declining market. The dull and unprofitable trade has come in accordance with our anticipations, but the important decline in prices which was to have resulted from it has so far failed to show itself. The question is interesting to all, How are the high prices maintained?

We have of late years heard so much about the effects of speculation on so many things with which speculation had nothing to do; we have so frequently seen the premium on gold, and the credit of the Government, and the price of eggs and butter at the market-stalls, attributed to unscrupulous gold gamblers and forestallers and middlemen, who were really as much interested in lowering prices as in advancing them, that we have perhaps become too much inclined to go to the opposite extreme, and to entirely ignore the existence of that potent element of our commercial organism. We hear comparatively little of speculation nowadays; the press has stayed its daily tirades against Wall Street and the marketmen; the general public no longer watches the ups and downs of gold and stocks; the great mass of private citizens are no longer "taking flyers" in Erie or Northwest Common, or "dabbling a little" in flour or wheat; there is no one now to throw the blame for his losses on the professional speculator, and hence speculation is scarcely mentioned and seems almost to have died out. Yet never was speculation so intense, so powerful, so wide-spread, or so dangerous to the public welfare as at this moment. It is not the speculation of thousands of thoughtless individuals, who risk a portion of their earnings, much of their time, and withal a share of their comfort and independence, on the chances of the Stock Exchange or of the cotton market, and who after the "fitful fever" return to their ordinary avocations soberer and poorer. It is not even the speculation of the professional speculators who make a precarious living by seeking to foretell the natural course of the markets. It is a speculation of a very different kind. In all the markets there appear to have sprung up suddenly, almost as if by concert, organized bands of bold, able, unscrupulous men of wealth and prominence, who appear to have obtained control of the railroads, the banks, the crops, the real estate, gold and Government bonds, or of a large portion of them, and who are daily advancing the prices of all these things without reference to their value or to the supposed natural tendency of the markets, but by the simple determination to hold by main force possession of them until absolute necessity or want shall compel the public to pay whatever price they, the holders, choose to demand. The public is almost unanimous in the belief so frequently expressed by the *Nation*, that prices are too high, and they consequently abstain from buying. The speculative combinations declare that they will force prices still higher, and consequently refuse to sell. All business is at a deadlock, each party striving to starve the other out.

At all the great Lake ports, Milwaukee, Chicago, Detroit, and Buffalo, the stocks of flour and grain are steadily accumulating; but little or nothing is moving to the East. The railroads are bringing us no breadstuffs, nor are we sending any abroad, vessels are lying idle in our harbors, the Produce Exchange is almost deserted, and after a magnificent harvest prices have but slightly declined from the famine rates of last spring. The great grain speculators here and at the West are buying up everything that comes to market, and placing it in store to hold for higher prices. Petroleum, which has grown to be an article of the first importance in trade, is being produced latterly again in larger quantities than ever; it is subject to precisely the same influences as grain—it is accumulating in stores, and advancing in price, until its export is entirely stopped. Cotton, which of all our products is the most valuable, has for the last few weeks almost ceased to be an article of trade. In spite of a good crop, prices are nearly double what they were a year ago. Europe, which takes about two-thirds of our crop, refuses to pay our prices; American cotton can be bought in Liverpool to-day two or three cents a pound cheaper than in New York; the Manchester cotton-mills are running on half time, yet lose on their production; English and French ships that have gone to New Orleans or Savannah for cotton take back lumber, or whatever they can get, for no cotton can be shipped; American manufacturers are not buying beyond their most pressing wants; the planters themselves think they have made a mistake in selling their crops, and come into the market to buy them back and even to buy more; no one is willing to sell; and while the crop is good, and consumption light, and stocks are accumulating, prices keep advancing, and the whole trade is at a standstill.

The great bulk of the railroad stocks of the country have been, by waste, mismanagement, and fraud, materially reduced in value during the last two years; comparatively few of them pay regular cash dividends; many of them have been doubled and trebled in quantity without representing a single additional dollar in property; yet they are selling to-day from twenty-five to seventy-five per cent. higher than a year ago. Most prudent investors have sold out their railroad stocks and have purchased other property; never was there known so little investment demand for securities of this class, never so little faith in their honest management; yet prices go higher and higher by strides almost fabulous, until the most hardened gamblers ask themselves, How much further can things go? The last quarterly statement of the National Banks shows that they hold scarcely one-half the amount of Government bonds that they held a year ago; it is notorious that many private holders have been sellers; Europe is at present unwilling to purchase more from us—has not, indeed, purchased any for several months past; the amount of bonds held by large speculative dealers is very great, and there are no buyers at present prices; yet the prices keep advancing still. The premium on gold is more directly affected by the export demand than by any one other cause; for over two months there has been no export of consequence, and the condition of the foreign exchanges is such that no early export is probable; all other leading influences point to a lower premium, yet gold is to-day four or five per cent. higher than in December.

With the general dulness of business and the decline in profits of all trade, there naturally comes a decline in rents of all tenements used for business purposes. In the lower part of the city a very

large number of offices and stores are vacant. The owners of some of the recently erected bank palaces find no tenants for their marble halls. Of the extraordinary number of new dry-goods stores erected during the last two years on the west side of this city, many will, according to all accounts, stand empty or be rented at very low figures. The prospect is that dwelling-houses will be similarly affected. While thus real estate generally is not profitable, and seems likely to become less so, the prices paid for it are advancing rapidly; the transactions are almost incredible in amount; whole blocks of city property change hands almost daily for cash sums that a few years ago would have been the town talk for a week; whole townships, whose existence was all but forgotten, are suddenly laid out in city lots and country residences, and find eager buyers at auction after auction; acres of mud that have for centuries lain buried under the Harlem River, or the sweet waters of Gowanus Bay, suddenly emerge into the money markets as first-class security for loans on bond and mortgage; and the same state of affairs appears to prevail in all parts of the country alike.

The enormous activity of production and of traffic resulting from the waste and movement of our gigantic war rendered necessary the creation of an amount of money or currency far in excess of all our former wants, but certainly not in excess of the wants of those days. The creation of this increased amount of money or currency was accompanied or rapidly followed by a corresponding or even an excessive increase in all kinds of credit facilities. The war witnessed not only the issue of four hundred millions of greenbacks and of three hundred millions of bank currency, but it also witnessed the creation of fourteen hundred national banks and of twenty times fourteen hundred private banking firms. These national banks and banking firms, by the well-known and perfectly legitimate means of drafts and checks and loans and deposits, create credit facilities which for all business purposes serve just as well as money, and in fact are better than money when used for legitimate business purposes only. In this manner, while the currency of the country was trebled or quadrupled to meet the exigencies of the war, the credit facilities of the country were from the same necessity increased tenfold or fifteenfold; nor is there any good evidence to show that during the height of the war either currency or credit facilities were really in excess. But while peace and the disbanding of the armies have reduced the business movement of the country to a mere fraction of what it was four and even three years ago, the whole currency, the whole machinery of banking credits, remains at the same high figure as during the most active period of the war. We need to-day perhaps twice or three times as much currency and credit together as we had *before* the war; but we have in use ten times as much. One-half of our present currency and credit cannot find employment in legitimate business. It is the natural tendency of currency and credit, once created, to seek to be employed to its full extent. The currency and credit which cannot be employed in legitimate business is forcing itself upon speculators, and is at one and the same time the impulse and the means of the extravagant speculation now going on.

The remarkable feature of this speculation is that it does not lead to any increased activity in any of the different markets affected by it, except perhaps in the market for real estate; but even in the latter there seems to be a pause. As a general thing there are no buyers. The advance in prices is not based on increasing transactions. The prices are simply put up by the holders asking each day more than they asked the day previous. Once in a while the great combinations make a few sales and let prices fall, so as to give an appearance of activity to the markets, and entrap a few unwary outsiders into buying or selling at the wrong moment. But these are rather exceptional phases of the movement. Its regular course for weeks past has been a steady upward forcing of prices of almost every article named, without any increased demand for them—with, on the contrary, a steadily decreasing demand; without any increase in the real value of any of them—with, on the contrary, a steady decline in the productiveness or real value of most of them; without sound or valid reason beyond the sheer force of will of reckless men, and the incautious greed of the banks and bankers, whose money and credit are the cheap lever with which the whole machine is worked.

"Capital is timid." At least so says a favorite axiom of social science. But is the capital timid that trusts itself to water-lots? Is even the rapid progress of New York sufficient reason for making an East River oyster-bed worth as much to-day as a lot on Fifth Avenue was a few years ago? Is the capital timid that expects the surplus population of even our city to overflow within the next ten years one-tenth only of the acres of corn-fields and meadows turned into suburban villa sites during the last twelvemonth? Is the capital timid that allows store-house after storehouse to be filled with grain and flour and meats, at prices that admit of no export, after a magnificent crop, and with a lessened domestic consumption? Is the capital timid that enables a planter to hold his cotton, by advancing him fifty per cent. more than last year's average price, in face of a better crop than last year's, in face of a diminished demand, in face of preparations to double the crop next year, in face of the fact that it almost pays to import cotton here from England? Is the capital timid that lends to-day thirty per cent. more on a railroad stock than it would have done a year ago, when the value of that stock is lessened by one-half through its quantity having been doubled? Is the capital timid that lends on securities manipulated by men who control courts of law? Do timid capitalists, who have lent their money or their credit for thirty, sixty, or ninety days on railroad stocks or cotton or grain or pork—do they ever ask themselves who would buy these things of them, if they should ever be compelled to sell? At present prices there are no buyers except speculators interested in sustaining the price. If *their* ability to buy should be curtailed, who would relieve the timid capitalist of his load? Can any timid capitalist give any reason satisfactory to himself why any one of the articles named by us should to-day be worth one cent more than they were a year ago?

The only sensible reason that can be given is, that money is abundant. If money or credit could be profitably employed in trade, there would be more demand for it for that purpose, and it would be less abundant. The very fact that it is abundant shows that it cannot be profitably employed in trade. But if trade is not active or profitable, that is the strongest possible reason for a general decline in prices. The abundance of money is the very last reason in the world why prices should advance. The abundance of money, which tempts the capitalist to discriminate less closely in his risks, is the very thing that ought to make him more cautious than ever. In fact, capitalists and money-lenders generally have to learn that in times of peace and economy there is not and cannot be the same employment for money and credit that there was in times of war and extravagance. The excess of money and credit created during the last six years will have to lie idle during the years to come. Capitalists, like every other class of the community, will, hereafter, have to be satisfied with smaller profits and lighter transactions. Their present efforts to avoid the inevitable by lending on property or merchandise of any kind at present speculative prices can only delay the resumption of activity in legitimate business, and involve money-lenders, speculators, and the whole community in the irretrievable confusion and ruin resulting from sudden panic and collapse.

THE CRIMINALS AND THE LAW.

THERE is a good deal of ferment in New York just now on the subject of the growing audacity of criminals, and, unhappily, it is not confined to New York. Criminals are unusually bold, and the means of repression apparently unusually defective, through the West and Northwest also. The criminal class, too, seem to be gaining, like all other classes, by the general diffusion of intelligence, and are displaying in the work of robbery and murder a good deal of the power of combination and organization shown by their betters in great commercial and benevolent enterprises. Science, too, though it has done much to facilitate their detection and arrest, has, perhaps, done more to facilitate their escape. They use the railroad and telegraph as energetically as anybody, and the immense movements of population which the improved means of communication have caused of course doubles a fugitive's chances of avoiding observation in his flight.

But the great cause of the increase of crime must, after all, be

sought in the increasing defectiveness of the machinery of penal justice. The same agencies which are lowering the character and efficiency of the civil courts are, of course, lowering the character and efficiency of the criminal courts. One of these is the elective judiciary. That the election of judges by the popular vote should, in a more than ordinarily moral and religious community, interfere with the proper administration of criminal justice, may at first sight seem very strange to the simple-minded. But any one who is puzzled by the phenomenon has only to spend an hour or two with one of those lovely characters, "the men inside politics," in any State in which the judges are elected, and if he can only get him to explain fully "how the thing is done," the way in which his honor on the bench may, in many cases, have reason to fear the hostility of the friends of the swashbuckler or express robber at the bar will become plain enough. The judge is, however, after all, even in the worst States, only a subordinate hindrance to the due and proper punishment of crime. It is always difficult for a judge to be glaringly remiss in his duty, because he has, happily, to perform it in public and in the presence of professional critics. The principal mode open to him of favoring powerful criminals, at least in this city, consists in the "suspension of sentence," and, amongst the justices of the peace, in prematurely discharging prisoners, or in releasing them on "straw bail."

The real god of the thieves and murderers, at whose shrine they threaten or adore, is the district attorney. Wherever he is elective, he exercises a control over the administration of justice such as probably no judicial officer in the world, at least in a law-governed country, has ever enjoyed. He is, in the first place, usually nominated and elected rather for his political services than for his fitness for the place. In the second place, he is virtually responsible to nobody for his manner of discharging his duties; nobody has a right to call on him for an account of his stewardship. He is, he will tell you, responsible to "the people" from whom he derives his authority, and in a small Swiss canton or Greek republic this might amount to a real check. But saying that a judicial officer in crowded, busy, and complex communities like the States of the Union is responsible to "the people," is very like saying he is responsible to posterity or to humanity or the spirit of civilization. True, it is the business of the press to keep an eye on him; but the press cannot hit him no matter how much it shoots at him, and he knows it, partly for want of exact information, which it can procure from nobody but himself or his employees, and partly because the press abuses very respectable men so fiercely for mere differences of opinion that its charges against unworthy officials produce little or no impression. The minute a criminal leaves the justice's court-room, he passes into the hands of the district attorney, and everything this officer does for or against him from that moment is shrouded either in secrecy or mystery. He draws up the indictment; and, being the legal adviser of the Grand Jury, may press it or let it be thrown out. If found, it passes into a pigeon-hole in his office, and it is for him then to decide absolutely when he will bring it to trial or whether he will bring it to trial at all or not; or, if he does bring it to trial, whether he will take pains with it, and will bring out the points for the prosecution in the examination of his own witnesses, or cross-examine properly those for the prisoner, or make a strong presentation of the case to the jury. In most States, too, he has no personal interest in procuring a conviction. He is paid by salary, which he draws no matter what becomes of the criminals, and if you complain, as impudent people occasionally do, that somehow a good many bad fellows are never brought to trial, and a good many others prosecuted with such languor that they have no difficulty in escaping, the answer is that the officer owes you no account of his conduct, and that, at all events, you are so grossly ignorant both of the facts and of the law of the matter that it would be useless to talk to you about it, which, in nine cases out of ten, would be strictly true. There is no person authorized to visit his office, look among his papers, and ask why this murderer or that burglar goes unwhipped of justice. "The people" might make such an inquisition, but he is no more afraid of "the people" than of the precession of the equinoxes.

Supposing, however, the district attorney to be honest, capable, and energetic, and supposing him even to be paid by fees instead of a salary—so much for every conviction—and supposing the courts did their duty valiantly, and pronounced promptly the full sentence of the law, the greatest difficulty of all would still remain untouched, viz., the uncertainty as to whether the sentence would ever be carried out. Imprisonment for long terms, which now furnish the only penal protection society enjoys against grave crimes against person or property, and which in some States furnish the only protection for life itself, are in practice a mockery. They are hardly ever executed—a fact of which the criminals are perfectly well aware—and yet all schools of reformers and jurists agree in pronouncing certainty to be the element in punishment which, more than all others, gives it its efficacy. It is this which gives the punishment of death *all* its value and all its terrors. On every other ground it is objectionable. It is the absolute destruction of hope which it involves, the absolute impossibility of modifying or lightening or changing it, that makes it so terrible to criminals, a fact which its assailants almost invariably pass over without notice, and apparently hardly think of, and consequently they give themselves no trouble about a substitute. They tell us, as a matter of course, that you may imprison the murderer for life, but they make no attempt to meet the fact that imprisonment for life is practically an unknown punishment in American jurisprudence, and which, for reasons which cannot be removed without a total reorganization both of our political and social system, and indeed, we might add, without recasting human nature itself, cannot be introduced into American jurisprudence. What these reasons are we cannot state better than in the language of the Chicago *Tribune*, which has been discussing the efforts now making in Illinois to have the infliction of the death penalty restored to the judge, as under the old law, instead of being, as now, left to the discretion of the jury:

"If convicted, he can rely upon the strongest efforts to have his term made short, the chances of escape from prison, and the chances of pardon. Should he be imprisoned, the circumstances of his case will soon die out of public memory, and the feelings of the few who may remember them will be softened by time. New judges will be on the bench, new attorneys will represent the State, new governors will be in office. It never has been and never will be difficult, under these circumstances, to satisfy such officials that the demands of justice have been substantially complied with, and that the repentant and exemplary prisoner who has served one, two, or three years of his sentence is a fit subject for clemency. Friends and relatives, male and female, religious and political, will not fail to press the matter until at last the prison bars are removed, and the murderer walks forth in health and vigor, purified of all crime in the eyes of the law, and worth, in the estimation of society, a hundred dead men."

Not more than five per cent., the same journal says, of criminals sentenced to the penitentiary in that State for over three years serve out their terms, and those who do so are poor, penniless wretches who are more comfortable in prison than out of it. In Massachusetts, the penal system of which is perhaps better than that of any other State in the Union, the warden of the state prison reported in 1865 that "he had never received a man into that institution, on a life sentence, who did not say he preferred it to one for ten years." The records of the prison since 1833 show that while the average time served by prisoners sentenced for ten years is six and three-quarter years, the average time served by prisoners sentenced for life is only six and a quarter years. We need not after this cite the statistics of any other State.

All of this uncertainty about life sentences is, of course, not due to simple laxity on the part of officials. Some remissions of sentences are due to the commutation system, or are granted on proof of long good behavior; some to executive clemency, excited by all sorts of agencies; but no matter what the cause, the fact that life sentences or even sentences for long terms are practically never carried out, deprives them of most of their terrors for criminals, and practically, wherever the death penalty is abolished or rarely executed, puts the killing of a man on the same level with burglary or highway robbery, and thus furnishes every criminal who finds himself detected or pursued with the strongest possible temptation to murder his victim, in order to escape capture or destroy evidence. Of this privilege of course criminals are largely availing themselves. A policeman now counts on receiving one or two shots from a thief's revolver, as almost a matter of course, before arresting him, and the slightest resistance to a robber puts life in imminent peril.

These facts, which are notorious, give a curious air of humbug to the tremendous sentences recently pronounced on criminals in the New York courts, and convert into something very like a farce the surrender of the "butcher-cart thief" who murdered the sheriff in Michigan, where murder is punished by imprisonment "for life," to the authorities of that State, after he had received a sentence of forty years' imprisonment from the courts here for an attempt at burglary and felonious shooting at a policeman.

Considering that the opponents of the death penalty for murder do not profess to regard human life as absolutely sacred, and contemplate the killing of men by the thousands in war with perfect complacency, and even under certain circumstances with joy and pride, it is evident that they really consider the question of its retention or abolition as one of expediency simply, to be solved by experience. They would kill men for robbery only, if there were no other way of preventing robbery, for unchecked robbery means the dissolution of society, and they will, therefore, we take it, kill men for committing deliberate murder, if it can be shown that there is no other way so efficacious in preventing it. The sentimental treatment of the matter, therefore, in which they largely indulge, and the harrowing pictures they draw of executions, are very improper instruments of persuasion. We believe we are safe in saying that the experience of all communities, in which the experiment has been fairly made, shows that nothing will adequately protect human life except a penalty which will shut out hope, appal every imagination, and which, by being reserved for murder exclusively, will mark as nothing else could the enormous interval which separates, or ought to separate, the taking of property from the taking of life, in every good system of criminal jurisprudence.

THE PRINTERS' STRIKE.

The first obvious reflection suggested by the recent strike of the printers in this city is, that they offer no exception to the general disposition—we may now say custom—among the working classes to combine against their employers and against each other for the purpose of controlling the amount of their work and their wages and the competition in every branch. The Printers' Union is as unreasonable and arbitrary as any other trades-union, shows itself as exclusive and tyrannical towards those not members of it, as peremptory in its orders and in its demands, as ready to coerce where it cannot persuade. The strikes which it has caused within the last eight or ten years have not, perhaps, been stained by as great violence as those of other bodies; but the attempt has been made repeatedly to intimidate those who refused to be bound by its programme, and in spirit it has been as unjust as if it had hunted down, beaten, and killed those from whom it claimed but could not obtain support. Its rule that no member shall work in a printing-office where all are not members; its edict not to parley or discuss, but to quit work immediately after presenting its demands; its claim that the skilful and the inefficient alike shall be paid by a fixed scale; its hostility to the employment of women; and the powerful, almost superstitious, control which it has over even the decenter men of the craft—all these features it has in common with the bricklayers' and the shipbuilders' and the piano-forte makers', and all the other mechanics' unions. It is, like these, deliberately carried on in the interest of the lazy and the incompetent, who chiefly engineer it, plan its surprises, marshal its forces, pass its resolves, and suppress everything like diversity of sentiment as if it were the sheerest treason. There can be no reasonable doubt that the strike among the book printers was devised and organized by the printers employed on the daily journals—for what ulterior purpose will perhaps appear before long.

This comparison with other working-men is of use as serving to correct any *à priori* notions we might have entertained as to the essential difference between setting type and working at a lathe, for example. By neither, it appears, is a man saved from extravagance and folly, nor are these differently displayed or for diverse ends. Yet there would seem to be a valid distinction between the labor of the printer and that of the mechanic pure and simple. The art which has to do with the expression and preservation of ideas appeals more to the intellect and the judgment, requires a better education, and ought to stimulate thought and broaden the understanding more than any other productive industry that could be named. Yet this does not prove to be the case, though instances are not wanting among us of honorable advancement from the printing-office into public station and dignity. If we except the brutal and violent passions, the journeymen printers of our day will not surpass in average morality, self-respect, or scarcely intelligence, the carpenters or the painters, the smiths or the mill hands. They labor under the same delusion as to their rights, their interests, and their obligations; they are even notoriously unsteady, vagrant, shiftless, irresponsible. Mr. Jenckes tells of officers in the custom-house who do not know over-night with whom they are to carry on the business of their office in the morning. The foreman of a large printing establishment expects to make up a new pay-roll every day, for every day some man who was counted on disappears, without explanation, and some new compositor appears asking to be set to work; but the stuff which fills the gap is as unreliable as that which made it; and looking at all these changes, and the miserable workmanship of the bummers who flourish under the ægis of the Printers' Union, it is a perpetual source of wonder to those engaged in publishing how anything is printed correctly and how anything comes to time.

It is well known that the uncertainties and delays which these strikes occasion have already built up the country offices at the expense of this city, just as other mechanical processes have been transferred or put out—piano-forte cases, to quote a recent example, being now largely made in Massachusetts, where the water-power and the timber are close at hand, and where wages are lower and workmen more steady. Singularly enough, this putting out of books increases along with the marked growth of publishing houses in New York, which far outstrips every other city in this kind of productiveness. What remains to be done here is the slop-work and the periodicals, along with whatever is urgent and must be done under immediate supervision. Any disproportionate increase of wages benefits printers at a distance, and attracts numbers hither to compete with those who have forced them up. To recall its proper business to the city, wages must be reduced to about the same ratio which they bear in other places to the cost of living, and this can be done in two ways—by the employment of women or by the aid of machinery. The machines, though forward, are not yet ready, nor, in a certain sense, are the women; that is, there is no well-trained body of them to start up the moment a strike occurs and adequately fill the places left vacant by the men. Women compositors there are plenty, but not many of high proficiency. Their lack of education is perhaps balanced by other qualities which belong to their sex, and which render them peculiarly fitted for type-setting. But on the other hand their sex is a drawback in many respects. They seldom apply themselves to their work as if it were to be their sole dependence in life, and with a determination to master it in all its details. Before each flits the inevitable perspective of a husband and a home, and her interest in the office becomes only temporary. Moreover, they could scarcely be expected to endure night-work or exposure in the streets by night, and thus again their usefulness is limited. Nevertheless, there is undoubtedly room for improvement, and we are glad that enough women have been found, trained or eager to be trained, to bridge the interval between the beginning and the end of this strike, and indeed to render the strike futile. The training-school instituted by Messrs. Gray & Green is an excellent example which we are glad to praise the ladies of the *Revolution* office for sustaining and extending. In this practical side of the woman question the public will always sympathize, however much craftsmen grumble.

The present status of the printers as a class, compared either with the nature of their work or with their former status, offers a curious social problem. That with the rise and enormous development of the daily press, the augmented production of books and periodicals, the wide diffusion of knowledge, the spread of just and ennobling ideas by reforms of every kind that have found an instrument in the press, the printer has degenerated—has got on, at least, no faster and no further than other mechanics whom schools and newspapers are but just reaching, is certainly amazing. In morals we will not be too positive. Those whose memories go back to the time when printers' "devils" were largely occupied in bringing them "black strap," will perhaps think that money may as well be spent for whiskey as for rum-and-molasses, and with no greater detriment to morals. The proportion of married men among compositors has certainly diminished, and this has done much to unsettle the business and to keep respectable men from entering it. Then the necessity of night-work has received an extraordinary extension from the emergencies of the daily papers, which in gratifying the public thirst for the latest news have redoubled the drain on the physical resources of printers and made it almost impossible for them to do first-class work. The night-work, with the generally irregular habits inseparable from a printing-office, is the fruitful source of dissipation; the want of a stimulus to good workmanship, and the imperative need of help whether good or bad, produce that floating and objectless crowd which every office shuns, and has notwithstanding to endure more or less.

By their lack of fixed habits, the exhaustion of their nervous systems, their default of ambition and self-respect, incapacitated for good work, they are yet by their numbers so formidable that they easily control the better sort, whose lot is less arduous than their own. They inevitably tend to drive the sober and industrious from the trade, and to put the public not less than their employers at the mercy of their caprices.

The remedy for this is not really found when we have driven all men, or all but a very few men, out of the business and turned it over to women and machines. We shall never get rid of night-work; we shall never, like the Continental journals, print this morning's *Times* yesterday afternoon, for the sake of getting through by daylight or of being read at evening in the cafés. Nor shall we, so far as can now be judged, restore apprenticeships in printing any more than in other trades. But it has always seemed to us that sufficient attention had not been given to the comfort and health of printers within the limit of the necessities already enumerated. The engine-room of a large factory is often the most attractive part of the whole establishment, light, airy, cleanly swept and dusted, the brass and steel of the mighty motor polished to brilliancy. In quite other conditions the human machine both in the factory and the printing-office is left to perform its appointed task: in dirty and obscure garrets, crowded and unventilated, with no incentive to be any cleaner than his surroundings, the printer undergoes a process of slow poisoning which begins with the blood and ends by corrupting the whole system. That self-respect and manliness, the sense of something due to the employer, the desire to be perfect in what is one of the most beautiful, as it is almost the most valuable, of the arts, cannot flourish naturally in such a soil, is clear; and the first step to reform would, in our opinion, be to burn up ninety-nine out of every hundred printing-offices and build new ones on sanitary and humanitarian principles. The entrance of women in considerable numbers will perhaps modify these obstacles to the moral influence of the printing-office; but on this side statistical tables and their own experience should remind employers that they have a duty towards their men which cannot be avoided if reason is ever to take the place of strikes.

ENGLAND.

LONDON, January 22, 1869.

SINCE I wrote last the most important topic of public discussion has perhaps been the course adopted by the Ritualists. The decision of the committee of the Privy Council was, as you know, to forbid the practice of lighting candles and of kneeling before the consecrated elements. A large meeting was held in London by members of the party to discuss the proper course to be adopted. The general tone of the meeting was quieter than was expected, and a majority seemed to be decidedly in favor of moderate courses. Of course a great deal was said about the injustice of the decision, and the incompetence of a lay tribunal to decide upon these knotty ecclesiastical questions. The result, however, was that no decisive motion was passed, and it was understood that it should be left to every clergyman to do as seemed good to himself. A good deal of correspondence has subsequently taken place in the newspapers, and the matter seems still to be in suspense. Mr. Orby Shipley—one of the most prominent Ritualists—has asked pathetically, How, if I leave my candles unlighted, can I possibly teach the doctrine of the real presence? The difficulty has almost a comic sound, and yet, considering the position which the Ritualists have taken up, is a very real one. They have been preaching with great energy the symbolical meaning of the various ceremonies which have given offence, and now, at the bidding of a court consisting chiefly of lay judges and acting on the authority of acts of parliament, they are required to abandon them. Certainly the impression upon their congregations might naturally be that in taking down the symbol they abandon some of the doctrine. It is not very easy for a man to haul down his flag and say that he does not surrender. Therefore, in spite of the exhortations from the large body who like to keep things quiet, and the demonstrations that a Christian ought to yield many external matters for the sake of peace, the Ritualists make many mouths over their leek. Mr. Mackonochie, the defendant in the late action, wrote a long letter to the *Times*, in which he took up very passionately the position to which, as is increasingly evident, they are being rapidly driven. He repudiated all authority of the state over the church, and declared, in the unpleasant metaphor used by theological writers, that it was a case of spiritual adultery between mother and son. He added, and certainly it was a moderate conclusion from such a statement, that he should be sincerely grateful if the church was turned adrift from the state, even though stripped of all its property. In short, the Ritualists are rapidly taking up the position to which they are logically bound—that the Church of England must be separated from the state. At present there is a disposition, more or less avowed, to wait for some stronger pretext; but it is not improbable that such a pretext will soon be given. Mr. Bennett, one of the most conspicuous of the party, is being prosecuted for asserting the doctrine of the real presence. If that should be decided in his favor, there will probably be a respite for some time, and the comparatively trifling matters of mere ritual will be overlooked; if the doctrine as well as the symbol is condemned, it seems probable that matters will be brought to a crisis of which it is very difficult to predict the issue.

The three great church parties have hitherto managed to keep together in a state of more or less repressed animosity. The Evangelical party went through its season of difficulty over twenty years ago, when Mr. Gorham won his case and established the right of the clergy to preach the Low-Church doctrine of the sacraments. The Essayists and Reviewers more lately established a right to say pretty much what they pleased about the inspiration of the Scriptures and everlasting damnation. Almost the only clergyman who has within modern times been expelled for heresy was a Mr Dunbar Heath, who blundered into a flat contradiction of one of the articles whilst preaching some doctrines about faith, unintelligible, if not to himself, at least to every one else. He would probably have been let alone if he had not shocked the surrounding clergy by casting doubts on the existence of the devil, and so depriving them of one of the most cherished articles of their faith. Hitherto, then, the policy of the Church of England has been practically the widest possible comprehension. In condemning the Ritualists we should for the first time be taking a step towards narrowing its borders and, sooner or later, to the disestablishment of the Church. In a letter recently published, from Mr. Goldwin Smith, I see that he anticipates that ecclesiastical questions will be among the first to stir up political agitation in England. The symptoms which I have noticed give considerable probability to this view of the question, and I think it highly probable that within a year or two we may see the beginning of a struggle far keener and more exciting than that which is now raging in Ireland. The Church of England has in many ways enormous power with the upper classes of society, and an attack upon it would alarm not merely those who have a sincere belief in its doctrines, but all who desire the permanence of the present arrangement of landed property and the security of vested interests generally. It has struck its roots so deeply into the soil that when it falls there will be a great upheaval of the foundations of other things besides churches. That it will fall, and that we shall see the beginning of the process, is an opinion which is daily gaining ground, though it is more difficult to say whether the battle will last for years or for generations.

The public is meanwhile amusing itself with other discussions, generally of rather trifling interest. There has been a remarkable apathy as to the fate of the conference which has been discussing the Eastern difficulty. Few people flatter themselves that they really understand the ins and outs of that ominous and perplexing question, or have any definite view of its merits. Moreover, England has withdrawn itself so decidedly of late years from any participation in the affairs of the Continent that we look on more as outsiders than as directly interested. The Eastern question indeed touches us nearly, and a conflagration in that quarter of the world might end by setting fire to this. The contingency, however, is at present remote, and we are by no means so eager as before the Crimean war to have a share of any hard knocks that may be going. A little controversy that has been raging for some time without creating any great excitement has a bearing on the same subject. Admiral Grey wrote to the *Times* to propose that we should abandon Gibraltar. The more ardent Liberals have frequently advocated this measure as an act of justice to Spain; and as we bestowed the Ionian Islands upon Greece by way of solemnizing their new experiment in constitutional government, it seemed not inappropriate to suggest a similar compliment to the new Spanish empire, monarchy, or republic. You are such promising lads, we should be saying in effect, that you shall keep your own little fortress in future, instead of leaving it in the hands of your elders. However, on looking a little further into this generous offer it seems that there is something more behind. Spain, it was suggested, might make the matter easy by giving us Ceuta in exchange. In short, it turned out that, according to the admiral, Ceuta would really be more convenient to us than Gibraltar. The harbor is better, it is not exposed, as that of Gibraltar will be in future wars, to the fire of long-range cannon, and it might be made sufficiently strong, if not so strong as the celebrated rock, for a moderate expenditure—a few millions or so. In fact, the admiral proposed to do a generous action in order to secure a good bargain. I am no judge of the rival merits of the two fortresses, although the argument seems to preponderate in favor of Gibraltar; but the proposal to

do a sharp stroke of business whilst gaining a little credit for liberality was rather amusing. If we are to abandon Gibraltar, I would rather do it on terms which, if they made our common sense doubtful, would at least show that we were really disinterested.

Another little discussion has excited interest of a more local kind. The Thames embankment is now approaching completion. The result is a really noble work, unapproached by anything done in London in modern times. The grand curve of the Thames makes one of the most picturesque vistas to be seen in any city. Several striking buildings already look down upon it—the Houses of Parliament, Somerset House, the Temple, and St. Paul's all come in effectively from different points of view. Meanwhile, we are about to undertake a work for which immense preparations have been made, and which, if properly carried out, will add a first-rate building to London. A great sum of money, accumulated in the Court of Chancery by a process which I confess is rather mysterious to me, though the money somehow or other seems to belong to nobody in particular, is to be spent on the erection of new and magnificent law courts. A large space of ground was accordingly purchased between the Strand and Lincoln's Inn, and has been cleared of a set of the meanest and dingiest houses to be found in any part of London, or, in other words, in any civilized city. Just as we are about to begin the work, it turns out that the space is so confined and the approaches so difficult that it will be almost impossible to give to the courts due effect. If a larger area is to be bought, the purchase-money would absorb the whole fund that should have been spent on the building before a stone has been laid. Now, it has occurred to Sir C. Trevelyan—a distinguished civil servant of old standing—that a splendid opportunity presents itself of remedying this cost by building our new courts on the ground reclaimed by the embankment. They would still be close to the Inns of Court, and by effecting one or two exchanges of public buildings we should have a legal quarter most conveniently arranged, and a singularly fine addition to the beauties of the metropolis. The embankment would be adorned by a grand Palace of Justice, as our French neighbors would call it, with the common-law barristers in the Temple on the one side and the equity lawyers in Somerset House on the other. Several minor advantages would be obtained, and, in short, we should have a fine set of public buildings in a position of almost unequalled beauty. The prospect is certainly tempting, and if it could only be proved that the expense would not be too great for the advantages promised, it might probably be adopted. Unluckily, we are at this moment, and are likely to be for the present, in a fit of rigid economy. The Government is cheeseparing with considerable vigor, and is likely to look with scant approval upon any plans, however attractive, which involve an increase of expenditure.

The chief resource of the newspapers at the present moment is the series of election trials. So far as we have yet proceeded, the new system seems to give general satisfaction. It is working with much greater expedition than the old plan of committees, and, as the judges sit on the spot, the expenses, though very great, are of less ruinous proportions. The decisions are more imposing than those of the amateur and not too impartial judges who formerly decided; and we may hope that the difficulty of direct corruption has been decidedly increased. Nothing, indeed, has come out of a very startling nature. There are the old stories of the consumption of unlimited beer, which seems to be the favorite mode of influencing the British elector; and at one place we hear of a man in a mask distributing sums of money to the intelligent constituents. At this place, not only the male voters, but their wives and children, appear to have been kept in a constant state of semi-intoxication; and the result was that one voter at least, after consuming many pints of beer at the expense of one candidate, was induced, according to his own account, by reflecting on the names of Martin Luther, Ridley, and Latimer, to vote for the other. It is possible to get a voter into too hopeless a state of mental muddle. Only two decisions have yet been given: one member satisfactorily cleared himself of all imputations; the other was turned out owing to acts of some of his agents, of which it did not appear that he was himself cognizant. As it is very easy not to know too much, it is very desirable that a man should be responsible even for acts of which he is in partial ignorance.

Notes.

LITERARY.

MESSRS. D. APPLETON & Co. have in press "Underground Life; or, Mines and Miners"—which is from the French of M. L. Simonin; "Letters of a Sentimental Idler," by Harry Harewood Leech; and "Hawaii: The Past, Present, and Future of the Island Kingdom," by Mr. Manley Hopkins, who has been, and we believe still is, the English consul-general at the Sandwich Islands. The Bishop of Oxford writes a preface for the book. Almost immediately this house will begin the publication of their weekly paper, which will be called *Appleton's Journal of Popular Literature, Science, and Art.* It will be as large as *Harper's Weekly*, will contain as a serial Victor Hugo's new novel, will be illustrated, will give with each number a detached picture—a steel engraving or a cartoon on wood—will devote much attention to education and educational books, and will pay more attention to science than is paid by any of the merely popular journals. ——Messrs. D. & J. Sadlier & Co. will publish "The Ghost-Hunter and his Family," by Michael Banim.——We may mention here, what we should have mentioned some time ago, that Mr. Patrick Donahoe, of Boston, has published a volume which it may interest some persons to have, now that they can get it without paying for it its highest price: we refer to John Henry Newman's poetry, which Mr. Donahoe publishes under the title of "Occasional Pieces."——Messrs. John Wiley & Son announce "Free Town Libraries: their Formation, Working, and Results, in Britain, France, Germany, and America," by Mr. Edward Edwards.——"E. Foxton" is the well-known pseudonym of a New England lady who has already once ventured into the field of fiction and had a tolerable success with "Hermann; or, Young Knighthood." She is now announced by Messrs. J. B. Lippincott & Co. to write a novel entitled "Agnes Wentworth." The same house will begin in the July number of their magazine a new novel by Mr. Anthony Trollope.——Messrs. Sever, Francis & Co. are publishing a new edition of a book for which there will be some considerable demand—Mrs. Shelley's "Frankenstein," of which everybody has heard, and which but few people have ever happened upon.

—We observe that Mr. William A. Wheeler, well known as a lexicographer, both independently and in connection with the rival dictionaries of Webster and Worcester, has obtained the fit and congenial appointment of General Assistant in the Boston Public Library. The eighth number of the *Bulletin*, in which his name appears for the first time, has for its principal object the cataloguing of "Books placed in the library, or newly located, during the months of November and December, 1868." On the back of the title is a list of "Duplicates in American History" which are offered in exchange (in kind?), and there is an appeal made for pamphlets, which will be sent for at the expense of the library. Mr. F. W. Christern, we believe, takes charge of such contributions from this city. Towards the end of the *Bulletin* is another list of "Deficiencies in American Periodicals," and in Almanacs; and on the last page are enumerated several embossed books for the blind (the gift of Mr. George Ticknor), which will be increased, it is stated, if the demand warrants it. Finally, to show the liberal spirit in which this noble institution is carried on, we shall quote the following standing announcement:

"A particular privilege is, in this Library, accorded to all persons desiring any book not in its possession, of asking, on blanks furnished for the purpose, that it may be immediately purchased; and the assurance is given that, unless there is some special reason why it should not be ordered, it will be procured as soon as possible, and the applicant will be notified of its reception. If duplicates are asked for, they will be ordered, provided our records show a circulation of the present copies to warrant such additions."

These *Bulletins* are sold at the library for two cents each; but there are hundreds of persons in all parts of the country who would gladly pay fifty cents or more for a year's subscription to so useful a mirror of current literature in every branch of human knowledge.

—Carl Knortz, who has for some time been engaged in studying the antiquities and languages of our North American Indians, with special reference to their legends and folk-lore, tells in *Die Welt* of this city (Jan. 1, 8) how he made an excursion to Lake Superior in the summer of 1867, and spent several days among the Ojibways at Sault Ste. Marie, picking up what stories he could of Hiawatha, who there goes by the name of Menabusho. He found that Mr. Longfellow had not exhausted this field, and he reproduces the characteristic though not striking tales of the hero which a squaw of some hundred snows, on the Canadian side of the straits, delivered to him in return for a piece of chewing-tobacco. To these the chief Shawano—who lived on a little island in the midst of the rapids, and to whom the writer brought letters of introduction from his step-son, an American lawyer—could contribute nothing; but his account of the origin of his tribe, and the reason why they settled in the neighborhood of the rapids, is as good as anything that came from the female centenarian. "The Ojibways," he declared, "dwelt formerly in heaven. Then on a time the Great Spirit let fly a pair of them, in crows' shape, to the earth; and these

two flew through the whole world, tasting as they went the flesh of the buffalo, the bear, the beaver, the deer, and of other animals; but as they perceived from the flavor of each that it was doomed in the lapse of years to extinction they would not alight in any of their lands. After they had thus flown about the earth for a long while, they came to the rapids, tasted the fish there, and discovered that these would never be diminished. Accordingly, they alighted on the spot where the fort now stands, and as soon they had touched the earth with their feet they suddenly became a human pair."

—The famous pipe-stone quarry in Minnesota, from which the Indians have from time immemorial procured the material for their pipes—the stone being of an unusual color, that of the Indians themselves—is well described in an interesting paper in the *American Naturalist* for February. Catlin was the first white man to visit the spot, as he declares in his "Last Rambles among the Indians of the Rocky Mountains and the Andes" (New York: D. Appleton & Co. 1867); and he gives some details of the "stone medicine-man" and other curiosities within a radius of twenty miles from the quarry, not mentioned by the writer in the *Naturalist*, who gives, however, a much better idea of the quarry than Catlin does. Passing over the other entertaining articles and miscellany of the *Naturalist*, we are happy to republish its announcement that Dr. A. S. Packard, Jr., assisted by Dr. J. L. Le Conte, Mr. S. H. Scudder, Baron R. O. Sacken, Mr. P. R. Uhler, and other specialists, will undertake, with sufficient encouragement, to produce an entomologist's annual for 1868, or, as it will formally be called: "Year Book of Progress in American Entomology." It will be duodecimo in size, and should appear in the spring. If three hundred names are sent in, five hundred copies will be printed. They are requested in advance, at seventy-five cents a copy, addressed to W. S. West, Peabody Academy of Science, Salem, Mass. Though this work is designed for the students of insect life, it deserves the support also of the class who are most benefited by the labors of these gentlemen: we mean the farmers.

—Among the several stenographic publications which we receive from time to time, we have been most pleased with *The Rapid Writer*, published at Mendon, Mass. The quarterly issue for Jan. 15 indicates that the system devised by the editor, Mr. D. P. Lindsley, has maintained itself in the face of many obstacles, and we are particularly glad of this because it is the only system which ever seemed to us practicable for general use and for instruction in our common schools. The desideratum has been: a system at once rational, simple, and uniform, which any intellect could master that could master the alphabet and the spelling-book, and proficiency in the practice of which should depend chiefly on diligent application. We do not say that Mr. Lindsley's method accomplishes all this; from a superficial examination of it, some years ago, we came to a different conclusion; but he gave us hopes of seeing the need supplied, and really took a considerable step in that direction. He dispenses with lines, for instance; all his characters mean one thing, however written with reference to those which precede or follow. Then he has carefully adopted them in such a way as to make those signs horizontal which are most in use—an evident economy which no other system has sought after. Of other details we are not competent to speak, but the author seems to have gone to work in the right way. That he enables a student to dispense with a teacher we think doubtful; he may not profess to do so. Any one who has dabbled alone in phonography will testify to the embarrassment of choice caused by the duplication of signs according to situation, the consequent disagreement between the same word as written one day and written the next, and the desire, not to say the necessity, that is felt for an arbiter and director. Perhaps absolute uniformity is not compatible with speed in writing, but if by this we understand reporter's speed, the objection is slight. The value of the reform will be not in enabling everybody to take down stump-speeches on the spot, but in saving a vast amount of time and labor in the ordinary writing of everyday life—a great matter, if only a third of what we now expend. By uniformity we gain this: that all who have been trained to the system can read the writing of other people as readily and as certainly as their own; printers, for example, will compose straight from the reporter's note-books, instead of requiring him to translate it into the common hand.

—Mr. Hepworth Dixon, after several encounters with accepted historical traditions, and as many more or less successful attempts to set up *à priori* theories, has entered the lists with those who have sought to reconstruct Shakespeare's character and training from his plays. And as some have proved the poet a lawyer bred, others a merchant, others a Catholic, etc., Mr. Dixon lays his finger on a certain text and makes Shakespeare a Puritan. He first rescues from monkish aspersion the character of Sir John Oldcastle, an early martyr of the Reformation, whom Shakespeare took as his lay figure in modelling Falstaff, and whose name even he retained for the first representations of the play in which the fat knight was brought upon the stage. Subsequently, he would seem to have repented, substituting Falstaff's name for Oldcastle's, and taking pains to say, in the Epilogue to the Second Part of *Henry the Fourth*, where he promises a continuance of the story, "with Sir John in it," who may likely "die of a sweat, unless he be killed with your hard opinions"—"for Oldcastle died a martyr, and this is not the man." Hence Mr. Dixon concludes: "The man who wrote that confession in the days of Archbishop Whitgift is a Puritan in faith." *Protestant* would perhaps be a closer inference, though if either really covers Shakespeare there will be few of his admirers to grumble at it. Mr. Dixon's argument will be found in his volume called "Her Majesty's Tower."

—Our readers will hardly expect of us a formal review of that Welsh book of poems whose title we gave a fortnight since, "Gemau Llwyfo," or, as we may render it, "Llwyfo Gems; being selections from the Principal Compositions and Songs of Llew Llwyfo [Lewis W. Lewis]. (Utica: T. J. Griffiths.)" It will be sufficient, we trust, to refer to articles on Welsh poetry in the *Nation* of March 8 and Dec. 20, 1866, and to say that the poems contained in this volume have for the most part carried off prizes at the national Eistedfod, or bardic tournament, in the mother country, and that the author is an ardent champion of the new or Carmarthen school of metres, as his controversial and rather egotistic preface informs the reader. In order to show, however, that the freedom which he demands for the bard is not an excuse for inability to handle the old metres, he gives a few specimens of what he can do with them in the way of consonantal jingling, and affords us, at least, all the satisfaction on that head that we require. The strong pieces of this collection are two epics: one national, "Gwenhwyfar," and the other scriptural, "David, King of Israel," with fragments of two other long poems on "Arthur of the Round Table" and "Elijah the Tishbite." Of the minor poems in addition to these, especially the songs, little can be said in comparison. The former exhibit a remarkable command of language, dramatic power, constructive genius, and wealth of imagery, characteristic of the genuine poet. In artistic form and in real merit "David" will bear the palm over "Gwenhwyfar," but falls behind it in popular interest, and will probably not endure so long. "Gwenhwyfar" celebrates the virtues, trials, and misfortunes of King Arthur's queen. As Mr. Lewis prefers blank-verse to the old national metres, it is difficult to compare him with other Cambrian poets, but all things considered he would seem to have claim to no less a rank than first among those whom Wales has produced in the last hundred years.

—The censorship in France, which regulates what may or may not be sold at railway bookstalls, was recently reported to have proscribed the Erckmann-Chatrian series, for no other reason that could be surmised than the feeling against war which *Le Conscrit*, *Madame Thérèse*, *L'Invasion*, and *Waterloo* would be apt to excite in the French bosom. This, by the way, was not an absurd conjecture. M. Frédéric Passy, who has been addressing the working-men and other citizens of Eastern France on the subject of political economy, with great approbation, embraced Geneva in his tour, where, as the report says, "plus libre qu'en France, il avait pu parler sur la paix"—that is, over the border, he felt at liberty to speak of peace. However, the admirable novels of the twin authors have not been thrown out of the market, but the censorship has shown itself in another direction. M. Paul Albert, one of the lecturers at the Sorbonne to the ladies admitted by M. Duruy's famous provision for secondary instruction, recently had occasion to criticise Bossuet for narrowness in his views of the human race, and to oppose to him Voltaire as among the first to group nations under one family and preach their solidarity. Some of the mothers who accompanied their daughters to these lectures, being shocked by this rather harmless doctrine, made such representations to the Empress as that M. Duruy was compelled to censure M. Albert, whereupon the professor at once resigned.

—M. Duruy, when left to himself, prefers making professors to unmaking them. In July last he launched out the scheme of a "Practical School for the Higher Branches (*hautes études*)," which was to supplement the purely theoretical instruction of the schools already existing. Like the School of Fine Arts, which consists of a large number of distinct *ateliers*, this "École pratique" would not be confined to any one building. In November, feeling emboldened, and counting 264 pupils already in his four sections, the Minister ventured to order the institution of a fifth, "compris-

ing the economic sciences," or, as he rightly prefers to call them, "economics"—whether political, industrial, financial, or other. In accounting for the lamentable neglect of political economy in France, M. Duruy referred to Quesnay, one of the "physiocrats," as the founder of the science, which therefore becomes "toute française." He then contrasted the thoroughness and detail with which it is taught in the German universities, did scanty justice to the actual French teaching of it, affirmed that economics were learned in France chiefly by practical experience, and that, destitute of the guidance of science, men were constantly shipwrecked by rash enterprises or swamped by routine. He concluded by praying the Emperor to create a second chair of political economy in the Collége de France—"for the history of economical facts and doctrines." To this the incumbent of the present chair, M. Michel Chevalier, objects as delicately as he can, showing what a reflection it is upon his professorship, which ought properly to include the scope of the proposed chair. The *Journal des Economistes* also points to the superfluousness of this establishment, which by right should have been bestowed on the Sorbonne. It reminds M. Duruy of his unsatisfactory experiment in the same direction with the programme of secondary instruction, and concludes, for its part, that "it is not the higher studies, but the primary and intermediate," which are lacking in the public instruction relative to the economic sciences.

—What we said last week of the Athenian fondness for newspapers is quite overshadowed by the account given by the Madrid correspondent of the London *Times* of a similar passion at that capital. He states that there are sixty political journals published there, and that their number is constantly increasing. Their circulation in the provinces is insignificant, and it is reckoned that at least 150,000 copies are daily sold and consumed in the city itself. Even diminishing this number by one-third, and allowing the number of citizens able to read to be one in ten instead of one in seventeen, there will still be an average consumption of three and a third newspapers *per caput*. The fact agrees with the natural inference, that it takes several of these newspapers to make one good one, and several, we should add, to make an expensive one. For tenpence one can have his paper for a month delivered at his own door. The dispersion of talent implied in the active existence of so many papers affects of course the quality of all, and they are in fact edited less in the interest of the public than of their proprietors, who use them as means to political advancement. One, the most popular and widely circulated of all, the *Correspondencia*, which is no dearer than the rest, has gained the chief editor a fortune. It is in the strictest sense a *news*paper, and a hotch-potch at that: a mass of disarranged, undigested items from all parts of the world, in which contradictions, nonsense, error, and falsehood are jumbled indiscriminately with truthful reports. This extraordinary publication, which is besides of dirty and illegible typography, is published between nine and ten o'clock at night, and the temporary revival of the day's bustle which occurs when the edition begins to be hawked about at that naturally quiet and drowsy hour is one of the most curious customs of the Spanish capital. The paper is with good reason called the "Nightcap."

In last week's paper, in the piece of correspondence on "The Financial Tendencies of the Labor Movement," there is a proof-corrector's blunder so bad that we suppose most of our readers set it right without trouble. "Lowe" is to be read for "Lewes" wherever the name occurs.

DEAN'S HISTORY OF CIVILIZATION.*

If the execution of the late Mr. Dean's "History of Civilization" were as good as the general plan, it would be a valuable contribution to literature. To take the various elements of civilization in their "envelopment," to use his rather awkward expression, and show how one after another they have been individually *developed* in the course of history, as is sketched in the introduction, is a good leading idea for a historian, and in the hands of a competent person might have resulted in a noble work. But Mr Dean neither had the scholarship nor the grasp for an undertaking of this magnitude.

He had, in the first place, no sense of the weight of authorities; a glance at the citations at the foot of the several pages is enough to show that we need not look here for the latest and best that is known in regard to these nations. To take a single example: on the vexed question of early Italian ethnology, the sole authority quoted is Prichard, who is of course a high authority wherever *physical* evidences are to be weighed, but none at all in a field where these count for very little, and *historical* testimony is chiefly to be appealed to. But Mr. Dean alludes to no other writer—not even Niebuhr and Ottfried Müller, much less Lepsius and Mommsen. These pages, therefore, are altogether worthless. The inhabitants of Italy are divided into three "departments"—the Umbrians, the Etruscans, and "the inhabitants of Italy south of the Tiber"—although nothing is more certain than that the Umbrians formed one race with the Southern Italians. Just below it is stated categorically that "the first colonists were the Pelasgi;" although nearly all scholars have now rejected Niebuhr's hypothesis. A page about the Etruscans follows, ending with the assertion that, as to their language, "all that can be safely inferred is that it belonged to the class of Indo-European languages"—an assertion which is at best a very doubtful inference from very scanty data. The most important fact of Italian ethnology, which has been accepted for years, is wholly ignored—that the various Italian nations (always excepting the Etruscans, and the Greek and Gallic colonists of historical times, probably excepting also the shadowy Iapygians) formed one cognate race, or rather one branch of the Indo-European race, itself subdivided into Umbrians, Oscans, Sabines, Latins, etc.

Mr. Dean's second defect as a historian of civilization is a lack of the sense of the relation of facts to each other, whether in regard to their comparative importance or to their bearing upon historical continuity. A sufficiently full account of manners and customs, religion, art, etc., is given, but all in the catalogue style. Important and trivial matters receive about the same degree of prominence, nor are they handled in such a way as to lead of themselves to the general deductions which he desires to make. These reflections form separate paragraphs, in which the author philosophizes upon facts, but always from a very narrow and commonplace point of view. Each nation is treated as if it were wholly independent of others; it does not seem to have occurred to him to show how the civilization of one worked upon that of its neighbors; that is, how civilization spread from one to another. Neither have we any hint of the rich truths of philosophy that the patient toil of the present generation has brought to light.

For instance, whoever would study the history of civilization from its earliest beginnings, would naturally, one would think, master first of all the results of comparative philology as to the earliest condition of the Indo-European nations. The truths of comparative mythology, as brought out by Max Müller; the interesting development, by Mommsen and others, of the stages of advancement occupied by the several branches of this great race at the successive epochs of their dispersion; the nature of the primeval patriarchal institutions, as described by Maine—such discussions as these indicate the line of enquiry which is alone worthy of a student of the nineteenth century. But of all this Mr. Dean seems utterly ignorant. If he undertakes to search into primitive manners at all, it is in a description of the Tartar tribes of Central Asia—an interesting theme, but one which has hardly anything to do with his subject; for civilization, as we possess it, is not descended from Tartar society, nor, so far as we are in a condition to judge, from anything resembling it.

It is not surprising, therefore, that the chapter on Egyptian religion is silent upon the influence of this religion upon that of the Hebrews, and through this upon humanity. Such vital investigations as these seem entirely out of his ken. For instance, he says (p. 402) that "no ancient papyri have yet been discovered that would throw much light upon" the philosophy of the Egyptians; apparently he had never heard of the translation of the "Book of the Dead." In like manner we are not surprised at the assertion (p. 668) that "the religious system of Phœnicia exerted little influence in historic times on the belief of other nations," although it is notorious that its influence upon the Greeks was very marked. We are, however, rather surprised to meet on the same page, following some ten pages of Phœnician mythology, the assertion that the philosophy of this people was atheistic, and that "there exists no trace of a belief in God as an intellectual principle distinct from matter."

It is in keeping with the general character of this book that in treating of primeval times all the early records are accepted without question, just as they have stood in school-books; and that we have a somewhat detailed account of the siege of Troy, "about B.C. 1184," just as if Wolf and Grote had never written. Granting its exact truth, it is hard to see what it has to do with a history of civilization. It is probable that the later volumes of this history, when the author comes to stand on firmer ground and treat of better ascertained facts, will be more satisfactory; for much of the present detail is very well done, and many of the defects are such as are peculiarly glaring in the treatment of primitive epochs. But it is in every respect a pity that Mr. Dean chose to reserve his work from publication until

* "The History of Civilization. By Amos Dean, LL.D." [In seven volumes. Vol. I. Albany, N. Y.: Joel Munsell. 1868.] 8vo, pp. 695.

it was completed. This first volume is hardly above the standard of the scholarship of thirty years ago, when it was first written; judicious criticism upon the several volumes as they appeared might have taught him something of the requirements of a historian of the present day, and have resulted in a work more worthy of his really fine powers and his pure ambition. Yet among these requirements must surely be reckoned an acquaintance with the leading modern European languages and the ability to verify in the original any passage of a translated work. Now, there fell into our hands the catalogue of our deceased author's library as it was offered for sale. It was evidently the store from which he had drawn the materials for his history, whose scope is world-wide; and yet, to our surprise—not merely on account of the author, but also and first on the scholar's account—it contained, with the exception of some venerable rubbish of Latin or Greek, not a single work printed in a foreign tongue. Such a fact is sufficient to stamp the possessor as incapable of grappling with the problem he has approached. Neither science nor philosophy nowadays can get on with a single crutch.

SMILES'S LIFE OF GEORGE STEPHENSON.*

When George the Third was King, an English country physician used to drive about Lichfield in an old, bespattered sulky crammed with books, sweetmeats, and the massive form of its owner, Dr. Erasmus Darwin. As he went round among his patients he used to scribble poetry or speculate on botany, æsthetics, mental philosophy, and mechanics. He wrote a deal of mellifluous verse. All who have read his "Loves of the Plants" remember

> "How the young rose in beauty's damask pride
> Drinks the warm blushes of his bashful bride;
> With honeyed lips enamored woodbines meet,
> Clasp with fond arms, and mix their kisses sweet."

And in similar strains he portrayed the glories which he firmly believed were in store for ballooning and steam locomotion. Darwin corresponded with Benjamin Franklin concerning a model of a fire-engine that Boulton, of Birmingham, had sent to London for Franklin's inspection, and—his sanguine and speculative mind inflamed by the idea of a locomotive—he used up, riding in his sulky, large store of scraps of paper in embodying his suggestions as to the construction of the "fiery chariot." For one not a mechanic they were really remarkable.

This was in 1765. But already, in 1759, Robinson, of Glasgow, produced a model of a carriage driven by steam-power. In 1769, Cugnot, in Paris, constructed such a machine, which "ran against a stone wall that stood in its way and threw it down." His carriage had power enough, but was unmanageable. Although he improved it, he obtained no results, and it may still be seen in Paris at the "Arts et Métiers." Meantime, Moore, in London, gave notice of the invention of a similar machine. James Watt, in 1784, took out a patent for the application of steam-power to purposes of locomotion. Wm. Murdock made a model of a steam locomotive in 1781. Then came Symington and Sadler, called by Watt "hunters of shadows." Symington not only made a practical model of a land locomotive, but in 1801 built and ran the *Charlotte Dundas* by steam on the Forth and Clyde Canal. He died in London, so poor that he was buried without a stone to mark his grave. Then came that genius, Richard Trevithick, who, after various successful experiments with land locomotives, applied and completed the first railway (tram-road) locomotive on the 21st of February, 1804. It drew for a distance of nine miles ten tons of bar-iron at the rate of five and a half miles an hour. A romantic history that of Trevithick. On the verge of unlimited wealth in Peru, we next see him escaping across the vast expanse of desert to Cartagena, where, gaunt, starving, and in rags, he meets a strange Englishman—Robert Stephenson! Trevithick accomplished extraordinary things. He made the first railway locomotive, introduced the cylindrical boiler and high-pressure engine, invented the oscillating engine and a screw propeller. These are but a part of his triumphs. Never did career so fully give the lie to that senseless and immoral maxim, "Success is the test of merit." He died in 1833, and but for the charity of friends would have been buried by the parish.

The milestones of progress in the history of this branch of mechanics are the grave-stones of those who fell by the wayside in the race for success. Few of the modern triumphs of science have had so unpromising, so halting a development as the steam locomotive; and Mr. Smiles's book is, really, its biography, which necessarily includes the biographies of scores of men—the history of struggling genius and crushed hopes, of unrequited labors and disappointed ambitions. As you look upon the modern Prometheus, the locomotive of our day, the huge iron creature almost instinct with life, you might almost imagine that in its streams of fiery sparks, its deep sobs, its convulsive screams, its clouds of white smoke, you see its creators' flashes of genius, hear their sighs of sorrowful regret, and behold in that column of misty vapor a fit emblem of their vanished dreams of triumph. Slow, halting, failing, again beginning, the unsuccessful invention of one age is perfected in another. Every screw, rod, plate, and piston of the modern machine may be said to have its separate inventor and perfector—or a dozen of them—and the locomotive, as Robert Stephenson said, is "not the invention of one man, but of a nation of mechanical engineers." One may see at Baltimore the first locomotive used on the Baltimore and Ohio Railroad. It was made by George Stephenson in 1832. That machine is the half-way house in the history of the locomotive. It looks strangely to our eyes of 1868, but it was a marvel thirty-six years ago.

Then the development of the railway itself, likewise slow, is also interesting. Wooden rails were employed in 1630 by one Mr. Beaumont, who lost £30,000 in the enterprise, and, as the chronicle has it, "rode home upon his light horse." Indeed, Mr. Smiles contrives to interest one equally in the railway, the locomotive, and in George Stephenson, whose biography possesses every element of interest. The son of a collier, a poor laborer himself—so poor that when his wages were raised to twelve shillings a week he announced to his fellow-workmen that he was "now a made man for life"—this illiterate pitman raised himself by his honesty, industry, sagacity, and talents to rank with those of whom his country may be proudest. Everything about the man engages our sympathy, compels our esteem, and enlists our admiration. Mr. Smiles has done his subject entire justice, and well placed before us the admirable character of the honest Northumbrian—his simplicity, his great heart, his intellectual perseverance, his admirable intelligence—an intelligence that was not bounded by the horizon of railways and locomotives. "Buckland," said Stephenson, one Sunday morning as he stood on a hill with the great geologist watching the stream of white smoke tossed out by a rapid locomotive—"Buckland, I have a poser for you. Can you tell me what is the power that is driving that train?" "Well, I suppose it is one of your big engines." "But what drives the engine?" "Oh! very likely a canny Newcastle driver." "What do you say to the light of the sun?" "How can that be?" asked Buckland. "It is nothing else," said Stephenson. "It is light bottled up in the earth for tens of thousands of years; light absorbed by plants and vegetables, being necessary for the condensation of carbon during the process of their growth, if it be not carbon in another form; and now, after being buried in the earth for long ages in fields of coal, that latent light is again brought forth and liberated, and made to work, as in that locomotive, for great human purposes."

CURRENT FRENCH LITERATURE.*

We find deportment in books as well as in men. Mr. Turveydrop was a deportment. So also was His Royal Highness the Prince Regent. A "deportment" is a humbug—always hollow, often vicious, sometimes both. Here we have "De l'Organisation Sociale, par Ch. Barre (Comte De La Garde)"—a handsome 8vo volume of five hundred pages published at the "Imprimerie et Librairie Générale de Jurisprudence," Paris, 1868; white paper, ample margin, clear type, bound in Turkey morocco, but yet a literary and typographical "deportment;" certainly hollow, and not altogether virtuous. The first chapter opens thus: "Man is a mixture of two elements; he is at once material and immaterial. In this he resembles every animal that breathes here below." "The material element asserts and developes itself in him sooner than the immaterial. This phenomenon likewise shows itself among beasts." "Man, presuming that the other animals do not understand each other by signs, or by the inflection of their cry or song, assumes generally that speech is the great gulf that separates him from the beast." Our author proposes (p. 200) that there should be two kinds of marriage, temporary and definitive: the first for five years, the second permanent. We pass on.

"Si j'étais Reine, par Marie de Solms." The authoress is Madame Ratazzi, wife of the Italian ex-Minister of State, and formerly Madame Wyse, *née* Marie Bonaparte. The book is descriptive and biographic, but not a success.

"L'Astronomie Moderne, par W. de Fonvielle. Paris, 1868." Not so much a scientific disquisition as a talk on matters astronomical, in the

* "The Life of George Stephenson, and of his son Robert Stephenson; comprising a History of the Invention and Introduction of the Railway Locomotive. By Samuel Smiles." Second, revised edition. New York: Harper & Bros. 1868. 8vo, pp. 496.

* The works noticed may be had at F. W. Christern's, New York.

course of which the author expresses his dissatisfaction at the manner in which astronomy is cultivated in France—"*l'insuffisance de l'astronomie nationale*"—and presents quite a formidable indictment against the officials charged with the interests of astronomical science. He complains specially of what he calls idolatry of La Place, whose *Mécanique Céleste* is "that dry, false, and incomplete dogmatism under which we are crushed." Every year the first graduate of the École Polytechnique receives at the hands of the President of the Institute a magnificent copy of the works of La Place. And, says our author, they would send to Charenton (insane asylum) any one who might arise in the audience and with truth cry out, "Wretched man! what have you done? Do you not see that you have given that youth a *dead book*, loaded with dead formulas with which, unfortunately, his memory is already overcrowded, and which will prevent him from understanding the true philosophy of nature?"

"A Travers les Espagnes"—for the author finds several Spains: Catalonia, Valencia, Alicante, Murcia, and Castile. This is not precisely a book of travels, but of dreamingly descriptive letters written while journeying; some nice pen-pictures and charming bits of sentiment—evidently a woman's writing.

"Espagne. Traditions, Mœurs et Littérature, par Antoine De Latour." We remember "Études sur l'Espagne," by the same author, published some ten years ago. Few writers on Spain are better qualified for the task than M. De Latour. Long residence in the country (he went there as secretary to the Duke of Montpensier) and thorough study of its history, literature, and traditions have made him familiar with every subject of interest in the peninsula. His volumes are all interesting, although, perhaps, a trifle too scholastic for the general reader.

At no distant day, when the furore as to California and Australia shall have abated, and fresh outlets are sought for the enterprise and redundant population of Europe, it is probable that Asia Minor will be the first country to attract attention; and there are reasons why it should. It is a peninsula larger than Spain and Portugal, rich in natural resources and commanding in geographical position, with an admirable coast-line on the Mediterranean, the Greek Archipelago, and the Black Sea. It was one of the cradles of civilization, of empires, and of religion, and is now but a dreary waste, sparsely populated by three millions of wretched inhabitants. Nevertheless, it was once covered with large cities and the noisy routes of commerce, and contained the richest of all the Roman provinces. Plutarch tells us that, after the defeat of Mithridates by Sylla, Asia Minor in two years paid the Romans a military tax of 120,000 talents of silver—almost equal to $150,000,000 gold. Our moderns have done something grand in that line too. France paid the Allies (in 1814–15) a thousand millions of francs, besides the support of from 400 to 500,000 soldiers. Gibbon estimated the annual revenue of Asia Minor at four million and a half pounds sterling. Considering the relative value of the precious metals to-day, these sums should be doubled in order to obtain a correct idea of the actual amount. On these data, and making an approximate calculation on the relative basis of taxation and people, the population of Asia Minor under the Romans must have been about twenty millions. Livy names four cities that under the Consul Manlius furnished in one summer 14,000 bushels of grain, and money equivalent to $200,000. On the sites of these four cities now stand as many wretched hamlets, which together could not furnish a hundred bushels of grain and a hundred dollars in money. In former days cotton, the olive, the mulberry, and all the orchard fruits flourished. We know it is the country of the vine, but its extirpation was part of the religion of the Turk. Its present small population is demoralized and scattered among ruins, deserts, and morasses. Such are some of the salient features in the picture drawn of this once flourishing region by M. P. de Tchihatcheff in his most interesting "Une Page sur l'Orient." He claims that Asia Minor can yet be restored to more than her ancient prosperity. The means proposed would be the direction thither of a stream of European emigration. The advantages of such an emigration over trans-Atlantic emigration are pointed out. Of course, the "sick man" of Constantinople is very much in the way of such a plan, and the long-enduring "Eastern question" must first be solved.

"Révélations sur l'Intervention Française en Mexique, de 1866 à 1867," is one of a long list of books concerning the Franco-Mexican catastrophe, which must be rather lugubrious reading for the subjects of the third Napoleon. M. F. de La Barreyrie, the author, for three years chief editor of the *Journal d'Orizava*, had excellent opportunities for observation. He declares that the Mexican question must not be left silent and forgotten in France, and that a "liquidation" is indispensable for the honor of the French Government. Much fault is found with General Forey for the delay in the advance of the French army upon the capital. Disembarked September 22, he should have been in Puebla October 15, and in Mexico November 5, even supposing his entire march to have been one long combat. Sixty days were spent in the siege of Puebla, and he did not reach Mexico until June. He was only then ready to open a campaign in the interior which should have been already closed—the favorable season there for a campaign being from October to May. Then the rains begin, the roads become bad, and the country unhealthy. Our author compares the withdrawal of the French to a "*sauve qui peut*," more resembling a rout than an orderly retreat. "The United States had said *Va t'en!* and to show its obedience, the French army did not wait for the period fixed upon for abandoning Mexico." Intervention, so bold in 1862, was frightened in 1866. "A single word from the United States sent the army back to France much quicker than it came, and it sought Vera Cruz by forced marches, abandoning everything likely to embarass the wild retreat (*retraite échevelée*). It was followed by crowds of men, women, and children (French) forced to leave Mexico. "*C'était une grande débâcle humaine, qui faisait pleurer des larmes de sang.*" Such was the precipitation that enormous values in property were abandoned. At Orizaba thousands of loads of corn, barley, straw, and droves of cattle were left behind. Powder in large quantities was thrown in the gutters, bombs and grenades destroyed, the hospital at Orizaba, worth 200,000 francs, given away for 20,000 francs—one item alone of its medical stores, 80 pounds of quinine, was worth 58,000 francs; clothing, harness, and wagons given away; horses sacrificed—one lot of 200 Arabian mules sold for 500 francs, many of which cost 5,000 francs each. But the most remarkable, as well as the most humiliating, incident in this series of misfortunes was the extent of desertion from the ranks. The author of the latest work on New Mexico ("2,000 Miles on Horseback") speaks of the large numbers of deserters from the French ranks then (1866) seen in New Mexico and Texas, and who had left the French corps that penetrated as far north as Chihuahua. But M. Barreyrie gives us a more sombre picture of the demoralization of the French army when he tells us of crowds of soldiers who not only deserted their flag during hostilities, but turned their backs on France when ordered home and were found in the Juarez ranks, firing on their own comrades and countrymen! Desertion in the French army is a much more serious affair than in ours. It is punished, as it should be, by death. During our late rebellion, an ill-timed clemency, the presence of foreign elements in our ranks without attachment to our cause or to our flag, and the sympathy of a large disloyal civil element, almost encouraged the crime. In the French army it is different. Discipline is better and the dishonor attached to desertion greater. Not one man of the thousands who deserted in Mexico dares again put his footon his native soil, any more than if he were an escaped convict. And yet, in the face of these consequences, the French desertion in Mexico, as revealed by M. Barreyrie, is startling. Following the army the road was strewed with arms and equipments, abandoned as though in complete rout, and you met groups of soldiers, some with, some without arms, sadly expatriating themselves in dishonor—*qui les larmes aux yeux tournaient le dos à la France.* As the French left Orizaba it was occupied by General Gomez (of the Juarez army) with an escort of eight cavalrymen, of whom five were French deserters (p. 24). The main assault on Puebla (April 3) of the Juarez army, under Porfirio Diaz, was made by a body of French deserters in the Mexican ranks (p. 66). A detachment of Juarez's cavalry charged into Vera Cruz. "It is sad to be obliged to relate that Frenchmen headed it (p. 25)." The secretary of Porfirio Diaz was a Frenchman (p. 45). "Hundreds of millions have been spent, French blood has been shed throughout Mexico, and our army rolls are covered with that disgraceful stain—*couverts de cette honteuse maculation*—deserter!" (p. 97). M. Barreyrie, in order to show that Mr. Secretary Seward might have saved Maximilian's life, had he chosen so to do, quotes Mr. Dominech. If Mr. Dominech is not better authority in modern history than in Mexican archæology, the citation is not a happy one. M. Barreyrie's little volume of 115 pages, although highly interesting, is fragmentary and wanting in method.

"Recherches sur la Géologie de l'Egypte et le Canal Maritime de Suez, par P. Cazalis de Fondouce." The Suez Canal is the competitor of our Pacific Railroad in the race for the commerce of China and the Indies. It is, therefore, a subject of deep interest for Americans. This enterprise of to-day is, in its origin, the oldest in the world. Arab tradition carries it back to the period of the first journey into Egypt of Abraham with Sarah his wife. Aristotle, Diodorus Siculus, Strabo, and Pliny, all relate that the Pharaohs, Darius, and even Ptolemy, discontinued the work because they were satisfied that the Red Sea was higher than Egypt. Strange to say, this ancient error was confirmed by the French *savans* who accompanied Napoleon to Egypt

and who reported a difference of ten metres—about 30 feet—between the two seas, and in favor of the Red Sea. La Place said they were wrong, and maintained, *à priori*, that there was no difference of level. Subsequent geodesical research confirms the correctness of his theory. One hundred miles of sand separate Port Said, on the Mediterranean, from Suez, at the head of the northern end of the Red Sea. Enormous works are in course of construction at either end. Fifty miles, or one-half of the canal, one hundred yards wide and twenty-six feet deep, is already finished to its full size, and M. Lesseps asks but two years more for the full completion of the work. Five hundred tons of sand drifted every day into the canal from the desert, and the enormous mud deposits at Port Said are the two great obstacles to contend with. The English transports for troops already use the canal, and its receipts in 1857 were about $260,000. M. Fondouce's work is an excellent one, but those who are specially interested in the geological questions connected with the canal will find a more valuable book in the "Studii scientifici" of Figari-Bey, published at Lucca, 1864.

"Les Origines du Christianisme d'après la Tradition Catholique."—2. "Les Origines du Christianisme d'après la Critique Rationaliste Contemporaine." Both these works are by M. l'Abbé Em. Castan. The nature of the first is explained by its title. The second is "the refutation of the boldness of contemporary rationalistic criticism, of which the most popular organ is M. Renan." Learned, calm, and dignified in tone, the Abbé treats M. Renan with great fairness; and, while rendering full justice to his eminent talents, criticises him with tact and erudition. "Du Progrès dans ses Rapports avec l'Eglise" is also by the same author, and is written to show the position of the Catholic Church with reference to the great modern idea usually designated by the word "progress." The introduction has an eloquent analysis of the merits and defects of Renan's principles, doctrine, and style. From the "Questions Contemporaines" of the latter a remarkable passage is quoted: "Deism, with all its pretensions to be scientific, is no more so than religion; it is an abstract mythology—but still it is a mythology. It requires miracles. Its God intervening in the affairs of the world does not substantially differ from the God of Joshua, who stayed the sun in his course. We may add that dry, narrow dogmas, having nothing poetic nor traditional, and without possible interpretation, are for the human mind a much more narrow prison than popular mythology. By the standard of Voltaire—Herder, Fichte, and Schleiermacher were not sufficiently orthodox for a professorship of natural religion; they were, simply, excellent theologians."

"Milton: Sa Vie et ses Œuvres, par Edmond de Guerle." This is a remarkable book. Not merely because it is the production of a foreigner upon a subject that but few even of the poet's countrymen have successfully ventured upon, but remarkable for its intrinsic merit. We know of no work in English so satisfactory. The biographies of Milton by Dr. Johnson, Symmons, Newton, Hunter, and others are, none of them, so full and so well digested as this work of M. de Guerle. Much is expected of Mr. Masson's work now in press—"The Life of Milton, in connection with the History of his Time"—and it will doubtless fill a void long left in English literature. When Coleridge was asked in Germany if Klopstock was not a German Milton, he replied: "Yes; very German." But the estimate of the English poet has improved abroad since then. In France, Delille and Chateaubriand have endeavored to translate "Paradise Lost;" Villemain and Quinet have written eloquently upon Milton; Geffroy has produced an excellent work on his pamphlets, and M. Taine, in his "Histoire de la Littérature Anglaise," presents an elaborate criticism on his great poem. Milton's early life, his foreign travel, his political experience, his theology, are all well and clearly presented by M. de Guerle, and we are struck with his critical discrimination in treating of Milton's pamphlets. Macaulay's extravagant praise is equally applied to all of them when he tells us that they abound with passages compared with which the finest declamations of Burke sink into insignificance; that they are a perfect field of cloth of gold; that the style is stiff with gorgeous embroidery, and that their bursts of devotional and lyric rapture are "a seven-fold chorus of hallelujahs." To the "Areopagitica" M. Guerle gives quite as high praise as Macaulay: "Never have the rights of conscience and of free thought been more nobly asserted; and the ideal of political eloquence is reached at a bound a century before Rousseau." But, on the other hand, he points out the serious defects and blotches of writings which, stained in the muddy waters of his controversy with Du Moulins and Salmasius, sadly offset his grand beauties of style. Of course, our author has the inevitable parallel with Dante. But it is well done, and such a parallel, *cæteris paribus*, is safer in the hands of a Frenchman than of an Italian—say Alfieri—or of an Englishman—say Macaulay. M. Guerle protests against the criticism of his compatriot, Taine, and with justice. Taine says that Milton, in his painful effort at poetic flight, was not able to rise above the narrow horizon of his own vision: his heaven is a Whitehall of embroidered valets, his God a constitutional monarch presiding at council, clothed in beautiful ermine robe, with a peaked beard, such as Vandyke would have loved to paint, and, above all, dreadfully dull—*incomparablement ennuyeux*. The Word Creator is a Prince of Wales, whose archangels, thrones, and dominations celebrate his majority in a gala, where we see the Lord Mayor's coach and the beef-eater's wigs. Adam—nice young man, fresh from the University of Oxford—is an assiduous member of the House of Commons; Eve, "*une jeune miss anglaise*," good housekeeper, who electioneers for her husband among the young country squires, and who leaves the table when dessert comes on and the men begin to talk politics, etc., etc. Of all Milton's creations Satan is the only one who finds favor in M. Taine's eyes, "in spite of his puns and his drill-sergeant amenities." This is not criticism, correctly remarks M. de Guerle—it is parody; and he protests against it accordingly.

Essays on the Progress of Nations. By Ezra C. Seaman. Second Series. (New York: Charles Scribner & Co. 1868. 12mo, pp. 659.)—The first series of this work appeared many years ago. We cannot give the exact date of the event, any more than we can determine the precise line of demarcation between tertiary and post-tertiary deposits. Indeed, there is a sort of geological grandeur in the long and indefinite interval which elapsed after the first series (we had unconsciously written stratum) was finished and before the second series was formed; and this analogy is rendered still more striking by the fossilized character of their contents. As a repertory of statistical information concerning national wealth, population, and productive industry, this volume will be found convenient and valuable; the materials have been collated with evident care, but the arrangement is loose, confused, and repetitious. Much space is also wasted in the reiteration of facts so obvious that to see them gravely put into print is a great trial to the patience. Who wishes or needs to be informed that savages and barbarians have no schools and colleges? or that, by the art of photographing, the likenesses of friends and of distinguished men are taken in large numbers? or to be told twice on the same page and in nearly identical words that the microscope enables us to see things otherwise beyond the power of the human eye to discover? Mahometanism is described, at least a dozen times, as a religion sanctioning polygamy, robbery, slavery, and aggressive and predatory warfare, and it is repeated quite as often that the Koran contains a few theological dogmas but no moral precepts, a statement which is very far from the truth. It seems strange, too, that a religious system which "allows unrestrained sway to the passions and to the lusts of the flesh" (p. 139) should have the effect of "making the Mahometans a sedate and grave people remarkable for their regularity of habits and stability of character" (p. 140). Mr. Seaman's assertion that the Koran simply enjoins frequent prayers without inculcating either love or benevolence, justice or humanity, is not sustained by such citations as the following: "One hour of equity is better than seventy years of devotion;" "To endure and to pardon is the wisdom of life;" "Paradise is prepared for the godly, who give alms in prosperity and adversity, who bridle their anger and forgive men;" and many other admonitions to patience and charity which we have no space to quote. The truth is, Mr. Seaman's sketch of Mohametanism is a commonplace diatribe such as might be found in "Encyclopædias of Religious Knowledge" a century ago, but which gives no real insight into what it purports to describe and would not be endorsed by any Oriental scholar of the present day.

Here we might raise a fundamental question as to the relevancy of much of the material contained in Mr. Seaman's volume. What have the rise and growth of Mahometanism, Judaism, Brahminism, Magianism, Buddhism, and a host of other isms to do with the author's avowed object in preparing this second series, namely, to trace the "great progress made by enlightened and industrial nations" since the "new census," and "to bring the work down to the present time"? In order to understand the events of the last decade, it was not necessary to go back to the deluge or even to the Christian era. If the second series begins with the dawn of history, what period of time did the first series cover? Did it describe the contemporaries of the Lithuanian aurochs whose bones were found in the caves of Bize and Pondres, or was it devoted to *l'homme fossile* of M. Troyon? This superfluous padding certainly mars the symmetry and detracts from the usefulness of Mr. Seaman's book. The author has also a chapter on the races of men, in which he makes a most remarkable exhibition of hobby-horsemanship. The Rosinante on which he sallies forth against the giants of radicalism is—climate. The revelations of Mahomet, the fickle character

of the Saracens, "gambling among Catholic nations," "the fine arts, music, poetry, and eloquence," "concubinage and polygamy," "a tendency to build up an aristocracy," "monopoly of lands," and a hundred other features of national, social, moral, and intellectual life are attributed to the influence of hot climates. The "superiority of the Chinese" over the Hindoos is referred to the same cause (p. 339), although we are told on p. 5 that both India and China are "blessed with pretty good climates." Now, the fact is, that the Hindoos, with a far hotter climate, are as a race far more highly endowed than the Chinese. Their literature, instead of being "of very little value," is superior to that of any Mongolian nation, and shows an inexhaustible vigor and originality unsurpassed by any other branch of the great Indo-European family, to which the inhabitants of India and of England alike belong. Mr. Seaman's classification on p. 176 utterly ignores this kinship. But it is in the section which discusses the "Characteristics of the Negro Race" that he unfolds with the most complete self-satisfaction his theory of climatic influence, and brandishing his foil, as M. Jourdain flourished his *fleuret*, seems to say to his "fanatical" adversary in the words of the illustrious *Bourgeois Gentilhomme*: "*Je te veux faire voir ton impertinence tout à l'heure. Tiens; raison démonstrative!*" Among other things he accuses the colored people of being "particularly subject to the crime of rape." Does this assertion rest upon any better basis than that made a century ago by Schlözer, who discovered in the Jews a peculiar proneness to highway robbery? "The test of experience," to which Mr. Seaman constantly appeals, proves that the above-mentioned crime prevails in communities in proportion not to the shade of color, but to the lack of culture in the population. The statement, too, that the anti-slavery people of the North expected that the President's Emancipation Proclamation would incite the slaves "to kill, slay, and assassinate their masters and their families," and that they were disappointed in this respect because they did not understand the character of the negro, is entirely false. No such results were ever anticipated by the advocates of that measure. On p. 199 an attempt is made to trace the acknowledged vices which afflict society in the Southern States not to slavery, but to "the hot climate." Our author's contempt for the negro is only equalled by his hostility to the Puritan, and he intimates (p. 214) that the intellectual character of the former and the moral character of the latter might be improved by miscegenation.

But we have already devoted more space to Mr. Seaman's book than it intrinsically deserves. To point out all the misrepresentations and sophistries which it contains would require us to give to the criticism of it at least one whole number of the *Nation*. The most useful portions of the volume, and indeed almost the only portions that are free from partisan prejudice, are the statistical tables; and we advise the author henceforth to eschew vain philosophy and stick to the figures, which have a proverbial reputation for never swerving from the truth.

Earth Closets: How to make them and how to use them. By Geo. E. Waring, Jr. (New York: *Tribune* Association.)—This pamphlet is substantially made up from one issued by the English company which manufactures the patent commode, on the dry-earth principle, invented by the Rev. Mr. Moule. And as the application of this principle in the simple and convenient manner herein described can hardly be overestimated, in an economical or sanitary point of view, Mr. Waring has rendered a very great service in spreading the knowledge of it in this country. We apprehend that the adoption of earth-closets will meet with the greatest hindrance in cities and in farming districts; the first, because water is already in every house and dirt is not easily obtainable or easily dried; the second, because farmers are peculiarly indifferent to the matter in question, and thus, more perhaps than in any other way, are distinguished as less refined—not to say less civilized—than the people of the town. The farmers, however, will undoubtedly take to heart the demonstration of great gains in manure, while townsmen might easily arrange to be supplied with dried earth as with coals, with this difference: that persons could be found to supply the earth and to remove it for no other compensation than the simple enrichment it will have undergone in the meantime. Such an arrangement, if extensively carried out, would save immense outlays for plumbing, and all the annoyance and expense of frozen pipes in winter, as well as reduce the water-rate and effect a very considerable reduction in the water-consumption of a great city. But the sanitary considerations should have even more weight, as they point to an invaluable defence against contagious diseases, the connection, for instance, between cholera and sewers and sinks having been clearly demonstrated. This safeguard small places cannot afford to neglect, and metropolitan boards of health would do well to consider it indispensable and provide for it by enactment. As a beginning, let our schools, hospitals, jails, and other public institutions make the experiment which has proved so entirely satisfactory in England and India, and has done more than anything else to solve the sewage and river-nuisance problems of which we nowadays hear so much. Perhaps we ought to add that where coal-ashes are plenty (and they are generally too plenty), they can be used, whether sifted or unsifted, with nearly the advantage of dried earth.

Saint Paul. By Frederic W. Myers. (New York: A. D. F. Randolph. 1868.)—What may be called the Kingsleyan flavor or the Kingsleyan savor—there is need of as fleshly a word as can be had—pervades all this clever book and makes it disagreeable. Kingsleyan it may be termed, for Mr. Charles Kingsley is the most offensive, at the same time that he is the most noted and most admired, of the writers who exhibit what, by a slight distortion of the phrase, we may call a peculiar carnal-mindedness in religious and all other matters: everything becomes sensual in their hands. To this animalism as a root may be traced easily and directly most of the faults of omission and commission which make him, whether as preacher or writer, to many people the most offensive of all the second-rate living English authors. That he is a writer of considerable power—which he undeniably is—makes the matter all the worse. In this "Saint Paul" Mr. Myers, with an unchaste fervor of language; with a sort of heat and excitement which is noticed in platform speakers when apparently the roll of their own voices warms them up; with much sensuous alliteration and other unintellectual ornamentation—in short, in the Kingsleyan manner—presents us with his view of the great apostle to the Gentiles. We see, not the intellectual disciple, the trained reasoner spinning creeds out of the simple system his Master taught, but a Paul in raptures, and agonies, and ecstasies, hot and cold, faint with love and with grief and with yearning for souls and with sorrow for his sins, and again full of a courage and fire that seem to be largely physical. That it is all well enough, such as it is, may be seen from a stanza or two that we copy; but it is from the impression got from the whole book that we have chiefly been speaking. Paul is preaching, as indeed is the case throughout:

> "God, who at sundry times in manners many
> spake to the fathers and is speaking still,
> eager to find if ever or if any
> souls will obey and hearken to His will:
>
> who that one moment has the least descried Him
> dimly and faintly, hidden and afar,
> doth not despise all excellence beside Him,
> pleasures and powers that are not and that are:—
>
> ay amid all men bear himself thereafter
> smit with a solemn and a sweet surprise,
> dumb to their scorn and turning on their laughter
> only the dominance of earnest eyes?—
>
> God, who whatever frenzy of our fretting
> vexes sad life to spoil and to destroy,
> lendeth an hour for peace and for forgetting,
> setteth in pain the jewel of his joy:—
>
> I am persuaded that no thing shall sunder
> us from the love that saveth us from sin,
> lift it or lose hereover or hereunder,
> pluck it hereout or strangle it herein."

The device of beginning the lines with a small letter is of Mr. Myers's invention, and is intended, we suppose, to help to convey the impression of the rush and fervor of the apostle's feelings and thoughts—an end which it seems to answer.

Hymns, by Francis Turner Palgrave. (New York: A. D. F. Randolph. 1868.)—We should suppose that this little volume might add two or three or perhaps more to the hymns which may be said or sung in the family and sung in church. There is a child's hymn which might very well be added to the small store that mothers now can teach their children, and the "Christus Consolator," the "Day-Star," "A Litany," and the "Garden of God," would enrich any hymn-book that we now have, or, we dare say, any future hymn-book, except one a good deal smaller than any that is likely to come into existence. This is not saying anything concerning the hymns before us considered as poetry, which we suppose they are not. But they are the work of a highly accomplished writer. The final poem, which is not a hymn, but a piece of "anti-science" verse, in the metre of Empedocles's monologue in Mr. Arnold's poem, is extremely unsatisfactory.

Gloverson and his Silent Partners. By Ralph Keeler. (Boston: Lee & Shepard. 1869.)—Mr. Keeler's book gives evidence that its author is a man of some reading and cultivation, and that having undertaken the volunteer duty of writing a story of California life, he has endeavored to do it with such honesty and fidelity as lay in his power. But his story only adds another to the already deplorably long list of thin and worthless American novels. It is not to be gainsaid that there is a certain truth to nature in his attempts at characterization. Just such vapid, empty, colorless people are, doubtless, to be met with in every corner of the habitable earth; but to paint them with no ulterior end in view, to relieve them by no contrast with something better worth delineating, reveals a certain sympathy on the part of the artist—a sympathy not conscious, perhaps, but ineradicable—which is not pleasant to contemplate. Among painters there is a saying, that all the portraits a man paints, no matter how strong the resemblance they bear to their subjects, have also a more or less perceptible likeness to the painter himself. The same thing holds in books. All novels are, in a sense, autobiographies, and usually their authors are the persons most plainly indicated in their pages. Often enough this is done consciously, the writer using himself as the most available material to work from. Unconsciously, however, he reveals himself quite as fully, as much by negation as by definition. The glimpse of life he gives his reader shows plainly enough the angle from which he got it. It is not necessary to conclude from reading a novel like this that life in California is absolutely sordid and trivial. One feels persuaded that a writer who possessed himself more fully, who had something definite to say, and was not too much hampered by his reading and an uneasy sense of the conventional way of describing life and character, might make some effective use of it. Mr. Keeler seems to be a clever sort of man, with a certain facility in expressing himself; but we should say that it would neither benefit him nor give much pleasure to any one else for him to continue the career as a novelist which he has unsuccessfully begun in the novel before us.

"THE STATESMAN,"

PUBLISHED WEEKLY IN BALTIMORE.

Established October, 1868.

Since the beginning of the New Year, *The Statesman* has made its appearance enlarged by the addition of four pages, or twelve columns. Each weekly number now contains twenty pages, or sixty columns, making an aggregate, at the end of the year, of one thousand and forty pages, or three thousand one hundred and twenty columns, of printed matter—three-fourths of which are Reading Matter—the balance being made up of Advertisements. The rapid increase of Advertisements consequent upon the growing estimation in which *The Statesman* is held as an Advertising Medium necessitated this enlargement of the paper. The circulation of *The Statesman*—the only legitimate foundation of an advertising patronage, as well as of the usefulness of any journal as an organ either of news or opinion—is steadily growing, and already extends to nearly every State in the Union, from Maine to Texas, from the Atlantic to the Pacific coast; besides which, copies of the paper are mailed to persons residing in London, Paris, Berlin, Geneva, and other places abroad.

The Reading Matter of the paper embraces a greater variety of subjects than is to be found in any other weekly journal of the same character published in the United States. Besides the usual variety of Editorial Matter, each number of *The Statesman* contains Critical Notes, Musical, Dramatic, Artistic, or Literary; Reviews of New Books; a department of Correspondence, in which the widest latitude of discussion upon the greatest range of subjects is freely permitted; short pieces of Poetry, original or selected; a condensed summary of the News of the Week, and of the Proceedings of Congress and of the Maryland Legislature, when in session, and a carefully prepared Review of the Markets. In the department of Fiction each number contains one or more chapters of "HAMMER AND ANVIL," a new Novel, by Friedrich Spielhagen, now being published as a serial in Germany, in the Berlin "Hausfreund," and which is being translated expressly for *The Statesman.* The most distinguished foreign critics have united in assigning to Spielhagen the first place not only among German but among living novelists. This, it is believed, embraces a greater variety of departments than can be found represented in any other weekly paper, political or literary, published in this country.

The form of *The Statesman*, compact and in book-shape, is very convenient for handling and for preservation. The bound Volume, at the end of the year or of six months, will furnish a complete Record of Events—a History of the Period—easy of reference, and capable of filling a place upon library shelves.

The subscription price of *The Statesman* for one year is Three Dollars, payable in advance; of a single copy, Ten Cents. A liberal deduction is made upon these Rates in favor of News-dealers and Agents, and also of Clubs subscribing for four or more copies to be forwarded to a single address. The Table of Advertising Rates can be had upon application at this office. Address

"THE STATESMAN,"
Baltimore, Md.

LAWS

OF THE

Last Session of Congress.

LITTLE, BROWN & CO.

PUBLISH THIS DAY:

The Government Edition of the STATUTES AT LARGE AND TREATIES OF THE UNITED STATES passed at the Second Session of the Fortieth Congress, 1868. Containing the Public Laws, Resolutions, Proclamations, Private Acts and Treaties, and Alphabetical List of Persons in the Act for the Removal of Legal and Political Disabilities.

EDITED BY GEORGE P. SANGER.

Royal 8vo, 592 pages, price $2 50.

The Treaties and Conventions in this pamphlet are of unusual interest and importance. There are, in addition to the Indian Treaties, the Postal Conventions between the United States and the principal foreign countries, regulating the rates of postage and the transmission of the mails; treaties with some of the chief European powers, respecting the reciprocal rights of the citizens of each country, including naturalization and expatriation, etc. Besides the ordinary legislation are acts in relation to taxing shares in National Banks; authorizing the issue of loan certificates; exempting certain manufactures from internal taxes; relating to Bounties, Pensions, and the Postal Laws; admitting Southern States to representation in Congress. There are also among the private laws the acts removing political and legal disabilities from persons in the several Southern States, for acts done during the late rebellion, with a full alphabetical list of their names.

"A DELIGHTFUL PRODUCTION."

THE

New England Tragedies

IN PROSE.

True Narratives of those strange events in American History,

I. THE COMING OF THE QUAKERS.

II. THE WITCHCRAFT DELUSION.

"Within a brief compass it presents all the facts and suggestions necessary to form an intelligent idea of the two tragic episodes in our early history."—*Dr. George E. Ellis.*

"The style is very pleasing, and the facts are compiled with great care."—*New Haven Palladium.*

"All who have read Longfellow's Poem should read this historical version."—*Springfield Republican.*

"Under this intense scrutiny the 'New England Tragedies' gain rather than lose."—*American Presbyterian.*

"Every one who has Puritan blood in his veins should give it a candid reading."—*Hartford Courant.*

One handsome volume 16mo, price $1 25.
Sold by all Booksellers, and sent by mail on receipt of the price, by

NICHOLS & NOYES, Publishers,

117 Washington Street, Boston.

JUST PUBLISHED.

A NEW EDITION OF

THE SPECTATOR.

Complete in one volume, 943 pages, price $1 75.

Reproducing the Original Text, both as first issued and as corrected by its authors. With Introduction, Notes, and Index by HENRY MORLEY, Professor of English Literature, University College, London.

"This edition of Mr. Morley's is opportune; it merits a great deal of praise. The editor's introduction is full, acute, and suggestive in its literary and critical remarks, and very readable. In all Mr. Morley writes there is a simplicity of manner that is very agreeable."—*The Nation.*

The Seaboard Parish.

A Sequel to "Annals of a Quiet Neighborhood." By GEORGE MACDONALD, LL.D. 12mo, paper, $1; extra cloth, uniform with "Annals of a Quiet Neighborhood," $1 75.

"There is no literature better than this."—*Illustrated Times.*

"A story of the very highest order; full of deep and healthy truth, told in the most genial way; a story to read thoughtfully, slowly, lovingly."—*Birmingham Daily Post.*

"Uses his captivating pen for the dissemination of some of the richest truths of the Christian system."—*Christian News.*

"Written in the author's own quiet yet forcible style; full of deep, true Christian feeling."—*Oldham Chronicle.*

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON-SENSE FAMILY SEWING MACHINE. This Machine will stitch, hem, fell, tuck, quilt, cord, bind, braid, and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., PITTSBURGH, PA.; BOSTON, MASS.; or, ST. LOUIS, MO.
CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured.

By its charter, the Company is permitted to issue its own FIRST MORTGAGE BONDS to the same amount as the Government Bonds, *and no more.* These Bonds are a First Mortgage upon the entire road and all its equipments.

THEY HAVE THIRTY YEARS TO RUN AT SIX PER CENT., and both PRINCIPAL AND INTEREST ARE PAYABLE IN GOLD.

The entire amount of the mortgage will be about $30,000,000, and the interest $1,800,000 per annum in gold. The present currency cost of this interest is less than $2,500,000 per annum, while the gross earnings for the year 1868, FROM WAY BUSINESS only, on AN AVERAGE OF LESS THAN 700 MILES OF ROAD IN OPERATION, WERE MORE THAN

FIVE MILLION DOLLARS.

As the supply of these Bonds will soon cease, parties who desire to invest in them will find it for their interest to do so at once. The price for the present is par and accrued interest from January 1, in currency.

Subscriptions will be received in New York

AT THE
Company's Office, 20 Nassau St.,
AND BY
JOHN J. CISCO & SON, Bankers,
59 WALL STREET,
And the Company's advertised agents throughout the United States.

Bonds sent free, but parties subscribing through local agents will look to them for their safe delivery.

PUBLISHING OFFICE, 3 PARK PLACE.

The Week.

ON Wednesday week the Senate began business by receiving the credentials of the new Maryland senator, Mr. Hamilton, and then, after discussing for a while the proposition to assist certain parties in establishing an Americo-European line of steamships, proceeded to the chamber of the House of Representatives, where it was treated in a manner almost or quite unexampled in the history of our national legislation. Mr. Butler's revival of John Randolph's violence was, however, borne with more dignity—so far as we get accounts—than could have been expected of "a co-ordinate branch of the Government" in process of having fists shaken in its face. The more radical senators were in some sympathy with both Mr. Mullins and Mr. Butler as regarded the case of Louisiana and Georgia, but the issue was not fairly and squarely made between them and their opponents, and the Senate's decision as to the counting of the vote of Georgia was based on the concurrent resolution of the two houses. It overbore the decision of the House, thanks to Speaker Colfax's energetic action, which, whether "inspired" into him by some bold member or taken of his own proper motion, was most effective. It seemed to cut Mr. Butler's legs from under him, it sent him to his seat so quickly. But the spectacle presented by Mr. Wade will diminish the regrets at his speedy disappearance from the national councils. On Thursday, Mr. Garret Davis wanted Mr. Butler censured for insolence. That is a business, however, for the Massachusetts Legislature or the House. His letter in reply to a request from the Legislature asking him for heaven's sake, and the sake of the State, and the sake of the unfortunate Fifth District, to resign his seat, would be lively reading. On the same day the bill striking the word "white" out of the city charters of Washington and Georgetown was passed for the third time, and perhaps Mr. Johnson will take this one more chance for a veto. Appropriations and the currency occupied the attention of the Senate for a good deal of the week, and on Monday there was discussion of the question whether or not to pay civil officers in the South who, though unable to take the test oath, were yet employed by the Secretaries and Postmaster-General in 1865, and who were expressly told, in many instances, that the oath would be dispensed with in their case. There can be no doubt that these men ought to be paid for what services they rendered, whatever should be done with the authorities who set aside a law of Congress. On Tuesday, in the Senate, a desperate attempt was made to dispose of Mrs. Lincoln's pension claim, but the Washington markets bill proved too strong for it, and it was laid over. An effort was then made to take up the repeal of the Tenure-of-Office Act, but Mr. Ferry, of Connecticut, again showed that the Washington markets would not bear delay, and this too went over.

Business presses on the House as the session draws near its end, but it allowed Mr. Butler to take up two or three days with his attack on his friend, Mr. Wade—for whom, by the way, he still entertains great reverence, he says. The votes by which he was defeated in his endeavors to do something with his resolution of censure were very heavily against him. To find Mr. Schenck on Mr. Butler's side is rather surprising; but he is apt to take a notion to bolt once in a while, and is by nature pugnacious, and is usually so nearly right that he may be permitted an occasional escapade. Boutwell, Banks, and Eliot, of the Massachusetts delegation, followed the lead of their filibustering colleague. Mr. Dawes, by the way, is highly praised for his conduct as Speaker *pro tem.*, and Mr. Colfax, taking the floor, spoke as sharply and clearly as he "rules" when in the chair. On Friday, $190,000, the estimated value of the *Alabama*, was voted as prize-money to Commodore Winslow and the ship's company of the *Kearsarge*, which nobody will begrudge who remembers the morning when the news came of the action between those two now immortal cruisers. On Saturday, Mr. Hooper made an able financial speech. On Monday, the Scannell business came up again, Mr. Brooks reading as a part of his speech a petition from the prisoner intended to be jocose and satirical. Mr. Covode made the point of order that the petition was impudent, and then Mr. Ward made a further point by objecting that the impertinence having been incorporated into Mr. Brooks's speech, he could not be allowed to proceed even if in order, so that sorry joke was brought to a fit end. On Tuesday a bill was passed removing political disabilities from a great many persons in the South. Beyond the passage of this bill no business of importance was transacted.

The Supreme Court has rendered its decision in the case of *Bronson vs. Rodes*, in which it affirms the validity of contracts for the payment of money in "gold and silver coin, lawful money of the United States," made before the war. This of course still leaves open the question in what manner promises made before the passage of the Legal Tender Act, to pay in "lawful money of the United States," should now be redeemed, coin not being specifically mentioned. It has also decided that contracts made since the passage of the act to pay in coin are perfectly legal, so that no legislation on the subject is needed, and contracts of this kind already in existence do not depend on the honor of the parties for their fulfilment, as has been supposed. The court holds that the making greenbacks lawful money of the United States did not make gold and silver coin unlawful. The *Times*, with which we had some controversy on the subject last summer, confesses that "a grievous wrong was committed when the State courts made the enactment of this law [the Legal Tender Act] a reason for invading the sanctity of contracts previously in existence." But the *Times* says elsewhere in the same article: "The Legal Tender Act may have been a necessity of war time, and we expect to see its constitutionality affirmed." If the law were constitutional, however, the State courts could only do as they did, and committed no wrong at all. Moreover, it is not for a State court to pass on the constitutionality of a Federal act. The duty falls to the Federal courts, and we are still of the opinion which we held last summer, though we only give it for what such an opinion is worth, that the Supreme Court will hold the act to be unconstitutional with regard to all contracts which do not plainly contemplate greenbacks as a possible mode of payment, and thus do away with what *was* "a grievous wrong." We think, moreover, that the decision in the case of *Bronson vs. Rodes* is but the first of a series in which this conclusion will be reached, and that the term "lawful money" used before the passage of the act by contracting parties will be held to mean gold and silver coin, and not greenbacks. The *Times* treated this view of the case as little less than wicked when we first propounded it, but we did not care to protract the controversy

then, lest we and the *Times* between us should be betrayed in the heat of argument into deciding the case without giving the Supreme Court a chance of saying anything.

General Grant has made a speech in reply to the official announcement of his election, in which he declares that he will not reveal the names of the members of his Cabinet until he sends them in for confirmation to the Senate, and reiterates his determination to regard merit more than aught else in his selection of them. The reason he gives for keeping his secret so long is, that he wishes to save trouble to competitors for the various offices. The principles of his administration are to be "economy, retrenchment, faithful collection of the revenue, and payment of the public debt." There is here no mention of "the main question" or of "the goose"—an omission which cannot, we imagine, have been pleasing to Messrs. Butler, Logan, and Chandler, and the like, and we fear will lead to trouble with those worthies, as well as several other Republican chiefs who care nothing for any of the objects to which Grant attaches so much importance. His mode of choosing the Cabinet, also, is said to be very obnoxious to many politicians, who are reported to be determined to show that a President cannot succeed who begins his administration in that way. We wonder what Messrs. Cameron and Forney think about it, and trust they will speak out. A storm is unquestionably brewing, and will break out before next December.

There appears to be a good deal of difficulty, as has been all along anticipated, in getting the Senate to repeal the Tenure-of-Office Act. Senator Edmunds and other very good men have been making desperate efforts to bring up the repealing bill for final action, but somehow other things have thus far appeared more important, the fact being, in the estimation of the world out of doors, that some senators out of secret hostility to and suspicion of Grant, and others from the feeling that the power of preventing men from being removed from office is too good a thing to be lightly given up, are determined to leave the act standing, if they can do so without an open declaration of their sentiments. The senatorial reputation for wisdom has not been rising of late. The Constitutional Amendment, as the Senate has produced it, is worthy of the House as it is on Saturdays, and the performances of Mr. Wade on Wednesday week suggest some curious reflections as to the state of the Senate's mind when they selected that gentleman as the person best fitted to preside over their deliberations in case they should have serious trouble with Andrew Johnson. It appears that he does not possess one of the qualities which were claimed for him when he received that extraordinary honor, and a more striking and painful illustration of the way sensible men allow themselves to be imposed on in exciting times, by noise and uproar, than his selection for his post is not often met with.

Mr. Johnson is closing his term in a cloud of pardons. His last act of grace has been the release of Devlin, a distinguished "whiskey thief," convicted about a year ago in Brooklyn. Many others have experienced similar clemency. For offences against the Post-Office, too, he seems to have the greatest tenderness. The stealing of publishers' money-letters has been very common of late amongst postal employees, but there is little encouragement to prosecute, owing to the way in which the fountain of mercy flows at the White House. Against the assassins of Mr. Lincoln, too, he seems to have ceased to feel any rancor. He has restored the bodies of some of them to their relatives, which is perhaps but reasonable and humane, and he is said to be about to bring Dr. Mudd home from the Dry Tortugas. What makes this worth remarking on, is the unpleasant contrast it offers to the almost ferocious haste and sternness he manifested at the time of the trials. Now that Wilkes Booth's body, too, has been dug up, and delivered to his relatives, one wonders what was gained by the theatrical mystery which was thrown round the place of his burial.

The accounts from Tennessee are all very positive as to Mr. Johnson's intention to run for the governorship immediately, and his success is considered certain, unless the Loyal League, an organization of great size and efficiency, should prove too much for him. He has the advantage of not having been mixed up in the recent State quarrels and coming back from Washington as the martyr of Southern rights, and his eloquence will doubtless have more force than ever on the cross-roads. It will be a disappointment to many people not to see him returned to the Senate, where he would meet his old enemies face to face, and where he certainly would not indulge in soft dalliance with them. In Tennessee his views on the public debt will doubtless also be popular, and the bondholders need look for no quarter from him. When one takes up the old newspaper files of last year, or the reports of the impeachment trial, and reads there what some Radical orators and writers assured us Mr. Johnson would do, or cause or permit to be done, in the way of rape, arson, highway robbery, and treason, in case he were not convicted, one can hardly believe that it was really the personage who is now leaving the White House so peaceably that those sons of thunder had in their eye when they were thus trying to act on our nerves.

The most striking event of the week has been the riotous proceedings at the counting of the electoral vote, arising out of General Butler's objection to the reception of the vote of Georgia. It is due to Congress to say that they took every proper precaution against the occurrence of this scandal. Knowing that there was a difference of opinion about the exact status of Georgia, and that therefore there was a chance of a dispute over the reception of her vote, the question was brought up for settlement a week beforehand, and a concurrent resolution adopted by way of compromise, under which the vote of the State was to be counted, but was not to be allowed to affect the result; a condition of no great practical consequence, as it was well known it could not affect the result in any case. There was, therefore, ample opportunity afforded to everybody of saying whatever he wished to say upon the matter, and of recording his vote upon it, and it was finally settled in the only way in which it could be settled under any circumstances, or at any time, by a resolution of both Houses. Consequently it was not possible on the day of counting to raise any objections to the reception of the Georgia vote which had not been already raised, or have them passed upon by any body or tribunal which had not already passed upon them. So that the resuscitation of the question by General Butler was, it is fair to conclude, due to the love of disorder which seems to be rooted in his nature. Bringing it up at all was an unnecessary interruption; bringing it up as he did, with loud yells, rolled-up sleeves, and threatening looks and gestures, and all the usual preliminaries of a riot amongst Sixth Ward roughs, on what is, except the inauguration, the most solemn of American political ceremonies, was of course a piece of unmitigated ruffianism, for which, if his constituents were like other people, he would be at once called to account.

He has now been in Congress nearly three years and he has not yet given the smallest aid to rational legislation. All his energies have been devoted to schemes of personal annoyance of enemies or plans for the creation of tumult and disorder in some branch of the Government. He revelled in the impeachment; he revelled in the corruption enquiry, and in the squabbles with Sam Ward and Sheridan Shook; in the crusade against the tax bill, and in the attempt to tax the bondholders. Re-elected by a large majority, on the assurance that he had abandoned his financial heresies, his first work was to prepare a pamphlet in favor of irredeemable paper, and denunciation of gold and silver coin, and read it to the House as "a speech," at a moment when the honest men of all parties were cudgelling their brains to discover the best and quickest mode of returning to specie payments, and when the utmost discretion on the part of legislators was needed to restore confidence in the public credit. This falling flat, he devoted himself to getting up a riot on the most public occasion possible, so that his own notoriety, and the national disgrace which is the result of his notoriety, might receive their final touches. Those readers of Congressional proceedings who remember that he and Mr. Wade are the two men whom the conviction of Mr. Johnson, on his impeachment, would have raised to power and influence, and charged with the conduct of affairs during a most difficult crisis, must have experienced some strange sensations last Thursday morning. The squabble between him-

self and Mr. Bingham over the rhetoric of the latter was a fitting close, too, to the mutual beslavering which went on between them last February, when they were both beating their tom-toms against "the greatest criminal of the age."

The *Boston Advertiser* has been dealing very severely and sarcastically with General Butler's admirers and supporters since his performances last week, and insinuates that they are now ashamed of him. But we think it does them injustice. Not one of them, from Senator Sumner down, has, so far as we know, ever ventured to assert, in a private room, that he thought General Butler a good man, or a proper representative of an intelligent, Christian constituency, or a man whose career he would like his son to imitate. They reserved their eulogies of him for the stump, where blather and evasion would pass without critisism or contradiction, and what they said there was not that he would not prove a stumbling-block in the way of honest legislation, or an injury to the public credit, or a scandal to free government, but that "the Copperheads hated him," and that he was "sound on the main question." Now, these two propositions are still true of him, and therefore we do not see that his admirers are likely to hang their heads in view of his last exploit. Men who were not ashamed of the code of morality which they concocted last fall to justify their voting for him, are hardly likely to blush over his excesses, even if he were to knock the President of the Senate out of his curule chair. He owes his position, however, less to the support of those who really think well of him than to the cowardice of those who know him and distrust him, and have shrunk from doing their duty by him. We observe, by-the-by, that in trying to wriggle out of his scrape in the House, he declared that "there was no man who had greater love, greater respect, or greater veneration for old Ben Wade than he had." In the same debate, General Logan pronounced Ben Wade "the great living monument of this great age." The public will now be curious to hear Ben Wade's opinion of Ben Butler and Jim Logan.

The Spanish Constituent Cortes has met, and is now busy in organizing for work, the first thing in order being, of course, the selection of a monarch; that the Government is to be a monarchy being, apparently, a foregone conclusion. The person now most talked of is the Duke de Montpensier, the Duke d'Aosta having dropped out of sight. The religious question, which was pronounced, after the success of the revolution, the one likely to give least trouble, is now thought likely to cause most, owing to the assassination of the civil governor of Burgos and the unexpected spirit of resistance which is showing itself among the clergy. The governor was stabbed to death by the crowd which collected round the cathedral in which he was about to make an inventory of the plate and jewellery; the attack, the police say, having been instigated by the archbishop and the clergy, who have been accordingly arrested. The news caused a violent demonstration in Madrid against the Papal nuncio, who was obliged for some days to lie hid, but the rest of the diplomatic corps made common cause with him, and threatened to leave if he was harmed. The Pope has given the priests the cue by refusing to receive the new Spanish ambassador at Rome, and the clergy throughout the country are fiercely denouncing civil marriages, which have been recently authorized, as concubinage, and are threatening a total suspension of religious offices, which would, it is feared, fall as heavily on the peasantry as an interdict in the middle ages, the Spanish peasant looking on regular mass as a necessity. One small Protestant church, the first, has been opened in Madrid, and is crowded. The minister is an able and moderate man, and uses a liturgy which is, in a large part, a translation of that of the Anglican Church. The clerical journals have, however, begun to threaten the demolition of all Protestant "temples." One of the most curious incidents of the crisis is a threat on the part of the Provisional Government to demand the ex-King, and Father Claret, the ex-Queen's confessor, from the French Government, under the extradition treaty, for having carried off a large quantity of church plate and other valuables. A new adviser of the Spanish people has appeared in the field in the person of that wise and moderate Genevan radical, M. James Fazy, whose performances in that ancient burgh have, during the last twenty years, attracted so much attention. He is of opinion that the best thing for Spain to do is to set up a federal republic like that of Switzerland. It is quite clear, however, that the *first* thing for Spain to do is to offer seats in the Constituent Cortes to all the "earnest radicals" of the civilized world, who think they know better what is good for the Spaniards than the Spaniards know themselves.

By the way, in talking last week of Mr. Hale's troubles at Madrid we, in what we must acknowledge to have been a somewhat muddle-headed manner, substituted in various places the name "Bliss" for the name "Perry," thus robbing Mr. Perry of some of his glory, and, as one correspondent suggests, casting an imputation on Mr. Bliss of the Legation at Berlin. Mr. Bliss, however, will hardly be troubled by the bad opinion of anybody who did not detect our mistake.

The other foreign news is unimportant. In England, the case of Overend, Gurney & Co. occupies the larger share of public attention, the defendants having been committed for trial, with a fair chance of its resulting as painfully as the case of Sir John Dean Paul and his confederates in 1856. Gigantic frauds, by persons of the highest social and commercial position, have, in fact, during the last ten years, been alarmingly frequent in England. During that period, one member of Parliament has committed suicide to avoid exposure; another has been sentenced to penal servitude, and two banking-houses of the highest standing have been in the criminal courts—and all on charges of swindling or embezzling. The Overend-Gurney case is, as a social phenomenon, made all the more serious by the appearance in the case, as a self-convicted cheat and humbug, of the official assignee of the Court of Bankruptcy, an officer in whose hands enormous amounts of property vest every year. It appeared on his own evidence that he was in the habit, while acting as agent of the Gurneys for the examination of the affairs of persons to whom they were making heavy advances, of taking bribes from the borrowers, and finally used the knowledge he had acquired of the desperate condition of the Gurney affairs to extract a douceur of one hundred thousand dollars from the firm. He was near being mobbed on leaving the court-room Parliament has been opened by a Queen's speech, read by the Lord Chancellor; but it, as usual, indicates nothing except the nature of the subjects which will probably be brought forward by the Ministry.

The Greek question has been settled for the present by the King's finding a ministry ready to sign the protocol of the Paris conference. As we said last week, it is a perfectly harmless document, and binds nobody to anything. It inflicts on Greece a censure by implication, but a very slight one, and it has rendered the Bulgaris ministry an essential service by enabling them to get out of the Cretan scrape with the air of martyrs. Moreover, it does the Cretans no harm, because their struggle was over before the conference began its sittings. The evil of it is that the Greeks have probably learned nothing from it, and will keep on disgusting Europe by their rant, instead of winning its respect by the spectacle of order and good government. Whenever the day comes that travellers can journey through the interior of Greece with as much safety as through Switzerland or even Turkey in Europe, we shall see a revival of Philhellenism, and a fair chance of the Greeks succeeding the Turks. But there is something preposterous in the anxiety of the former to administer the affairs of the whole Ottoman Empire, when they do not pay the principal or interest of their debts; or, admitting this to be excusable, when a stranger cannot ride ten miles into the interior from Athens without an escort of cavalry to save him from being robbed or murdered, or both, on the high road. It is doubly preposterous when one remembers that a foreigner may ride alone from Belgrade to Constantinople in perfect safety, and find himself along the whole route in the midst of a Christian population which, in all outward marks of comfort and prosperity, stands higher than any peasantry in Europe, except the Swiss and Austrian. Little is known of Greece, but whose fault is it? Into what country in the world would travellers pour with greater delight if they could do it with safety to their throats or purses, or if the Athenians gave more time to road-making and farming and policing, and less to newspaper articles and stump speeches?

THE CONSTITUTIONAL AMENDMENT.

The Suffrage Amendment as it passed the House was in these words: "The right of any citizen of the United States to vote shall not be denied or abridged by the United States, or any State, by reason of race or color, or previous condition of slavery, of any citizen, or class of citizens, of the United States." But the Senate Amendment is in, these words: "No discriminations shall be made in the United States, among the citizens of the United States, in the exercise of the elective franchise or in the right to hold office in any State, on account of race, color, nativity, education, or creed." In other words, the Senate proposes to the legislatures of the various States a much more radical measure than that of the House, intended to prevent the possibility of oppression for which a way might be opened by restrictions based on education, origin, or religion. The differences between the two Houses will have to be reconciled by a committee of conference, and of what conclusions that committee will come to no one can be said to have the least idea, for the present result of the long discussion of Congress on the subject seems to be that all the propositions have about an even chance of adoption, and that no one can say what may turn up enacted at the end. The Amendment is an attempt to restrain (or rather to eradicate) the passions of a dominant and hostile race, not by punishment, not by the effect of terror, but by a simply declaratory resolution. We say declaratory, because although the power be given to Congress to enforce it by appropriate legislation, the legislation will always be difficult of execution, and therefore inefficient.

It is very true that the idea of the extreme members of the Republican party is, that until the negro is educated to that point at which he can compete evenly with the white he is to be protected by such legislation as may from time to time prove necessary; that this new article, for example, will enable the North to deal summarily with any State which violates its provisions; that States may be excluded under it from representation, as the Senate Committee now proposes, even without its aid, to exclude Georgia; that Mr. Sumner's motto, "Anything for human rights," will clear the way of a good deal of difficulty, and what little may be left will disappear very rapidly before the broad light of such minds as those of Messrs. Butler, Logan, and Wade. This method of dealing with the South is that which one section of the Republican party has long advocated, the policy of extending the arm of the Government over the black until he was quite able to hold his own. It was in fact a system of "protection" applied to man, such as we have been accustomed to apply to manufactures, its principle being, Government support in the "struggle for existence" as long as needed. The Georgia Committee's report offers an excellent example of this theory of the duties of Congress, a theory to which our chief objection is that it is impracticable. It might, perhaps, be an excellent thing, if, while an inferior race was slowly improving its morality and intelligence, some impartial agency could come between it and oppression, could avert evil and cherish good influences, could, by gradually educating, perform that office for its subject which a parent performs for its child. And particularly would such a course be advantageous where the government was, as in our case, in great measure itself responsible for the existence of the subject class. While the tutelage continued, the world would have the admirable spectacle afforded it of a government engaged in an effort purely moral, and at the end of it would have a result which would certainly justify its attempt.

But the trouble is that such a thing has never yet been done, and, as far as we can see, is just as impossible in America to-day as it would have been in Sparta two thousand years ago, though for different reasons. In Sparta it would have been impossible, because if it had occurred to any one to suggest it, the Spartans would have treated him either as a lunatic or criminal. In America it is impossible, because, in the first place, the *laissez-faire* system has been so long and so successfully worked with our own race that no considerable number of them can be induced to think of any other, except as the merest temporary shift. Any American, or any Englishman, at heart believes that a man who cannot make his way in the world without assistance from rulers is, and must be, a contemptible fellow, and if he is a negro will begin to call him "nigger," and prove the contempt in which they hold him by cheating him; if they get a chance, by enslaving him. They resent any interference with this natural chain of cause and effect as an interference with their liberty. The hardest charge, perhaps, against which the Republican party has had to struggle in its administration of affairs since the war, has been that which was founded on the military occupation of the South after the rebels had laid down their arms.

Another reason why a long-continued protection of the negro is impossible is that you cannot concentrate public attention on the matter for any great length of time. It may be said that is not necessary, inasmuch as the negro has now the ballot and the right to be elected to office. But although neither race, nor color, nor religion, nor education, nor nativity could any longer give ground for depriving him of his rights, are we to suppose that those five guarantees would prevent the clever white politicians of the South from finding ways in which to reach their ends? We need only look at Georgia. There, in the face of a law granting the negroes suffrage, every negro member of the legislature has been turned out of his seat, and no remedy has been discovered at Washington except an unlawful abrogation of the very statute under which these members were elected. We may be sure that for a very considerable length of time the Southern whites will find means by which to override any restriction we may impose upon their love of domination. No amendment can exclude the possibility of intimidation such as that which lately rendered the black vote useless in Louisiana. Cases like these will be occurring continually, and unless public attention can be riveted upon the negro question during the next century, we do not see any way in which political outrage of that sort is to be hindered by protection. You must certainly be vigilant in order to know when to protect and where to protect, when to pass a law and when to repeal one, when to cry "Anything for human negro rights!" and when to cry "Nothing for human plantation rights!" If eternal vigilance is the price of liberty for yourself, what sort of watchfulness must be that which is to preserve the freedom of your somewhat sleepy neighbor? Now this continuous vigilance is an impossibility. The negro question can only be kept alive until the States are all in the Union, and then other matters will absorb the attention of individuals, and, what is more, of parties. The public can only be interested in a very small number of subjects at once, and the next twenty years will certainly crowd subjects upon it. Free-trade and protection, civil service reform, municipal reform, taxation, finance, and foreign relations form the tangled web which is to be the business of the next generation, as negro slavery has been that of the last. The moment is fast coming when the negro will disappear from the stage of national politics. The last thing we can do for him is to pass the Fifteenth Amendment and establish on paper the principle that his right to vote shall not be taken away from him by State restrictions, and that neither an aristocracy of color, nor of race, nor of property shall enslave him. In fact, the only way open to us of guarding the negro against encroachment was through military occupation, and perhaps, looking at the matter from a speculative point of view, the most serious mistake we have made has been in refusing to retain armed possession of the South until proofs of a radical change of political feeling were given. But only great statesmanship could have accomplished that in the face of all party cries that were raised over it, and statesmanship was not at our command. There is a feeling implanted in the breasts of people long accustomed as ours have been to self-government which makes military rule odious even when military rule is necessary, and that feeling carried the day and hurried the reconstruction acts upon us before we were prepared for them. It is too late to take another course now; the ballot is all that is left to us.

But *the ballot is no panacea for political ills.* It has been proved as well as anything can be proved in politics that a whole class or a whole race may be enfranchised, and yet injustice and oppression remain in force as before. The French have voted for half a century, and yet their suffrages are cleverly manipulated in the interests of a despotism at every election. A large class in England was enfranchised by the law of last year, and yet we hear complaints every day that the new voters have not learned the extent of their powers, and that they vote against heir ultimate advantage in support of wealthy candidates who seek

an entrance to Parliament to represent not their constituents, but their own class; and that the voters do this in the teeth of the most active attempts to persuade them to the adoption of a more far-sighted policy, is undeniable. In Jamaica the negro himself has long had the right to vote and to hold office, but events which occurred in that island not very long since might teach any one who needed the teaching that the right was *of itself* of little value to them. But, slight protection as the ballot affords the freedman, it is the only protection in our power to give, and we have always maintained that such value as it might yield was justly his. But we repeat that very little good will come to him from laws or constitutional amendments unless supplemented by what in other cases has given newly-enfranchised classes influence among the communities which gave them the suffrage. What makes the German and Irish emigrant a dreaded if not a respected member of society in America? It is certainly not the ballot, but the fact that he uses the ballot intelligently as a weapon against all who would trifle with his liberties. He educates himself; he earns wages and saves them; he makes bargains which conduce to his own benefit as much as to that of the other party; he is honest and does not get into jail; he is sober and thrifty. When he is not, he immediately loses his rights. In this city the Irishman has no rights which his governors are bound to respect, and this merely for the reason that he is ignorant, and neither industrious, sober, nor thrifty. The politicians whom the ballot gives him, whom he himself elects, grind him to poverty by taxation and wax fat over his misery, and the more they batten on him, the more he adheres to them. The ballot does not protect him, but the semblance of power which it gives makes him facile in the hands of his oppressors. If the negro will work and earn money, if he will put it away in banks and not squander it in riotous living, if he learns to make as sharp a bargain as his white neighbor, then the ballot will be of some use to him, but not otherwise. Every deposit in a savings-bank is worth ten votes to him. His color will be forgotten as soon as he is "respectable," and to be "respectable" in modern times means to exhibit the faculty of acquiring independent wealth. He must find some means of making his Southern fellow-citizens look upon him as an equal, and this he will never do by merely being able to produce a copy of the Constitution of the United States and refer the usurper to the Fifteenth Amendment.

EDUCATIONAL TESTS.

The prohibition of educational tests, which the Senate has added to the amendment, deserves separate consideration, because it forms the one obnoxious feature of the measure. In the first place, it is an attempt to protect the negro from a purely imaginary danger. As long as distinctions on account of race or color are forbidden, no educational test can be imposed at present at the South which would exclude, if not quite as many whites as blacks from the franchise, at least enough whites to make it impossible for any such test to be enforced, even if any political party were bold enough to attempt its enforcement. As far as this matter is concerned, the protection of the interests of the ignorant negroes may be fairly left to the ignorant Caucasians. No degree of acquirement can be exacted of the one which is not exacted of the other, and we should like to know where the planters, or any other class at the South, are going to find the force to keep the whites from voting on election day because they have no "book larnin'." In fact, the one thing which even the wildest and most visionary of Southern politicians, accustomed as they have been to the maddest speculation in government and social organization, have always acknowledged to be impossible, is the taking away of the franchise from any white man now in possession of it on any pretext whatever. If it be said that an educational test might be set up which would be applied loosely to white men and strictly to blacks, we reply that from injustice of this kind no laws can protect any class of the community. Negroes might be cheated in the same way in the enforcement of a registry law, and they may be driven from the polls by intimidation, though no qualification is exacted of them, as decent men were in so many cases in this city last November; or they might be cheated, and probably will be, in the counting of the ballots. In short, what real protection from *cheating*, after all, does any of us enjoy, in any walk of life, except our own shrewdness and intelligence? There was and is an educational qualification required in Connecticut, but in towns in which the selectmen were Democrats a man who did not know his alphabet could pass it without difficulty, while in others a voter had to be a fluent reader.

In the next place, neither our experience of aristocracy nor of caste, at the South or anywhere else, warrants us in expecting the Southern whites to attempt the imposition of an educational test. This is the one test from which aristocracies invariably shrink, and have never resorted to. The tests they love are those of race and property, and occasionally creed. Property they believe in, and blood they believe in; but in mere reading, writing, and ciphering they do not believe. Whenever they have for any reason found it desirable to abolish property and race qualifications for voting, and have had to swallow universal suffrage, or anything approaching to it, they have invariably shown a strong dislike to educating the voter. By keeping him ignorant they keep him poor, degraded, and easily managed, and yet get the use of his vote for themselves, without the trouble of arguing with him or convincing him. Universal suffrage without education is notoriously the very best basis in existence for absolute or aristocratic rule, because by making people believe they are sharing in the government, and that the court or council which regulates their lives and spends their money is the product of their votes, it prevents discontent, and makes exactions of all sorts safe. An educational test, on the contrary, would, in the first place, excite a good deal of dissatisfaction amongst those whom it shut out; and, in the second place, would furnish a powerful stimulus to the malcontents to get enough knowledge to meet it; and, having got it, and made their way through the barrier, they would arrive on the political stage both with their feelings hurt and their wits sharpened, and with the idea firmly implanted in them that knowledge ought to rule—an idea which, once it takes hold of a community, makes caste impossible, and distinctions based on color or creed ridiculous. In fact, the establishment of an educational test at the South would be the virtual surrender by the Caucasians of the theory to which they so fondly cling, and which is the source of all their troubles—that the negroes are an intellectually inferior race. There is no test they can possibly prescribe for voters which negroes would not meet, after a while, with greater readiness than white men, for we believe it is admitted that negroes mount the first steps on the ladder of knowledge more readily than whites, though their comparative ability to reach the highest heights, in as great numbers, is a matter of dispute; and it would be difficult to conceive of a spectacle better calculated to damage the claims of the Japhet family to perpetual ascendancy than their daily defeat by the tribe of Ham in the acquisition of the rudiments of learning.

Our last objection is one of which probably all of our readers may not see the practical force, but those of them who believe, as we do, that all legislation, and even all administration has more or less of an educational influence, and that one effect of the formal adhesion of a government to a principle, no matter how false, is to spread and perpetuate a belief in its soundness, will agree with us in considering this objection the strongest of all. A good illustration of our meaning is furnished by the history of the "spoils" theory of the nature of the public service. Fifty years ago everybody in the United States believed that government offices ought to be filled as places in a bank or counting-house are filled—by persons possessing certain moral or intellectual qualifications for them, and that such persons should be furnished with inducements to do their work well in the shape of sufficient pay and tenure during good behavior. In fact, we suppose that the notion that any other rule of selection could, would, or should be applied to the public service never entered any one's head. But in an evil day the Government itself abandoned the rule and began to use the public offices simply as means of rewarding party services, and the result is that, after thirty years of familiarity with the practice, we find the opinion widely diffused that any other use of the public offices, or any other mode of filling them, would endanger free institutions on this continent or make party government impossible.

Now, we would look on the insertion in the Constitutional Amendment of an article forbidding States, no matter what their experience

or necessities hereafter, to exact any evidence of education from voters, even the knowledge of the letters on the ballot, and actually abolishing the intelligence test, where, as in Massachusetts, it is in successful operation, and the ratification of such an amendment by the States, as a solemn affirmation of the pestilent doctrine which during the last ten years has been gaining daily strength, that no man can be too ignorant to vote, and which during the last five years has given birth to another, which is if possible worse, that no man can be too ignorant to legislate. The necessity which Southern folly and fanaticism have forced on Northern politicians and philanthropists ever since the outbreak of the war, of defending the rights of the negro to citizenship by every weapon within their reach, has, of course, produced a prodigious amount of exaggeration. It has been so necessary to heighten the value of man, even in his lowest state, that humanitarian orators and writers have got into a way of throwing doubt on the political value of all education and culture, and from insinuating have come gradually to asserting broadly that the most ignorant negro knows just as well which way it will be for his interest to vote as the best educated white man. This has naturally and logically led to the ostentatious exaltation of ignorant and violent legislators, men who make a boast of their ignorance and their freedom from all training, and to the jealous relegation to the background of politicians who profess to treat politics as a science and legislation as an art, or who confess their obligation to schools, colleges, and law courts and drawing-rooms, to the experience of the human race and the dicta of cultivated reason. In fact, during the last three or four years it has seemed sometimes as if, in the hands of some people, the pro-negro agitation would resolve itself finally into a crusade against civilization itself; and all this in the teeth of the illustrations which every State and every city in the Union furnishes, that in proportion to the ignorance of the voters are the ignorance and corruption of its legislators, and in proportion to the ignorance and corruption of legislators are the weight of taxation, the failure of justice, the power of money, the degradation and oppression of the poor.

Of these detestable doctrines, a constitutional amendment prohibiting educational tests would be the crown and consummation. It would, if it did nothing else, help to strengthen the impression already too common amongst the millions of new-comers from the Old World, as well as amongst native imbeciles, that education is simply a device of the wealthy for the vexation of the poor, and that for political purposes its advantages are a delusion. We have seen the same charge brought in Congress by "a man of the people" against what is even more necessary to the poor than education—gold and silver coin. After this there is nothing improbable in the supposition that we shall yet see schools and colleges denounced by philanthropic War-Horses, who have got their learning in odd hours by the light of pine-knots, as feudal inventions for the humiliation and annoyance of the hardy sons of toil, and the funds of which ought to be spent in supplying honest laborers with "capital" or farms. Some of the possible consequences of the educational clause are so absurd as to give countenance to the story which is afloat, that it was inserted for the express purpose of having the amendment defeated. That clause would prevent any State from exacting from a judge or attorney any knowledge of law; from the warden of a State prison, a policeman, or a sheriff, a knowledge of reading and writing; from the doctor of a State lunatic asylum or hospital any knowledge of medicine; from a State engineer any knowledge of mathematics, and so on.

FRENCH POLITICS.

One useful result of the thoroughness of the arrangements made by the Imperial Government in France for the preservation of its own existence, as far as the use of force can do it, is that it is furnishing the French with a training in constitutional agitation such as they have never had, or have only had during very short periods. It is now nearly eighty years since the Revolution, and during the whole of that time they have not had one experience of the possibility of accomplishing a political reform through persistent organization of public opinion and persistent appeals to it, or, in other words, through persistent talk. What they obtained under Louis Philippe's charter was the result of three days' fighting. When the nation outgrew the charter and began to clamor for a loosening of its bonds, it got what it sought in the same way by another insurrection. So that the French public really knows nothing of the power of public opinion, when exerted through free debate, except what it learns from the history of other countries. Louis Napoleon is, therefore, by permitting any debate at all, and by making an appeal to arms hopeless, really supplying Frenchmen with an amount of political training such as they have never received under any other régime, and if he were only a little wiser and bolder, and were likely to live longer, might prove, in spite of his bad antecedents or bad intentions, the best friend France has ever had.

His defect is that he is, in spite of his prodigious material force, over-timid. The concessions of January, 1867, loosened men's tongues, but the Government has ever since been struggling fiercely to prevent their wagging, and, in doing so, has of course produced greater irritation and a stronger impression of its own feebleness than if it had never removed the gag. For instance, the press has been recently released from the arbitrary control of the Minister of the Interior, to which it was subjected after the *coup d'état*. He can no longer suppress a newspaper and ruin its proprietors after three "warnings." All press offences now have to be regularly tried before the courts; but this concession, though a great one, has been rendered positively injurious to the Government by confining the jurisdiction of these offences to the inferior courts, and making them triable, without juries, by young judges dependent on the Government for their promotion, and therefore constantly exposed to the suspicion, at least, of servility. The concession has, of course, set the press talking as it has not talked before in eighteen years, and prosecutions are incessant all over France, and the trials are attended with so much *éclat* that writers rather court them. The fines are compensated for by the increased circulation of the newspaper, the imprisonment by the increased popularity or notoriety of the editor, and, what is worse than all, the judges are every day presented to the public as the corrupt instruments of power. The offences selected for prosecution, too, are such as might properly enough have been made subjects of arbitrary punishment by ministerial edict, but which are trivial when considered as subjects for judicial enquiry. The cause of this mistake is to be found in the character of the men with whom the Emperor has unavoidably surrounded himself. His confederates in the *coup d'état*, the Persignys, Fleurys, Mornys, were men who detested the press and would willingly have extinguished it altogether. Their successors are men who have been trained in the régime of repression, and are, therefore, utterly unfit to work any other. Men with the real political sense which is needed to work a constitutional machine, exposed to public criticism, have not rallied to the Empire and are not doing so, and the attempt to put the liberal system in force with the old instruments may be pronounced a failure thus far. M. Pinard, for instance, who rose into favor through the impression produced on the empress by his Catholic piety, had so little discretion as to treat some small sentimental attempts to honor Baudin's memory as state offences, and finally got the whole garrison of Paris under arms to provide for the possible results of a funeral oration at his tomb. At this point the ridiculous was reached, and the minister was dismissed; but the mischief was done.

One of his colleagues, M. Baroche, the Garde des Sceaux, an officer who occupies—judicial functions apart—a position toward the legal officers of the Government which may best be described by saying that it is a compound of that of the Lord Chancellor in England and of the Attorney-General in this country—has been displaying the same want of tact in his treatment of the crown counsel engaged in the prosecution of press offences. It has been such that he has in a measure driven the "parquet"—that is, the whole body of prosecuting officers—into the arms of the opposition, and done more to give weight to opposition harangues and articles than could have been done in any other way, merely through his excessive anxiety to secure convictions. No number of acquittals could damage the Government as Baron Séguier's resignation, of which we have already spoken, has done; and the sting of it is aggravated by his openly appealing to the newspapers and the public in justification of his conduct. It would be difficult to

give anybody not familiar with the reverence of Frenchmen—and, above all, Frenchmen of Baron Séguier's rank—for official *convenances* an adequate idea of the political gravity of such an occurrence as his resignation, and his writing an account of the causes of it to the newspapers. Even such a sober journal as the *Revue des Deux Mondes* treats it as "the gravest of all recent incidents," and "a symptom, and a very curious symptom, of the existing situation." It means, in fact, that the opposition is not factious, and is not confined to professional agitators or grievance-mongers, or to speculative observers or politicians.

The few defeats sustained by the Government in the country elections have not been followed up with such rapidity as to warrant the assertion that it has lost, or is in any *immediate* danger of losing, its hold on the country population, but its majorities are everywhere diminishing, and in an increasing number of departments it has begun to regard the elections with anxiety. This state of things in the provinces is now said to be bringing about what will certainly be the most striking phenomenon witnessed in French political life within the present century, namely, the reappearance in politics of the Legitimist gentry. There is said to be a great demand everywhere, not for opposition candidates, properly so called, but for "independent candidates"—that is, men not suspected of republican or Orleanist tendencies, but men who are not nominated by, and will not be dictated to by, the prèfets. To meet this a large number of the prominent men of the old noblesse, who for forty years have not touched politics, are said to be about to take the field for election to the Corps Législatif. Many of them are men of enormous wealth, owners of great estates, and in possession of great social influence, who would have little difficulty in making their way in politics if they chose; and certainly their appearance on the scene, even if they professed to belong to no existing party, would be a powerful reinforcement to the opposition.

The public meetings in Paris have become considerably worse. They are held daily, and are mainly attended by socialists, and the proceedings consist principally of denunciations of property and marriage, and advocacy of the holding of all things, husbands and wives included, in common. Attempts have been made by moderate men to get a hearing in defence of the existing institutions, but they are cried down, and even threatened with personal violence. Anybody who says a word before the audience on behalf of the present bases of civil society is treated as an enemy of the poor man and an abettor of the selfish bourgeoisie, just as here anybody who, like the clergyman in Massachusetts the other day, attempts, on a temperance platform, to throw doubts on the efficacy of coercion, is treated as a friend of drunkenness, if not silenced altogether. There are signs, however, that the Government in France is going to commit—under the instigation of men who ought to know better—the unpardonable folly of prohibiting the meetings. Experience in all countries has clearly shown that, when the discovery is made that revolting folly and ignorance prevail in any stratum of society, the very best remedy is to give the fools and ignoramuses every possible facility for laying their theories before the world. These theories are never dangerous except when they are preached to small circles of dupes in dark workshops and bar-rooms. Produced on a "free platform," the common sense of the community and the artillery of the press have free play upon them, even if "the freedom" of the platform be, as it often is, only a name; and these no form of human delusion has long withstood. Nothing is more certain than that modern society, on the whole, runs no risk of retrograding; and to human reason and human experience the work of directing its progress and removing the obstacles in its way may safely be left everywhere. A donkey, though you stop his braying, remains none the less a donkey. In fact, by doing so and condemning him to obscurity, you only facilitate his passing himself off as a horse or a zebra.

THE HIGH PRICES.

The *World* of last Saturday describes an article in last week's *Nation* as a "tissue of absurdities," or as the *Tribune* would say "branded lies," without basing this criticism upon anything beyond our statements of facts, several of which the *World* very emphatically denies. We do not pretend to lay before our readers accurate tables of statistics, but we do pretend to base our statements upon a correct knowledge of general facts. How far the former bear us out on this occasion, we must leave our readers to judge.

At the time we wrote only the figures of four weeks' shipments of wheat since January 1 had been published, showing the insignificant export of only 360,000 bushels, or at the rate of 90,000 bushels per week. Considering that the receipts at the principal Lake ports during this period were over 2,100,000 bushels, that the stock in New York was over 3,000,000 bushels, and in Chicago and Milwaukee alone nearly 3,000,000 bushels more, or together about two-thirds larger than last year, and nearly three times as large as in 1867, the export of 360,000 bushels in four weeks is certainly "no export at all." It is quite true that while our article was in press—its publication was unavoidably delayed for a week—a marked revival of exports took place, amounting in ten days to more than double the total export of the preceding four weeks, and swelling the 360,000 bushels suddenly to over 1,000,000—as the *World* triumphantly states. But the very fact that the shipments could so suddenly increase to that extent shows how light they were before. And we certainly could not accurately state what had not yet happened when we wrote.

The *World* also takes exception to our reference to the prices of breadstuffs. As far back as June superfine flour sold in New York at $6 75 to $7 50, and spring wheat at $1 95 to $2 18. Since then the prices have only fallen to $6 to $6 50 for flour, and to $1 48 to $1 70 for wheat, in spite of the excellent condition and great abundance of the harvests. That the slightness of the decline is due to speculative holding is amply proved by the large accumulations, and is besides a matter of such unquestioned notoriety as scarcely to need proof.

Petroleum has advanced from twenty cents to twenty-seven cents per gallon in less than six weeks, in spite of increased production, and mainly upon a speculative combination among leading foreign and domestic houses. Up to the fourth week in January the exports were less than one-half of what they were last year, and the increase in the exports of which the *World* speaks has taken place since, mainly for account, and for the convenience of the very combination referred to.

Our statements in regard to cotton are equally borne out by the commercial statistics. At this time last year middling New Orleans cotton was selling at twenty cents, and a few weeks before had sold as low as sixteen cents, whereas the price now is thirty to thirty-one cents. The export from all the ports for the week ending January 30, this year, was 21,000 bales against 64,000 bales for the same week last year, and for the week ending February 6, also, 21,000 bales, against 62,000 for the same week in 1868. One week there was not a single bale shipped from New Orleans to England, and another week not a single bale shipped anywhere from either Charleston or Savannah. Surely we did not exaggerate much in saying that there was no trade in cotton. In fact, the very increase in the export of breadstuffs, which is the most striking though mistaken charge of the *World* against us, was largely due to the almost total stoppage of cotton shipments and the consequent decline in freights.

Have the events of the last few days satisfied the *World* that there is a great deal of speculation going on in all the markets?

THE EDITORIAL TYPE.

It is constantly said that the wide diffusion of newspapers and other cheap periodical literature is essentially modifying human character, and that we shall have in after generations a new type of man, as different from the slow-acting, slow-thinking, on the whole contented and not over-curious man handed down to us by the Middle Ages, as the mediæval man was from the Greek or Roman citizen. The effect, actual and probable, of the diffusion of this literature, too, on education and culture of all kinds, on scientific investigation, and on morals, is a constant subject of speculation. It is somewhat strange, therefore, that so little attention has been paid to the rapid growth and increasing distinctiveness of the profession by which this literature is created. It is, to be sure, of comparatively recent origin—the only one, indeed, which can, strictly speaking, be called modern. It is true, also, that its claims to be called a profession at all are yet hardly admitted. It is only very recently, and in fact as yet only in this country and in France, that men who write for and edit newspapers are willing to call themselves journalists and admit journalism to be their only and regular profession. In England most of those who follow the

calling either do so as a stepping-stone to something else, or as a supplement to something else, or else under cover of something else, in deference to the popular belief that a man cannot make a steady livelihood by it, or that if he can it does not call forth all his powers or his best powers, and that, therefore, a high-minded or ambitious man ought not to sit down to it contentedly as the work of his life. The London journalist usually calls himself a "barrister-at-law," even though he has relinquished all hope or never entertained any hope of holding a brief—one of those small social shams the success of which, considering the intense horror of Englishmen for the lighter sorts of humbug, is amongst the most amusing phenomena of English society. In France the almost complete exclusion of the aristocracy from all share in the government wrought by the Revolution, combined with the profound respect of the French for talent apart from wealth or social position, opened in 1815 a career to newspaper men which led rapidly to the highest official positions and elevated the calling at once into the rank of a recognized profession; and a recognized, in a certain sense an honored, one it continues to be in spite of the suspicion with which it is regarded by the Imperial régime, and in spite of the despicable character of the men who there, as in all countries, fill its lower ranks. Here it has shared the happy fate of all honest callings: that is, its respectability, like the selling of soap or the peddling of apple-peelers, depends not on its nature but on the manner in which it is pursued, and a man is an editor and calls himself so as naturally and properly as he calls himself a doctor or a farmer. Even in England, however, the profession is getting able to stand alone. Of late years the rapid growth of the demand for periodical literature and the crowding of the ranks of the bar, and the diminishing possibilities of colonial life, have drawn into it a large number of men of better education and higher character than those who formerly filled it, and it has risen into the rank of a career which a sensible and enterprising man may deliberately embrace.

Journalism has in all these countries, however, been a distinct calling for a sufficiently long period to make the mental and moral peculiarities of its members not only recognizable but worthy of investigation at the hands of the social philosopher; but somehow the work has never been done. The legal type of character and the ministerial and medical types of character are well known and have often been analyzed and described. The effect of sifting and classifying facts, of arguing from analogy, of defending all sorts of causes, on the lawyer's mind has been often treated; so has the effect of didactic oratory and complete exemption from criticism on the clergyman's mind; and so has that of the constant struggle to extract laws under trying circumstances from singularly obscure and uncontrollable phenomena, on the physician's mind. The military mind, the agricultural mind, the mercantile mind, and the politician's mind, too, have all been examined, described, and classified with more or less care, and are perfectly familiar to the public. The editorial mind remains to this hour unreached by scientific enquiry, and yet there is no doubt that it forms a type in itself which grows every year more marked and which will well repay study. Our present purpose is to call attention simply to one feature of it, and that perhaps the most striking and the one which does most to prejudice the public against the profession, though it is one for which the peculiar history of the profession fully accounts: we mean its notorious want of modesty. By want of modesty we do not mean confidence in one's own opinions and over-earnestness in setting them out as the true and only truth. This is a characteristic of all men whose business it is to argue, and, in fact, may be said to be a necessary element of rhetorical success, whether at the bar, in the pulpit, or in the press. It is in fact a characteristic from which no class of controversialists or teachers is entirely free. What we mean is the freedom with which the editor expresses the wonder and delight with which he regards his own performances. All men are apt to do so whenever they are even tolerably successful. There is a good deal of exaggeration, we think, in the popular estimate of the extent to which men overrate their own powers. The mass of men take a tolerably just view of them. As a general rule, men reach and retain the positions for which they are fitted, and they owe these positions rather to the correctness of their own calculation as to what they can accomplish than to that of other people. It is in estimating the value of their work after it is done that the weakness of human nature shows itself most, and it is of course most marked in men who have achieved some measure of success, and whose calling places them in conspicuous places.

But in most of the "learned professions" etiquette, if not natural sense of propriety, forces a man to conceal this high appreciation of his own performances. At the bar, for instance, even a leader affects humility constantly, except when engaged in a personal quarrel. His opponents, however deep the contempt he may entertain for them, he designates as his "learned brethren," or is apt even to pretend to be somewhat appalled by their eloquence and lore. In fact, if it was not for the badness of *their* causes, he would give up *his* causes in despair, but having justice on his side he does not shrink from the encounter, feeble though his natural powers may be. His own exploits he has, in obedience to well-settled usage, to speak of as "humble efforts;" his abilities are "poor abilities." The counsel on the other side are an "overwhelming array of talent and learning." In nine cases out of ten this no doubt is gammon, but it is a kind of gammon which promotes good feeling, good manners, and has a certain humanizing reflex action on the mind.

In the pulpit, also, personal boasting is not permitted. Clergymen, like other men, may be and are proud of their influence, of the growth of their congregations, and of the confidence reposed in their character, and it is allowable and is customary for them to review their work openly; but then usage requires the most conceited man either to ascribe the glory of the work to Providence, or, if he reserves any of it for merely human agents, to share it with the congregation. The medical profession, or at least the respectable part of it, is bound by even stricter conventional rules than any other. The public depreciation of a professional brother, or interference with his practice, or any attempts to lessen it by doubts of his capacity, or unfavorable comparisons with one's own or open exaltation of one's self, are amongst the unpardonable professional offences.

The editor is, in fact, the only man engaged in an intellectual calling who publicly discourses on the number and value of his own services to society, and this not in self-defence or under the influence of temporary excitement, but as one of his regular duties. He generally varies the ordinary business of his calling, which is certainly dull and monotonous, by a sort of hymn to himself which treats now of his influence on the existing public; now of his type and paper, which he calls his "dress," and new type, his "new dress;" now of the furious eagerness of his advertisers; now of the prodigious number of his subscribers and the lightning rapidity with which his admirers are forming "clubs" and forwarding remittances; now of his devotion to the True, the Beautiful, and the Good, and now of the amazing meanness, cunning, and corruptness of his rivals. His song hardly dies away, however, before an antiphonal strain is heard from one or more of these rivals sweetly accusing him of fraud and lying, and challenging him to prove even one-half of his assertions or back them up by a small wager, and ascribing most of the evils of society to his unhallowed influence.

He is the only man, too, who, pursuing an intellectual calling, touts for customers or for hearers. A lawyer who offered a spring overcoat to anybody who paid him a retaining fee of one hundred dollars, or gave him that amount by way of professional remuneration, would lose caste, and the public would be rather shy of giving him their cases. A clergyman who announced that the deacons or vestrymen would present each taker of a pew in his church with a Dutch oven or a set of ladies' furs, would soon find his church empty. But an editor frequently professes to do the work of both a law-professor and clergyman: that is, expound the constitution, for instance, and save souls on the same page, and yet nothing is commoner than his offering goods of various kinds to persons who will listen to his teachings or induce others to do so, and he does it with a perfectly imperturbable face and with much puffing both of his law and his gospel. One of the causes of this absence both of modesty, and dignity, and *esprit de corps* in what promises to be the most influential of the professions, is, doubtless, the fact that it took its rise just at the beginning of the commercial age, and inherited no feudal traditions as the other professions have done. The newspapers began to be a power just as the commercial spirit began to invade society and supply a new standard of success and merit. But the principal cause is doubtless to be found in the fact that newspapers were originally commercial undertakings simply. The editor undertook to sell such scraps of intelligence as he could pick up, and he brought to his calling precisely the same code of morals and manners as he would have brought to the establishment of a small retail milk or potato business. The comments on public affairs, criticisms of public men, and general work of instruction were added on to the business afterwards, and have been every year growing in power and importance, and promise hereafter to be, perhaps, the most effective of all agencies in moulding popular thought and character. But the combination of instruction with the purely commercial work of selling the news and outdoing commercial rivals produces the most ludicrous contrasts in the columns of newspapers—a combination which nothing but long use prevents from producing greater amusement, and doing more to bring the press into contempt, and which would, but for the steady growth of the press in commercial strength, con-

vert the editor into the most singular type of man in existence. This growth in commercial strength is gradually ridding the profession of the traces of the milk and potato business, but it will never thoroughly assimilate it in manners or in minor morals to the others. All professions are becoming more and more commercial in their spirit, and are leaving more and more room for the play of individual enterprise and energy in getting on. At the bar as well as in medicine the traditional rules of propriety are gradually giving way, and though there is gain in the change there is also loss, for these rules, though they often kept merit in the background for long years, did a great deal to prevent noisy impudence from pushing too soon to the front, and if they kept men from using all the legitimate means of succeeding prevented them from using most of the illegitimate means. But the press must, from its very nature, be more or less given to self-laudation, because it holds its own trumpet constantly in its hand, and it will probably never be in human nature to resist a temptation of this kind. If lawyers or doctors had the means constantly at their disposal of informing a great many thousand people, without expense to themselves, that their offices were amongst the few places in this world of sin and sorrow in which justice and health were to be found, we greatly fear we should hear of many more wonderful cures than we do, and the counsellor would have fewer laughs at the editor for his high appreciation of his own merits.

A REAL CONSULAR STORY.

I AM in the civil service, and I have been in it for nearly eight years. I was appointed soon after the accession of President Lincoln, and the way it happened was this: Desiring for the sake of pursuing certain studies to go to Venice, some of my friends wrote a petition that I be sent there as U. S. Consul, that being a capacity in which favored students, invalids, and incapables have much the habit of going abroad. My friend H. wanted at the same time to go to Munich, but as that city was provided for *he* was sent to Venice, and I was sent to—we'll call it X., it being advisable not to make the veil too transparent, to avoid libel suits. It was a capital city, though so far as we are concerned of no political importance whatever, yet had a legation, established for the benefit of a well-known political invalid, and kept up for equally hospitable reasons. When I arrived at my post, I found both legation and consulate vacant for a long time and in the charge of a sub-secretary of the French legation and teacher of languages, who kept the bird of freedom in a cheap fifth-story apartment in an obscure part of the city, where he dispensed *visés* and French lessons together. There were many of my compatriots in the city, and monsieur made himself popular by being valet-general to the colony.

I had no salary, only fees, but as the consular returns made the compensation from these sources respectable, I had accepted the place on those terms, hoping it might be a step towards Venice when a change should take place. Assuming the reins of government, I took to myself, in a third-story apartment, the coat of arms, passport-book, etc., etc., and began to exercise consular jurisdiction over my fellow-countrymen to the amount of one dollar per *visa*. It was one of the few cities in Europe where the passport was still indispensable, and my generous compatriots, who like to have a functionary of my class in case of difficulties but don't like the fee-paying part of it, were not as a general thing very agreeable, and as a large proportion of them were secesh, it was very hard putting the screws on, especially after the law was promulgated demanding the oath of allegiance preliminary to *visa*, very soon after my arrival. My dollars cost me sometimes more than they were worth. But the police were inexorable; the consul's *visa* must precede theirs; and by cultivating friendly relations with the officials I got all the support I needed. It would, however, have been easier to squeeze out a considerable amount of money than it was to get the oath of allegiance. I remember one Virginian lady, young, spirited, and beautiful, who went on the rampage about it and almost broke my heart; but I enrolled her amongst the loyal in spite of everything. Another patriot of the peace persuasion, with a strong charity for the employment of force when it was necessary to prevent coercion, on being informed that he must kiss the Book, burst into fury and assured me that he was as good a loyalist as I was. I was ready to admit it, the more that he had already made a large income out of the war, and I, sitting in my office six hours a day, could only make about $600 a year; but I could not let him go without the oath.

He went on in a torrent of abuse of me, the Government, the President, etc., and finally, drawing a dollar from his pocket, held it up, and ordering me and all the interests I represented to a place I hope to escape finally, assured me that that magic talisman would carry him through everything. "Very good," said I meekly, "if that will carry you through, it will be cheaper than ordinary, for *I* shall charge you as much as that." He went off, abusive to the last, and I saw nothing more of him for three days, when he came to me as meek as could be desired, and went through the forms without a word of remonstrance. At another time two wealthy citizens of Mobile came, backed by two of my consular colleagues, to persuade me to let them slip by. They were perfectly loyal, they said, but feared the confiscation of their property if they took the oath. I was inexorable, and after exhausting the inducements they went away, and I believe left town with English passports, I losing my two dollars lawful gain, to say nothing of what I might have pocketed if so disposed which the law would not recognize. I doubt if any one in the service enrolled so many South-siders as I in that year. No fish got through my net except those who had interest enough to get a pass from the minister of foreign affairs, but my income suffered in the end, as will be seen.

After six months' solitary representation of the United States, I received a reinforcement in the person of Hon. Mr. A., we'll call him, being the first of the series, a Western politician, a backwoods lawyer who had been governor of his adopted state. He informed me that he had only come out to see Europe at the public expense and had a leave of absence in his pocket. Of course he knew nothing of diplomatic matters, French he had a profound contempt for, international law he didn't care to meddle with, and he unhesitatingly availed himself of my experience, my French, and my labors. Acting as his man of business and interpreter, I took a house for him, engaged an office-keeper, and after having presented him to the authorities I was honored by the appointment of secretary with a compensation left to his generosity. I went with him to talk of affairs, translated for him, wrote his letters to the authorities, and in a few days, finding that I was *au fait*, he allowed the duties of the place to devolve on me altogether.

The governor was good-natured, witty, and on the whole an interesting sample of what a man may become with no other advantages than civilization west of the Mississippi affords. The sleepy old town was soon too dull for him, and pulling out of his pocket his leave of absence he went off on it to make the tour of France, Switzerland, etc., leaving me in charge. This of course was all right, being in the way of his better education. When he returned it was only to say good-by to the sovereign and return, making another detour to America. He confided to me that the legation at this place was a sort of preserve kept for a certain friend of the head of the department, and whom we shall hereafter have to know as C., being the third of the series. C., he said, had another place just then which he did not want to quit, and so the place would be, in one way or another, kept warm for him. He assured me at the same time that he should return to the place as soon as he had been at Washington to arrange matters, and so went off, begging me to pay the rent when due, with some other obligations, to meet which he would send me the money as soon as he reached London.

There was an interregnum of six months, in which I did all the duty of consul and minister, paid the rent, etc., but I never from that day to this heard a word from the governor about the money spent, which, amounting to about $400 gold, I obtained from the U. S. Treasury through the intercession of his successor (the second minister, B.), less by about $40 which I had not taken vouchers for and could not therefore recover. As for my labor, perhaps when I meet the governor in the Fortunate Isles he will pay me in funny stories. Of the three occupants of his place in my time, he was on the whole the most creditable, and I had bitter cause to regret him

With the fashionable season following came his successor, Mr. B., a politician of doubtful reputation, as they say when it is not at all doubtful, and whom some excessively dirty work in managing elections had entitled to a reward in the way of a foreign appointment, due deference to his reputation forbidding his being put into a responsible post at home. His services deserved a more important post, as he had, they say, narrowly escaped the State prison in performing them. He was as ignorant of French or diplomacy as A., but that was nothing, as he only came to keep the place warm for C. and draw $8,000 from the public treasury, in gold, when paper was worth from 30 to 40 cents on the dollar.

I have never been certain that the sin I was guilty of in asking him for the office of secretary with a slight compensation did not merit all the misfortunes he brought on me, but I was hard up and willing to do any work that lay in my line without regard to the character of my principal. I was underbid, however. A certain individual—that's a *safe* term—who held a place in a local banking-house in consideration of his being an American and a good decoy-duck, offered to do the work in return for the honor of being his excellency's secretary. His Excellency B., glad to supply the want at so reasonable a rate, at once agreed, and the banker, who had during

the whole period of my tenure of office been an out-and-out Copperhead, partly from "pure cussedness" and more because most of the Americans then in the city were South-siders, began suddenly a new part—loyalist, with decorous reservations, not to alienate his former clients. B. had respect enough for law to induce him to prevent his secretary from assuming the title of Secretary of Legation, an impertinence the American Eagle resents by declaring a fine and imprisonment on whoever ventures on it. The legation was not yet at its lowest indignity.

That winter's business was good, and my income from fees amounted to $800, with a prospect of increasing, and my comparative prosperity induced me to go out to the U. S., and bring my family—wife and one child. I made a cheap voyage home and as cheap a voyage back as was possible under the circumstances, and arriving at X. found that during my absence the secretary, left in charge of the legation, had put on the feathers, assumed a card with B. C. D., Secretary of Legation U. S. A., had assumed diplomatic powers, and negotiated a treaty with the local government by which the American consul's *visé* should thenceforward be dispensed with, because, as he himself assured me, "it was too great an annoyance to Southern people to be obliged to come to my office and take the oath of allegiance." I went to the police and made reclamations; to the minister of foreign affairs to remonstrate, but was told that our minister had requested it and that there was nothing more to be said on the subject. I was never so dumbfoundered in all my life; in fact, I have never quite got over my amazement at the amount of cheek shown in this affair. That a person illegally assuming to represent the U. S. A. should have entered into negotiations with any government to facilitate the protection of declared outlaws was only to be outdone by another equally strange fact, viz., that our own Government, being informed of the fact, should have taken no notice of it, not even to order the pretender to diplomatic honors to put off his borrowed plumes. But the incident had a more than humorous or surprising import to me; it left me without income; but how I struggled and how we suffered the next two years, living *au cinquième* and out of society, is of no direct moment to my narrative.

I hoped that the arrival of His Excellency C. would have ended the injustice. This chosen man, to keep the place open for whom it had been twice ill filled and the country twice dishonored, must be a rare and worthy representative. A. and B. I have sufficiently characterized; the new one was another type of the pure incapable. On his arrival he quietly settled down into the secretary's apartments, established the official quarters of the legation in one of the rooms of his bank, accorded gratis, be it understood, in consideration of the honor conferred; and when the official doorkeepers at one of the government *fêtes* refused the *soi-disant* secretary admission as a person not officially known, Mr. C. took him on his arm and walked him through. They were very punctilious at the court of X. Thenceforward Secretary B. C. D. ruled the legation, and C., reposing in his *otium cum dignitate*, consulted his pleasure and left the duties as far as possible to D. C. had two tendencies generally remarked and for which he quickly became notorious in X., to economy and whiskey, so that R., who was something of a punster, made a great hit when a lady enquired if it were true that his excellency "drank," by replying, "drinks any given quantity." It is to be supposed that it was for so meritoriously saving half his very insufficient salary that he was accorded (as he himself assured me, at least) $1,000 from the contingent fund of the State Department.

A reader of any spirit will have asked the question many times ere this, Why have remained in the place under such circumstances? A man of spirit who had the means to back it up would have resigned long before, but I had put all I had into my voyage out and had nothing for my voyage home. Besides, I hoped that a sense of justice would induce the State Department to urge on Congress the appropriation of a salary for the consulate, seeing that there was a clear necessity of such an office at X. It was a great mistake. My subsequent experience has proved that our Government has never paid the least attention to justice, to fitness, to merit or good conduct in its appointments to diplomatic and consular posts. I have known men whose habitual neglect of duty and absence from their posts without reason or permission, notorious drunkenness and bad character, utter incompetence and innate unfitness, or even corruption and venality in the performance of their duties, were well known locally and easily to be proved by a slight investigation, to remain in office despite of complaint after complaint, until they were obliged to leave their official residences to escape legal action of one kind or another. The result of all my complaints in the above-cited case proved the folly of looking to the Government for justice, but, like the unjust judge, the department finally, tired of my clamor, sent *me* to another place to get rid of it. I believe that the history of this legation is the history of many others, and as for our consuls, *such as they are*, the quicker we cut off three-fourths of them the better. As to other branches of the civil service, let those testify who know. Of my own I have spoken what I know, and the above account is true to the least fact, neither overdrawn nor over colored. I am willing to affix my affidavit thereto. The opportunities for a dishonest man to make money in a U. S. consulate are sometimes great. I know of several who have grown rich on a salary that wouldn't pay their living expenses. I have myself been offered considerable sums for appointments which would give American protection, and I know that in the Levant an appointment to a consular agency or vice-consulship is often worth £200. In the busier Western European ports a man can make more than his salary by having an interest in some ship-furnishing house, who will pay him a nice percentage on all the jobs he sends them, and he has almost complete power over the ships, owing to the extreme looseness with which we hold our consuls to responsibility and the liberties they have to be disobliging, or the reverse, to the captains. A dishonest consul in a place whence many shipments take place may work himself into a large income and make the Government lose ten times as much in duties. In times of political disturbances American passports sell for large sums, and I have known a good many to be sold. Each one of those illegal papers may be the source of serious diplomatic difficulties and loss of prestige.

Yet we put all these powers into the hands of men who, for temporary amusement, for profit or for idleness, and having an uncle or relative further removed or nearer, see fit to ask for a place abroad. There is no qualification, no kind of examination. Not one in twenty of our consuls can speak any language but their own. I have known a man to leave his office entirely in the hands of a sharper, while he vagabondized by the year, got drunk, made a reputation of being an associate of the lowest characters in his place of residence, *and deserved it*, and, though complained of for years, to remain in his place, because he had some friend in Congress or behind the scenes.

The appointment of special agents during our war at a great expense to travel through Europe to act on public opinion, and Mr. Seward's notion that they were of eminent service to the Republic, shows at once what our consular and diplomatic service ought to have been and what it was. It alone should have been equal to the duties for which these agents were appointed, yet the fact that they were appointed proves that even in the eyes of the Department of State its subordinates were incapable of performing their first and most obvious duty—that of representing their country.

A man who enters our civil service does so thinking only that he has got a place. With a very few honorable exceptions, it is only to him a share of the spoils of victory, and no conception of doing honor to himself or the country or advancing the public interests, no hope of making himself an honorable position, enters into consideration. He cannot live honestly by his salary, and he has every facility for dishonesty to supply the deficiency. People and government are alike indifferent to what he does so long as he is sound on the goose and can answer Mr. McCracken's questions satisfactorily. What the consular service may have been before Mr. Lincoln's time I can't say, but since his advent it is without exception the least respectable of the civilized world.

Venite Lictores, or I shall chop my own head off.

A Civil Servant.

Correspondence.

THE ALABAMA CLAIMS.

To the Editor of the Nation:

A long-lived nation can wait for ample justice. No reparation that Great Britain can *give* now will undo the mischief that she has done. But, as a nation outlives many generations of men, the equivalent that America can *take*, by accepting the English theories of neutrality, and biding our time to act on them, may sweep maritime England from our path of commercial rivalry for ever.

Many American citizens would be glad that our Government should pay our ship-builders for losses occasioned by Anglo-Confederate piracy, and close the door of negotiation for ever. A gigantic reprisal upon British commerce, by some future generation of American ship-owners, can alone compensate American commerce for the fears and the injuries of the past.

The spirit in which Great Britain ought to have treated our Southern and Scotch enemies is illustrated by the conduct of the first Lord St. Germains, great Sir John Eliot. "One of his first orders," says his biographer,

"strikingly exemplified the sense of justice, irrespective of personal leanings, with which he performed strictly at this time his commercial duties. A French ship, laden with wine, belonging 'to one David Alexander, of Dieppe, a Papist,' had been taken prize, under commission from the town of Rochelle, then in revolt against the French king, and driven by storm into Dartmouth, where Eliot arrested her. Here all his sympathies were with the captors, and against the captured. But in vain he was petitioned to permit the ship to be carried into and judged at Rochelle. The case was too clear to admit of doubt. *England was yet at peace with France, and the men who made prize of the ship, as rebels to the French king, could only be regarded as pirates by an English vice-admiral.* Eliot was immovable; and, though Buckingham was anxious to have found a flaw in the transaction, and it was reopened on the Rochellers being taken under protection by England, the admiralty could only confirm the decision of Eliot."—John Forster's "Life of Eliot," Vol. II., pp. 21, 22.

Modern England *builds* ships for the rebels of a country with which she is at peace, and refuses redress for this infamous aid to piracy. *Per contra*, the spirit in which Great Britain *demands* reparation for wrongs is curiously shown by the despatches of another Elliot, Her Majesty's plenipotentiary to China in 1841, enclosing to General Gough a copy of "Terms of Agreement granted to the officers of the Chinese Government resident within the city of Canton." *Granted!*

"Art. 2. 6,000,000 dollars to be paid in one week for the use of the crown of England, counting from the 27th of May, 1,000,000 dollars payable before sunset of the said 27th day of May. [The day of agreement.]

"Art. 3. . . . If the whole sum agreed upon be not paid within seven days, it shall be increased to 7,000,000 dollars; if not within fourteen days, to 8,000,000; if not within twenty days, to 9,000,000.

"Art. 4. Losses occasioned by the plunder of the factories, and by the destruction of the Spanish brig *Belbanio*, in 1839, to be paid within one week."

In this affair "Kwang Chow Foo" met a plenipotentiary whom no amount of stewed puppy could mollify, and unjust Great Britain was facing China, and neither France nor a united AMERICA.

Notes.

LITERARY.

IN a late issue of the *Commercial Advertiser*—which by long custom is the recognized organ of "the trade" for the purpose of making announcements of new books and of laying claim to foreign books to be reprinted—we see Matthew Arnold's "Culture and Anarchy" announced by the Appletons and by the Harpers. Apparently, then, Fields & Osgood do not insist on their right to the works of this author. Their imprint on two volumes of his poetry and one of his prose would seem to establish their right so far as the imperfect right "by courtesy of the trade" can be established. It is said, by the way, that Americans will not have especial reason to be pleased with this new book. The author "ought to come over and study our institutions," as they used to say; and really that is not so bad a way of preparing for criticising a people—to take a look at them, "to see the thing as it is," as Mr. Arnold himself likes to say. We may properly mention here that in the last number of *Macmillan's*—an excellent family magazine for families, clever enough, though there is a good allowance, too, of third and fourth-rate matter—there is an article by Mr. Arnold, readable, of course, and capable of instructing; of course, too, not without whimwhams and affectations. It is the inaugural lecture which he delivered some ten or twelve years ago when he took the chair of poetry at Oxford. "The Modern Element in Literature" is the title of it, and one would say, from the way in which it treats the subject, that there is more of it to come. The Greeks, of course, are the true moderns; we are pretty modern, we of to-day; the Romans were modern in feeling, some of them; the Elizabethans were more ancient than we, and far more ancient than Sophocles and Horace. There is, to be sure, a truth in all this, but there is misuse of language too. Other books which the Appletons announce are "Lecky's History of European Morals," and a work with the title "Tommy Try, and what he did in Science."—Messrs. Harper & Brothers announce numerous additions to their list of reprints of English works, and besides these Maclaren's "Physical Education," "Personal Recollections of English Engineers," and "The Flowery Scroll." This last book is the Chinese love-story which Sir John Bowring has recently been translating, and it is agreeable reading.—To the titles of books already mentioned by us, Messrs. G. P. Putnam & Son add these two, "The Shakespearean Treasury of Wit and Wisdom," compiled by Dr. C. W. Stearns, and "Mexico and the United States," by the Rev. Dr. Gorham D. Abbot. The latter is said to contain information derived from high official sources.——The American News Company will publish on the 20th inst. a book in which Mr. Samuel Bowles describes his last summer vacation trip to the Rocky Mountains with Mr. Colfax and his family. The title is "Colorado: Its Rocky Mountains. A Summer Vacation in Camp." What with the Vice-President elect, the Indian question, the Pacific Railroad, in which everybody is interested, the interest which most Americans take in our far Western country—to say nothing of the interest which some people will take in Mr. Bowles as the captive of Mr. James Fisk's bow and spear—this volume ought to be a good one to sell.

—The inability which every people—with the possible exception of the French—has found in itself to give to localities names at once well sounding and not unmeaning gets its best illustration in the nomenclature of the streets of cities. Whoever may have made the country, it might be proved from the names at the street corners that some decidedly finite being made the town, and is responsible for its local sign-board literature. Walking about New York, for example in the newer parts of the city, every lettered lamp-post at the corners makes us aware of the poverty of invention under which christeners of our thoroughfares labor. And by the way it may be remarked that this dull uniformity in the local signboards is in very marked contrast with the racy strangeness of the personal signboards. Perhaps there is no city where there is more variety in the names of the business men. We have the old Dutch names, the old English names, arriving by way of New England, the newer English names of later unpuritan importation, the strange German names, the names of Jews, Spaniards, Frenchmen, Irishmen, and Scotchmen, and of men of almost every nation, gathered here for trade. It is the fashion, too, to make the sign conspicuous. But London seems to be in worse difficulties than any of our American cities in the matter of finding names for its thoroughfares. The Metropolitan Board of Works has just issued a blue-book which has a good deal to say on this subject. It reports that there are in London no less than eighty-seven John Streets, besides John's "Places" "Passages" and "Mews" without number; there are eighty varieties of streets bearing the name of Victoria, to say nothing of thirteen Victoria Cottages; including thirty-five Prince Streets, there are some hundred or so of modifications of Prince's road; there are sixty-four Charles Streets, forty-seven James Streets, and twenty-seven James Places, thirty-seven Edward Streets, fifty-eight Elizabeth Streets and Places, a directory page or so of Alfred, and great numbers of George Streets and Charlotte Streets. Deceased monarchs and princes are of course responsible for some of these names, but some of them, and perhaps not the smaller number, have been bestowed in honor of sons or wives or daughters of builders and owners. On any other supposition it would be hard to account for thirteen Mary Anns, seven Emilys, seven Ellens, ten Elizas, thirteen Janes, thirty-four Marys, and fifty-three Annes. It appears that there are a few exceedingly odd names, which is almost a wonder too, considering the whimsicality of the Britisher and the obstinacy with which he indulges any whim that he once takes into his head. But for that matter the greater wonder is that with these traits of character he has made himself notorious as a nomenclator by the uninventive, unindividual manner in which he follows after "old use and wont." Still we find a Ruhamah Place and a Mehetabel Road, which will do very well as oddities. These would bother Mr. Matthew Arnold as much or even more than "Coles's Truss." Here in New York we have fallen back on the Arabic numerals, which we may thank heaven are entirely inexhaustible for the purpose of designating streets—though we suppose the Chicago press will contradict us on this head, so far as concerns the growth of their municipality. But the Londoners will have to marshal the whole body of letter-writers to the *Times* if they are ever to be extricated from the confusion they are in.

—For more reasons than one the recent death of Viscount Strangford should be mentioned in journals devoted to literature or to politics. He was an extraordinarily good scholar, and an extraordinarily good writer for the press, as well as being a politician in the high sense of that abused word. Questions of Eastern politics—Egyptian, Turkish, Persian, Indian—were his specialty, and it may be doubted if he was anywhere equalled—in England he certainly was not—for the closeness of his study of them, the minute exactness of his information, and his comprehensive views of England's rights and duties as regards them. He was the second son of Percy Clinton Sydney, the sixth viscount of his house, and seems to have labored with more than the usual disadvantages besetting the career of younger sons. His mother dying soon after his birth—which took place at St. Petersburg, where his father was ambassador—Percy Smythe Sydney was sent to his grandmother—an American lady, by the way—at Clifton

a watering-place near Bristol, and remained there, going to a small school, till he was ready for Harrow. From early childhood he showed a wonderfully retentive memory and in the last years of his life could recall the names of the shipping that he used to see in the harbor, of the streets and lanes about which he wandered, of his childish companions, and of every book that he read; indeed it is said of him that he never forgot anything that he had ever known. Vámbéry, the orientalist and traveller, bears testimony to the power of this faculty in the viscount's later days, when it was as great as ever. Vámbéry says that his knowledge of Asiatic tongues was so precise, deep, and correct as to be astounding. After his return from Central Asia, he visited Strangford, and among other things conversed with him concerning the Tchagatai, or Tartar-Turkish, a dialect all but unknown and even unheard of in Europe. Strangford could speak the Tchagatai, Vámbéry found, better than himself, and quoted to him Tartar classics as well as any mollah in Khiva or Bokhara. This was not the only dialect of an Asiatic country that he had never visited which the learned viscount could speak and write fluently and idiomatically. In short, "he was the most varied linguist England ever produced," if the Hungarian scholar's opinion is to be accepted as conclusive. Not unlikely it is to be so accepted. Persians have said that he spoke Persian "with the mastery and elegance of a highly educated native," and it is said that his knowledge of modern Greek in all its dialects was so extensive and accurate that he could at once tell of what province a speaker was a native, and, more than that, could hardly in any province have been known for a foreigner so far as his speech was concerned. From Harrow he went to Oxford. After leaving school it is said that he never—for what reason we do not know—received a shilling from his father, but supplied himself. This fact may explain the brevity of his stay at the university, which he left at the end of a year. Or it may be that his passion for oriental studies decided his departure. However that may be, he went out to Constantinople in 1845—when he was 20 years old—as an attaché of the embassy. Already he had taught himself Arabic and Persian, and to them he soon added Turkish and Greek. For twelve years he was in the diplomatic service, and as the Crimean war occurred in this period, so much labor was thrown on him as Oriental Secretary that it very nearly ruined his health utterly. He was never robust. In 1857 his brother, who had succeeded his father, died and he became the eighth viscount. In February, 1862, he married happily, and on the eighth of January last was found dead in his bed—dead of overwork at the age of forty-three years. For the ten or eleven years of his later English life he was as before a student, and a light of the Asiatic Society and the Geographical Society; as a geographer, not more than one or two men in England were comparable to him. Besides his studies, however, he occupied himself more or less in writing for the press, as we have said. He did some reviewing in the *Saturday Review;* there is an article of his entitled "The Eastern Shores of the Adriatic," in the *Quarterly Review* of August, 1866; and from its foundation he was a promoter of the *Pall Mall Gazette* and a frequent contributor to that journal, which will sorely miss him. Indeed, whether considered as political writer, scholar, or profound politician, his death is nothing less than a loss to the British Empire. It is to the *Pall Mall Gazette* that we are indebted for most of our facts concerning him.

—With the so-called Phil-Hellenic movement Lord Strangford was by no means in sympathy, and we can easily imagine him severely denounced in Boston by the Phil-Hellenes lineally descended from the Byron and Doctor Howe of 1821, just as in England he was often denounced by the more numerous and less intelligent writers and talkers on the "Eastern question" as "a mere Turk." He used to say of himself, "I am an anti-φιλελλην," whereupon most people set him down as a hater of the Greek and a lover of the Mussulman; but he used to go on and say, "But I am a pro-φιλορωμαιος." That is to say, Lord Strangford, who may almost be said to have made the future of Turkey in Europe the study of his life, who talked and thought about it from the experience and labor of years and not merely from a fervid, uninstructed, sentimental, school-boy notion of ancient Athens and her glories, who knew the character of all the races involved in the problem—this trained student of politics and history disliked the Turks, was decidedly an anti-Turk, disbelieved in the Greeks, and was no Phil-Hellene, but was a "Philo-Romaic," as he phrased it, was a believer in the Bulgarians as the race destined to supplant the Turks and, in place of Mohammedan or Russian, hold Southeastern Europe. We observe that half a dozen Bulgarian gentlemen resident in London have recently addressed to Lady Strangford a letter of condolence, in which, while expressing their sorrow at the loss of their champion, they express at the same time confidence or hopefulness for the future of their people. They claim that the Bulgarians, little known as they are in Europe, and much as they are overshadowed by the noisier Greeks, are a strong undivided nationality of five millions souls. It is not unlikely that the death of Lord Strangford, calling as it has and will wide attention to his projects for the gradual settlement of the most baffling of all the questions of European politics, may be an event more fruitful of political results than his life would have been. It is to be hoped that something may be done with his letters, which are spoken of very highly, as being full of linguistic learning and of wit, and which, probably enough, may have political as well as philological value. And unless something is done with them he will have left behind him no permanent memorial of great labors and great talents.

—Those of our progressive men and women who were for doing all kinds of things to Chief-Justice Chase because of his behavior during the impeachment trial, and who have not yet ceased their visitations on the heads of the seven judges who would not be politicians on the same occasion, will be pleased to hear a new anecdote concerning Dr. Pusey which is now going the rounds in England. We hope he may be able to deny it. Lord Kingsdown—Thomas Pemberton, and afterwards Thomas Pemberton-Leigh—who died not long since, was one of the many English lawyers whose abilities have raised them from poverty to the peerage; he filled several high offices in the course of his life, having been for many years a member of parliament, and served as attorney-general to the Prince of Wales, chancellor and keeper of the great seal to the Prince of Wales, and member of the Privy Council. Of the judicial committee of the Privy Council he was a very active and efficient member, being for learning and for intellectual power able among the ablest. Of course his integrity was as well known and as much believed in as his ability. When he was lying ill of the disease of which he died, it was proposed in the Hebdomadal Board at Oxford that the degree of Doctor of Laws should be conferred upon him, an honor which he had so well deserved that the conferring it would have been an honor to Oxford. A large majority of the board were eagerly in favor of the proposition, but it was opposed by Doctor Pusey and one other clerical member, and as Lord Kingsdown's friends were not willing that a disputed honor should be tendered the eminent man whom they admired, the two ecclesiastics were permitted to have their own way—a thing not overmuch to the credit of their fellow-members, most people would say. It was of course, as is customary in such cases, thought best to say nothing to the defeated candidate about the proposed honor. Doctor Pusey, however, conceived it his duty to write to Lord Kingsdown, saying that his opposition had proceeded from no want of respect for his lordship, but from the conviction that by his judicial authority he had contributed to sustain judgments adverse to the spiritual interests of the church. Put in plain English, this occurrence would be related with substantial accuracy if it were said that Lord Kingsdown, a man of undisputed probity, having declared the law on certain matters to the best of his knowledge—an indisputably greater knowledge than Doctor Pusey's—was punished by Doctor Pusey to the best of his power for thus doing his duty. It may be wrong to allege want of temper and want of consideration and want of sense against a man in many respects so good and in many respects so able as Doctor Pusey, but this act of his looks very like what in other men would be called spitefulness, and blind zeal for party, and an immoral ignoring of the honesty of eminent opponents.

—Three of the heroes of modern Italian unity have rejoiced in the name of Giuseppe, and of these perhaps the greatest, though from his modesty the least conspicuous and famous, was the Sicilian patriot La Farina, one of the most intimate and valued advisers of Count Cavour. Towards the close of last year his private correspondence was published in Milan, in two volumes (*Epistolario di Giuseppe La Farina, raccolto e publicato da Ausonio Franchi*), and the incidental allusions in some of the letters to the well-known radical and now representative Crispi have provoked the latter to a rather ridiculous display of himself. On the 4th of December he wrote to the editor of the correspondence, that there was not a word of truth in all that La Farina had said of him; but as it would require a volume to confute his misrepresentations, he would confine himself to two, and he instances passages in letters of November, 1860, which imply that Crispi's patriotism was inspired by sordid motives. In view of this "infamous calumny" he makes an appeal to the conscience of the editor for an early apology, failing to obtain which he threatens to seek redress in the courts. The reply of Franchi is what might be expected, and is marked by dignity and quiet irony. After disclaiming any responsibility as editor for the judgments or opinions of the deceased writer—a responsibility which no editor would or could assume—he explains away the injurious construction of La Farina's language with regard to Crispi,

and concludes as follows: "When I am sure of being in accord with my conscience, I have very little concern for my legal responsibility. If you wish to have recourse to the latter, so do; you know better than I do what legal reparation is worth as compared with the judgment of history, and I know besides that no law and no tribunal will ever succeed in making me retract what I have never uttered." It may, however, be questioned whether the publication of these letters was not premature, considering how violent have been the agitations and dissensions of the Italians during the last twenty years, how fierce were the personal jealousies evoked, and how many have survived that stormy period. The omissions in Franchi's collection, due to numerous refusals to surrender La Farina's letters for publication, are a proof of the sensitiveness which still exists. The documents withheld would undoubtedly show how former friendship had changed to opposition and hostility; and the better La Farina's character is established for integrity, statesmanship, and intelligent devotion to his country, the less likely is any one to confess having differed with him or been any the less far-sighted and patriotic.

—Within the past two years Italian scholars have been fruitful of commentaries upon Dante and the "Divine Comedy." Of about a dozen that might be named—some general, others confined to particular books or passages—and which have been published in all parts of the kingdom, the one by Giovanni Ventura is the most interesting. It undertakes to explain the opening verse of the seventh canto of the "Inferno," well known to have given rise to various interpretations:

"Pape Satan, pape Satan aleppe."

Ventura by some reasoning persuades himself that in Pluto Dante designed to impersonate Philip the Fair, of France, who has, however, received his dues in other parts of the same book. He then develops the satirical speculation of Benvenuto Cellini that the line in question was borrowed from a phrase he once heard used by a judge in a French court, and should be read as French, by sound:

"Paix, paix, Satan; paix, paix, Satan; allez, paix!"

This Ventura changes into—

"Pas paix, Satan; pas paix, Satan; à l'épé [épée]."

But as there is nothing to justify such an extravagant fancy—certainly not the words of Jesus, "I come not to bring peace but a sword," which Ventura cites—so the explanation of the best commentators commends itself by its simplicity as sufficient. According to this, *pape* is a Latin exclamation of surprise, while *aleppe* is the Italian form of *alpha* (as *Giuseppe* of *Joseph*), and in this connection means chief or prince. But Ventura really improves the fine passage in Canto V. that contains the story of Francesca da Rimini, by separating from her narration the line which is commonly supposed to terminate the first portion of it:

"Caina attende chi vita ci spense."

This fierce and abrupt transition from the sweet tenor which became Francesca, seems to be fairly attributable to Paolo, who up to that time had been silent and of whose silence throughout some commentators have made much as poetic art. But the two succeeding lines sustain Ventura perfectly by their plural allusions—

"Queste parole da *lor* ci fur pôrte.
Da ch' io intesi quell' *anime offense*," etc.

By this suggestion our author has quite redeemed his book from worthlessness. A new work with the pretentious title, "La Mente di Dante Alighieri," is announced by Professor Brambilla, of Como, to whom these studies are not new.

—The International Congress of Statistics will hold its seventh session this year, and, by invitation of the Government of the Netherlands, at the Hague. In anticipation of its meeting, Herr von Baumhauer, director of the Dutch Royal Statistical Bureau, has published: "Idées-mères ou plan motivé d'un programme pour la septième session du congrès international de statistique. La Haye, 1868." Hitherto, in the author's opinion, the practical usefulness of the congress has been almost neutralized by a want of system in its subjects of discussion, and, as a consequence, a too crowded programme and overburdened committees. He therefore endeavors to reduce under a few heads the more important topics to which attention should be given. The congress will miss one of its ablest members in the late Prof. Frederic Benedict William von Hermann, the Bavarian political economist, who died in November at the age of seventy-three. For forty-five years he had been a teacher of his favorite science, and in 1832 published his first work upon it (*Staatswirthschaftliche Untersuchungen*), by which he at once won reputation. He was engaged in his last moments in preparing a second edition of these "Researches," which his son-in-law, Prof. G. Mayer, may perhaps complete for publication. Von Hermann stood very high in the confidence of his Government, and was an illustration of the extent to which the rulers of the present day depend on men of science and special learning. He was made successively inspector of the schools of technology, ministerial counsellor, and counsellor of state; was a long time member of the Bavarian chambers; represented the city of Munich in the national assembly at Frankfort in 1848, and his country several times in international conferences and negotiations where economical questions were involved, as in the reunions of the Zollverein, the expositions of London and Paris, and finally the congress of statistics, of which he was one of the most admired speakers. It is worth mentioning that the Bavarian Government has been and still is managed on anything but the "non-interference" theory. Munich is one of the cheapest capitals in Europe, but the prices of the necessary articles of food are regulated not by competition or supply and demand, but by government decrees.

RIVES'S MADISON.*

It is ten years since the first volume of this work was published, and three years since that was followed by the second volume. In the editor's plan as originally announced, and as restated in the preface to the volume now in our hands, still a fourth volume was contemplated for the completion of the work; and even then, if the narrative and its illustrative extracts had been presented with the same fulness as is allowed in the three substantial octavos now before us, it seems as if Mr. Rives would have found a fifth volume necessary. But his labors were closed by his death, at his residence at Castle Hill, Virginia, on the 25th of last April. It is greatly to be regretted that he should have left a work, in many respects so admirably and faithfully constructed up to a very important point in our constitutional history, uncompleted beyond it. And the failure is the more to be deplored because it cannot be referred to the want of time, as Mr. Rives had kept his second volume all prepared for the press through the space of four years, during a critical period of the war of the rebellion, waiting for a more auspicious season for its publication. We must therefore look to another mind and hand to bring the work to a close We hope that the conclusion will be characterized by the same excellent qualities of dignity, good taste, fidelity, and intentional impartiality as are exhibited in the portions of it that have been put in print. It is to be presumed that Mr. Rives has left all the necessary materials with some preparation of arrangement and illustration to facilitate the task of his successor.

Fortunately the excellent plan on which he constructed his work has secured the results of his labors from being merely fragmentary compositions. He intended that his several volumes should be complete, each in itself, by treating and confining itself to a definite period of history, constituting in itself an epoch marked by its own incidents and results. In each of the three parts of the work, the agency and the noble and conspicuous services of Mr. Madison offer material of the most important character for illustrating the most signal movements in our national annals. In the first volume in which this accomplished and high-toned man, a patriot by nature, was fitting himself to be a statesman, the War of Independence, and the political union based on the Articles of Confederation, presented to him a field and materials not only for acting an eminent part in the emergent occasions of the time then passing, but also for preparing to perform the very exacting duties which would be imposed on all our able men in all sections of the country in the formation of a working plan of government.

In the second volume, beginning its narration at the close of the war of the Revolution, and treating largely of the distractions and perplexities of the ensuing period, Mr. Madison appears in his honored place as one of the most competent and judicious if not the most brilliant and gifted among the men who formed and established the Constitution of the United States.

The third, and, as we have said, the last volume which Mr. Rives has been permitted to give to the public, traces the course of public affairs during the period of both terms of Washington's administration, Mr. Madison being through the same period a member of and, as we now have to add, a party leader in the House of Representatives. He did his full share, and contributed his generally calm and discreet counsels, his integrity of purpose, and his wisdom in policy, in the very difficult work of setting the new government in motion, and in initiating the measures which turned it from theory and parchment into a living organization

* "History of the Life and Times of James Madison. By William C. Rives." Vol. III. Boston: Little, Brown & Co. 1868. 8vo, pp. 639.

with its vitality represented in institutions and functionaries. This was the period, too, in which the previous harmony, or rather the as yet untested question as to the degree and quality of the accordance in opinion and purpose which was supposed to underlie much variance of aim and inclination, was brought to the severe trial of debate and sectional and personal declarations on the floors of Congress. When all were professedly Republicans, and all were professedly Federalists, a common agreement to divide on some issues led as usual to the charging of synonymous terms with new and diverging meanings. We have ascribed to Mr. Rives the merit of an intentional impartiality. If he has ever failed in respect of that quality—as in some very important and in many subordinate points we think he has—the human error, in his manifestation of it, may be referred in part to common and in part to especial temptations. Hamilton went to his grave with the full conviction that Madison had been recreant to his own once avowed political principles, and had also been influenced by personal unfriendliness if not by jealousy and malice towards him; while he had also been used as a tool by a wilier and an abler party leader, Jefferson. That the son of Hamilton, through the seven volumes in which he has identified the career of his father with the development of the American Republic, has given just cause of provocation to the biographer of Madison, we suppose no one but a prejudiced partisan will deny. That Mr. Rives has not limited himself within the most rigid rules of candor and fairness in some of his pleas and arguments which must be regarded as rejoinders, is, we think, equally evident to an unimpassioned and intelligent reader. Mr. Rives was, and with abundant and all-sufficient reasons, a profoundly devoted and revering admirer of the personal character, as well as an earnest political disciple, of Madison. It will be remembered also that he was appointed by Congress to edit the Madison Papers. No one of course could be more competent than he was to set forth the views, the mental history, and the mature opinions of the subject of his political and biographical study. But he has—as most do, when they love their themes and have a noble one to deal with—become a champion, and failed of justice to some in extolling the one.

There is one very serious and positive assumption under which Madison spoke and acted in the public services through which he is followed in this volume, and Mr. Rives adopts the assumption in his whole exposition of the course pursued by the incipient Republican party. The assumption was of this sort: Madison spoke and wrote with a continual reiteration of "the sense in which the Constitution is known to have been proposed, advocated, and adopted," alike in the General as in the State Conventions, as if there were room and right for only one opinion—and that his own—as to what that "sense" was. Mr. Rives, adopting this assumption as to a forestalled and perfectly according interpretation of that great organic instrument by all the parties interested in it, takes for granted that there was no range left for the construction of the Constitution in national and liberal directions tending to the formation of a "strong" government, such as Hamilton and the Federalists desired, but that a rule of stringent limitation, leaving no elasticity of interpretation or use, had been recognized contemporaneously with the adoption of the instrument. The old complaint is, that Hamilton and his party, seeking money power and prestige and imitating monarchical institutions, were bent upon a complete alteration of the spirit and the letter of the Constitution. But could not those thus harshly censured fall back upon the "sense" in which they had accepted that instrument, and maintain that while that instrument was a novelty and stood to represent a new and untried experiment, its interpretation in many details was free, and as fairly admitted of constructions in one direction as in another? Besides, Madison, as a member of the Virginia Legislature, had there successfully advocated the giving to the Congress of the Confederation the power to regulate commerce for all the States, the lack of which power in the central government was the occasion of such discordancy and mischief as exercised by the States. Yet this precedent was in itself a sufficient token that if the Constitution was to secure nationality in one or in many matters, the prime characteristic of the government which it was to support and guide would be that it should be "strong."

It is observable also that Mr. Rives is apt to attach severe epithets, indicative of bitterness, greed, cunning, or mean ambition, to the leaders of the incipient Federal party. How differently, for instance, does Fisher Ames appear in these pages, and in the admiring and revering memories of him personally that are lingering in the hearts of the old men in Massachusetts!

There are two golden sentences from the pen and the mind of Madison which it would have been well for the citizens of his State to have kept in their view during the civil war. Before the weak and inefficient Confederacy of the States had yielded to our constitutional government, and while patriots South and North were feeling their way on towards the needful measures which provided for and perfected the latter, Madison wrote: "The individual independence of the States is totally irreconcilable with their aggregate sovereignty." He wrote this also: "The right of coercion should be expressly declared."

Thus far it seems that the publication by descendants or by admiring representatives of each single biography of the prominent founders of our Republic indicates such a spirit of partisanship in individual portraiture or narrative, as to prompt a like spirit in all the biographical pens which follow, if only in the needful task of answering and correcting alleged misrepresentations. What a work will that be by-and-by, of some wise and faithful constitutional historian, who shall undertake to digest these voluminous and jarring publications; and what a genuine tribute it is to the greatness of Washington, to find claims advanced, in rivalry, in behalf of so many gifted men—that each of them was the one of whom Washington confidentially asked help, as regards the sentiment or the phraseology, in the composition of important public papers and which it is nevertheless most reasonably believed that he wrote substantially himself.

We must add a word of high praise in behalf of the publishing firm of Messrs. Little, Brown & Co., for their continued fidelity in serving the cause of one of the highest departments of our literature. These elegantly printed volumes, on fair, thick paper, with hardly the most trivial error of the press to be noticed in them, lengthen out the file of works bearing the imprint of a firm which, beginning with our era of literary culture, has perpetuated itself by the production of what we may now call a National Historical Library.

THE "ISMS" OF CENTRAL ASIA.*

THE title of M. le Comte de Gobineau's work indicates with sufficient clearness its aim and scope as a historical survey and critical analysis of the religious and philosophical systems which prevail at the present time among the inhabitants of Central Asia. The author is a man not only eminent in letters, but also well known in diplomatic circles; and his former connection with the French embassy at Teheran gave him a rare opportunity of studying Oriental civilization in all its phases, and of becoming familiar with the peculiar intellectual life of the East. His book is divided into sixteen chapters, in which the following subjects are treated: 1. The moral and religious character of the Asiatics; 2. Persian Islamism; 3. The faith of the Arabs, with an account of the origin and development of Shiism; 4. Sufism and the philosophical speculations of the East; 5. The free-thinkers of Asia under the influence of European ideas; then follow seven chapters on the rise and growth of Babism, four chapters on the theatre and the drama in Persia, and an appendix containing a translation of the Book of Precepts, which is one of the sacred books of the Babists. According to M. de Gobineau, the salient features of the Oriental mind are a strong proclivity to inductive methods of reasoning united with a wild and undisciplined imagination which often leads to the most astounding feats of metaphysical microscopy, a great fondness for theological discussions and insoluble problems of the supernatural, wonderful dialectic skill and subtlety, and excessive excursiveness. The love of disputation which characterizes the Asiatics accustoms them to listen with equanimity to the opinions of their adversaries, and thus disposes them not only to tolerance, but also to a very broad eclecticism in religious belief and worship; so that, although conversions from one faith to another are extremely rare, every man modifies his hereditary religion by engrafting upon it whatever ideas and ceremonies may please his fancy or correspond to his supposed needs. The Albanian Mussulman lights his wax-candles in honor of St. Nicholas; the Mirdite Christian reverences the dervish as a father-confessor from whom he seeks absolution for his sins; the women of Khosru-shah do not hesitate to bring offerings to Our Lady with the hope of obtaining children, and, if their desires are granted, return thanks in the manner prescribed by the Christian ritual; in the maritime town of Pondicherry, Mussulmans, Hindoos, and Christians celebrate their religious festivals in common and join in all the solemnities with equal devoutness; and in the temple of the fire-worshippers at Baku may be seen a kind of divine service performed with an accompaniment of small cymbals such as are used by the Guebres in their devotions, around an altar adorned with images of Brahma, Vishnu, Siva, St. Nicholas, the Virgin Mary, Greek and Roman crucifixes, and Parsee vases, all of which are equally revered as sacred emblems by a multitude of half-naked penitents, who

* "Les Religions et les Philosophies dans l'Asie Centrale. Par M. le Comte de Gobineau." Deuxième édition. Paris: Didier et Cie., Libraires-Editeurs. 1866. 8vo, pp. 543. New York: F. W. Christern.

by long fastings and macerations of the flesh have rendered their bodies as insensible to physical influences as their souls are inaccessible to the suggestions of common sense, and whose speech, consisting of a farrago of Hindoo and Persian dialects, with occasional European interpolations, is as motley as their worship. There are also in the environs of Trebizond and Erzeroum religious communities which profess to be Sunnites, frequent the mosques on Fridays and listen with apparent edification to the reading and interpretation of the Koran by the mollahs; on Sundays, however, they go to the churches, hear mass, confess the divinity of Jesus Christ, and adore the images of the saints. Among the more lettered classes this melange of ideas manifests itself in an extremely particolored philosophical eclecticism. M. de Gobineau does not sympathize with those who regard Mohammedanism as a hindrance to intellectual development. A religion which declares that "the ink of the scholar is more precious than the blood of the martyr," and that in the last judgment each man must give a strict account of the use made of the mental faculties with which he was originally endowed, cannot, he contends, be hostile to the intellectual growth of the race. The high degree of material prosperity and of scientific and literary culture which was fostered under the ensign of the crescent from the seventh to the sixteenth century would seem to indicate that the subsequent decline of the Asiatic nations must be due to some other cause than Islam. A civil and military administration like that which has prevailed in Turkey for the past two hundred and fifty years, the intestine strife and anarchy which the conscription of foreign slaves has made chronic in Egypt, the Afghan invasions which have desolated Persia since 1730, the tyranny of Nadir Shah and the cruelties and ravages that have marked the accession of every monarch even to the present dynasty of the Kadjars, are certainly sufficient to account for the ruin and retrogression of oriental countries without burdening Islam with an unjust responsibility.

In the chapter on Sufism our author alludes to the use of opium and bang as vehicles of religious sentiment and their influence on philosophical speculation. The Orientals are as fond of physical as they are of moral intoxication. Drunkenness is, indeed, the radical vice of the Asiatics. In spite of sumptuary laws and the positive prohibitions of the Koran, the immoderate indulgence in fermented liquors is universal. Priests as well as princes, the guardians of church and of state, devote their nights to the wassail-bowl. Women, too, of all classes, from the ladies of the palace to the girls of the bazar, have their merry drinking-bouts, which they prolong till after midnight or until the "cold tea," as brandy is euphemistically called, has left them dead drunk on the carpets of the seraglio. It is not because it tickles his palate that the Oriental drinks spirituous liquor; the savor is by no means pleasing to him, and he gulps it down as one would swallow a bitter medicine with grimaces of disgust. It is the bliss of stupefaction that he seeks, and consequently prefers those beverages which produce this effect in the shortest time. There are multitudes of Persian scholars, famous for erudition, eager for knowledge, and with a keen relish for the most refined intellectual pleasures, who, nevertheless, seldom pass a night without intoxication. A very interesting portion of M. de Gobineau's volume is the fifth chapter, in which he gives a serio-comic picture of oriental free-thinkers, a sort of *gens joyeux* who form the "best society" of the large cities and especially of Teheran. Their scepticism, however, is of an extremely intermittent character and alternates with the most abject superstition. They belong to that feeble class of rationalists who fear neither God nor devil, but who live in terrible awe of chance, whose knees smite together at the thought of Friday, and to whom the trials of life would be greatly lessened by erasing Monday from the calendar. The Persian sceptics have an intense admiration for Voltaire (Valater), with whom they have been made acquainted by the Russians. M. de Gobineau gives an amusing account of a conversation with one of these free-thinkers, who described the patriarch of Ferney in the following terms: "Valater was a French writer, but what a man! A real scamp! He used to stroll through the bazars with cap jauntily cocked, shirt unbuttoned, and arms akimbo. He spent his days drinking with the Armenians and his nights elsewhere. He hated worst of all the mollahs and was never weary of tormenting them. They hated him, too, and denounced him to the police; but Valater was as sly as a fox and easily eluded all their snares. In moments of good-humor he composed a quantity of songs which are still read: some are on the unfortunate mollahs whom he cut up cruelly, others praise the wine of the Armenians and the charms of the women whom he was accustomed to visit. Oh! he was a terrible scapegrace." Such is the great poet, philosopher, and *encyclopédiste* of the eighteenth century as he appears to the most intelligent Persians of the present day.

There could be no better illustration of the difficulty of communicating the civilization of the West to the people of the East even when, as in this case, they both belong to the same Aryan stock. The gratuitous distribution of the Bible by the American and British Bible societies at Ispahan is regarded by M. de Gobineau as labor worse than lost. The natives eagerly accept these gifts not from any interest in the text, but solely for the sake of the calfskin covers which they can use to advantage in binding their own books. The translation, too, is so destitute of all elegance and beauty of style as to make the perusal of it almost impossible to an educated Persian, and serves only to render Christianity contemptible. M. de Gobineau's sketch of the prophet Bab and the religion which he founded is the most full and consecutive that we have anywhere seen. It contains all the information necessary to an intelligent appreciation of this important movement concerning which the reader would seek in vain for any knowledge, even in the most recent encyclopedias and theological dictionaries. The rise of a new religion with its attesting miracles and martyrs in the middle of the nineteenth century is an exceedingly curious and instructive phenomenon. Babism is a great historic event and seems destined to exert an influence upon the civilization of the East, and to produce a reformation in Islam analogous to that which Protestantism has effected not only in the Christian church but also in modern culture. Although scarcely a quarter of a century has elapsed since Mirza Ali Mohammed, surnamed the Bab, began to preach and to prophesy in the streets and mosques of Shiraz, and although he himself suffered martyrdom in 1849, in the twenty-fifth year of his age, his doctrines have been disseminated throughout all Persia and many provinces of India, and are at the present moment accepted and professed by millions of adherents, many of whom belong to the best educated and most influential classes of society. In this connection M. de Gobineau describes the Persian theatre and the relations which it bears not only to art but also to religion. The stage in Persia is the most powerful ally of the pulpit, and is employed by the different sects for the propagation of their peculiar ideas. In this respect the Persian drama resembles the mediæval mysteries and miracle-plays. The prologue and the epilogue of every piece are prayers, so that the scenic representation always begins with an invocation and ends with a benediction.

THE RING AND THE BOOK.*

ONE of Mr. Browning's earlier poems and one of his simplest and least obscure—as standing unconnected with any of his theories of life or religion, and unconnected too with any of the artificial, arbitrary systems of which his single pieces may perhaps often be parts—is a poem with the story of which the world has long been familiar. A generation or two ago, Schiller, making use of an old tale, sang, so far as Schiller could do singing, of "the lion-garden gate"—as Bulwer translates it—of King Francis, of the knight who made love to a lady of the court as she sat in the gallery above the wild beasts, of how in her levity and hard-heartedness she threw her glove into the arena and challenged her suitor to bring it back as a proof of the devotion of which he talked, of how he descended for it and recovered it, and then how, regaining his place beside her, "straight in her face he flung the glove"—his love being changed into contempt by the revelation of his mistress's true character which the wickedness of her act had suddenly made. This same story Mr. Browning takes as a theme, but it is curious to see that when the Englishman reaches the point where the German makes an end he does not stop, but goes on; rather it may be said that it is at that point that the later poet really makes his beginning. The lion—for Browning has but one—is shown us in lines as sinewy as himself, the fluent knight makes his compliments, the glove is picked up and disposed of as in the vulgar version, and the lady, having been insulted, sits silent amid the scorn of all whose vision goes no further than to the outside of the circumstances; then we are made to listen to her justification; we get a subtle, or at all events a subtilizing, piece of psychological analysis and see the unsuspected side of the case.

What he did in this poem of his younger days the poet has been pretty constantly doing since; in this last work not better but more elaborately and at greater length than ever before. Of so voluminous a writer, of so acute, fertile, and powerful an intellect, of a master so learned in the technic of his craft, of a master so really accomplished in artistic style, whose successes in the mere puzzles and difficulties of his art, much as he delights in them, are nothing in comparison with his really artistic successes, there is of course very much to be said—so much that half a dozen

* "The Ring and the Book. By Robert Browning, A.M." Boston: Fields, Osgood & Co. 1869.

ordinary critics with their aggregated powers might wisely leave alone the task of exhaustively describing him, as being a greater work than they could well manage. Volumes might be, as volumes have been, written in explication of the hidden meaning of his works, of the religious and philosophic doctrine contained in them, of the author's view of the nature and the uses to mortal and immortal beings of the passion of love, which he has felt and which he seems to have studied enthusiastically and deeply, of the various learning—historical, musical, artistic—with which many of his pieces are stuffed and on which many of them are based, in praise of the vivid truth of his realism, in praise of his passion, and of others of his gifts as a poet. But all these seem to be minor points in the consideration of one who is as a man so fresh and strange. The essential thing about him, what differences him from other poets, seems to be that he is primarily a psychologist, with certain favorite and obtrusive theories as regards religion, life, and love, and with a subtle and intricate mode of expressing himself—we do not speak of the strained prosaicalness, the labored conversationalism, of his surface style—which is perfectly in consonance with the depth of his insight into the intricacies and subtleties of human character which he so naturally and so much loves to study and depict.

If this view of the poet were disputed, one might make it seem evident that it is not far out of the way by calling attention to the fact that all, or very nearly all, his poems are dramatic in the sense of offering for our inspection men and women, *dramatis personæ*—the drama being usually in the person, with Mr. Browning for chorus and scene-shifter—and that none of them—even none of those in which he had in view the actual "boards"—is ever dramatic in any other sense. By the way, for light on this point of the undramatic character of our poet, for his undramaticalness except in so far as a poet is dramatic who goes out of himself and into other men sufficiently to paint the feelings of others, compare Luria the Moor—perhaps Browning's very best personage—with Othello the Moor. To leave out the lesser things—which are rather the playwright's than the dramatist's affair—the dramatist, to be truly a dramatist, must possess the power of making his personages people, of giving them objective existence. The Moor of Venice lives a real life of his own; let him enter to us after an absence and we are ready to believe whatever he may say has happened to him or has happened in him; the Moor of Florence, however, must be careful to talk to us in a certain way about certain things, or he will find himself among strangers who have never met him. It is his too exclusive sympathy with psychological investigations into mental and spiritual states that is the reason, we suppose, why our poet, realistic as he is, has failed so almost entirely as a dramatist. But then, in fact, his realism is that of a man who, for the delight that he takes in his own mental operations, loves as well to shape vivid pictures as to observe the movements of other minds. His is the psychological half of the drama; and, rightly considered, his characters are essentially almost as far from having a genuine, human, independent life of their own as are any of the abstractions—the virtues, vices, and passions with christian and surnames—which constitute the *dramatis personæ* of Joanna Bailie, say, or any other of the dramatic authors, infinitely below Mr. Browning in general power of brain and poetical ability.

As we have already said, Mr. Browning has some favorite theories or beliefs on several of the most important topics which engage human attention. So far as they are religious, they may be perceived with sufficient clearness for the recognition of their existence, if not for the full understanding or acceptance of them, by any one who will read the poems which we may call chiefly religious that lie between "Christmas Eve" and "Rabbi Ben Ezra" at the one extreme and "Bishop Blougram's Apology" at the other. So far as they relate to "the master passion," we may refer the reader, who cares to study rather than read, to the "Men and Women" and to scores of the other shorter pieces. So far as they attempt to account for man's nature and limitations and his destiny, they are here and there perceptible, perceptible not without difficulty—perceptible, to speak for ourselves, not without aids not supplied very well by the poems themselves—in many of the longer poems especially, and more or less perceptible throughout the whole body of the author's works. But despite all these theories and systems and guesses with which habitually he pleases himself and the like-minded reader—

("'Tis the taught-already that profits by teaching"—)

he is to be described, if we have not misapprehended him, as primarily an intellectual seer, as a psychological analyst of great penetration, too fond of over-refining and altogether too careless of expression, but of wonderful insight, and with more power of synthesizing the results of his analysis, of putting them realistically before us, clothing them with the flesh of living people, in their habit as they lived, and putting them amid their proper surroundings, than any other poet who has ever devoted himself to the study of moods of mind and shades of character as distinguished from minds and from whole characters—from human nature, in short, as it really lives and moves and has its being.

His skill in reproducing the external life and surroundings of his characters is seen at its very best—so they say who know—when his scenes and personages are Italian or mediæval. Landor used to say that in mediæval matters Browning was sure never to go wrong, never to be out of keeping or to strike a false note. Thinking of "My Last Duchess," and "Holy Thursday," and the "Spanish Cloister," and the "Tomb in St. Praxed's Church," one is ready to agree with the more competent critics that this praise is most thoroughly deserved. In "The Ring and the Book," then, we may say that Mr. Browning is on his chosen ground, the time being centuries ago, and the place being Rome. A murder has happened; a husband, an elderly man, has had his wife assassinated, as he says, because she was unfaithful and fled from him in company with her paramour, a priest; as the priest says, because she was worn out by the husband's cold-blooded tyranny and treachery; as half Rome says, because she deserved death for intriguing with the priest; as the other half Rome says, because her husband was a jealous scoundrel, unworthy of her—and so on. Over and over, and over again, till the crime and the relations of the parties to it, and their own and others' opinions of it, have been looked at from every point of view, Mr. Browning intends, he says, to tell the story. This, it will be seen, is but an expansion of his familiar method. In the volume before us, which contains two volumes of the English edition, the work is but half done, and another volume will follow. Why not three more, there is no very obvious reason. It is indeed the fault of this subtlety that, once begun, there is practically no necessary end to it. When the art is not to perfect a jewel but to cut facets, the artist may work at any length. It is a sort of art that fascinates those who have once formed a taste for it; but if it is likely to call forth exaggerated admiration, and to make the simplicity of really great works seem tame, and, after the first neglect and contempt are weathered, to be estimated at far too high a rate, it is also, when practised by a master, admirable and profitable. As for this particular specimen of it, we feel it will be as well to speak of it when it is completed, and meantime to commend it to all lovers of poetry as the work of a masculine intellect and spirit, and of a trained workman whose methods are worth close study.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Bickmore (Prof. A. S.), Travels in the Indian Archipelago	(D. Appleton & Co.) $5 00

C. P. PUTNAM & SON

WILL PUBLISH ON SATURDAY, FEB. 15:

I.

THE NEW HISTORICAL ROMANCE,

Madame De Staël:

A NOVEL.

Translated from the German of AMELY BOLTE.

BY THEODORE JOHNSON.

1 vol. 12mo, price $1 50.

(*From the Europa*, LEIPSIC.)

This exceedingly interesting novel may be called a wreath of beautiful historical flowers. Every chapter brings the reader in contact with eminent personages, and entertains him in the most agreeable and profitable manner. The authoress introduces us successively to Voltaire, Mesmer, Rousseau, Marmontel, Lafayette, Montmorency, Maddame de Genlis, the royal family of France, Napoleon and his brothers, Benjamin Constant, Goethe, Schiller, Wieland, Schlegel, Madame Récamier, and a host of other illustrious men and women. The strange and eventful career of the Necker family is depicted most attractively, and the character of the gifted authoress of *Corinne*, the heroine of the work, is portrayed with great skill and discrimination.

II.

The Shakspeare Treasury

OF

WISDOM AND KNOWLEDGE.

Displayed in a comprehensive arrangement of *Themes from his Works.*

By Charles W. Stearns, M.D.

In an elegant volume, printed on laid paper, bound in cloth, extra, gilt top, price $2 50.

III.

Mexico and the United States.

Their Mutual Relations and Common Interests.

With portraits on steel of Juarez and Romero. An elaborate colored Map of Mexico, and a Mercator Map of the World. By GORHAM D. ABBOTT, LL. D. In one handsome volume 8vo, price $3 50.

*** This volume contains authentic and copious information in regard to the history and present state and prospects of Mexico, and its relations to the civilized world, and it is of special interest and importance at this time.

For sale by all booksellers, and sent post-paid on receipt of price by

C. P. PUTNAM & SON, New York.

IMPORTANT ANNOUNCEMENT.

VALUABLE ADDITION TO

Gray's Botanical Text-Books,

BY ASA GRAY, M.D.,

Fisher Prof. of Natural Science in Harvard University.

The Teacher, the Student, and the Botanist will hail with delight the appearance of this new and valuable class-book, just added to this popular series, namely,

SCHOOL AND FIELD BOOK OF BOTANY

This consists of the "Lessons in Botany," and the "Field, Forest, and Garden Botany," bound together in one compact volume, forming a comprehensive School Botany. This will be the most generally used class-book of the whole Series, adapted to beginners and advanced classes, to Agricultural Colleges and Schools, as well as to all other grades in which the science is taught.

This work supplies a great desideratum to the Botanist and Botanical Teacher, there being no similar class-book published in this country. Cloth, 8vo, 622 pages, price $2 50.

*** Single copies sent by mail on receipt of price.

Address the Publishers,

IVISON, PHINNEY, BLAKEMAN & CO.,
47 and 49 Greene Street, New York.

NOW READY.

NO. 1 OF THE REPRESENTATIVE BIOGRAPHIES.

The Life of John Bright, M.P.,

Radical Member of Gladstone's Cabinet.

BY JOHN McGILCHRIST.

Illuminated boards, 50 cents.

The four following Books of the same series will immediately follow, viz.:

THE LIFE OF GLADSTONE.
THE LIFE OF DISRAELI.
THE PUBLIC LIFE OF QUEEN VICTORIA.
THE LIFE AND CAREER OF LORD BROUGHAM.

FELT & DILLINGHAM, Publishers,
455 Broome Street, New York.

THIRD EDITION.

BLINDPITS:
A Story of Scottish Life.

Large 12mo, $1 75.

"A fresh, powerful, and interesting work, written from experience, and with correctness and skill. It delineates real life with insight and dramatic truth."—*Boston Transcript.*

"Exhibits delicacy as well as power. . . . Tenderness and pathos, and the rarer quality of humor."—*Saturday Review* (London).

"One of the best stories of the year."

"It depicts Scottish life vividly, its delineation of character is minute, and its plot original."—*Phila. City Item.*

"Unheralded and unprefaced, this volume presents itself to the reader on its own merits. It is said to have produced a great sensation in England. It is destined to have the same popularity here. It belongs to that realistic school in which character is analyzed with absolute fidelity, and the scenes of every-day life and the passions they evoke are worked out, as the miner delves into the recesses of the earth; and the whole process of the formation and development of character is accomplished step by step."—*Albany Argus.*

"It is written in a smooth, finished style, and contains portions of remarkable force and originality. The fault of 'Blindpits' is that it has been over-elaborated. Independent of this, it is a novel which will achieve a great and lasting popularity. Its humorous portions contrast with the dramatic episodes admirably, making them all the stronger. The characters are thoroughly characteristic and natural—Miss Boston, Barbara, Mrs. Barclay, Mr. Pettigrew, Mr. Dods, are all living creations which have been drawn by an experienced and able hand. By arrangement with the Edinburgh publishers, the novel is issued from advance sheets in unusually handsome style by Putnam & Son, and we may pronounce it one of the most artistic and readable books of the season."—*Phila. City Item.*

For sale by all booksellers, and sent, post-paid, on receipt of price, by

C. P. PUTNAM & SON, New York.

"THE STATESMAN,"

PUBLISHED WEEKLY IN BALTIMORE.

Established October, 1868.

Since the beginning of the New Year, *The Statesman* has made its appearance enlarged by the addition of four pages, or twelve columns. Each weekly number now contains twenty pages, or sixty columns, making an aggregate, at the end of the year, of one thousand and forty pages, or three thousand one hundred and twenty columns, of printed matter—three-fourths of which are Reading Matter—the balance being made up of Advertisements. The rapid increase of Advertisements consequent upon the growing estimation in which *The Statesman* is held as an Advertising Medium necessitated this enlargement of the paper. The circulation of *The Statesman*—the only legitimate foundation of an advertising patronage, as well as of the usefulness of any journal as an organ either of news or opinion—is steadily growing, and already extends to nearly every State in the Union, from Maine to Texas, from the Atlantic to the Pacific coast; besides which, copies of the paper are mailed to persons residing in London, Paris, Berlin, Geneva, and other places abroad.

The Reading Matter of the paper embraces a greater variety of subjects than is to be found in any other weekly journal of the same character published in the United States. Besides the usual variety of Editorial Matter, each number of *The Statesman* contains Critical Notes, Musical, Dramatic, Artistic, or Literary; Reviews of New Books; a department of Correspondence, in which the widest latitude of discussion upon the greatest range of subjects is freely permitted; short pieces of Poetry, original or selected; a condensed summary of the News of the Week, and of the Proceedings of Congress and of the Maryland Legislature, when in session, and a carefully prepared Review of the Markets. In the department of Fiction each number contains one or more chapters of "HAMMER AND ANVIL," a new Novel, by Friedrich Spielhagen, now being published as a serial in Germany, in the Berlin "Hausfreund," and which is being translated expressly for *The Statesman*. The most distinguished foreign critics have united in assigning to Spielhagen the first place not only among German but among living novelists. This, it is believed, embraces a greater variety of departments than can be found represented in any other weekly paper, political or literary, published in this country.

The form of *The Statesman*, compact and in book-shape, is very convenient for handling and for preservation. The bound Volume, at the end of the year or of six months, will furnish a complete Record of Events—a History of the Period—easy of reference, and capable of filling a place upon library shelves.

The subscription price of *The Statesman* for one year is THREE DOLLARS, payable in advance; of a single copy, TEN CENTS. A liberal deduction is made upon these Rates in favor of News-dealers and Agents, and also of Clubs subscribing for four or more copies to be forwarded to a single address. The Table of Advertising Rates can be had upon application at this office. Address

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON-SENSE FAMILY SEWING MACHINE. This Machine will stitch, hem, fell, tuck, quilt, cord, bind, braid, and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., PITTSBURGH, PA.; BOSTON, MASS.; or, ST. LOUIS, MO.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured.

First Mortgage Bonds
AT PAR.

By its charter, the Company is permitted to issue its own FIRST MORTGAGE BONDS to the same amount as the Government Bonds, *and no more*. These Bonds are a First Mortgage upon the entire road and all its equipments.

THEY HAVE THIRTY YEARS TO RUN AT SIX PER CENT., and both PRINCIPAL AND INTEREST ARE PAYABLE IN GOLD.

The entire amount of the mortgage will be about $30,000,000, and the interest $1,800,000 per annum in gold. The present currency cost of this interest is less than $2,500,000 per annum, while the gross earnings for the year 1868, FROM WAY BUSINESS only, on AN AVERAGE OF LESS THAN 700 MILES OF ROAD IN OPERATION, WERE MORE THAN

FIVE MILLION DOLLARS.

As the supply of these Bonds will soon cease, parties who desire to invest in them will find it for their interest to do so at once. The price for the present is par and accrued interest from January 1, in currency.

Subscriptions will be received in New York
AT THE
Company's Office, 20 Nassau St.,
AND BY
JOHN J. CISCO & SON, Bankers,
59 WALL STREET,
And by the Company's advertised agents throughout the United States.

Bonds sent free, but parties subscribing through local agents will look to them for their safe delivery.

ADDRESS, PUBLISHER OF "THE NATION," BOX 6732, NEW YORK.

PUBLISHING OFFICE, 3 PARK PLACE.

The Week.

THE Senate has been as determined all this week as it was last to do nothing with the Tenure-of-office Act, but the strength of the friends of the repeal must be not very far from equal to that of their opponents. They made bold to call a caucus of senators, evidently in good hope of its action being in their favor, but they were defeated; the caucus decided to leave it untouched until after the 5th of March. What some of the reluctant senators are thinking of is well enough understood, and if it were not, it might be gathered from the remark attributed the other day to one of them, to the effect that "Grant would find himself mistaken if he imagined he could get along without him"—the speaker. On Wednesday week the Senate had up the proposed Constitutional Amendment. It would not have a conference with the House, and stood out for the form of words reported by its own Judiciary Committee; but the fact is, we suppose, that there is much lukewarmness as regards the matter both in Senate and House. Last Tuesday, however, it was brought up again by Mr. Stewart, who succeeded in getting the committee appointed; and as Constitutional Amendments do not require reference to the President, and are not susceptible of being vetoed or "pocketed," there is still time for the passage of this one and its submission to the States. The Kansas Senate, by the way, has just defeated a proposition to strike the word "white" out of the State constitution, a vote significant of what would be the fate of the Amendment in that body. On Thursday, by a majority of 2, the bill to abolish or effectively to modify the franking privilege was defeated as usual, and "every man still may rob as he please," as the song says, provided only he himself writes his name on the wrapper of whatever article he sends by mail, and does not use a stamping-machine. On Friday, Mr. Trumbull made a vain attempt—one of many—to get the bill reorganizing the Supreme Court up for consideration. There is now a denial of justice in each circuit court of this court on account of the judges, too few in number, having to do too much business in the district courts, and thus being compelled to leave undone for three or four years work that should be done in one. On Tuesday the bill came up again and was passed. It appoints nine new judges, one for each circuit, resident in the circuit; but it does not prohibit the other judges from doing circuit court work. On Saturday there came up one of those cases in which a ship-owner sues for an American register for a vessel which, during the late war, was put under British colors. As we remarked when the last application of this kind was made, enough has already been done for "patriotism" in this matter, and it is time that it should be looked at sensibly. Mr. Sumner and Mr. Conkling favored giving leave, but, as the American Eagle owns no shipping, and as Mr. Nye's constituents have none either, Mr. Nye all in a minute was in a light blaze of patriotism at the proposal. On Monday the Currency Bill, as it came from the House, occupied the day in the Senate.

Appropriations have been the order of the day in the House for the past week, and of appropriations that for the army got most attention. Several schemes were before the House, but the chief were Mr. Butler's, Mr. Dodge's, and Mr. Blaine's, the two latter being not different in principle, and both being strongly opposed by Mr. Butler, who, however, was defeated by 111 to 64. His plan was peremptorily to discharge men and officers till the estimates should be reduced by a certain amount. By the plan adopted no new commissions are to be given nor new enlistments made, and consolidation is to be done to such extent as may seem best to the General of the army until such time as the forces are reduced to twenty regiments of infantry and five of artillery and cavalry; and meantime no promotions shall be made, nor any new appointments, in the various departments. This number of organizations may very likely contain 25,000 men; what we have now contain, say, 38,000 men, and their expense for the coming year is estimated at something like $34,000,000, which is surely not a great sum when we think of the South and the Plains. It is less, proportionally—the statement was made in debate—than the expenses of the army in the happy days of Mr. Buchanan. On Wednesday the House received a report from the Committee on Elections that none of the three claimants of the seat in Congress for the Second Louisiana district (Mr. Menard's) is entitled to it. On the following day Mr. Boutwell informed the House that he had intended to bring in a bill to establish a provisional government in Mississippi, but that he would not do so, as the gentlemen of the Democratic side of the House had frankly informed him that they would filibuster till the end of the session, and prevent its passage. This statement Mr. Eldridge cheerfully confirmed. Up to Saturday there was intermittent but long discussion of the National Currency Bill, which on that day was passed and sent to the Senate, which body likewise shows an inclination to pass it.

The Senate continues to gain in distinction, though not always of the most enviable kind. The revelation recently made of Mr. Wade's fitness for the post of presiding officer in troublous times sheds some curious light on the capacity of the body as a judge of character. Since then it has repudiated the Reconstruction Acts *in toto*, and shut out the Georgia senators on general grounds, just as if the acts did not exist. More recently it "amended" the House amendment to the Constitution in such reckless fashion that Wendell Phillips in last week's *Anti-Slavery Standard* actually denounced it for its "radicalism," and advised it to consider not Eternal Justice but the possibilities of the occasion. In this amendment it sought to prohibit the exaction of educational qualifications even for office—a proposition the like of which was probably never before made in a civilized country, and the adoption of which would not only have put an end to all hope of reform in the civil service of the United States, but have prevented any State from attempting any reform in its own civil service, let it be ever so much convinced of its necessity. The most charitable construction, and we have no doubt the correct construction, of Mr. Wilson's course in introducing it is that he had not fairly thought the measure out to

its general results, and had his mind concentrated on various devices to which the South might resort for keeping the negroes from the polls or out of office. But then, as we have said more than once, the best mode of getting the negro fully and fairly into the body politic is only one-half of the question of reconstruction; the other half is the kind of body politic you get him into. It is well to make him free of the city, but it is not well and not necessary to bring him in through a hole in the walls, and prepare for him by undermining the houses, tearing up the pavements, and spreading general confusion. He is even more interested than white men, because he is weaker than white men, in the preservation of all existing guaranties for good government, including pure and efficient administration of the finances and the laws.

The Judiciary Committee of the Senate have just made a report which for clearness and brevity is a model of what a report should be. As for the conclusiveness of the argument, it may be as well to wait for the Supreme Court to pronounce on the question involved, and that it will have to do sooner or later, and probably before very long. The report relates to the recent proclamation of amnesty put forth by Mr. Johnson, with whom pardoning has become a mania, and of whom it is said that during these last few days of his power he is undergoing the punishment of being perfectly beset by the friends and business agents of scores of revenue thieves, counterfeiters, forgers, and the like. In his late proclamation he undertook to give full pardon and amnesty to all rebels—to speak briefly—and to do this in virtue of a power conferred on him by a certain provision of the Constitution. The present generation, thinking of amnesty, will perhaps be most apt to think of the proclamation made by Mr. Lincoln in the end of 1863, in which he also offered full pardon and amnesty; but he made the offer in virtue not only of his constitutional power "to grant reprieves and pardons"—which is the clause in which Mr. Johnson seeks his justification—but also expressly in virtue of acts of Congress—since modified or repealed—authorizing the President to offer and grant full amnesty. The committee begin by defining "reprieve" and "pardon"—legal words with a well-fixed meaning. They then show that "amnesty" also is a legal term, which also has a perfectly well-defined meaning, and of which it is enough for us to say here, that while "pardon," as known to English law and to ours, took a specified man and remitted that part of his punishment which he had not undergone, "amnesty," for its part, was an act of oblivion, looked backwards as well as forwards, and left the man amnestied as he was before his offence was committed, as if there had been no offence. For example, in England amnesty purified blood corrupted by attainder, pardon did not. Thus, too, in some of our States, the governor's pardon, if received by a man condemned to the State prison for a certain time, would not disannul the divorce from his wife which his sentence had inflicted. But amnesty is the act of the sovereign power—which in this country is the President with Congress—and its effect is to wipe out the very crime, not merely to make some remission of punishment to a criminal. It is not to be supposed, the committee argue, that the men who framed the much-discussed Constitution—men, many of them, of sound legal knowledge, and men, too, disposed to bridle rather than extend the power of the officer who was among us to represent, more or less well, the kings of other countries—it is not reasonable to suppose that they did not use the terms "pardons and reprieves" with a full sense of their exact meaning, and had not, too, a clear intention in omitting as they did the wider term "amnesty." The committee, therefore, have reported a resolution which declares the Christmas Day proclamation to be, in the Senate's opinion, of no force. But of course it must be the courts that settle the matter.

The President's veto of the Copper Tax Bill is comparatively short, and is one of the few documents of the kind which have come from him that will repay the reading. We referred a month ago to the contest between the miners of Lake Superior and the Atlantic smelters—the former demanding protection on the ground that they were starving, and the latter as strenuously opposing any increase of duties on copper and copper ores, on the ground that then *they* would be in danger of starving. That is to say, Congress was asked to bolster up the less important industry of the two, judged by its productiveness, by paralyzing the more important; and what it was asked to do it did, for no other reason, apparently, than that whatever appeals for protection creates a presumption in its favor. Mr. Johnson not only sets forth this conflict of interests, and the loss which the country would immediately sustain by the diminished production of copper and the consequent enhancement in its price, along with the falling off in the customs receipts because of the nearly prohibitory duty, but he dds, what he probably knows for a fact, that the effect of the law if enacted would be to enhance the cost of blue vitriol 70 per cent., and thus interfere most seriously with such great industries as the dyeing and printing of colored cloths. We should then have created new claimants for protection against foreign competition, that would be satisfied only by another increase of duties, entailing fresh embarrassments on other industries, and so on indefinitely. The *Tribune* says that "this veto will delight the organs of the free-traders," but it does not undertake to show why, without reference to any general theories, it should not meet the approval of everybody capable of taking in the facts of this particular case. To pretend that protection, abstractly, under all conceivable circumstances, is advantageous, is to assert that if the smelters had got the start in asking for some discrimination against the miners, they ought to have received it—a self-evident absurdity. The House on Tuesday barely passed the bill anew over the veto.

Since the failure of the Congressional Committee to discover what Judge Field said at Jeremiah Black's dinner-party, we have never felt much confidence in the efforts of these committees to find out what is said at *any* dinner-party. The attempt made by Chief-Justice Chase, for instance, at *his* dinner-party to bribe the bad senators to acquit Andrew Johnson is still surrounded with mystery in spite of even Butler's great investigation, and though it is well known that most of the villanies of Copperheads and Conservatives are concocted around the social board—falsely so-called—the nation is left just as much in the dark as ever about the particulars of these scenes of wickedness and debauchery. It now appears that Mr. Corcoran, the Washington banker and a prominent Copperhead, openly announced, during the war, at his dinner-table, that "he would give $100,000 to have Mr. Lincoln put out of the way." One of the waiters heard him, and that waiter is now the steward of the Russian minister; but being summoned before the Congressional Committee now sitting on Corcoran's application to have his house in Washington restored to him, the man absolutely refuses to say what he heard at the dinner in question, and thus we are left just as ignorant as ever of what Corcoran says at his meals and what his servants manage to pick up. The matter will rest here, no doubt; but ought it? Why not take a look into Corcoran's private check-book and see what payments he has made since the commencement of the enquiry?

A man was sentenced in the Recorder's Court in this city last week to twenty years' imprisonment for an outrage of extraordinary brutality on a young girl of seventeen. She begged, naturally enough, after he had been convicted that he might be compelled to marry her, and the Recorder very properly insisted on his doing so, and the ruffian very cheerfully complied. But in consideration of his doing so sentence was suspended, and the couple left the court-room with the understanding that if the "husband" failed to support the wife and treat her well the sentence was to be carried out. It is difficult to see on what theory of the nature and objects of judicial punishment the court allowed this arrangement to be made. The sentence of twenty years' imprisonment was surely not pronounced by way of vengeance, or by way of compensation to the girl, and yet it is only on the supposition that it was, that the remission of the whole penalty in consideration of the marriage could possibly be justified. If, on the other hand, the man's fate was intended to prove a warning to others, the Recorder must have somewhat singular notions about marriage, as well as about the moral and mental condition of New York roughs. Of course there

is not one of the class to which the criminal in this case belonged who would not marry twenty girls in a day in order to escape even a month's imprisonment, and a worse fate than to have one of them for a husband no girl could encounter. The Recorder's expectation that a man of this kind, who marries a woman in order to escape sentence for a criminal assault, will live with his wife longer than suits him, or will ever work for her at all, or will do anything but leave her to support herself and one or two of his children, seems to indicate much more youthful and innocent views of life than are usually met with on the bench of a criminal court. A more deliberate and atrocious crime is not often committed in the streets of the city than the one which in this instance has been atoned for by going through the marriage ceremony, and there can hardly be a doubt that the result will be to make the streets more unsafe for women than ever. The threat that the sentence might yet be carried out was of course an empty one.

The occurrence is worth the attention of those who are occupied with the woman's rights question, as an illustration of the disturbing influence which sex after all exerts on the merely economical part of the problem. Here is a respectable young girl who comes to the city, as hundreds of young men do every day, in search of employment. She arrives late, has difficulty in finding a lodging, and while looking for one falls in with a well-dressed ruffian who decoys her into a public house, and outrages her within hearing of the police. All young women who leave home to seek their fortunes are exposed to just this risk, and have to be guarded against it by extraordinary and necessarily expensive precautions on the part of friends or benevolent persons. Even when they come to the city to seek an education—professional or other—they have to take extra care of themselves, keep within doors at certain hours, avoid certain localities, and go about their business at all times burdened with peculiar anxiety; and this not because they are physically weak or timid, for plenty of men are weak or timid, *but because they are women*. One consequence of the simple fact of their sex therefore is, that they enter the labor market to compete with men on unequal terms. They are weighted—so to speak—in the race of life by their sex, even though their mental and moral qualities may be, as some maintain they are, the same as those of men. It may, of course, seem convenient to say in reply to this that this would not be the case if men had reached a higher stage of mental and moral culture, but this is a mere cloaking of the point. The *actual* moral or mental condition of men is one of the elements in the problem, how woman's condition is to be improved. In other words, the question has to be considered with reference not simply to women's capacity, but to the actual condition of society. We mention the matter as one of the things to which we should like to see platform agitators turn their attention, but which they carefully avoid. When you mention men's passions as one of the difficulties of the case, they are apt to reply scornfully that men ought not to have passions—a proposition which may be true, but is singularly irrelevant, and leaves us just where we were.

The death of Mr. James T. Brady, which occurred too late last week to allow of our doing more than make mention of it, and is now so long gone by that anything we can say about it will seem flat and stale, was nevertheless too great a loss to the bar of this city and to the whole community to permit of our passing it over without any notice at all. To his many great qualities, both personal and professional, his brethren have perhaps done justice; but we doubt if enough has been said, and it is hard to expect that enough should be said, of the extent of the calamity, in the existing condition of the bench and bar in this city, involved in the loss of even one of those members of the profession who still keep alive in their own walk and conversation the traditions of an earlier and better time. Mr. Brady was something more than a successful lawyer. He was the soul of professional honor, and he had that extreme sensitiveness without which professional honor, like female modesty, has never long survived anywhere—which dreads suspicion almost as much as wrong-doing. He was not satisfied with being pure; he did not rest content, as so many knaves do, "with the approving voice of his own conscience." He desired that men should never have reason to dream of his being anything else than pure, and governed his practice accordingly. To a man of whom this may be said at a time when the general tendency is to treat reputation as a thing of only trifling consequence, many more and worse faults than Mr. Brady had might be freely forgiven.

The news by the Cable has been of no great importance. Parliament was opened on Tuesday week, but the Irish Church debate is yet to begin. In Spain the Provisional Government has resigned, and the Cortes have made Marshal Serrano temporary executive. In France, M. Forçade has enforced his previously announced intention to repress public gatherings in abuse of the law permitting them. The Paris Conference has decently laid the ghost of the Eastern difficulty and held its last session; Turkey has reopened its ports to Greek shipping, and a new election for members of the Greek Chambers, in place of those just dissolved, has been ordered. Athens—and, through Athens, Greece—now boasts of a railroad, connecting the city with its port, Piræus. The opening took place on New Year's day, by the Greek calendar, and was an event which we hope will justify all the flag-flying it gave rise to. Together with the reviving importance of Brundusium as a railway and steamer station, and the restoration of the Suez Canal, it marks a curious infusion of modern life into the antique frame.

The *Pall Mall Gazette* makes some comments, which seem just, on the recent conversion of two notable personages—the political conversion of M. Sainte-Beuve, and the religious conversion of the enormously wealthy young Marquis of Bute—which we reproduce on account of their intrinsic interest, and because they serve to illustrate the remarks of our English correspondent in another column; because, too, what it says on the subject gets further illustration from the religious proceedings—to call them so—which have recently been taking place at Auburn, in this State. The points the *Gazette* makes are these: that now, for the first time in what may be called modern history, or even in the history of Christianity, the issues between the natural and the ecclesiastical ways of looking at the universe are being raised with very great sharpness and neatness; at every other period these issues were confused, often confused by great violence, often by being inextricably bound up with political interests of the most obvious and important kind; but in our age, and more and more so every day, it is not so very hard for a man, throwing aside political and social considerations, to avow and act upon his real convictions as regards the proper way of looking at the world. Then there is at once a chance for the forces to be drawn off into two camps and to join battle, with such results as may be. This is not saying that politics and religion will ever be entirely disentangled; on the contrary, the case of the Marquis of Bute turning Catholic, the fact that the Roman Catholic Church seems to gain in favor with the wealthier, more fashionable, less intellectual, more distinctively "upper class" part of English society, might almost embolden one to generalize and say that the natural Tory—which is what in politics the distinctively "upper class" person is—would naturally be a Catholic in religion. On the other hand, the natural English Liberal should be a natural Protestant, and it would not be hard at all to find the reasons why this should be so. Few Catholics in this country, whether rich or poor, are Republicans, and few "advanced" Protestants are ever Democrats. In the case of the Auburn troubles between Bishop McQuaid and the refractory congregation, we see what is not now seen for the first time in the history of Irish Catholicism: the certain degree of liberalism, of practical political protestantism, which has been acquired by the men who turned Father Kavanagh out of the church and "persuaded the Bishop to retire," after informing him that they were determined to have a priest of their own choosing, and "to submit no longer to the one-man power," is assuredly making bad Catholics of them. So, too, of the freedom of thinking, such as it was, that the Fenian movement induced; the politician repudiated the priest.

THE NEW ADMINISTRATION AND THE FREEDMEN.

It is natural enough that those who have been laboring during the last four years to secure the deliverance of the freedmen from all legal disabilities resulting from their color or previous condition should form in their own minds, and should communicate to the minds of others, an exaggerated notion of the immediate value of what they have been seeking to accomplish. When the Reconstruction Acts were under debate, it was the custom of Messrs. Stevens, Boutwell, and others to treat as sacred not simply their great object, but also the particular means they fixed on for its accomplishment; that is, they put a person who was opposed to the elevation of the negro altogether in the same category with the person who was opposed to their mode of seeking his elevation. It was, therefore, with the greatest reluctance they allowed anybody to debate their various bills. Out of pure "courtesy" they used occasionally to give their opponents five minutes, or fifteen minutes, or, though very rarely, an hour, in which to comment on their measures; but they always made the concession with the angry and contemptuous air of persons whose opinions it was folly and presumption for any of their fellow-creatures to try to change, and who were condemned by the silly usages of a corrupt age to listen to wicked men twaddling against the most valuable and effective reform human wits had ever devised. It was, of course, impossible to hope for efficient legislation from men in this state of mind. He is no statesman who does not want to hear his measure criticised by his opponents, because he is no statesman who is not more concerned with the question of making his measure work than with the question of getting it enacted; and there is no way in which the obstacles to its working can be got at so readily as by hearing what its enemies have to say against it. Let them be ever so factious, they are seldom so discreet as not to draw attention to its weak points, and betray the devices by which they hope to defeat its practical operation; but the *working* of the Reconstruction measures, provided they could get the House and Senate to give them three readings and a two-thirds majority to pass them over the President's veto, seemed to give their promoters no more trouble than if they had received them directly from the hands of the Almighty.

In this way of looking at them, too, they received, unhappily, plenty of support from a portion of the press. There was not one of their foolish predictions and wild threats and expectations which the New York *Tribune* did not hail as pure wisdom. The immediate "regeneration" of the South under the operation of the Reconstruction Acts was talked of as if it were an accomplished fact. Anybody who was not convinced by Thaddeus Stevens's reasoning, and was not warmed by Mr. Boutwell's rhetoric, was set down as a man in sympathy with Copperheads and eaten up with "the sin of caste." It was, in short, impossible that legislation undertaken in such a spirit should be wisely executed, however sound its fundamental principles might be, and impossible, too, that utterly unreasonable and extravagant expectations should not be formed by the public with regard to its probable results. Of course these expectations have been moderated under the stern teaching of events. The *Tribune* and *Independent* do not venture now to sing a double-leaded pæan over the "regeneration" of another State every time the news comes that a new constitution abolishing discriminations based on color has been adopted by a "State lately in rebellion." After all that has happened in Georgia, Louisiana, Alabama, Mississippi, and Virginia, people are less hopeful and credulous. They see that the regeneration of States as well as of men comes slowly, and that it is only in poetry that "old forms of vice and crime" can be rung out, like the dying year, by a peal of bells; and that, no matter how noble the theories you may have got hold of, their application to the practical regulation of human conduct is one of the most intricate and difficult problems to which the human mind can address itself. Nothing is easier than to clothe them in bills and resolutions; nothing harder than to make whole communities really respect and obey them in their daily transactions.

What made it all the more desirable that great care and deliberation should be exercised in the framing of the Reconstruction measures was that any mistakes made in the work were sure to be irreparable. It was useless to hope for the long continuance at the North of the temper towards the South, whether black or white, which carried the elections of 1866. It was useless to hope or believe that the extreme radical men would retain the hold on public confidence which the war had given them. Nobody needed to be a prophet, or even a very close observer of revolutions or of human nature, to foresee that when quiet times came they would lose their influence, and that those who came after them would hardly be disposed to supplement or amend their work, and that if the Reconstruction Acts did not work well, there would be the end of them. It would be useless to go over this ground now or to recall the failures or shortcomings of men who at least meant to do well—and who, if they did not accomplish all they sought, undoubtedly accomplished a great deal—if it were not now more than ever necessary to remind the public that the failure of the Reconstruction policy to do all that was predicted for it by no means releases either its opponents or its supporters from their responsibility to the South. The Government owed the negroes all the legal protection it could give them. It owed them perfect equality before the law; it owed them the same means of calling officials to account and of protecting themselves against class legislation which other men and other classes enjoyed; and these things it has given, and they can, in our opinion, never be taken away. Of this great glory the Reconstruction policy can never be deprived. But there is an evident disposition in every direction now to let Reconstruction alone; to let the acts and the Constitutional Amendment which we trust before long will be adopted, work as well as they can—or, in other words, to leave the negroes themselves to work as best they can the legal machinery provided for their use. One sees this tendency in the increasing concentration of the public mind upon questions, such as the finances and municipal and administrative reform, which only affect the freedmen as they affect all other members of the community. It was worthy of remark that, although nobody doubts Grant's determination to enforce order wherever the law permits him to interfere for its enforcement, he made no mention of Reconstruction, or of what some people call "the main question," in his reply to the deputation which informed him of his election. He enumerated the leading objects of his administration, but they were all questions of revenue and of financial administration. He is going to try to have the Government economically and efficiently served and the public obligations honorably met; but he is not going to assist any man or body of men in taking care of themselves. In other words, he is going to follow the good American plan of leaving everybody to work out his own salvation under the protection of the Constitution and the laws. Even Wendell Phillips admits at last that he looks for nothing more than the ratification of the Fifteenth Constitutional Amendment, and declares that with this he will be content. So that the negro must clearly make up his mind to share the common lot and submit to the common discipline. There is no doubt that for a time he will be dealt with unfairly. As we pointed out last week, neither the Amendment any more than the Reconstruction Acts can, under all the circumstances, prevent him from being frequently wronged and oppressed, because there is no political machinery to protect ignorance and inexperience completely against skill, vigor, and unscrupulousness, and the Southern whites can boast the possession of all three.

But it has now to be borne in mind that there is nobody so much interested in the success of all the reforms now under discussion as the negro. Anybody who has entertained extravagant expectations as to the results of the Reconstruction Acts or of the Constitutional Amendment, and is now suffering from disappointment, has the consolation of knowing that there is no class of the community which will derive so much benefit from a reform in the civil service, from an improved system of taxation, from the more honest and faithful collection of the revenue, from improvements in the administration of justice, from the purification of the ballot-box, and from economy in all branches of the Government, as the weakest and most despised class, whatever that may be. It is not the rich or the dextrous or shrewd who are most interested in good government. These generally manage to take care of themselves under any government, or even under no government at all. The people who go to the wall when legislators are ignorant and reckless, judges unlearned and corrupt, and tax-gatherers thievish and lazy, are the very poor and very weak, no matter

what may be their color, and the thorough remedies for the evils of poverty and weakness are found not in specifics but in general tonics. To make any part of the community permanently better in our day, you have to make it all better. To diminish the number of victims of oppression, you have to begin by diminishing the number of oppressors. In other words, you have to elevate the whole of society.

The devotion of the best portion of this community through a whole generation to the task, first, of preventing the spread of slavery, and then of destroying it, has permitted the growth of an enormous crop of abuses, which undoubtedly have weakened all the usual guaranties possessed by either poor blacks or poor whites for the enjoyment of their rights, so that the citizenship we now offer to the negro is undoubtedly worth considerably less than the citizenship we could have offered him twenty years ago. He is poor, and poor men count for less in politics than they did then, because the power of wealth, and especially of wealthy corporations, over legislation has enormously increased, and because the choice of officers for nearly every position in the Government has passed into fewer and less reputable hands; because the bar and judiciary have declined in learning and independence, and because the weight of taxation has increased without any increase of skill in the distribution of its burdens; because the number of officials has increased without any improvement in their organization or discipline; because crimes have increased, if not in number at least in variety and ingenuity, without any increase in the certainty or efficiency of the machinery of punishment or repression.

We look now for the rapid and successful application of the reformatory energy of the country to the extirpation of these new abuses, and anybody whose history or sympathies render him more interested in the lot of the negroes than in that of any other class of poor men—and this many good and able men may confess of themselves—may feel assured that whatever he does for the reform of the civil service, for the independence and learning of the judicial bench, and for the bringing of brawling, ignorant, and corrupt politicians into disrepute, he does for the freedmen. The next best service he can render them is to assist in their education. To educate a black man is to make him literally, in spite of the unpleasant state of things on the coast of Guinea, "an heir of all the ages," and to give him a weapon of offence and defence worth all the constitutional amendments ever passed. Men who know their rights have never yet been utterly confounded or brought to naught. No tyrants have ever yet long tyrannized over men who knew how to argue, and how to save money and wait, though many tyrants have tyrannized long in spite of statutes and constitutions.

THE LEGAL TENDER DECISIONS.

The probable results of the action of the Supreme Court in all the legal tender cases now or lately before it will be, as we ventured to suggest last summer, that persons who made contracts in which they specifically agreed to pay money in coin, will have to pay it in coin; and persons who agreed to pay money, understanding that they would have to pay it in coin, and not anticipating the existence of any other kind of money, will have to pay it in coin; and persons of whom it may be fairly presumed that when they made contracts they anticipated that the payment to be made under them would be made in greenbacks, will have to receive payment in greenbacks. This, of course, is simply a roundabout way of saying that the Legal Tender Act will be treated as unconstitutional in so far as it impairs the obligation of contracts. In so far as it did this it was, as the *Times* said, a grievous wrong, no matter what may be said or thought about the constitutional power of Congress to issue paper money, or to make it a legal tender in payment of debts, and no matter what may be thought of the war power as a source of right. The horror which was excited in the breasts of some of our contemporaries when we made bold to predict the course of the Supreme Court on this subject, and expressed our satisfaction at the prospect, is rapidly giving way to a more just and sensible view of the subject. That horror, which was in itself an eminently respectable feeling, and closely allied to the feeling of disapprobation excited by the sight of any species of vice or immorality, was a remnant of the very useful but somewhat unreasoning enthusiasm by which so many doubtful, but perhaps excusable, things were "put through" during the war.

The passage of the Legal Tender Act was in reality the levying of a forced loan under cover of the money-making power given to Congress by the Constitution, and the money-making power was used successfully to disguise the real nature of the transaction. All levying of forced loans is, however, a clumsy and wasteful operation. The sum a government derives from them, no matter how perfect its machinery or how great the confidence and support of the people, is very trifling in comparison to the amount lost by individuals through the shock given to industry and the stimulus given to fraud. Every issue of irredeemable paper, with a forced currency, brings but little in to the treasury compared to the loss it inflicts on creditors and dealers whose transactions extend over long periods of time. The only plea that can be made to cover it successfully is the plea of necessity. The thing is done, its defenders must say, because we cannot help it. We have to choose between this and a greater evil. This is the only plea which can be made successfully to cover military operations—the killing and devastation and lying which inevitably attend them. Attempts like De Maistre's, to elevate slaughter on the battlefield into a thing in itself holy, must always fail, because to be successful they would require a total recasting of men's moral organization. The release of whole communities from the usual restraints of the moral law, which war involves, may be restrained and regulated by what publicists call "the laws of war," but to the moral man, in quiet times, it can never seem other than detestable. It was, therefore, a mistake for anybody to keep on preaching after the war was over, and its necessities and anxieties had ceased, that the issue of the legal tenders, and the interference with contracts which it involved, was a good, legitimate, and normal exercise of the powers of government. It was like arguing for the perpetuation of martial law, the substitution of special orders for writs, and the introduction of ambuscades and spies into civil life. Any act of government which makes plighted faith a mockery, and enables a knave to evade the fulfilment of his obligations, can never be defended one minute after it has ceased to be necessary to prevent some greater evil; and nobody has attempted to show since 1865 what greater evil was prevented by continuing to give fraudulent debtors the right to pay off their debts in depreciated currency. No evil in time of peace is so great as the spectacle of legalized fraud.

Persistence in this preaching at last brought its legitimate result in the shape of the proposal to pay off the bondholders in depreciated currency. In the period since 1861 a new generation has come on the scene, which has no practical knowledge of gold and silver coin, or of its use as a regulator of currency and trade. The generation, too, which carried on the war, and saw the Legal Tender Act passed, got so accustomed to maintaining, first, that Congress had the same right to issue paper legal tender as metal legal tender; and, secondly, that the paper was just as good as, and in fact on the whole better than, the gold; and to abusing dealers in gold as "gamblers" and "traitors" who ought to be shut up in jail—that a very large portion of the community rapidly drifted into the belief that on the whole there was something preposterous on the part of the bondholders in expecting to be paid off in coin, and that it was an imposition to which the country ought not to submit. This belief having been diffused, of course there were soon plenty of demagogues found to preach it openly and vehemently, and after it had been preached awhile there appeared "weak-kneed" Republicans, and "managing men," like Senator Sherman, to advise the bondholders to give way, and agree to accept payment in greenbacks, as the best road out of a very disagreeable scrape.

When things had reached this pass, and it still seemed doubtful whether the authors of the proposed greenback swindle would not really succeed in deceiving the majority of the voters, we were delighted to learn that there was a fair chance of the Supreme Court's pointing out in calm judicial language the wide interval which in the forum of law, as well as in the forum of conscience, separates unredeemed promises to pay money from money itself. The confusion of purely moral with purely legal or material considerations which the war had brought about in the public mind, and the coloring which

party feeling gave to every discussion both of financial and legal questions on the stump and in the newspapers, made it very difficult to bring the exact state of the case home to the popular perceptions through any of the ordinary channels. Nearly everybody who has opened his mouth on the legal tender question for three or four years back has been suspected of prejudice or passion or selfishness in all he said about it. The judges of most of the State courts, to whom it has been submitted, being in closer dependence on popular opinion than they have ever been before, have not unnaturally shrunk from what seemed the tremendous responsibility of gainsaying what so many good men had been saying, and the best part of the community believing, for so long on such an exceedingly delicate subject as the value and power of the currency actually in use. Whether even the Supreme Court has weight enough to do it successfully still remains to be seen, but we think it has, and we have for some time hoped it would do it. Its last decision has acted like a bucket of water on a drunken man's head. One or two more in the same direction will completely sober most of the currency madcaps and put the greenbacks before us in their real character—as a makeshift which it was excusable to resort to at the outbreak of the war, but which is the source of incalculable evils, and whose disturbing influence on trade and on private and public morals should, now that the war is over, be kept within the narrowest possible limits till we finally get rid of them. They have already introduced a strong gambling spirit into all commerce and manufactures; they have contributed, in some degree at least, to the withdrawal of labor from production; they have enabled an immense number of rascals to cheat their creditors by paying back considerably less than they received, and they have thrown the popular mind into a state of confusion on the subject of value and good faith and national obligations of which it will take a good while to clear it.

Of course, the only complete remedy for the existing evils of the currency is a return to specie payments, or, to put the idea in what is far more accurate language, the redemption of its promissory notes by the Government. The greatest obstacle to this at present of course lies in the fact that the Government has not the money to redeem with; but another great obstacle will be removed when the public has been fairly brought to recognize the fact that the greenbacks *are* promissory notes and nothing else. In clearing up the fog which on this point envelopes the popular understanding, the judgments of the Supreme Court may prove an important help.

SECRET SESSIONS.

It is a little startling, but it is nevertheless true, that the American public have no more means of knowing the reasons which are about to prevent the Senate from ratifying the *Alabama* Claims Treaty than it has of knowing the reasons which induced the English Government to propose it. That it will be rejected no one for a moment doubts, but whether because, as some of the papers say, we can afford to wait until England admits her fault and agrees that the only question for arbitration is at what figure to set the amount of damages caused by it, or because no separate arbitration is provided for the *Alabama* matter, or because it is natural to reject a treaty negotiated by a minister who has made most of us angry with him by reason of certain social follies in which he has indulged himself, or for any other reason, the public will remain ignorant; the Senate sits with closed doors, and promulgates only the result. It is not merely that the *chauvinisme* of Mr. Chandler or the appeals to "God and humanity" of Mr. Yates fail to reach us, but Sumner and Trumbull and Fessenden and Conkling and Edmunds are also unheard. If the affair were a San-Juan protocol it might seem to make little difference whether the Senate opened its doors or shut them during the final debate; but the matter under discussion at present is one of the gravest international questions that has arisen in modern history—one which has already threatened the peace of two great nations, and which, as long as it is unsettled, endangers the commerce of the entire civilized world. During five years the hottest discussion has raged about it in both countries, and now, at the climax of the controversy, when the most interesting moment of debate arrives, when at length the subject is approached by men trained to the consideration of points of international law, and endued at the same time with the responsibility of decision, the galleries are cleared, the reporters must take themselves off, and secrecy begins.

We cannot see any good reason why this should be so, and there are certainly many reasons for publicity. In the first place, one of the greatest evils arising from the system of secret sessions is that a public which is of course very ignorant of international law finds no means of enlightening itself, while it is able, notwithstanding, to exert the most powerful pressure on our foreign relations. In a country in which it is a truism that all power comes from the people, a principle is introduced which seems founded on the belief that the people are of no consequence whatever. No sound progress in Democracy is possible at all unless all make progress together; whatever is done by the leaders must at least be understood by the rank and file, for if this rule be neglected the rank and file, knowing they have the ultimate power, will nullify in some way or other the acts of the leaders. Now, we cultivate in the Senate a body of picked men, the most able representative body in the country, but on some of the most important topics that come before them we prevent their debates from having the slightest public effect. The result is natural; on these topics the public become more and more ignorant. Fifty years ago the foreign relations of America were more equitably adjusted than those of any other nation in the world; to-day they are assuredly not in a good way. It was only the other day that a number of discontented Irishmen planned, under the protection of our flag, the invasion of a country with which we were at profound peace. They organized, equipped, and despatched an army across the Canadian frontier. It seemed as if we were returning to a state of nature when a nation pretending to be civilized could permit such practices. Many of our newspapers and orators applauded, and when President Johnson, prompted by the simplest dictates of duty, doing what he absolutely had to do, arrested the movement, and performed the one act which entitles him to the respect of the country, abuse was showered upon him from every side, and the affair was spoken of in many quarters as if one of the inalienable rights of man was to take advantage of neutral territory to organize thieving, murdering attacks upon his neighbors. Again, a little later some of these same invaders, being captured, were held for trial. The law was simple enough; they were on the same footing with pirates. But a cry was raised that their being American citizens made a difference, and the trial was spoken of as an insult to this country and the invasion of American rights. The administration was requested to expostulate, and, although nothing had been done except to treat a crime as a crime, we seemed for a while to be really nearing war.

Now some, at all events, of such humiliations as these might be avoided if the public had any means of educating itself in international law. If the debates of the Senate on foreign affairs were public, we should know what reasons influence the most intelligent and cultivated body in the country in their decision of the important questions which are remitted to them for debate, and we should not be thrown back on the House of Representatives as the great school of instruction in the code which prescribes the relations of nations to one another. At present, although the Senate is the body which ratifies treaties, the House is the great forum of debate on foreign relations. What Mr. Fessenden or Mr. Sumner thinks of the *Alabama* treaty may never be known, but what Mr. Banks and Mr. Robinson, of Brooklyn, think of our proper attitude on the naturalization question, and what Mr. Orth thinks we ought to do with San Domingo, is telegraphed all over the world. This would not be so bad if the House took pains to inform itself of the matters which it discusses; but not having any responsibility, it feels free to advise in all directions, and is a full fountain-head of false doctrine. It has become part of the regular business of every session to refer some prominent topic of foreign affairs to Mr. Banks's committee, not for the purpose of obtaining light on the subject, but that a vote-catching report may be made, pandering to the prejudices of some particular class. The latest method is for the committee not to sanction, but to permit the introduction of a resolution—a plan which relieves them of all responsibility, and at the same time furnishes as ample an opportunity for speech-making as could be desired. This was the way in which Mr. Orth's resolution was brought in, requiring the administration to send a fleet to Dominican waters

for the purpose of reading homilies to the natives on the necessity of calmness and moderation in political affairs, and with orders to report progress at proper intervals.

The result, then, of the secrecy of the Senate's debates, and the publicity of those of the House, is this, that we fail to hear good reasons given, and have our minds perpetually confused by hearing bad ones. The newspapers can hardly afford a remedy, for they speak at best without authority or responsibility. The people are thus becoming more and more like a mob whenever the discussion of points of international law is involved. It is clear that if the Senate's debates were reproduced and criticised in every quarter as those of the House are now, part of the danger would be removed, for part of the ignorance would be dispelled. Is there any reason why they should not?

The theory on which the practice rests is the very old one that diplomacy is such a very delicate business that exposure to the light kills it. The old-fashioned way of carrying on diplomatic negotiations—and it is not so very old-fashioned that it does not exist to-day—was of assuming to begin with, as the major premise, that all diplomacy was villany; and starting from that point it is not surprising that the conclusion was adopted that the more secret the operations were the better. The theory was invented to supply the place of a still older one, which made each nation the natural enemy of every other, and a state of war the normal international condition. The earliest diplomats were statesmen whose habit it was in the early morning to send their neighbor an envoy extraordinary and minister plenipotentiary with offerings of peace and good-will, following him up in the early afternoon with a strong military force, thus getting for their army of invasion the benefit of the feeling of repose produced in the enemy's mind by the herald of amity. That method answered the purpose admirably so long as international law was not recognized as binding, or hardly as existing; but when rules of action began to be applied to the conduct of nations in their relations with each other, it became evident that the simple methods of a simple age must give way to a more complete system. Then diplomacy proper was invented. Diplomacy is the art of so dealing with foreigners that you give to your acts the appearance of justice, and at the same time reap all the advantages of villany—the art of cheating on a grand scale under the pretence of the grandest equity. Diplomacy is the homage which international vice pays to international virtue. Let us illustrate our position.

Diplomacy wishes to acquire territory. Under the old system, a state filled with this desire of aggrandizement seized the territory it wished, sold the inhabitants as slaves, and filled it with new citizens. Not so to-day; diplomacy has different methods. In the diplomatic age, to begin with, a secretary of state offers to buy, and not having the power, as he well knows, to conclude the treaty of sale himself, he persuades the other contracting party that the body which has the power will ratify, reserving to himself, in case of error on this point, the right to doubt his own assertion. The other Government, not unaware of the habits of diplomacy, in order to make sure that all is right, sends a secret agent to talk the matter over with the ratifying body, and to discover whether its disposition is as reported by the secretary of state. The ratifying body, not liking the responsibility of deciding what its feeling may be, refers the agent to the committee of foreign affairs, reserving the right, without saying so, to differ in opinion from the committee; and the foreign affairs committee intimates an opinion that the secretary is quite correct in his representations, and that there are no objections to the proposed sale, making always the mental reservation that as they are not a responsible body, the treaty-making power cannot be concluded by what they may do. All this takes place in secret, and the result is that the agent is persuaded that a sale can be effected. He so informs his government, a protocol is drawn up and sent to the buying government for ratification. But it turns out that the buyers have not the money to buy with, and the secretary of state gravely informs the selling government that he had no authority to make any arrangement, while the committee tells him he was foolish to trust to a body which, as he must have known from his general reading and reflection, had no power which went farther than that of conversation, and the ratifying body laughs in his face, and suggests that if he had been a little clever-er he would have managed differently.

If treaties had to be debated in the eye of the public no Senate would dare to countenance such proceedings, as we may see from the feeling of shame which even a semi-official exposure of the St. Thomas affair has elicited.

SNOW-DROPS IN ITALY.

Oh! loyal vestals in this land of sun,
Your white cheeks flush not, and your virgin eyes
Vouchsafe no lifted look. In vain the skies
Are red and pale with passion; swift clouds run
And beckon; warm winds call; long days are done,
And nights are spent, and still by no surprise
Your snows are changed to blushes.

Oh! where lies
The spell by which your gentleness can shun
These heats? Is it your hidden zone of gold?
Or in the emerald whose glimmers show,
Scarce show, beneath your white robes' inner fold?
Vain question! Still your calm bright peace ye hold;
And yet ye put my pulses all aglow,
With loyalty like yours to lands of snow. H. H.

Rome, Jan. 14, 1869.

ANOTHER VIEW OF TOWN NOMENCLATURE.

If we name towns and cities badly, who has ever done better? and in the end will it make much difference? It is said our names are often full of awkward pedantry, or commonplace or unpleasant suggestion; that our invention is so poor we have to borrow constantly from our old homes.

Let any one study the matter, and he will feel that our pioneers, who mainly give the names, do on the whole quite well. In the main they are walking almost precisely in the footsteps of pioneers of other nations. There is a subtle law which the rough fellows obey unconsciously, making what is done now almost a repetition of what has been. Here are half a dozen names of towns and hamlets in Southern Ohio within a short ride of each other, taken almost at random: Xenia, Camp Dennison, Powder-Mill, Goe's Station, Springfield, Kill-Pig. If this list is not a fair sample of American town names, at any rate the specimens are not over-favorable. Xenia we have heard criticised. It would be set down as coming from the pedantry for which we are blamed. This pedantry we own has left more traces in our land than elsewhere. Admit Xenia to be objectionable on this account, yet, after all, such names are far from discreditable. A race would not adopt them unless a pretty competent schoolmaster were abroad in it. But granting that the stock is poor, Xenia is really a beautiful flower from it. Its initial sound is the softest of English consonantal sounds, suggesting the home of happy bees, "the mellow breezy bass" in the summer harmony. There is no sound following that is not soft and sweet. But it is more than melodious—its signification, friendly hospitality, is fine. The old pioneer who fifty years ago baptized the cluster of new cabins high up on the little Miami, showed by his choice, perhaps, that he liked to have people know he had seen the inside of a Greek dictionary; still, he had an ear for music and a gentle heart for his kind.

We are too near the time of the great war to have the name Camp seem other than prosaic. The oaths and the monotony, the grease of the cooking-booths, the canvas dirty with rough handling, the blue crowd in the tent trampling into the mire the scanty allowance of straw—the soldier and the soldier's visitor remember all these too well. But let the years fairly begin to roll in between the world and that tremendous time, giving a softness to outlines, as intervening atmosphere gives it to a hill, then Camp Dennison will become one of the most poetic of names. So far as we know, it is the only point in Ohio whose name commemorates the time of the great rebellion. To this generation its suggestions may be somewhat rude, but the whole surface of England is dotted with names of precisely similar character, instinct with charming poetry. The terminations caster, chester, cester, it is hardly necessary to say, are the Latin castra, and all towns so named were once the camps of Roman legions. At Exeter, Lancaster, Doncaster, Uttoxeter, and a score more, the soldiers of Cæsar and Agricola, unbinding their sandals, have bathed their feet blistered with marches, and ground up the short swords dulled in campaigns against Picts and Iceni. The coarse blue coat is to be as poetic as the legionary's buckler. The spot where the rifle drill was learned before Atlanta and

Shiloh, and whose name recalls the measured foot-beat and the rattle of arms, will be hallowed ground.

Surely, one may say, a name derived from a prosaic manufacture like Powder-Mill will not last. If it does not, it will be an exception to a general rule in operation the world over. A mischievous proprietor in Canada once named two townships after his wife's lap-dogs, Flos and Tiny. It was like a boy throwing burrs in sport. They stuck where they were flung, and it was made a subject of complaint to the House of Commons that they adhered so close to the skirts of the Canadian territory. A thousand years hence, if your ghost should take the fancy to ride northward on the train from Cincinnati, more likely than not it will hear the brakeman of the period shout Powder-Mill, just as the spot is past. Nor need one smile at Goe's Station. Through phonetic decay its form no doubt will undergo change. Station in time will, very likely, become obsolete—associations may gather about it and adorn it, as lichens lend grace to the roughness of a stone. If this is the result, it will only be a repetition of what has taken place in the Old World. The termination *by*, so common in England, and often transplanted to America, is well known to be Danish, and to have very nearly this meaning of station. Derby is the station for Der, and Whitby White station; Rollesby, Ormsby, Grimsby, Swainsby, are simple stations of Rolf, Orm, Grim, and Swain, Danish freebooters, the rank and file of a horde of pirates, in comparison with whom the worthy Goe, whoever he may be, in the shadow of the great white water-tank, which is about all one sees at "Goe's Station," is without doubt a gentleman and a scholar of immeasurable dimensions. *Ham*, too, is Saxon for dwelling, and *ton* for farm. *Ing* has a similar meaning. Denham, Higham, Basing, Epping, Leighton, and a hundred others, lending surnames to families that have become famous—saturated with the smell of hay-fields and daisy-bearing meadows to which they have been so long attached—these often are but the softened names of the old leather-clad swineherds, coupled with a word denoting their huts. It shows poverty of invention, perhaps, to name a town Springfield, rather than something new; but how natural that a settler who has left his heart in his early home behind him should give the name of that early home to his new village. Nothing is more natural, and few human customs are older. New England, throughout its whole extent, remembers the old home in its town names; and so, according to Livy, Æneas and Antenor, leading separate parties of exiles, both gave the name Troy to their respective colonies. "In quem primum egressi sunt locum, Troja vocatur; pagoque Trojano inde nomen est." And so, long before Troy even, the Aryan colonizers of Greece gave to their new seats familiar names from further East.

But now poor *Kill-pig!* Can the absurdity of the name be paralleled? Can it ever become dignified and agreeable? Why not? We have seen a proper whistle made out of a little pig's tail; and heard from the showman that his mother's ears had been made into silk purses. Just so, it is quite possible that things charming may come out of Kill-pig and names nearly as bad. The termination *y*, anciently *ea*, meant island. In England there is the stately city of Ely, high above whose venerable homes towers one of the earliest of English cathedrals. In the ninth century King Canute, from his barge in the stream near at hand, heard the chants of the monks from their cloisters and laid down his sceptre to set forth his emotion in a poem that is still extant. Ever since, the name has continued to appear, attended with the most dignified circumstance in a hundred splendid events in the history of a great empire. Yet at first it meant only the island where eels were caught. Netley, a name which more than any other name of England suggests arches and ivy and clustered columns, the song of the nightingale from the ruined buttress, is simply nettle-patch. So Naseby is said to be only nose-town. Versailles is from *verser*, and got its name in the time when the lumbering coaches of the old régime were overturned in the mire in the neighborhood. Stuttgart, Würtemberg's elegant capital, is primarily Horse-pen; and why should not classic Bannockburn suggest the same idea to Scotchmen that we should get from a name like Flapjack Creek? But if designations like these seem less intolerable in their primary meaning than Kill-pig, there is one still nearer. In the north of Dorset, close under the low hills that form the boundary of Somerset, lies a certain pleasant little parish. It is in the part of England where the grass is greenest and the air softest—a spot where the orange might almost mature as it does among the Canaries. Its name is amongst the most sonorous of English names and probably quite venerable, *Toller Porcorum*. Hearing the word pronounced, without analyzing it, one might wonder what Roman consul it was who here laid away his fasces when his time came to die, or what other event it was of moment to Rome that is commemorated in the sounding Latin genitive? Now, "toll" plainly is Saxon, and is given by Bosworth as meaning toll or *tax*, while Porcorum is "*of pigs*." Candid reader, where would you rather live—in *Tax-pig* or *Kill-pig?* Which is the more agreeably suggestive? In Tax-pig you have the tithing-man on his way to the pound with a refractory and loudly complaining captive; but Kill-pig hints at the rasher and well-browned spareribs. But think of the Kill-pig of the future! In a thousand years, quite probably, the present meaning of the two words will have entirely vanished, as the meaning has vanished from *wich* and *caster* and *by*. Already it would be out of the question for our refined pen to write the three-lettered monosyllable beginning with *h* which designates the full-sized porcine animal; and even for a pig the polite prefer to say a swine, if they are forced to allude to him at all. Some time the words will have dropped out of use and lost their meaning entirely. A word, too, is much like a whip-lash. Cracked out by one of its Irish inhabitants, Kill-pig cuts the ear harshly enough. But *ig*, the hard snapper at the end, is almost certain to fray away into the softer *ich* or *ir* or *y*, or perhaps be snapped off entirely; while the sharp consonants *k* and *p*, hard edges along the thongs, becoming suppled, will fringe out into softer sounds. Then let it be associated a few generations with man. Now it is a name of yesterday, applied to what is hardly a hamlet. The landscape shows at present a straight track of railroad running north and south, with a pair of mud holes hung on either side, after the manner of saddle-bags, whose contents are shanties and styes. But let the grandson of old Ryan, the Kill-pig patriarch, grow up to be President; or in some future struggle let the spot be the scene of a great battle—there is no etching like the touch of blood to make gold out of the commonplace; or let it become profitable some time to work the iron ore in the vicinity; in the city that may spring up let Kill-pig become an agreeable suburb; let the cottage of a poet stand at last in what is now swamp, and a painter's studio in the clearing; let homes of taste stand behind trim hedges, and a picturesque ruin arise, draped in vines, and suitably provided with a ghost—it will not be strange if in time to come even Kill-pig becomes as pleasant in sound and suggestion as many an English name that had no better origin, but has become warm and beautiful and venerable through long contact with human interests. No let any one look at the matter and he will see we have no reason to reproach ourselves with exceptional want of taste. Our hap-hazard way of giving names is the fashion that has always prevailed when new men have occupied a country. No country is likely to have a different way. The backwoodsman takes the aboriginal name he finds, or whatever his convenience or rude taste suggests; and in the end too it makes little difference, though for a time the fastidious may suffer. Harsh syllables in three or four hundred years are very likely to grow melodious. Disagreeable meanings will fade out. Association with man will dignify and endear what primarily is trivial or low.

ENGLAND.

LONDON, February 5, 1869.

As Parliament does not meet for the next ten days, the ordinary period of Christmas dulness is protracted for a fortnight beyond the usual time. The papers fill their columns by various expedients, such as dissertations on spots on the sun and long accounts of episcopal installations. I think I should be almost justified in resorting to the Englishman's proverbial refuge, and discussing the weather. Indeed, I cannot avoid remarking that I am sitting by an open window without a fire, with a bright sun (bright, that is, for London) shining, and with an air as mild as that of the proverbial spring. We have read in the papers that the Seine is nearly frozen and that there has been skating in Florence. In England, we have not yet had even a glimpse of a frost. If American travellers would occasionally do us the favor to stay with us a little longer on their way to the Continent, they would discover that amongst the various blessings of a constitutional monarchy not the least is a happy freedom from the extremes of weather as of politics.

We are beginning, though languidly at present, the controversy about the Irish Church, which is to waste so much valuable time next session. Without prematurely opening that topic, your readers will, I believe, thank me for drawing their attention to one of the liveliest descriptions of Irish life that has appeared for a long time, which has been published in anticipation of this and other coming agitations. Mr. Trench, a land-agent of great experience, is the author. The title is *Realities of Irish Life*. Mr. Trench managed some large estates at the time of the famine, and sent several thousand of the tenantry to America by way of unburdening the property. In the course of this and other operations he incurred the enmity of the Ribbon-men. He was tried at one of their secret tribunals and

condemned to death, having, however, a reprieve of two days, because he had promised a pair of iron gates to one of his judges, who was therefore anxious that he should live long enough to keep his word. Meanwhile some well-wisher informed Mr. Trench of the plot, and for twelve months he never left his house, even to cross the street, without being armed to the teeth and accompanied by two other armed men. At length the murder of one of his neighbors, who was shot in the presence of a large number of the peasantry without a hand being raised in his defence, led to a discovery of the plot. One of the men arrested turned informer, and gave Mr. Trench a full account of the various ramifications of the scheme, of the means by which the assassins had endeavored to execute the sentence passed, and of the various hairbreadth escapes by which he had avoided them. The whole story is curious in the highest degree, and illustrates the social condition of Ireland, and some of the good and bad qualities of the peasantry, better than any novel I have read. The book contains many other vivid illustrations of different phases of Irish life, and is well worth reading, with two qualifications. The first is, that Mr. Trench, though refraining from drawing any general conclusions, is obviously a strong partisan of the Protestant landlord's view of the situation; the other, that it is difficult to suppose that he has not, to use the most delicate expression I can remember, "embroidered" his anecdotes a little. But a perfectly candid, accurate, and impartial account of Ireland remains to be written.

We are still engaged in studying the phenomena attendant upon an English election. There is a strong family likeness between the different cases, which makes it troublesome to wade through the reports of the trials. The way in which things are managed in a borough of weak virtue appears to be this: In the first place, the candidate pays a large sum of money into the bank, which somehow disappears in the course of the election. He knows as little as may be of the various channels by which the sum disperses itself amongst the constituents. He has to appoint an agent, through whose hands all the money must pass, and who has to make afterwards an official statement of the expenses. The task of the agent is to discover means by which the money may be spent so as to influence votes, whilst the items entered in the accounts may not have a suspicious appearance. One mode is to open committee-rooms in public-houses, and there to treat all right-minded persons to unlimited beer. The number of public-houses thus employed at Bradford was one hundred and sixty-four; but the extent to which treating had been allowed was difficult to determine, and there was always a certain haziness in the innkeeper's mind as to who had paid for the liquids consumed. Another plan is to hire a number of men as messengers or watchers. They are supposed partly to carry messages and partly to act as amateur detectives, keeping an eye upon the iniquitous practices of the other party. It is now illegal to employ in these capacities any one who is qualified as a voter at the election; but it is easy to find persons whose employment has an indirect effect upon the voters. A third plan is to cover miles of blank wall with placards, and to pay people handsomely for permission to exhibit them. The bare administration of hard cash seems to be comparatively rare, as it is evidently dangerous; but on one or two occasions a man in a mask has made his appearance distributing shillings and half-crowns with singular liberality. The other old-fashioned modes of bribery have been rendered illegal; but that which it is of course impossible to suppress is the indirect influence of wealth, the popularity which a man secures by spending money freely, and the intimidation exercised on tenants and dependants.

A good deal is being said as to the expediency of introducing the ballot with a view of making intimidation more difficult. It was tried the other day at Manchester by the Liberal party. They held a ballot, in view of the probable unseating of one of the lately elected members, to determine whether Mr. Milner Gibson or Mr. Ernest Jones should be the Liberal candidate. Poor Mr. Ernest Jones, a well-known radical and a Chartist who, in 1848, had the rare distinction of being imprisoned for seditious practices, was elected; within two or three days afterwards he died suddenly. The object of the experiment was to show, what I imagine is pretty plain, that with due precautions it is possible to secure secrecy and avoid fraud. It seems to have been successful, and will doubtless be quoted during the session by the advocates of the ballot. The measure seems not unlikely to pass the House of Commons, though the Lords may perhaps venture to reject it for the present. The usual arguments continue to be urged, but the real motive is the belief that a great and unfair pressure, which it is almost impossible to detect in a court of law, is exercised by landlords over tenants and by employers over workmen. How far this evil is prevalent it is, of course, impossible to decide; the influence is exercised by means as intangible as the contagion of the cholera. I have myself known cases in which men have voted from a traditional fear of their employers, when the employers were perfectly ignorant or indifferent; and, on the other hand, I have known cases of cruel pressure, of which it would be impossible to bring distinct proofs. My belief is that the tendency is to exaggerate the evil, though in particular districts it is doubtless very prevalent.

Another legal proceeding is amusing us just now. A young Irish lady became a nun in a Roman Catholic convent in Yorkshire. There, for some reason which has not yet appeared, the mother superior became prejudiced against her, and resorted to a system of petty female persecution. She intercepted her letters to her family and kept from her news of the death of a brother. She made her eat nothing but mutton and mouldy bread, when the rest of the nuns were allowed a change of diet and good bread. She made her scrub floors when her hands were chapped, and ordered her to rub off the candle-grease with which the poor nun had ventured to anoint them. Finally she was turned out of the convent and an account of her behavior sent to the Catholic bishop, of which she complains as libellous. This story with its various details occupied several hours yesterday before Chief-Justice Cockburn, and the whole history will take some days more. If the plaintiff speaks truth, it is a curious illustration of the small spite and ill-nature sometimes generated by shutting up two or three ladies in a small house and giving one of them spiritual authority over the others; but perhaps the British Protestant will be relieved at finding that the evils of a convent are after all on so much pettier a scale than those which his imagination delights to paint. There are no nuns walled up alive in cells, but already they seem to be adepts in the art of sticking pins in each other.

Convents have become so common in England within the last few years that their management is a matter of some importance. We are growing accustomed to the sight of Sisters of Mercy and priests perambulating the streets of London; and it seems to be rather the policy of Catholics to make a display of their numbers and growing importance. How far their importance really increases would be a difficult question. A great fuss has been made about a young gentleman who happens to be Marquis of Bute and to possess £300,000 a year having lately joined their Church. Indeed, it is said that he intends to become a priest. The good people of Cardiff, to which town Lord Bute and his ancestors have been useful landlords, almost went out of their senses when he obtained his majority last year. They composed—though I believe they did not actually sing—a kind of hymn altered from our national air to "God save Lord Bute." Of course, the conversion of such a demigod makes a certain sensation, though an ordinary youth of twenty-one might not be supposed to be a very weighty judge of the matters in dispute. The fact is, however, that there is certainly a tendency on the part of the aristocratic and fashionable classes to drift Romewards, if not actually across the boundary—omitting, of course, the large number who drift the opposite way. Protestantism may be true or false, but it is a religion for tradesmen, whereas Catholicism, false or true, is a gentlemanlike religion. That I take to be the opinion of the Butites, including in that name the large number of people who indulge more or less in Butolatry. There are, as I need not say, many reasons of much greater potency which may swell the ranks of Catholicism; but the supposed vulgarity of Protestantism, especially in its Dissenting forms, is one minor cause, which falls in with the general demand for a religion more satisfying in an æsthetic point of view than that to which we are accustomed. Meanwhile the intellectual part of the country alienates itself more decidedly from all traditional forms; as is curiously illustrated in a recent controversy between the *Tablet*—the ultramontane organ—and the *Pall Mall Gazette*. The *Tablet* complains that the *Pall Mall Gazette* and *Saturday Review* always speak of Catholicism with a certain quiet contempt as an exploded system of belief which no reasonable man could seriously entertain, though he might respect it historically. It proceeded to accuse those papers of semi-concealed atheism, and in a series of four bitter articles denounced the *Pall Mall Gazette* with special unction. The *Pall Mall Gazette* made a short and contemptuous reply. It acknowledged and defended the views imputed to it in regard to Catholicism; but emphatically asserted its utter repudiation of *atheism*. The *Pall Mall Gazette* always speaks on such matters with an earnestness and obvious sincerity which deserve respect, and in its remarks on Catholicism it speaks the mind of the most educated classes. The charge about atheism is vague. Neither of the papers attacked can be fairly accused of atheism in the true meaning, but it is plain enough that many contributors to both hold a form of creed which would be generally called infidel, and which a Catholic would possibly think as bad as atheism. They throw a decent veil over it, it is true, but it is not the less obvious to any one who will read "between the lines." In the *Saturday Review* it is curiously mingled with an occasional High Church article, due to the influence of the proprietor. In the *Pall Mall Gazette* the chief writers are sincere though liberal

believers in some form of religion, but both papers are substantially in favor of some form of free-thinking.

Correspondence.

WEATHER REPORTS.

To the Editor of the Nation:

The observations of the weather are now reduced to such a system in Great Britain that not only the interests of science but those of commerce and navigation are greatly promoted by them. A similar system in our own country would be of increased interest and value in proportion to the greater extent of country that would be covered by it. By means of the telegraph simultaneous observations of the weather might be reported in our daily papers from every quarter of the United States; and with the extension of the telegraph the system might easily be made to embrace the whole world.

As a practical illustration of the value of such a system to navigation, I may mention the suggestion made by one of our daily papers some years ago, that the telegraph should report the approach of our autumnal N. E. storms as a warning to vessels about to leave port. As these storms usually commence in the south and progress to the northward, as if the atmosphere were caving in from that direction, it is an easy matter for an observer at Charleston, S. C., to forwarn the ports to the northward of their approach. And to such perfection has our telegraphic system been carried that we might now have daily reports of the condition of the atmosphere, not alone from the chief points along all our immense sea-coast, but also from our inland seas—the lakes—and from our mountains and prairies. The daily papers might have a corner devoted to such reports, which would possess something of the interest of the almanac for everybody, and which would be much more valuable to scientific and commercial men, if not indeed to the community at large, than much of the political stuff which is now furnished to us by telegraph.

In order to commence a system of such reports it would be necessary to have the points of observation judiciously selected by practised meteorologists, such as Professors Henry and Loomis, the hours decided upon, and the proper instruments furnished. These instruments ought to consist of, 1st, the anemometer; 2d, the barometer; 3d, the thermometer; and 4th, the psychrometer.

I do not know what objections the newspapers might present against furnishing these reports for the information of their readers and the advancement of science, nor do I know what inducements they might require to undertake it; but an inducement to it which meteorologists might offer would be to subscribe to such papers as published weather reports in preference to any others. Not doubting that there are many others of a similar disposition, I extend to them the right hand of fellowship from

A Meteorologist.

February 15, 1869.

Notes.

LITERARY.

Messrs. Fields, Osgood & Co. announce for early publication another collection to match "If, Yes, and Perhaps," of Mr. Hale's magazine stories. "The Ingham Papers" will be the title of the new volume. The same house announce the speedy appearance of the second and last volume of "The Ring and the Book;" a new novel by Mrs. Stowe, entitled "Oldtown Folks;" a volume of Mr. Stedman's poetry, with the title "The Blameless Prince and Other Poems;" "Our New Way Round the World," by Mr. C. C. Coffin (Carleton); "On the Wing," a book of advice and instruction to young sportsmen, by Mr. John Bumstead; and "The Brawnville Papers," by Professor M. C. Taylor, which originally appeared in the *Herald of Health*, and relate to physical culture. Besides these new works Messrs. Fields & Osgood have in press new editions of several old ones. Mr. Dana's "Two Years Before the Mast," which bids fair to be an immortal "boy's book," is to come out again with additional matter, consisting in part of the author's account of a second visit to the scenes of his narrative. The Pacific coast being a place very different from what it was twenty-five years ago, this addition will no doubt have much interest; but whether it will not have an interest too much its own to be of advantage to a book that we believe we, for our own part, would a little rather see unchanged, may be questioned. Miss Phelps's "Gates Ajar" goes into a xth edition.——Mr. Dion Thomas, of this city, will publish for subscribers a book by a number of gentlemen, at the head of whom is Mr. Stephen Pearl Andrews, whose name most of our readers have heard, and which was more familiar to American readers of fifteen years ago than to those of to-day. The title of the work, which has long been in preparation, is as follows: "The Basic Outline of Universology: An Introduction to the Newly-discovered Science of the Universe; its Elementary Principles, and the Stages of their Development in the Special Sciences; together with Preliminary Notices of Alwato, the Newly-discovered Scientific Universal Language, resulting from the Principles of Universology, by Stephen Pearl Andrews." In further description of the work it is said to be "Revelation through Science;" or the "Philosophy of Integralism;" or the "Advent of the Reconciliative Harmony of Ideas;" and it is promised that there shall be "Eighty Illustrative Diagrams."——Messrs. J. W. Schermerhorn & Co. announce for the first of March the second volume of their "Library of Education," a 32mo series, patterned closely in style after the Paris "Bibliothèque nationale," and, like that, cheap and handy for the pocket. Volume I. has already appeared and contains the greater part of Locke's "Thoughts concerning Education." The remainder of this work and a treatise by Milton, with lives of both authors, will form Volume II. The third volume will contain one of the famous "Reports" by Horace Mann, and there will be, if the series meets with favor, a monthly issue in the same line of subjects, though with a very wide range of selection. The volumes are bound in paper, making from 150 to 200 pages, and are sold at 15 cents in this city, or 20 cents when ordered through the mail.——Mr. Henry Carey Baird announces a number of technical works—on the making of liquors, vinegar, ropes, cement, soaps of all sorts, saws, etc.—to but one of which need we call the attention of the general reader, namely, "A Book of Designs for Headstones and Mural and other Monuments."——Mr. Mansfield T. Walworth is the author of "Stormcliff" and one or two other novels which have met with more or less acceptance, and which, though they may be described as rather heavy reading, are not on the very lowest range of novel-writing; he will now publish, through Mr. G. W. Carleton, a new story with the title of "Warwick, or the Lost Nationalities of America."——Messrs. G. P. Putnam & Son have in press "The Life and Journals of John James Audubon." The naturalist's widow is the editor.——Mr. Patrick Donahoe announces several novels of William Carleton's, who, by the way, is now dead indeed; when we announced his death a few weeks ago he was still living, and in fact was threatening to bring a libel suit against an editor who in an obituary notice of him had spoken of him as intemperate. The titles of the books announced are: "Willy Reilly and his Dear Colleen Bawn;" "Evil Eye;" "Parra Gastha, or the History of Paddy Go-easy;" "The Black Baronet;" and "Redmond, Count O'Hanlon, the Irish Rapparee."

—The American Social Science Association has just been holding a session at Albany, evidently very much to its own satisfaction—for the Albanians, with General J. Meredith Read at the head of them, dispensed old-fashioned hospitality—and also a good deal to the satisfaction of those who heard the papers read or have seen a good report of them. A very good report we have not seen in any journal, though most of the important ones seem to have had a reporter there. But the fact is, we suppose, that the average reporter, accustomed to the whirl of nervous excitement which the political convention and mass-meeting furnish, is so far demoralized by his dissipations that his attention cannot but wander when the sober proceedings of a serious gathering are all there is to occupy it. The proceedings of this particular meeting were, however, interesting and very well worth attention. It is a reproach brought in England against such convocations that their papers all have an air of being rejected contributions to the popularized-science magazines, or attempts at padding for the heavier reviews. They are sciolistic without being at all light reading, and are profoundly dry without having a vestige of any other profundity than that of their dryness. It is not always that our American Association has been free from the suspicion of similar shortcomings. But of this particular meeting it is noticeably true to say that there was hardly one of the persons who undertook to instruct it who was not a specialist, hardly one, indeed, who may not be called an expert, as regards the matter of which he talked. Mr. Goldwin Smith knows "University Education;" Doctor Samuel Eliot knows "The Value of the Higher Education;" Mr. F. B. Sanborn, the long-time secretary of the Massachusetts Board of Charities, is certainly very well informed as regards "Public Charities;" Mr. C. L. Brace, who has been for years practically engaged in the investigation and in the amelioration of the condition of the poor of New York, understands the nature of "Model Lodging-Houses," and something of the same kind may be said of Dr. Griscom and "Ventilation," Mr. Charles Francis Adams the younger and "The Protection of the Ballot," and Mr. J. S. Gould and "The Cattle Disease." Mr.

Greeley, too, understands very well the subject of "Corruption in Public Offices," on which he was announced to speak; but rather unfortunately he devoted himself to urging on the attention of his auditors the advisability of a scheme he has of circulating small tracts, of the probable value of ten cents at retail, among people intending to build houses, and of giving to a series of such tracts the Association's guarantee. Each tract he would have filled with good advice as to choice of materials or of situation and so on. The Association adjourned without taking any action on this proposition. No doubt the general public will hereafter have an opportunity to read in some of the reviews the more valuable of thsee essays.

—That was not an omission in the Constitution which our Senators undertook to repair when they voted to prohibit educational tests for suffrage and office-holding; but a part of the unwritten Constitution which existed before the Union not less than did the principles of equal rights and of self-government. The common-school system which New England has bequeathed to the whole country has no other philosophy than that general intelligence—and the higher the better—is necessary to produce good citizens, good legislators, and good rulers. Of the North, at least, this may be called a fundamental law, and it was this which Senator Wilson outraged—unintentionally, we are sure, and without due reflection—when he moved and carried his fortunately ill-fated amendment. It is impossible not to infer from this attempt some weakening of the popular belief in education, and that we do not owe this to the vast foreign immigration of late years is apparent to any one who compares the educational condition of the West with that of the East. The last testimony on this point which we have seen is the first annual report of the present Superintendent of Common Schools in Maine, Mr. Warren Johnson, which we can praise as one of the most intelligent and readable documents of the kind we have ever examined. Maine makes a poor show for a New England State, being second even to Connecticut. A comparison of the years 1867–1868 with 1857–1858 shows the whole number of scholars (children of school age) between 4 and 21 to have fallen off fifteen thousand in the last decade; the whole number of registered scholars from twenty to thirty thousand; and, as we remarked last fall, when commenting on the September election, in spite of the unprecedented size of the vote then cast, the population of Maine is evidently not increasing. The superintendent enumerates the indications, not peculiar to his State, of a decline or, which is the same thing, stagnation in the public interest in the schools, and of the inability of the country to keep up with the cities and large towns in progressive improvement. As yet the normal schools have failed to make much impression on the rural districts, their missionary field *par excellence*.

—We spoke some little time since of *Sabin and Sons' American Bibliopolist*, and refer to it again for a special and for general reasons. In this second number is begun the republication of all those portions of the English *Notes and Queries* which relate in any way to American subjects. This the publishers do partly because of the intrinsic interest of the articles—there is, for example, a full and learned discussion of Madoc's more or less mythic voyage to America, and of the probability of there being or having been Welsh Indians—and partly with a view of getting additional information on the topics that are treated of in *Notes and Queries*. Mr. Sabin himself, in the number before us, makes a valuable bibliographical note in reply to a querist who desired to know something of a book with the following title: "Evangelium Regni: A Joyful Message of the Kingdom published by the Holie Spirit of the love of Jesu Christ." Besides this new feature, the lover of books, and the book-buyer, and the beginner in bibliographical learning will find in the *Bibliopolist* much that is instructive and very useful as well as entertaining. For example, we have here among us in the United States some sharp book-buyers who know what they are doing and are never made the victims of booksellers; but we have, too, a good many collectors of libraries—more perhaps than any other country—who have more willingness to buy than knowledge of the worth of what is bought. This latter class will find Mr. Sabin's work valuable as a corrective of catalogues—upon which he now and again discourses with the sort of subacidity which is commoner among persons of extremely minute and exact knowledge than among other men in presence of ignorance, and commonest, perhaps, among persons whose exact knowledge is of some branch of learning of the kinds that the stupid world looks on as worthless. It generally is a "pleasant sour," however, and in this case it is not at all disagreeable. The publisher's general design is to give hints in regard to the best editions and to keep his readers well informed of new publications, English and American; to tell prices got at sales; to print a list of books wanted, and to discuss all matters pertaining to books. It seems desirable that as many book-buyers and readers as possible should send in their subscriptions—a dollar a year—to keep this work on foot.

—We have received from a correspondent in Berlin a letter concerning the Vermont pond which was christened Lana Water in honor of General Wool. "Lama" Water, by the way, instead of Lana Water, is what we called it in the article on "Town Nomenclature" which we published in the *Nation* of the 17th of December. General Wool, at a date not mentioned, was visiting the Green Mountains, and a number of friends and acquaintances of his, among whom was our correspondent, invited him to "make a day of it" with them. It appears that in Vermont this is done in retired places. It was, at all events, on this occasion; the party went into the hills, and after boating across what was then known as Sucker Pond, they reached a high shoulder where was a beautiful basin into and out of which poured a pure cold stream. It was resolved, if we make out our correspondent's meaning, to christen or rechristen the pond to which this stream with its basin is tributary; "the baptismal *eau-de-vie* was therefore made ready," and it remained only to find a name. "Woolly Lake" would not do, evidently. Our correspondent bethought himself to ask the general how it was that the Mexicans named him at Saltillo. They translated his name it seems, and called him "El General Lana," so "Lana Water" became the formal name of the lake—which we fear the neighboring "liberal shepherds give the grosser name" by which their fathers knew it. "Sucker," by the way, is the name given in New England to a sort of fish (of the genus *catastomus?*) which the boys kill with sticks as they ascend the shallow streams, and which are afterwards given to pigs. In other parts of the United States they are used as food for man, but are tasteless and nearly worthless, and of repulsive appearance.

—An exchange newspaper suggests that we were perhaps lately in error in printing the Spanish name for the declaration that commonly precedes Spanish or Spanish-American revolutions—*pronunciamiento*—without the second *i*. We may explain that we did so not in ignorance of the original orthography, nor merely in accordance with newspaper practice, but because Worcester, whose spelling we prefer to Webster's, gives only "pronunciamento," and regards it as no longer foreign, but fairly naturalized. There are also many good reasons why the *i* may be dropped: one is, that the Spaniards themselves drop it in certain cases, and say, for example, either *partimento* or *partimiento*. Though the latter ending is much the more common in Spanish nouns, and has primarily a strongly marked participial sense, it is identical with the former in derivation (Lat. *mentum*), and generally comes at last to mean the same thing. We see this in such words as *atrincheramiento, alistamiento*, when compared with their English equivalents, *entrenchment* and *enlistment;* so likewise in *movimiento* (Lat. *momentum* from *movimentum*). The Anglicized form of *pronunciamiento* would be *pronouncement*, like *announcement*. The Italians, for their part, omit *i* in the word in question, writing *pronunziamento;* just as they write *manifesto*, where the Spaniards use *manifiesto*. In this last instance we follow the Italians, partly because the *i* is peculiar to the euphony of the Spanish language, and partly because we get so much nearer to the parent Latin—the same reasons, by the way, which induce us to reject the French *u* in *favour, labour*, and the like. As regards our using pronunciamento in the sense of a revolt, to which the same paper takes exception, our case is at least equally strong, since we are sustained not only by English but by universal usage, Spanish not excepted. A German writer, for instance, would not hesitate to say: "Barcelona hat pronuncirt"—Barcelona has revolted. There is, of course, nothing extraordinary in this extension of meaning from abstract to concrete, from cause to effect. Almost all nouns in *miento* exhibit it, and that the tendency is a natural one, every language will prove by copious examples. Our word *demonstration* offers a very close analogy to pronunciamento.

—We have received *via* England a circular of peculiar interest to Americans, or, if we may indulge a local metonymy, to Cortlandt Street. It announces an international exhibition at Utrecht, at which it will be our own fault if we do not easily take most of the prizes. The management is in the hands of the Society for the Encouragement of Manufactures and Manufacturing Industry in the Netherlands, which has fixed upon the period from Aug. 15 to Sept. 30 of the present year as the term of the show. Goods will be received for it only in the latter half of July, and the kinds desired are "such articles of household use, furniture, dress, food, work, and instruction of different countries, as at a low price combine usefulness with solidity, so that [the workman] may be enabled by judicious economy to improve his condition." Articles of pure luxury and elegance will be out of place. Seven classes are enumerated: (1) Houses, etc., (2) household necessaries, (3) clothing, (4) food, (5) workmen's and gardeners' tools, (6) means of moral, intellectual, and bodily development, (7) reports, statutes, regulations of different associations for promoting the well-being of the working classes. The first and last of these appear to us the only ones

in which America cannot shine, but to take five-sevenths of the awards would be an advertisement worth investing in. We cannot go into the particulars of shipment, insurance, etc., which are regulated in the circular before us with a good deal of strictness, except to quote Article 5, which runs as follows:

"The committee of management has the right not only to sell the articles exhibited at the price indicated, but also to order others of the same sort at the same price during the exhibition. The exhibitor who does not fulfil such order loses all claim to the medal, honorable mention, etc. The proceeds of articles sold, after deducting charges, will be remitted to the exhibitors at the expense of the latter."

Those who wish further information had best address either Dr. J. Th. Mouton, Secretary and Correspondent, Spuistraat, 28, The Hague, or Mr. J. J. Metelerkamp, 1116 Bregittestraat, Utrecht. The former is of the central committee, the latter of the committee of management.

—An antidote to M. Quinet's extravaganza of science noticed in the *Nation* of January 7 (p. 11) may be found in Dr. Pfaff's sober little book: "Die neuesten Forschungen und Theorien auf dem Gebiete der Schöpfungsgeschichte," published by Heyder & Zimmer at Frankfort-on-the-Main. It is divided into three chapters, of which the first shows the result of spectral analysis in determining the constitution of the sun, the fixed stars, and the planetary bodies in general, argues against the theory that the sun is a dark, cold body surrounded by a photosphere, and adopts the hypothesis of Kirchhoff that it is in a glowing state and that the spots are heavy masses of clouds. In this connection Professor Pfaff refers to the photometric researches of Seidel and Zöllner, who distinguish five phases of cosmogonal evolution: 1, a glowing gaseous state like that of planetary nebulæ; 2, a glowing, fluid state like that of the fixed stars; 3, a slaggy state like that of many red stars; 4, an eruptive state like that of flashing or twinkling stars; 5, a completely cool and solidified state like that of the earth. The author concludes this section of his work with a discussion of the various theories that have been advanced concerning nebulæ, comets, meteors, and shooting-stars (*Sternschnuppen*). Chapter ii. considers the question of the age of the human race, fixing it at "not over 7,000 years"—a conclusion which, we think, will not be endorsed by the majority of scientific men at the present day. Even Lyell, who is by no means prone to rash speculations or random assertions on such subjects, suggests 224,000 years as the probable age of the human family. Chapter iii. endeavors to show what race of men first inhabited Europe, or rather states that there are no data sufficient to determine it, although craniology proves them to have been of the Caucasian race. Dr. Pfaff has no sympathy with the ethnologists who regard the primitive man as more nearly allied to the ape than to the developed man of to-day. His polemic against Darwin, Huxley, and Vogt is especially earnest, and, although not conclusive as a refutation, may serve as a salutary check on the enthusiasm and frequent fantasticism of the new school of scientific observers and theorizers. The work is illustrated with woodcuts.

—The question of the kinship of man with the monkey, which Dr. Pfaff merely touches upon in the concluding chapter of his "Researches," is fully treated by Dr. Bischoff in his recent volume, "Die Grosshirnwindungen der Menschen." This study of the brains of men and apes in all stages of cerebral growth from the fœtus to the fully developed being is exceedingly thorough. Two circumstances, however, one affecting the author's mind and the other affecting his materials, tend to vitiate the results of his investigations: 1, He is haunted by the spectre of Darwinism, and seems resolved to lay his spirit at all hazards; consequently, he emphasizes the points of difference between brains of men and those of apes, but fails to note the points of resemblance, so that what should be a strictly scientific argument degenerates into a special plea. 2, The specimens of brains which he examined were preserved some in chloride of zinc, others in alcohol, whilst others were studied in wax impressions or plaster casts. The danger of false deductions from such heterogeneous data is evident, however great care may have been taken to avoid incorrect conclusions, since the source of error lies beyond the author's control. Dr. Bischoff discovered the nearest resemblance between the cerebral convolutions of the adult orang-outang and those of the eight months' fœtus. He does not appear to have compared the brains of young apes with those of children, where the similarity is said to be much greater than between grown apes and men. Indeed, the rotund cranial development and frontal elevation of the orang-outang in early youth indicate a mental power very little inferior to that of the human infant. These marks of intellectuality in the brute animal disappear with advancing age. Dr. Bischoff's book is rendered additionally attractive by a series of plates.

—A valuable contribution to our knowledge of Grecian culture and the influence of Grecian ideas since the revival of letters, comes to us from the press of Constantinople under the title of "A Sketch (Σχεδίασμα) of the condition of literature among the Greek people from the fall of Constantinople (1453) to the beginning of the present century." The author (M.K. Paranikas) is professor in a theological school situated at Chalki, one of the largest of the Princes' Islands in the Sea of Marmora. The word γράμματα (which we have translated literature) he uses not in the restricted meaning of *belles-lettres*, but in the broader signification (sometimes given to it by Plato) of learning, and thus includes in his "Sketch" an account of educational institutions, distinguished teachers and other men of taste and culture, laity and clergy, libraries, printing-presses, and all the appliances that have aided in disseminating Greek thought and in building up Greek civilization. We have full descriptions of the Greek schools in Constantinople, Turkey in Europe and Asia, Egypt, the Isles of Greece, the Greek colonies of the West, Russia and the Danubian Principalities; nor are the calligraphers (καλλιγράφοι) forgotten who lived in Rome and the other cities of Italy, and put posterity under a debt of eternal gratitude by their beautiful and accurate transcriptions of ancient manuscripts. The zeal of the Greek clergy in promoting classic as well as ecclesiastic erudition, as portrayed by our author, leaves upon the reader's mind a far more favorable impression of them than is generally current among scholars.

MR. C. W. DILKE ON AMERICA.*

Some three or four years ago Mr. Tuckerman compiled a book called "America and her Commentators," which gave but a melancholy picture of the foreign tourist in this country. Quite a number of the traits of character which degrade humanity to the level of the brutes he seemed to have possessed in full measure; falsehood, it appeared, was his natural way of speech; he was insolent to a degree; he rabidly hated free institutions; he would have overthrown this Government if he could, and so far as shameless perversions of the truth could injure the Government or the people, it was shown to have been his delight to invent and disseminate such perversions. We are mistaken if the public much enjoyed this compilation. The whole subject had a look of unprofitableness and seemed to belong to a past generation. However that may be, should anybody undertake to prepare a sequel to it the portrait of our new traveller would not be of so shocking a kind; it would, in fact, be rather an engaging picture. Since 1863 or 1864, or thereabouts, we have been visited by a good many people from abroad, and it is quite remarkable what a contrast, as respects its general tone, there is between the tourist literature on the far side of a line drawn, say, at 1863 and that which is on this side of such a boundary. Most of the late books of travel are as rosy and kind as the earlier ones were spiteful and full of the gloomiest forebodings. Mr. Kennaway, Lord Hartington, Mr. Hepworth Dixon, Mr. Fraser, Miss Jex Blake, M. Laugel, Mr. Goldwin Smith, Mr. Maguire, Mr. Newman Hall, Mr. Zincke, Mr. Dilke, and Mr. Rose have all taken a run through the States lately, and written about us, and we have had remarks, too, from Mr. Dickens and Professor Pearson, Mr. Anthony Trollope, Mr. Leslie Stephen, and Mr. Louis Jennings; and except Mr. Rose—who had a very discouraging "time," as we say, with his humorous entertainment—we believe they all have said a great deal more good than harm about us. Of course account is to be taken of the natural differences of opinion as to North and South which have prompted these English people to more or less sharp speaking in behalf of the one or the other side; it is speaking in strict accordance with the truth to say that they as naturally took sides as we; the way in which England fought for and against the United States Government is a better proof of the real unity of the two peoples than the "Shakespeare and Milton" and "common language" proof which is mentioned sometimes at "banquets." But though there is, for example, some anti-Northern talk in what Mr. Trollope has lately been saying about us, and some anti-Southern talk in what Mr. Smith has said, that is a very different affair from the real old anti-American talk that we used to hear in the days of Mr. Tuckerman's wicked and unreliable tourist. Though, for that matter, we are all agreed, too, that he was not in all respects so entirely unreliable as he might have been and as we used to swear bitterly that he was. There *was* a Mrs. Hominy and there was a Mr. Pogram—or, at any rate, dreadful shapes not so very distantly resembling them—we may as well confess; and there was not much need, after all, of Mr. Dickens's apology for depicting them. It is not merely to our war, or rather it is not merely to the fortunate result of our war, that we are to attribute the increased civility of English critics of America. The

* "Greater Britain: A Record of Travel in English-speaking Countries during 1866-7. By Charles Wentworth Dilke. With maps and illustrations." Philadelphia: J. B. Lippincott & Co.; London: Macmillan & Co. 1869.

war elevated the national character, proved true our former estimate of ourselves—which of course we had no right to ask other people to accept until the proof of its correctness was made—and thus, in a way more honorable to them than if our mere success had dazzled them, the war is a cause of the truer views and judgments of America now obtaining among the English. Besides this, the English are in the beginning of troubles, political and social, which make the Englishman of to-day, more especially the contemporary Englishman in the presence of American democratic institutions, quite a different gentleman from him who in the Waterloo period walked about the world as if he owned it, and simply laughed if told that England, social and political, was not fixed for ever. Then of course, besides a real change that has taken place in us, and a real change in the direction of humility that has taken place in him, and a fear of change that tends to keep him humble, there *is*, no doubt, a good deal in him of the mean respect for mere strength; only it is not to this last fact that we should wholly attribute the alteration in his attitude.

Of the good-nature and respectfulness of the latest contribution to foreign criticism of America, Mr. Charles Dilke's "Greater Britain," there is certainly no reason why any American should complain. Not that Yankees need make special acknowledgments to him for the complimentary title of his book. He set out to follow the English-speaking race around the world, and of the Britain greater than Great Britain, which he found after he had left London, he found a part in Australia, a part in India, a part in New Zealand, a part in the Canadas, and only a part in the United States. Still, the most ardent of that class of lovers of our country who may be called superficial patriots, or superficial-area patriots, who love their country the more there is of her to love, need not quarrel with him for not bestowing on us alone the whole of the larger name. He expresses a very full and satisfactory belief in the future immense strength, power, and grandeur of the people which now owns, and hereafter is to occupy, the Mississippi Valley and the boundless West; he sees that it is understood that—at a time not as yet fixed, to be sure—it is intended to absorb Mexico; he practically counsels England, as Mr. Medill, of Chicago, has counselled her, to "back out" and leave the Canadas to obey the law of political gravitation which eventually will make them so many States in the Union. In speaking of the Provinces, Mr. Dilke says a good deal that may properly be heeded by persons in authority on the other side of the water. They are, after all, most interested; and a hope that what he says may be heeded by persons in authority in the Provinces, is one that will not be entertained by anybody who is at all acquainted with what are called the upper classes of Provincial society. We may remark that, though Mr. Dilke evidently has his own opinion as to the political wisdom of the colonial governments, he seems to be not fully aware of the fact—as we take it to be—that the people of the Provinces—the great mass of the population as distinguished from that portion of it which is "a bad caricature of the worst features of English gentility"—are at bottom far from being unfavorably affected toward the United States, and far from being hopelessly in love with their present rulers. For a variety of reasons not many English visitors to the Provinces are able to note this. Americans, however, who know with what inevitableness we drain the Canadas of their immigrants and the maritime Provinces of their young men, who listen not so much for what is said by officials as for the opinions of the average Nova Scotian or New Brunswicker, have latterly been able easily to exercise patience as regards that "annexation of Canada" for the sake of which our fathers used sometimes to talk of going to war; and now, whatever might happen after war was once begun, it is only a Fenian, and here and there one American, who would think of beginning a war for the purpose of getting British America.

Of those chapters of Mr. Dilke's book in which he treats of India, New Zealand, and Australia we feel neither competency nor inclination to speak. They may be read, we should say, with this much of satisfaction: we may be fully sure that we are getting from them the views and opinions of one of the Advanced Liberals in regard to the proper policy for England to pursue in India and the colonies, in regard to the prospects and deserts of democracy in Australia, and in regard to several other similar subjects. But after reading what our author has written about matters of which we know something ourselves, we care but little, we find, for what he has to say about other things, and we are afraid to advise any one to put much reliance on what he offers as facts concerning any of the countries or peoples he has seen. Turn to the seventh page of the volume and we come on this bit of statement and accompanying philosophy. The author is in Virginia: "Where slavery exists, the 'poor trash' class must inevitably be both large and wretched; primogeniture is necessary to keep the plantations sufficiently great to allow for the payment of overseers and the supporting in luxury of the planter's family; and younger sons and their descendants are not only left destitute, but debarred from earning their bread by honest industry." This sounds very much like the slapdash talk of a traveller more desirous of appearing to know something of the country he has been in than solicitous to learn the truth. It must have been an exceptionally humorous member of the "'poor trash' class" who ever informed Mr. Dilke that his "low down" condition was due to any law or custom of primogeniture that ever prevailed in any part of the South. Again, payment of overseers—unless what some of them stole is counted as a part of their wages—was never a considerable item in the expenditure of any plantation. An "overlooker" was sometimes a gentleman, as gentlemen go in the South, and got a respectable income for his services in keeping an eye on perhaps two or three or half a dozen plantations, each of which individually was under the closer supervision or the immediate management of a white overseer on wages of a few hundreds of dollars a year, or of a colored "driver" at nothing a year; but the true "overseer" was a person whose charges never assisted in making his employer's family "poor trash." Almost always he was as really a servant in the matter of wages as an inferior in the matter of estimation. On this same seventh page at which we have chanced to set the book open we find this passage, which it will be seen is put forth with every appearance on the author's part of being well informed; and yet there is nobody who knows the South at all who says such things as some of these: "The Southern planters were gentlemen possessed of many aristocratic virtues along with every aristocratic vice; but to each planter there were nine 'mean whites' who, though grossly ignorant, full of insolence, given to the use of the knife and the pistol upon the slightest provocation, were until the election of Lincoln as completely the rulers of America as they were afterwards the leaders of the rebellion." They may have been as much, but certainly the mean whites were not any more "the rulers of America" before Lincoln's time than they were afterwards "the leaders of the rebellion." Louis Napoleon's secret police are the Emperor and Empress of the French and the founders of the Second Empire in the same sense in which the lower classes of the Southern people were ever "the South" of our older politics or "the Confederacy" of our politics of five years ago. We should not comment on these examples of wildness of assertion if they were of rare occurrence, but they are so frequent that hardly half a dozen pages together are to be found in any part of the American chapters without more than one of them, and they make it difficult to give any credit to any part of the work. How, for instance, does a man riding by rail between Richmond and Petersburg see "from the windows of the car that in the country there were left no mules, no horses, no roads, no men?" It was a fact, as Mr. Dilke probably heard before leaving home, that the war had made mules and horses scarce in Virginia; but it is not a fact that one could very well learn by looking from the windows of a railroad car, and it was not so, we make bold to say, that Mr. Dilke learned it. This may be but a small thing; but no traveller has a right to ask for our confidence, and none can get it, who shows himself willing to write down as true, things that have no existence. Why may not any Harvard man hold himself excused from troubling himself about Mr. Dilke's remarks in general when he finds him saying this of the University—where, by the way, he had ample leisure for making the acquaintance of the things about which he had decided to talk: "Her conservatism is shown in many trivial things—in the dress of her janitors and porters, in the cut of the grass plots and college gates," etc., etc. We were going to say that her porters and janitors are not dressed at all, and that she has no gates, but affects breaks-in-the-fence with posts in them. There is, however, one gate, we believe—an iron one which may perhaps be as ancient as 1845, or 1855. As for the porters and janitors—if indeed there is any porter, and if there are more janitors than one—they wear as many, or as few, and what garments they please, unmolested by any of the college authorities, so far as we have ever heard.

As we have said, the reader may get from this volume the opinions on several topics of an Advanced Liberal—or probably we should do better to say "of the Advanced Liberals," Mr. Dilke's opinions being perhaps, first, the opinions of the set to which he belongs, and then, secondly, his own; being, at all events, more important as the opinions of a certain school in English politics than as any single person's notions. Furthermore, whoever is interested in hearing the latest word of news from the Australasian and Asiatic Anglo-Saxon communities may read the book with some pleasure. But on the whole it seems to us one of those books which, like an ill-prepared dictionary, contains a deal that is good, but is to be looked at with decided distrust, and is only to be used by persons able to correct its blunders.

THE LATE GERMAN WAR IN LITERATURE.*

No series of public events ever produced in so short a time such a rich and voluminous literature as the German war of 1866. As early as July 1, 1867, Mühlbrecht's special catalogue, issued at Prague, contained the titles of fifteen hundred works, comprising poems, romances, pamphlets, addresses, orations, sermons, essays, diaries, histories, biographies, strategic treatises, maps, charts, photographic and lithographic collections, etc., each designed to illustrate some particular phase of the subject. Within less than a year after the armistice of Nikolsburg, there appeared sixteen biographies of King William and fifteen of Count Bismarck, besides several quite elaborate sketches of less prominent soldiers and diplomatists, one hundred and thirty-five histories of Prussia, one hundred and twenty-nine of Italy, seventy-four of Austria, forty-one of France, twenty-three of Schleswig-Holstein, eighteen of Venice, fifteen of South Germany, of Holland the same number, of Luxembourg twelve, of Hungary, Frankfort, Denmark, and the German Confederacy nine each, of Mecklenburg seven, and from one to five of such minor states and municipalities as Würtemberg, Hesse-Cassel, Nassau, Hamburg, Belgium, Tyrol, Switzerland, Hesse-Darmstadt, Lübeck, and Coburg; and in addition to these books of biography and history, about forty volumes of military maps, topographical charts, and engravings, all of which were elicited by the war and designed to elucidate it. Since the publication of the above-mentioned catalogue, the press of Germany has been pouring forth works of this class in a steady, though diminished stream, so that their number at the present time probably exceeds three thousand. Out of such a mass of literary material, much of which has a merely ephemeral interest, it is always difficult for the American reader to select, even with the aid of an ordinary *catalogue raisonné*, the few books which would possess for him an intrinsic and permanent value; and it is with the desire of helping him in this task that we call his attention to two recent works whose titles stand at the head of the present article.

The substance of Herr Blankenburg's volume appeared originally in "Unsere Zeit," a sort of serial dictionary or lexicographical review of contemporary events, published by Brockhaus at Leipzig. It is not, however, a mere reprint of those essays, inasmuch as the author has subjected them to a thorough revision and an artistic recasting into book-form, adding at the same time new matter of considerable importance. In the introduction he discusses the philosophy of war in general, which he considers as inevitable and beneficial in the economy of states as tempests and earthquakes are in the economy of nature. Here, however, he makes a distinction between *Cabinetskriege* and *Volkskriege;* the former depending upon the caprice of diplomacy and having only individual or dynastic ends in view, whilst the latter are waged in defence of great national interests and spring from profound moral causes. People and states which are conscious of their mission as civilizing forces in the world are not only permitted but also impelled, according to Blankenburg, to use war as one of the "positive means" in fulfilling their historic destiny; it is a crucial test of their right to political existence and of the validity of the claims which they make on the future; he has no sympathy with "the doctrine of the weak-hearted philanthropists of our day who justify war only for defensive purposes." It is also characteristic of a "people's war" that it never stops short of the end for which it was begun, whereas a "cabinet's war" usually contents itself with partial success and terminates in a compromise. In this connection our author lays down the principle that no government has a moral right to go to war, except with the determination to "fight it out completely;" and that the victorious army which rests satisfied with anything less than the "entire subjection of the enemy" is guilty of a crime against humanity. The decisive battle of Waterloo, which gave to Europe half a century of peace, and the unconditional surrender of Lee at Richmond, which settled for ever the question of State-rights and the political theory of secession in our own country, are cited as examples of *Normalschlachten*. The Crimean war and the Italian war of 1859, on the contrary, are declared to have been a useless waste of blood and treasure, inasmuch as they were not carried out to a logical conclusion, but were arrested by premature treaties of peace involving "the necessity of new conflicts for the decision of the pending controversies." The more energetically a war is conducted, the less danger there is of foreign intervention. "*Je ne veux pas m'allier avec un cadavre,*" is said to have been the reply of Napoleon III., when advised to form an alliance with Austria after the crushing defeat of the latter at Königgrätz. No government voluntarily practises upon itself as a political policy the *genus tormenti* which Virgil represents the tyrant Mezentius as inflicting penally upon his subjects.

After this ingenious and suggestive but not altogether satisfactory justification of war, we have more than a hundred and thirty pages devoted to a history of the causes which led to the events of 1866. The first chapter treats of the religious and political differences between Austria and Prussia, their rivalry and mutual hostility from the time of Frederic the Great to the convention of Gastein, including an account of the Danish war of 1864 and the manner in which it affected the European position of each of the allied powers. The second chapter traces the origin and final solution of the Schleswig-Holstein question and its bearings upon the affairs of Germany, the foreign and domestic politics of Count Bismarck, his defiant attitude and arbitrary measures towards the opposition in the Berlin chamber of deputies, his despatches and diplomatic passage at arms with Count Mensdorff concerning the menacing character of Austria's military preparations, the alliance between Prussia and Italy, the proposition of Austria in the Frankfort Diet to mobilize the Federal contingents, and the withdrawal of Prussia from the Confederation in consequence of the adoption of this proposition by a majority of the plenipotentiaries. The third chapter begins with Austria's note of April 18, proposing a simultaneous disarmament, which Bismarck rejected as insincere, and narrates the history of the negotiations and conferences in Germany and the other European states till the formal declaration of hostilities towards the latter part of June.

In the "Second Section" of his volume the author gives a concise but sufficiently comprehensive statement of the forces engaged in the conflict, the financial condition, wealth and natural resources, state of culture, military organization and discipline, and physical configuration of each country, everything, in short, that contributed to the relative strength or weakness of the two nations; he then describes in detail the several engagements and series of operations of the different armies till the armistice of Nikolsburg and the peace of Prague, illustrating the text by excellent maps of the various theatres of the war in Bohemia, Moravia, Lower Austria, Middle and West Germany, and on the Tauber and the Main, besides eight plans of battles. In a strategic point of view, Austria's geographical position was extremely favorable to purely defensive warfare, especially with Saxony, Bavaria, and Hanover as her allies. This fact must be taken into account in order to appreciate fully the achievements of Prussia. But neither this vantage-ground of Austria nor the numerical superiority of her army could atone for the demoralization of her troops, particularly the absence in the newly-recruited infantry of that *esprit du corps* and delicate sense of honor which make the veteran soldier feel a stain on his ensign as keenly as a wound in his own flesh, and the incompetency of her officers of every grade from Field-Marshal Benedek down to the lowest subaltern. Those who imagine that partisan prejudice or national pride may have led the author to exaggerate the deficiencies of the Austrian service in organization, tactics, and generalship, are referred to the anonymous work of "an Austrian Soldier," published at Leipzig in 1866 and entitled "Oesterreichs System als die einzig wahre Ursache seiner Niederlage vom militärischen Standpunkt aus," in which these evils are painted in still darker colors and traced to their real source in the pedantry that sacrifices individual intelligence to automatic precision of drill, and in the fatal system whereby promotions are regulated not by talent or military knowledge but by birth or by wealth. There is no doubt that the rapid and complete success of Prussia was due less to the needle-gun than to the character of the man who stood behind the needle-gun. The elements which contribute to victory in every war are three-fourths moral and only one-fourth material. If the Austrians and the Prussians had exchanged weapons, we have every reason to believe that the results of the conflict would remain the same, unless, indeed, the exchange should in some way affect the *morale* of the combatants. At Magenta and Solferino the Austrians were better armed than the French, but the latter *did not know it, and won the day*. It is moral and intellectual force that conquers; not the talismanic influence of red shirts and breech-loaders, but a clear comprehension of the thing to be done and courageous fidelity in doing it. A very instructive portion of Blankenburg's volume is the *Anhang* of sixty-six pages bearing the title "Prussia in Arms," in which he gives a sketch of the origin and growth of the Prussian military system during the last three centuries, and especially the transformations which it has undergone and the more and more democratic character which it has assumed since the disaster of Jena and the peace of Tilsit.

Of Dragomirow's "Epitome of the Austro-Prussian War" we can say only a few words, by no means commensurate with its worth. The author of this succinct and valuable monograph is colonel in the Russian army

* "Der deutsche Krieg von 1866. Historisch, politisch und kriegswissenschaftlich dargestellt. Von Heinrich Blankenburg." Mit Karten und Plänen. Leipzig: F. A. Brockhaus. 1868. 8vo, pp. xii., 553.
"Abriss des österreichisch-preussischen Krieges im Jahre 1866. Von M. Dragomirow. Berlin: A. Bath. 1868. 8vo, pp. 274.

and also professor in the Nicholas Military Academy. His book is not only a history but also a thorough and impartial critique, and thus furnishes an admirable supplement to Blankenburg's larger and more strictly narrative work. Its merits in this respect are so obvious that it was translated from the original Russian into German soon after its publication, notwithstanding the multitude of volumes which had already appeared on the same subject. The descriptions of battles are brief, graphic, and easily intelligible even to the civilian, although the entire absence of maps and plans is a serious defect. Unfortunately, too, the "Epitome" has neither table of contents nor index. It is no small advantage to the foreign reader that Professor Dragomirow writes from a non-German stand-point, and therefore notices many interesting peculiarities of both the Austrian and the Prussian tactics which to a German author would not seem sufficiently striking to be worthy of mention, and also draws parallels between them and the instructions of the Russian army, particularly the methods of Suvaroff. His sketches of the principal generals of each army are sharply drawn, and their prominent characteristics stand out in bold relief. Benedek's weakness was the want of preliminary culture and theoretical knowledge, for which no personal energy or bravery or practical experience could compensate. The superficial qualities that made him a brilliant corps commander at Solferino were not adequate to the strategic combinations of a great campaign. The man of "iron will" became under the weight of this responsibility strangely feeble and vacillating. The Prussian chief of staff, General Moltke, showed himself the antithesis of Benedek in all these respects. "Prince Frederic Charles," says our author, "belongs incontestably to the most eminent generals of the present day in Europe." In conclusion, we have several suggestive chapters on the strategic uses of railroads and telegraphs, and a *résumé* of the results of the German war of 1866 on the progress of military science.

World Pictures in Capitals. By E. T. Potter, architect; with a descriptive legend, by Henry Coppée. (Philadelphia: J. B. Lippincott & Co. 1869.)—Mr. Potter is a New York architect who has set a good example to his fellow-artists in publishing, in the book before us, pictures of the carved capitals he has put up in a private house, where, of course, the public cannot see them. The book offers, on eight pages, forty photographs, of which eight represent the eight capitals at perhaps one-fifth of their actual size; and the others, four to a capital, give enlarged details of the ornament. The photographs are well made and show the capitals well; although, of course, it could be wished that one or more were shown in position, by which the relations of capital to shaft and to superincumbent weight could be judged. They are given to us here as if they were mantel ornaments, designed for no place in particular. It is much easier to photograph them so—that is, in the carver's shop, on a handy table and with lights arranged for them—than in their places in the building; but the inadequacy of the representation so obtained is not to be overlooked.

Next to sound, logical, and durable building, the rarest and most desirable thing in modern architecture is ornament designed for its place and expressive of something beyond tasteful selection and skilful adaptation of ancient types. It is probable that little good ornament can be designed—as, for instance, no good capital can be designed—without this selection and adaptation; but the *something beyond* the evidence of fresh and independent thought is what we ask for. We need it more than the people of better times than ours needed it; for our ornamental work, done in the usual way by the workmen who execute such things, is always both coarse and cold, and it needs something more than the avoidance by the designer of the worst vices of design to make his work assert itself as of another world, demanding attention to its meaning as a work of fine art. Simplicity and repose are noble, and without them good art does not exist; but they will not dissipate the cloud of our indifference to all art that addresses the eye. Independent thought may: designs with intellectual meaning in them run a chance of being looked at. Probably the artist may receive permission to address people's sense of the beautiful, if he address at the same time their memory, their power of association, and their traditional respect for external nature.

Therefore it is well imagined by Mr. Potter that his capitals should have stories to tell; each one its story. One capital is of India, the corners framed of clustered palms, the abacus ornamented on the four sides with elephants' heads, and each side showing a carving in relief of an Indian scene, framed, as it were, in the leaves of cotton and palm. Now, it is certainly rare in American art to see so many ideas in the same space. As expressive of a healthy modern spirit of enquiry and restlessness, and as indicative of worthy ambition in the artist, this whole enterprise deserves attention and praise. The way the design is carried out is less admirable. The Corinthian capital is a thing of stone—or rather of marble; just so far as it is followed in these wood carvings, they are bad. But this fault, and the weak, semi-attached volutes, may be passed over in the general objectionableness of capitals made up of a score of pieces, some glued and some nailed, and designed without due reference to the material of which they are composed. It is not in this way that the wood-carvings are made of the artistic times and peoples. The art student of our time must go to Japan or India or the South Sea Islands if he wishes to learn how to carve in wood.

A Book about Dominies. Being the Reflections and Recollections of a Member of the Profession. (Boston: Roberts Brothers. 1869.)—On the whole, Mr. Hope's "Book about Dominies" seems to us to be preferred to its successor, the "Book about Boys." The two are so much alike in their style and matter that there is not much to choose between them, and readers who took pleasure in one will be like enough to find the other agreeable reading. The American publishers gave us Mr. Hope's second book first, and it was marked by a certain conceit as of a man who had been a little spoiled by meeting a favorable reception, which is less visible in his first essays. They are all more or less pervaded, however, by a slightly arrogant tone and a partisan fondness for long-held opinions and practices, rather on the ground that they are his own and have been long held than for any intrinsic value they may have. He has no faith, for instance, in the protest which is made against the practice of flogging in schools, and he has, of course, the right of one long accustomed to the ways of boys to state his contrary views and give his reasons therefor. But when he implies that one of the chief uses of "the tawse," or whatever other instrument is employed, is to teach boys to bear pain with fortitude; when he tells us how he loves to see little fellows in the play-ground thrashing each other with leather straps in order to anticipate and get used to their probable fate; when he compares his boys, rubbing their hands with rosin and nerving themselves to take their punishment without flinching or wry faces, to young Spartans, and finds them on the whole rather poor specimens of boys if they have not successfully tried to deserve the lash, he seems to have a not very valuable notion of the nature and ends of punishment. His faults, however, are chiefly faults which belong to him in virtue of his profession. A life-long teacher of boys who should be without arrogance, without conceit, without an impression that in order to make himself understood it is necessary to repeat himself emphatically and often, would present a very cheering example of man's ability to resist the natural influences of his surroundings. Mr. Hope's struggle against the tendencies of his profession has apparently not been very active, but he is, nevertheless, a lively and agreeable writer, who knows his subject and who, though his limitations are evident enough, can yet be read with pleasure and, as enforcing strongly the idea that the giving of instruction is not the only or the chief end of education, with not a little profit also.

Silver Threads. By Harriet B. McKeever, author of "Edith's Ministry," "Heavenward—Earthward," etc. (Philadelphia: Claxton, Remsen & Haffelfinger. 1868.)—Serious criticism on a book like this would be thrown away. As literature it has no existence, but for all that its probable destination is the Sunday-school libraries, where it will do its little part in injuring the children's tastes and filling their heads with false notions of life and virtue. Luckily it is not easy to make prodigies of infant pietism out of real flesh and blood, and the little girls who will be incited to uneasy emulation of the fabulous virtues of Daisy Gilbert are not likely to be very many. It is a pity, though, that false models should be set before them.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
A Summary of American History	(A. S. Barnes & Co.)

SPECIAL ATTENTION

Is invited to the *new* and *thoroughly REVISED EDITION just published* of

WEBSTER'S
Counting-House and Family Dictionary.

An *entirely new abridgment*, with important *additions, improvements*, and appropriate *illustrations*.

This new and revised edition conforms to the leading and desirable features of the *revised Quarto*, and was prepared not only for the student in our Colleges and Academies, but for the Family, the Office, the Counting-room, and for all who desire to obtain a comprehensive Dictionary of small size and cost.

Bankers, Merchants, and *Business Men* generally will be particularly interested in the COMMERCIAL TABLES, especially those pertaining to the Money, Weights, and Meas ures of the principal commercial countries of the world, carefully prepared by a well-known Statistician and Cam bist of the United States Treasury Department at Washington. These and many other valuable additions and improvements supply a want not filled by any similar work of reference.

In sheep, imperial 12mo, 620 pages, price $3.

*** Single copies sent by mail on receipt of price annexed.

*** Correspondence and orders will receive prompt attention.

THE GALAXY
FOR MARCH
NOW READY.

In this number is commenced

Charles Reade's Great Story,

Put Yourself in His Place.

THE GALAXY IS THE MOST
Elegantly Illustrated, Brilliant, Entertaining, and Attractive Magazine
PUBLISHED IN THIS COUNTRY.

Contents of the March Number:

I. PUT YOURSELF IN HIS PLACE. By Charles Reade. Chapters I., II., and III.
II. NEW YORK JOURNALISTS—GEORGE WILLIAM CURTIS. By Eugene Benson.
III. IS BEING DONE. A CHAPTER OF "WORDS AND THEIR USES." By Richard Grant White.
IV. SUSAN FIELDING. By Mrs. Edwards. (With an Illustration by Sol. Eytinge.)
V. WOMEN AS VOTERS. By Julia Ward Howe.
VI. TO MY GUARDIAN ANGEL. By Mary E. Atkinson.
VII. THE ENGLISH POSITIVISTS. By Justin McCarthy.
VIII. WILL MURDER OUT? By Edward Crapsey.
IX. CARLOTTA. By John S. C. Abbott.
X. TEA AND ITS ADULTERATIONS. By John C. Draper, M.D.
XI. AMONG OUR GREAT FARMERS—THE HORSE GROWERS. By Charles Wyllys Elliott.
XII. THE TELEGRAM. By Sarah E. Henshaw.
XIII. THE GALAXY MISCELLANY.
1. GOUNOD (With a Portrait).
2. THE SORROWS OF CHILDHOOD. By Marie Howland.
3. THE GASTRONOMICAL ALMANAC—MARCH. By Pierre Blot.
XIV. FAIR. By A. W. Bellaw.
XV. DRIFTWOOD. By Philip Quilibet.
XVI. LITERATURE AND ART.
XVII. NEBULÆ. By the Editor.

GALAXY SUPPLEMENT.
XVIII. CIPHER. By Jane G. Austin.

*** This number contains sixteen extra pages, or 160 in all.
PRICE 35 CENTS PER NUMBER; $4 PER YEAR.
Now is the time to subscribe.

SHELDON & COMPANY,
498 and 500 Broadway, New York.

VOLUME ONE OF "*THE NATION*" is wanted by the Publisher, who will pay a liberal price for it. He will also purchase the first six numbers. Any person owning an incomplete first volume will perhaps be enabled to dispose of it on written application stating its deficiencies.

ARNE;
A Sketch of Norwegian Peasant Life.
By BJORNSTJERNE BJORNSON.
A most charming and exquisitely simple story, full of beautiful touches of nature and lifelike description.
12mo, cloth, $1; paper, 60 cents.

FRANKENSTEIN;
Or, THE MODERN PROMETHEUS.
By MRS. SHELLEY.
12mo, cloth, $1; paper, 60 cents.
A powerful and weird-like story famous in modern literature for the elegance of its style and the graphic reality of its incidents.

THE HANDY EDITION
OF THE
GOLDEN TREASURY
OF SONGS AND LYRICS BY PALGRAVE,
AND OF THE
BOOK OF GOLDEN DEEDS.
18mo. cloth, $1.
The great popularity of the previous editions of these most excellent collections has induced the publishers to issue them in a NEW, CHEAP, AND HANDY FORM.
Each in 18mo, cloth, $1.
The 16mo edition, gilt top, still in stock. Price $1 75.
For sale by all booksellers, or sent by mail on receipt of the price by the publishers.

SEVER, FRANCIS & CO.,
21 Bromfield Street, Boston.

NOW READY.
THE MARCH NUMBER
OF
Lippincott's Magazine.
With a full-page Illustration.

CONTENTS:

I. BEYOND THE BREAKERS: An American Novel. Part III. By Hon. Robert Dale Owen.
II. INAUGURATION ODE.
III. ACTORS' MEMORIES.
IV. HANS BREITMANN AS A POLITICIAN: A Poem. By Charles G. Leland.
V. THE SHADOW OF FATE: A Tale.
VI. THE BOSTON PUBLIC LIBRARY. By L. Clarke Davis.
VII. THE FOUNDLING HOSPITAL OF LONDON.
VIII. OVER YONDER: A Charming Novelette. Part II. By the author of "The Old Mam'selle's Secret," "Gold Elsie," etc. Illustrated.
IX. OUR PROVINCIALISMS.
X. THE FORTRESS OF THE TAIKUN.
XI. THE DOUBTER: A Poem.
XII. MY GRANDMOTHER — THAT MIGHT HAVE BEEN: A Tale. By Alice Cary.
XIII. THE REVOLUTION IN CUBA.

BURKE'S WORKS.

THE WORKS OF EDMUND BURKE,

As Edited by his Literary Executors, and completed under the superintendence of the

Bishop of Rochester, Dr. King.

THIRD EDITION.

In 12 elegant volumes crown 8vo, green cloth, price $18.

In preparing this edition great care has been taken to examine all early and authentic copies of the papers embraced in the collection. As evidence that such a revision was needed, the publishers would state that over three thousand errors of text, in editions until now considered accurate, have been discovered and corrected by the present editor.

"This edition has every advantage which critical acumen, labor of research, and an almost fanatical exactness can give it." It "possesses the capital merit of accuracy; and we feel that the publishers deserve the special thanks not only of mere readers, but of all who love truth and honesty, for having resolved, first of all, to make a trustworthy book, and then, what does not always follow, for having secured a competent man to see that it shall be what it professes to be. The editor deserves the thanks of all admirers of Burke for having done for his author all that he undertook, and more than any one else we can think of would have been competent to do."—*North American Review.*

The Switzerland of America.

A SUMMER VACATION IN
THE PARKS AND MOUNTAINS OF COLORADO.
By SAMUEL BOWLES,
Author of "Across the Continent."
A volume of 175 pages, Price ONE DOLLAR.

It describes the Pacific Railroad—the Scenery on its Route—and how it is built; the wonderful Regions of the Rocky Mountains in Colorado, below the line of the Railroad; their grand Snow Peaks; their great enfolded Central Parks—vast Prairies of Grass and Grove and Flowers, seven to ten thousand feet above the sea level; experiences in Camp Life with Indians, Ladies, Vice-President Colfax, and Gov. Bross; the claims of Colorado to be the Switzerland of America, the resort of pleasure-seekers and invalids; the Charms of Atmosphere and Climate in the Centre of the Continent; and the state of the Mines and of Agriculture in this great central region,—all in the graphic and sympathetic style that made "Across the Continent" the most popular book of American Travel.

*** Sent by mail, postage paid, on the receipt of ONE DOLLAR, by SAMUEL BOWLES & COMPANY, Springfield, Mass. Also, published by the AMERICAN NEWS COMPANY, New York, and LEE & SHEPARD, Boston.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON-SENSE FAMILY SEWING MACHINE. This Machine will stitch, hem, fell, tuck, quilt, cord, bind, braid, and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1 000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., PITTSBURGH, PA.; BOSTON, MASS.; or, ST. LOUIS, MO.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured.

WANTED—AGENTS—To Sell the AMERICAN KNITTING MACHINE.

Price $25. The simplest, cheapest, and best Knitting Machine ever invented. Will knit 20,000 stitches per minute. Liberal inducements to Agents. Address, AMERICAN KNITTING MACHINE CO., Boston, Mass., or St Louis, Mo.

AGENTS WANTED.

$75 TO $200 PER MONTH! Or a Commission from which twice that amount can be made by selling the latest improved COMMON-SENSE FAMILY SEWING MACHINE. Price $18. For Circulars and Terms, address C. BOWERS & CO., 320 South Third Street, Philadelphia, Pa.

FRUIT-FARM AND NURSERIES.

SUCCESSFUL SMALL-FRUIT CULTURE.

Failure is generally the result of a choice of Inferior Varieties and Poor Stock.

The people are tired of theorizing and experimenting, and are anxiously looking for successful results in small-fruit culture. As evidence of our success, we refer to our Fruit-Farm of 150 acres; to the thousands of intelligent Fruit-Growers who visit our grounds yearly; to our Annual Fruit Exhibitions, both at home and abroad; to the reports of various Societies, who send delegates to examine our modes of culture, and to the Markets of Pittsburgh, New York, Philadelphia, Baltimore, etc., where large quantities of our fruit are sold every day during the fruit season at the highest price. Our stock of Vines and Plants for sale this season is not surpassed, if equalled, in the country, and we guarantee our prices to be as low as the same quality of a genuine article can be had anywhere.

Choice of Varieties and Quality of Stock.

It should be borne in mind by those engaging in fruit-culture that, as a general rule, the cost of land, expense of preparation, planting, and all after attention are the same for inferior kinds and character of stock as for the best; while the earlier, more abundant, and superior yield of the best will very soon more than pay the difference of cost, and all after results will be every way more satisfactory. It is, therefore, good policy to plant none but the best varieties and the best quality of stock. Better plant less than depart from this rule.

GRAPES.

Notwithstanding a great reduction in price, we have continued to grow our vines with the same care as formerly, and offer our present stock with entire confidence that it will give satisfaction, both in quality and price.

Most of the varieties now offered are too well known to need any description.

The **Concord** continues to be the most popular grape in the country.

The **Ives** has lately received the Longworth prize, as the best wine grape for the whole country.

The **Hartford** and **Creveling** are the best very early grapes yet thoroughly tested.

The **Delaware** has generally done well the past two years, and will be largely planted this season.

The **Alvey** is a grape of great merit.

Many of **Rogers's Hybrids** have proved valuable.

We can furnish vines—one, two, and three years old—of the above kinds in any quantity. Also Iona, Israella, Adirondac, Elsingburg, Herbemont, Rentz, Clinton, Union Village, Taylor, etc., etc.

MARTHA (White Concord) AND BLACK HAWK.

It is well known that we bought all the stock of these two varieties a few years ago from Mr. Miller, at a high price. If we had forced their propagation by green wood and other detrimental practices, we might previously have had a large supply of vines to offer. But we preferred to preserve their healthy constitution, and send them out in due time and in good condition, to establish their reputation as the

Best Two new Grapes now before the Public.

The **Martha** fills a want long felt for a first-class white grape. We subjoin a few testimonials of its merits, and might add many more:

"The most promising of all the new crops."
George Husmann.

"One of the finest grapes I have ever tasted."
Thomas Meehan.

"It will be found the most valuable white grape yet introduced, and is emphatically a grape for the people, as everybody that can grow a vine can have a beautiful white grape of the finest quality." Geo. W. Campbell.

"Taking hardiness, healthiness, and all other good qualities into consideration, I regard it as of more value than all the rest of the white grapes put together."
John A. Warder.

For full information in reference to this grape, also the **Black Hawk,** and many others, with reduced prices, see our Descriptive and Illustrated Catalogue and Price-list.

STRAWBERRIES.

We have given special attention the past season to the production of an immense stock of plants of all the leading varieties. Our experience has taught us that plants produced on clay soil are much preferable to those grown on sand. They are more stocky and vigorous, bear carriage and transplanting better, and give more satisfaction every way. All our plants are grown on clay soil with the greatest care, so as to secure a genuine article of the best quality.

JUCUNDA—Our No. 700.

This continues to be our greatest favorite. After the most thorough trial, we unhesitatingly say that, for

Uniform and Large Size,
Beauty of Form and Color,
Enormous Yield,
Long Continuance in Bearing,
Health and Vigor of Plant,
Adaptation to Shipment,
Great Profit,

And other desirable qualities, it is the most valuable Strawberry of which we have any knowledge.

Its character has been damaged in some localities, by the dissemination of spurious varieties called Jucunda.

We direct attention to our Descriptive and Illustrated Catalogue and Price-list for full information of this wonderful fruit. Our prices, it will be seen, are greatly reduced.

Fillmore is only second to **Jucunda**—our No. 700 on our grounds—and is of great value.

Our Illustrated Catalogue gives full descriptions of all the leading varieties: Lists for home use and convenient market; for market purposes or home use; distant and convenient market; early, medium, and late, in the order we esteem them. It contains much valuable information on Strawberry Culture, and will be sent to all applicants enclosing 10 cents.

RASPBERRIES.

There is a greatly-increased interest in raspberry culture. The demand for the fruit is ten-fold what it was a few years ago, and exceeds the supply.

The **Philadelphia, Clarke, Hornet, Pilate, Franconia, Improved Black Cap,** and a few other kinds, are much sought after. Our stock of plants of the above varieties is equal to any demand.

NAOMI.

This promises to become the leading Raspberry of the country—hardy, productive, large, of good color and quality, and the very best for transportation. We subjoin the following testimonials, and might add many others:

A committee of the Ohio State Horticultural Society, as the result of a critical examination of this variety, report:

"They were highly pleased with the evidence given of the immense productiveness, as well as beauty and excellence, of the fruit, and expressed the belief that the firmness of the berries was such as to render it better fitted for transportation than any other variety of equal excellence; while in regard to the hardiness of the plants, the testimony of all who have long known the variety is, that no injury has ever been known to result from the winter."

Mr. M. B. Bateham, Secretary of the Ohio State Horticultural Society, after a thorough examination of it, and test on his own grounds, says:

"For beauty and excellence of fruit, combined with great productiveness, vigor, and hardiness of plant, I know of no variety that equals it. The fine size, color, flavor, and firmness of the berries must make the variety pre-eminently valuable as a market fruit as well as for amateur use."

Dr. John A. Warder, President of the Ohio State Horticultural Society, after an investigation with the *ad interim* Committee of the Society, says:

"The fruit is large, of good color and quality, and has borne transportation to great distances. The canes, as seen in the neighborhood of Cleveland, appear to have resisted the severity of the previous winter without shelter, and were bearing a full crop of fruit."

We have secured the entire stock of genuine plants for sale, with perhaps the exception of one very small lot. All we do not sell we shall plant on our own grounds, being satisfied that it will pay us better to do so than to sell at any price. We are confident of being able to ship the fruit from our farm to New York, a distance of over four hundred miles, in the best condition.

BLACKBERRIES.

Kittatinny has given more general satisfaction than any other variety.

Our large stock of plants includes **Kittatinny, Wilson's Early, New Rochelle,** and **Newman.**

CURRANTS.

The demand for Currant-bushes last spring and fall was unprecedented, and promises to be even greater the present season. It is well known that it is exceedingly difficult to procure varieties true to name. After many years of expensive and careful effort, we are now able to offer an immense stock of all desirable kinds, which we guarantee to be genuine, and to give satisfaction in all respects.

We offer one and two year-old bushes of **Versaillaise,** the very best; **Fertile d'Angers,** very similar to the above; **Cherry,** best for jelly; **Victoria,** very late and good; **White Crape,** best white; **Black Naples,** best black. For illustrations, descriptions, etc., of these and other varieties, see Catalogue.

GOOSEBERRIES.

The **American Seedling** is entirely free from mildew, a strong grower, and enormous bearer. Fruit very excellent. We have imported a large number of foreign varieties, of the very best kinds, which we offer at reasonable prices.

The new edition of our DESCRIPTIVE AND ILLUSTRATED SMALL-FRUIT CATALOGUE is now issued. No one cultivating Grapes, Strawberries, Raspberries, Blackberries, Gooseberries, or Currants, even in the smallest quantity, should be without it. It gives information what varieties to plant, how to avoid failures, and to secure success with the above valuable fruits. Though the edition is large, it will likely be exhausted early.

*** Send at once 10 cents for copy.

1,000 MILES

OF THE

UNION PACIFIC

RAILROAD

ARE NOW COMPLETED.

As 500 miles of the western portion of the line, beginning at Sacramento, are also done, but

267 MILES REMAIN

To be finished, to open the Grand Through Line to the Pacific. This Opening will certainly take place early this season.

First Mortgage Bonds

AT PAR.

By its charter, the Company is permitted to issue its own FIRST MORTGAGE BONDS to the same amount as the Government Bonds, *and no more*. These Bonds are a First Mortgage upon the entire road and all its equipments.

THEY HAVE THIRTY YEARS TO RUN AT SIX PER CENT., and both PRINCIPAL AND INTEREST ARE PAYABLE IN GOLD.

The entire amount of the mortgage will be about $30,000,000, and the interest $1,800,000 per annum in gold. The present currency cost of this interest is less than $2,500,000 per annum, while the gross earnings for the year 1868, FROM WAY BUSINESS only, on AN AVERAGE OF LESS THAN 700 MILES OF ROAD IN OPERATION, WERE MORE THAN

FIVE MILLION DOLLARS.

As the supply of these Bonds will soon cease, parties who desire to invest in them will find it for their interest to do so at once. The price for the present is par and accrued interest from January 1, in currency.

Subscriptions will be received in New York

AT THE

Company's Office, 20 Nassau St.,

AND BY

JOHN J. CISCO & SON, Bankers,

59 WALL STREET,

And by the Company's advertised agents throughout the United States.

Bonds sent free, but parties subscribing through local agents will look to them for their safe delivery.

JOHN J. CISCO, Treasurer,

NEW YORK.

Jan. 20, 1869.

THE FIRST MORTGAGE,

FIFTY-YEAR, CONVERTIBLE BONDS

OF THE

ROCKFORD, ROCK ISLAND, AND ST. LOUIS RAILROAD COMPANY

PAY THE

PRINCIPAL AND SEVEN PER CENT. INTEREST, 1st FEB. and 1st AUG.,

IN GOLD COIN,

Free of Government Tax.

The Bonds are offered at 97½ and accrued interest in currency.

Pamphlets, with maps, giving full information, sent on application.

Bonds subscribed for sent by Express free of charge.

The Bonds may be had of

The Week.

THE newspaper record of the Senate's proceedings on Thursday would not lead any one to suppose that anything of public interest was done, but the public only need to understand what is called the McGarrahan case to be a good deal interested in it. The bill for Mr. McGarrahan's relief has passed the House, and having reached the Senate was referred to the Committee on Private Land Claims. This committee on Thursday made two reports, one signed by Mr. Williams and Mr. Ferry, and one, which favors the claim, signed by two senators from Southern States, by Mr. Kellogg, of Louisiana, and Mr. Sawyer, of South Carolina. McGarrahan's claim is one which he bought on speculation while it was in court—it has been through all the courts, and over and over again has been thoroughly condemned as based on fraud of all kinds, including the hardest sort of American and Mexican perjury—and there is hardly a shadow of a reason, so far as we can understand, why, having failed to convince the judges of the value of his case against the United States, he should be allowed to get a million or half a million out of the Treasury by means of a "relief bill," and share it among the lobby. The Senate did not act on either of the reports. On Friday the important business was the passage of the Constitutional Amendment. On the same day, being telegraphed to the West, it was ratified by the Legislature of Kansas, which a day or two before had declined to strike the word "white" out of the State constitution. This, however, it did because some of the negative votes, three we believe, were cast on that side from an excess, and not a lack, of Radicalism; some of the senators wanted the word "male" also struck out, and would do nothing for the negro till something could at the same time be done for the women. The Public Credit Bill, as changed by the Senate, was passed on Saturday, but the House having demanded a committee of conference, we cannot, as we go to press, announce the result. The difference between the two Houses is not essential.

In the House on Thursday, as a beginning of work, the clerk was ordered to present to Mr. Seward for promulgation the act which increases the duties on imported copper. It passed, by the skin of its teeth, over the President's veto. On the same day, which was mostly given up to appropriations, the Amendment to the Constitution was passed, as it came from the committee of conference, by yeas 143, nays 43, a majority of a size which we shall not see in the Forty-first Congress, in which the Democrats will, in all probability, number more nearly eighty than fifty. On Saturday the Louisiana contested election cases came up, and Mr. Menard, the colored man who claims a seat, was permitted to address the House, which is what no one of his complexion has ever done before. The House as well as the Senate has felt the influence of the Cuban revolt or revolution, whichever it is, and there are resolutions pending in both for the recognition of the island's independence. The House, with what seems to have been an impulse of good sense, declined to give Mr. Banks, to whose committee the affair was referred, the leave which he desired "to report at any time," which probably would have involved listening on the next day to a full account of several struggles for freedom occurring in various states. But appropriations press, and members are apt to be vigilantly busy in the last days of the session and need all their energies to get some little matter slipped into this or that money bill. On Monday Mr. Logan interfered to kill a plan which had for its purpose to give back to General Lee certain articles removed from his house at Arlington when it was seized. Among them are some relics of Washington. The Democratic members speak of this as a "restoration of stolen property;" but it is to the Secretary of the Interior that it is proposed to apply, so it appears that the removal was not simple thievery, though no doubt we did enough of that during the war—enough, by the way, to make us properly thankful that our rebel kinsmen never got very far into our towns and villages.

Congress has at last done what it ought to have done in 1867, passed a bill solemnly declaring the United States bonds to be payable in coin. Under the influence of its introduction and favorable reception, American securities have gone up above 81 in London, and there is now every prospect that they will rise rapidly at least close to those of England and France, and that a new loan, at a reduced rate of interest, will really become possible, and this not through the fear of our dishonesty, but confidence in our honesty. If anybody still entertains any doubt as to the power of talk in a free country, and of the singular sensitiveness of the American public to the influence of discussion, we recommend him to study the history of this question. It was raised nearly two years ago by a proposition to pay off the bondholders in greenbacks, which "took" immensely with many of the popular politicians. General Butler was of course one of the first to take it up, and preached it with his accustomed brass. Gen. Logan took to it and preached it with his accustomed vehemence. Senator Morton liked it, and ever so many others. Senator Sherman did not exactly say he liked it, but he confessed he believed in it, and confidentially advised the bondholders to compromise in order to avoid robbery; and a wild cry for plenty of greenbacks for the poor man began to come in from various quarters. The discussion then began and has raged for two years, and the result is that, though General Butler votes still for disguised repudiation, General Logan declares that while he leaned once himself in "favor of paying off our bonds with a new indebtedness," he now believes that "the payment of the debt with another would be no payment at all," and he says "it is nonsense to discuss this question any longer." Senator Morton has come over too, and Senator Sherman, on the whole, does not believe that the bondholders need compromise this time. So it appears the nation has a conscience after all. At the risk of seeming ill-natured, we cannot help calling attention to the fact. These men are all political leaders whom many good people think it nearly sacrilege to criticise, and yet

within eighteen months they have gone right about face on one of the most important questions ever submitted to a civilized people, and are now "burning what they once adored;" being apparently ready to stand up for any view of any question of morals or economy which has the biggest battalions on its side, and can recommend a nation to swindle its creditors and pay them off honorably almost in the same breath and with perfectly calm front. We do not impute positive dishonesty in this matter to any of them, but then are not recklessness and thoughtlessness in a legislator very little short of dishonesty?

The House Committee on Post-offices and Post-roads have presented what is in many respects an admirably written and clear report on the three schemes which have been submitted to Congress for the supply of a government telegraph in connection with the post-office. One of them, Mr. Washburne's, asks for $75,000 to construct an experimental line from Washington to New York, to be worked by the post-office, and to be extended to other places if successful. This the committee condemn, on the ground that it could not be worked except at a loss, as it would have to compete with companies which would be enabled, by the profits on other lines, to underbid the Government on this. The two other schemes, Mr. Hubbard's and Mr. Hall's, both of which propose the grant of exclusive privileges to private parties—in Mr. Hall's case for the construction of telegraph lines by him to be afterwards worked by the Government, in Mr. Hubbard's, to be constructed and worked by a company under contract with the Government—the committee condemn also, on the ground that the granting of such charters would be of doubtful constitutionality, that the expediency of it has already been discussed and decided adversely, that Mr. Hubbard's plan could not work well, and that the example of government administration of telegraphs in thickly-peopled countries like Switzerland and Belgium is of little value to a country as thinly peopled as the United States.

The attacks on Mr. Wells for his revenue reports reached the acme of their brutality in an attempt in the House last week, by Mr. Moorhead, to have his salary stopped, observing that the proper way to express the indignation inspired by his views was to withhold his pay. General Butler, to his credit be it said, defeated the trick by refusing to tell in what particular appropriation the salary was to be found. Here we have a scientific man carefully selected to report every year on the condition of the revenue and the industrial resources of the country. He reports, and comes to the conclusion that certain taxes are injurious, and nine-tenths of the intelligent men of the country agree with him, and forthwith people whose interests are likely to be affected by his findings try to stop his salary—with the view, we suppose, of encouraging scientific men to enter the public service, and of promoting frank discussion of economical topics. However, these tactics do not pay, as Mr. Moorhead will find. The view some gentlemen seem to take of Mr. Wells's duties is very like that which "the practical politicians" took of Mr. Fessenden's duty on the impeachment trial; he is to find in accordance with the dictates of his conscience, provided the dictates are on their side and not otherwise, which is in some respects very like the Irishman's notion of perjury—that it is "swearin' agin me." Mr. H. C. Carey is pounding away at Mr. Wells in the *Tribune*, but what with his defects of style and defects of logic, we suspect his readers are few. His notions of reasoning, as we have more than once had the honor to observe, carry one a long way back.

We have commented elsewhere on the attempts of the Pennsylvania politicians, represented by one of the most noted of them, Mr. McClure, or, as he is more familiarly known to the brethren, "Aleck McClure," to impose one of their number on Grant as a Cabinet officer. This is the second attempt of the kind, but the first appears to have been merely a strong reconnoissance, while this last was a regular attack. There was nothing novel about it except the way in which it was received—Mr. McClure presenting "the claims" of Pennsylvania in the usual form, and the usual letters of recommendation in favor of Governor Curtin, General Grant producing the obvious objection that he did not "see why the Pennsylvania politicians should choose his Cabinet for him." Mr. McClure strongly denounced the appointment of Mr. G. H. Stuart, if anything of the kind was in contemplation, on the ground that he had never been an "active worker" for the party. General Grant defended Mr. Stuart, but declined to say whether he had appointed him or not. The fact is that Mr. Stuart was one of the men who made the Republican party respectable and respected, and thus supplied the McClures with their pickings. The conversation was evidently an amusing game on Grant's part, which McClure perceiving, withdrew. This check to the Curtin men has brought Cameron over to Grant's side—an accession of strength which a Philadelphia correspondent likens to "the devil's help," but pronounces "acceptable," as it will strengthen Grant in the approaching fight with the "ring" which everybody seems to expect shortly.

Since the submission to the Senate of the *Alabama* treaty the *Tribune* has published two or three carefully prepared and forcible articles in opposition to its ratification, which read as if immediately "inspired" from Washington. In one of them, published on the 22d of February, the writer asserts that the treaty is "a fitting conclusion to the feeble and faithless policy" in which Mr. Seward has compromised the dignity and rights of the nation while holding his present office; and he cites as a memorable instance the instructions given to Mr. Bigelow, to inform Mr. Drouyn de L'huys that if the French troops were withdrawn from Mexico the United States could at once recognize Maximilian. In a letter published on Tuesday, Mr. Bigelow refutes this assertion both for himself and for the State Department, and shows what probably gave rise to the charge—his representations to the French minister, in the height of Maximilian's prosperity, that the French were without excuse in staying longer in Mexico, and that until their troops were withdrawn no steps could be taken by the United States, first towards determining what government and what ruler were the choice of the Mexican people, and then towards recognizing them. Mr. Bigelow adds that he did not follow up this protest with a liberal display of the American Eagle, and finds in his failure to do so the cause of the odium under which he labors in comparison with some of his colleagues—say, to use an instance of our own, Mr. Tuckerman at Athens. On this point, therefore, Mr. Seward seems easily vindicated; but the *Tribune's* articles foreshadow the overhauling which Mr. Seward's policy is likely to receive after he returns to private life, and somebody gets leisure to make a critical examination of his despatches from the time of his ninety-days peace predictions down to yesterday. Some things the public know, not creditable to his statesmanship or his politics, and the discussion involving Mr. Bigelow reminds us of a charge first brought to light in a German newspaper published in Boston, that through the offices of Mr. Seward the French minister obtained for the use of Marshal Forey the maps and plans used in General Scott's campaign in Mexico. So far as our memory goes this was never officially denied, and of course may have had no foundation except in the brain of some ardent believer in the Monroe doctrine. But if established, it would prove perhaps the most unwarrantable and self-stultifying concession to a foreign power which Mr. Seward, or any previous Secretary of State, ever had an opportunity of making.

It would be curious to know what wheels within wheels are working in the business of the severe sentencing of criminals that is now going on in this city. We have a new judge for some of the worst classes of cases, and a new district attorney, and there might naturally have been expected a little clean sweeping to continue for a greater or less length of time; but the onslaught upon the army of scoundrels is made all along the line, and judges never suspected of over-righteousness award the death penalty and twenty and forty years of imprisonment with a downrightness and promptness as gratifying as it is surprising. Meantime there is a whispering which may be mentioned here, so as to dispose of it, that some of our officials are connected with Tammany, and that Tammany is assailed and threatened just now by another official; who being in intimate relations with thousands on thousands of the voters of the Sixth and Fourth and Seventeenth Wards, has decided on fighting his way to leadership; and that word has been passed among

the faithful, without regard to their personal piety, to strike terror into the acquaintances and friends of the insubordinate official—so these are sent to Sing Sing in droves. One thing is evident, it surprises them and enrages them. They cannot yet believe that Real, who once was a deputy sheriff, we believe, is going to be actually hanged for only shooting a policeman, a probable Republican. It is said that the judge who sentenced him to death is in fear of his life, and has excellent reason for being so, as he is followed in the street by men who apparently would kill him if they could quite believe it of him that he would make unpleasantness for Mr. Real and his friends. What is to become of him if the execution ever takes place nobody knows. But the roughs will probably find in the end that they must obey their masters, and not again take up with entangling political alliances without orders. One odd result of this state of things was the sentence pronounced the other day on Migaldo, the Italian homicide, by Judge Barnard. The man whom he killed was an Irishman, and the counsel for the defence spoke of the feud existing between the Irish and the foreigners in the ward where the murder was done. To this part of the defence the judge referred in the sentence. He had nothing to do with nationalities, he said, but he was unwilling to hear slanders uttered of the inoffensive race without whom this country would have been a desert or very near it; they have dug the canals, and stretched the telegraphs across the continent, and built the railroads that carry civilization into the wilds of the West. This ought to be kindly received in the lower wards.

A San Francisco despatch of February 24th tells of the arrival of 400 Chinese women by a late steamer, and of the frantic efforts made by the resident Chinese to seize some of them, the police, with great difficulty, preventing a general riot. The cause of this excitement, we need not say, is the enormous disproportion of male emigrants to female in all countries which the Chinese have thus far sought to settle in or been forcibly taken to. The number of Chinese on the Pacific coast is estimated at about 50,000, and the women are so rare as to be counted almost at nothing. The social position of the few that are there may be easily guessed, as well as the purposes for which the new-comers were so fiercely pursued. On this side the Chinese problem in California differs widely from the negro problem at the South; and it is not to be solved by subjecting the Chinese to a treatment bordering nearly upon servitude. Such a policy at once takes away every inducement for the Chinese to emigrate in families—the best safeguard for the morals of the state—and reduces the women who happen over, rather than deliberately come over, to the condition of prostitutes if it be not theirs already. It remains to be seen what effect the Burlingame treaty will have upon the character of future emigration from China, and how much of a temptation it offers to become naturalized, to vote—when the Constitutional Amendment shall permit it—and to be buried in this country. The Pacific Railroad, too, may test the willingness of the Chinese to settle permanently away from the seaboard, and should it induce them to do so, we shall undoubtedly see them, coming from the West, meet the long file of German immigrants advancing along the same line in an opposite direction; and for many years to come the Plains will exhibit a most heterogeneous population, as regards either race or color or religion. That the development of this great region will draw off attention from the South can scarcely be doubted, and we may even have negro members of Congress deploring Asiatic intrusiveness, or denouncing it on national, ethnological, and economical principles.

Twice during the debates of the present session of the Prussian Diet Count Bismarck has quite distinctly alluded to the late imminence of a French war against the North German Confederation, the perils of which were averted—as he was understood to say—chiefly by the sudden outbreak of the Spanish revolution. There are, however, indications that the danger of a general European conflagration, such as would result from war between these two powers, may have been only temporarily averted. The *Kölnische Zeitung*, one of the best informed Continental journals and well known for its constant advocacy of peace—almost at any price—as well as for its consistent avoidance of sensational reports, does not hesitate to spread the news, received "from a trustworthy source," that France, Austria, and Italy are concocting a defensive and offensive alliance against Prussia and Russia, looking, among other ends, to the cession by Austria to Italy of the Italian portions of Tyrol, the aggrandizement of France and Austria at the expense of Prussia, and the restoration of Poland. The defiant way, too, in which the ex-King of Hanover and the ex-Elector of Hesse lately provoked the but too effective resentment of the Prussian Government distinctly shows that aid from abroad is still counted upon by the "dispossessed." The *Kölnische Zeitung* indulges the belief that Count Beust is a stranger to the secret negotiations of Paris, which, we must add, are almost universally discredited.

The danger to Prussia from the side of Roumania was also referred to by Bismarck as having been fortunately repressed by a peremptory word from the former. But this has not quelled the violent agitation against Turks and Magyars, which continues to rage, though with much diminished means and effect, since the dismissal of the fire-eating ministry of Bratiano. Prince Charles, too, having taken Bismarck's warning to heart, no longer seems "spilin' for a fight," but has set to work to reorganize his army according to the Prussian model. The attempt, however, to do this through a Prussian military commission, and the reappointment of an unpopular general, have led to violent debates in the Chambers, to a vote against the ministry, and, at last accounts, to the dissolution of the Assembly.

The statistics for 1868 of the chief European ports of emigration show that from Liverpool there went out during the year 120,000 emigrants, from Bremen 66,500, from Hamburg 44,000, from Antwerp only 1,500, from Havre not over 30,000. These figures represent final departures from the Old World, those who passed through Bremen, for example, for Liverpool, being credited to the latter port alone. From the United Kingdom the native emigration was at the rate of 391 souls every day, or 142,000 per annum. As regards that from the Continent, it is curious to observe that it still continues vigorous, although the political oppression and religious persecution which caused it originally have ceased altogether—or almost ceased. The Mennonites can hardly be called oppressed or persecuted for being subjected to military service contrary to their Quaker tenets. Since 1850 the condition of the German people has been steadily improving, and the grand consummation of 1866 put an end to some of the most tyrannical governments; nevertheless the outflow goes on. The authorities, to be sure, no longer place restrictions on emigration, or obstruct it from unfriendly motives; and they are even ready to treat with the United States for the protection of passengers, at either end of the route and on the ocean, from fraud and ill-usage. But this change from hostility to friendly supervision without hinderance has not what would be a natural effect of checking emigration and quenching the desire to leave the fatherland. The explanation undoubtedly is that those who now emigrate do so because of the friends and relatives who have come here before them, and whose representations both of the advantages of living and the ease of transit suffice to draw them away from home. It is on this very account that some of the German papers are urging a colder attitude on the part of their government, and a refusal to make the passage to America any more agreeable than it would naturally be if things were pretty much left to themselves. They do not advise a return to open opposition, but they protest against anything like favor of a movement which implies that Germany is a most undesirable country to be born in. Any retrenchment, however, of the present freedom to emigrate could not help exciting discontent and aiding the efforts of the Southern and Western States whose agents are busily engaged in recruiting all over Germany. With the mass of the population, now that their brothers have settled by the hundreds of thousands in North and South America, economical considerations will always prevail as long as such considerations exist; and even good government cannot wholly counterbalance them.

"THE MEN INSIDE POLITICS."

The past week has been a dolorous one for "the men inside politics." The experiment which Grant has been making at Washington, in selecting a Cabinet without their aid, and in steadily but civilly repulsing all their attempts at interference, is one which had to be made sooner or later, as an indispensable preliminary of all reform, and on the final success of which the future of the Government will largely depend. What he was really fighting against in his interview with the Pennsylvania politicians was class government; for that is really the kind of government these worthies and their fellows have established and are trying to perpetuate. What Grant is trying to do is to remodel the administrative machine on the popular ideal, and make it really democratic. Government has, the world over, been hitherto class government in the strict sense of the word; that is, the work of shaping and executing its policy, by selecting its officers and prescribing rules for their guidance, has been monopolized by a particular set or order of men, sometimes men of certain families, sometimes men of wealth. The democratic movement which culminated in this country in 1846 was in reality an attempt to put an end to this state of things, and substitute for it "government of the people, by the people, for the people." We believe we are not misrepresenting the general conclusion, when we say that the attempt has in one direction failed. The multiplication of elective offices, which was one of the most prominent features of the new system, not only, as we have more than once endeavored to point out, destroyed all real "responsibility to the people," but it so complicated the machinery of government, made necessary so much constant attention to details, that the task of working it has had to be committed to another class, as corrupt and immoral, and ignorant and unskilful, as ever took such business in hand, and the entrance to which for honest men is just as difficult as the entrance to any aristocracy, and success in which is harder, and has to be achieved by as base acts as ever were practised at any modern court. The work of shaping great lines of policy, or, in other words, of conceiving the ideas which the Government was to carry out, has of course been left to the people, but only because it could not be taken away from them. But the whole work of embodying the ideas in legislation, and arranging the government offices so as to give these ideas their full force and effect, has fallen into the hands of a body largely composed of unprincipled adventurers, jobbers, and speculators, who literally divide all the honors and rewards of public life between them, and have introduced the foulest conspirators into every department of the public service.

For awhile they allowed themselves, under the influence of a tradition of the earlier time, to be led by lawyers, whose professional training had made them somewhat conservative and fastidious, and given them more or less reverence for precedents; but of late years, lawyers, at least respectable lawyers, have been losing credit amongst them. Their foremost ranks are now filled by unscrupulous speculators of great wealth and greater desire for wealth, who buy up the State Legislatures, return the senators, and organize "rings" for the exploitation of the House of Representatives, arrange the party caucuses to secure the nomination of their own creatures, and always have half a dozen money-making "schemes" on foot in which they employ these creatures. Under them, in every State, city, and village, is a vast swarm of their "men," who work for them at primary meetings, in the newspapers, and in management generally, and whom they reward with the smaller offices. The higher ones they reserve for themselves or their confederates. The enormous addition made to the federal patronage by the war has of course immensely increased for this class the importance of the presidency and its powers. What they would like to do would be to return to the old plan of selecting for the office one of their own number, trained by themselves and known to be pliant, and then surround him with agents and counsellors of their choosing, under pretence of satisfying "the claims of parties."

To justify their monopoly of the working of government, of course they have had to provide a theory of some kind, and their theory has been that the art of keeping a political party together, and bringing all its force to bear at the polls, is an art of uncommon difficulty and mystery, which none but men of very peculiar powers and great experience can master, and which they only have mastered, and to the successful prosecution of which the most rigid discipline and the strictest silence in the ranks is absolutely necessary. The tremendous absorption of the popular mind in the struggle with slavery of course favored their pretensions; it made the people unable or unwilling to break loose from their yoke, and gave compliance with their demands the air of a sacrifice to principle. But the state of things which we now witness in the public service, as the result of twenty years of their rule, has at last done something to expose their bad character. A parcel of shallower and more impudent pretenders probably never afflicted a great country. Of the art of government, in any good sense of the word, they have shown that they know absolutely nothing. Their knowledge includes simply the smaller trickery of electioneering, the best mode of bamboozling the more ignorant voters, though even this is done clumsily, and the filling of the offices—a process for which they claim special qualifications, but which, as they conduct it, really requires no more skill or judgment than the division of booty in a bandit's cave. The license they have so long enjoyed has reduced the administrative machinery of the Government to the lowest stage of inefficiency and made its service a disgrace in the eyes of the best portion of the community. That it has not ruined it is due to two events, which almost wear the appearance of special interpositions of Providence. One was the accidental accession of Mr. Lincoln to the Presidency, and the other the imposition of Grant upon them for the same office by the events of the war.

Mr. Lincoln was, during the earlier period of his administration entirely under their influence, or, in fact, he never wholly extricated himself from it. They succeeded in choosing his first Cabinet for him, and fought over the appointments like dogs over a bone. They accepted Grant as a horrible necessity, but never despaired wholly of using him to perpetuate their power of dividing his Cabinet offices amongst them as part of their spoils. By way of guarding him against independent action, or, in other words, against selecting for himself the men who are to advise him on his most important official steps, they began to give out three months ago that the choice of a Cabinet was a task for the right performance of which great experience was required, and experience of a kind which unfamiliarity with men or direction of great affairs, such as Grant has enjoyed, could not supply, and which they only possessed. At first they talked as if their selections for office had always been of the happiest kind, or as if their secret was worth any money to a Christian ruler. His refusal to tell beforehand what he was going to do was the first intimation they received that he had taken their measure, and was of opinion that this Government could be carried on without their aid. But they were far from giving up the game in despair, and after a long consultation a formal attack was opened on him last week, as was fit and proper, by a deputation composed of the most corrupt of the whole fraternity, and from the most corrupt State in the Union—Pennsylvania. It is no exaggeration to say that the Republican party and its machine shop, the Legislature, in that State, is literally *owned* by the best organized and most thoroughly unscrupulous of the great "rings" which are now eating the vitals out of the Government. The deputation was headed by a Master Politician—Mr. McClure, and the object was to let Grant know that they wanted to have one of their "men" in the Cabinet, partly to advise him, of course, and partly to let them know how things were going on; and the extraordinary skill and coolness with which the attempt was foiled, and the great satisfaction with which its failure has been received in all parts of the country, are decidedly among the most hopeful signs which have been witnessed in politics for many years.

They have revealed two things of considerable importance. One is that the fears entertained by many of Grant's warmest supporters that, successful though he had been in the field, and good judge of character though he had shown himself, he might prove unequal to a work so novel, and in many ways so difficult, as a personal contest with the party "managers," and that even if he resisted their onslaughts, he would do so unskilfully and awkwardly, so as to give them the honors of the fray in the eyes of the public, were entirely groundless. In the new field he has shown the same imperturbable serenity, the same dogged resolution, and the same fertility of resource, which on

so many famous days "gave the battle to his hands." Of Mr. McClure he made no more account than if he had been dealing with a troublesome begging impostor, and for the whole science of which the McClure tribe make a profession, he showed no more respect than for the "black art" or cup-tossing.

The other thing is that the attempts he is now making to create in the Government something like real responsibility to the people is appreciated and will be heartily supported by the people. He is trying, as far as he can, to put himself in a position in which errors and shortcomings in the administrative machinery can be brought home to him, and in which he can be made accountable for them, the total absence of such accountability, on the part of any individual, being one great cause of the existing corruption and disorder. As long as the leading party politicians in the various States are allowed to choose the President's Cabinets for him, the members of Congress to pick out the persons who shall fill the subordinate offices, and the Senate to decide whether a functionary may be dismissed for malfeasance, of course the responsibility of the public service practically rests on nobody, and it will be as difficult to say who is to blame for this job or that swindle, for this drunkard or that knave, as to say under which thimble the "little joker" is to be found. We are in hopes that we have in Grant a man who will break up the present system, and in breaking it up reveal to the country the possibility of being both great and prosperous without the aid of the party charlatans. People have for many a day had a vague notion that they were impostors, but a practical demonstration of the fact was still needed.

THE NEW YORK FRAUDS.

The majority and minority reports of the committee appointed to investigate the naturalization frauds of last fall are at length published. The majority find that five kinds of frauds were perpetrated: the use of fraudulent certificates by aliens, the issue and use of certificates in the names of fictitious persons, frauds in canvassing the poll, criminal negligence in the courts, and "repeating." They show that prior to the year 1868 the only State naturalization courts in this city were the Superior Court and Common Pleas. The latter, numbering among its judges Daly, Barrett, and Brady, is honest; what the other is may be inferred from one or two facts stated by the committee. The average annual number of citizens naturalized by the two courts above named from 1856 to 1867 inclusive was, for the Superior Court, about 4,000; for the Common Pleas, 5,000; making a total average of 9,000. Now, on the 6th of October, 1868, the Supreme Court came into the field, and began to make citizens. The result for 1868 is as follows: The Common Pleas naturalized 3,145, the Superior Court, 27,897, and the Supreme Court, 10,070. These figures, it seems to us, are full of suggestion, for we have in them what is so difficult generally to obtain, a means of comparing the work done by two judicial bodies, all differences being eliminated save those brought about by fraud. Generally, when any one cites instances of judicial corruption, he is met, and quite rightly too, by the argument that it is impossible for him, knowing nothing either of legal form or substance, to say what a judge ought to have decided; but here everybody in New York knows that there is nothing which distinguishes the Common Pleas from the other two courts we have named, except honesty and capacity—that is, absence of corruption and absence of opportunity of corruption. The Common Pleas, in 1868, naturalizes two thousand fewer persons than its average number; the Superior Court naturalizes twenty-three thousand more. The decrease in the Common Pleas shows clearly enough that there was no natural pressure from immigration which told on all courts alike; and even if there had been, 10,070 citizens from the Supreme Court would have seemed to be sufficient to cover that cause. The committee very truly say that there could not have been any such number of legal applications as 41,000. We are not speaking of probabilities now: there is absolute certainty about this.

The committee find that out of 10,070 naturalizations in the Supreme Court, 9,711 profess to be "minor applications;" that is, applications coming from aliens who have resided in the United States three years before coming of age. These minors may dispense with the usual declaration of intention; or, in other words, there is one precaution against fraud less in their case. It seems from an estimate made by the clerk of the Common Pleas that 50 per cent. of naturalizations is a fair proportion for minors, which would give 5,035 for the Supreme Court, instead of 9,711, showing 4,676 to be "queer." In the same manner, an examination of 17,572 applications in the Superior Court shows that 13,541 were "minors;" but if the 50 per cent. rule is correct, and it cannot be far wrong, there should only have been 8,786, which gives a queer look to 4,755 Superior Court minors.

The Committee find that, although before 1868 the average annual number of naturalizations was 9,000, yet in 1868 the clerks of the Supreme and Superior Courts ordered from the New York Printing Company, between September 16 and October 23, 105,000 blank applications, and 69,000 certificates; that, although the length of time required to naturalize an applicant is, according to Judge Brady, at least three to five minutes, Judge McCunn was of opinion that he could examine a witness in thirty seconds, and the number naturalized in the Supreme Court for several days was as follows: 2,109, 1,868, 1,856, 1,842; that, although Congressional committees have power to compel the production of papers, the Supreme Court, on being required to bring before this one its records relating to naturalization, temporized for a long time, and finally sent their clerk to Washington, arming him with an opinion to the effect that it was not lawful to remove the records from the jurisdiction; that, of 39,000 blank certificates printed for the Supreme Court, 27,068 were, on the 17th of February, unaccounted for.

As to "repeating," the majority say that it can be shown to have been practised, by a comparison between the actual number of residents in various houses marked on the lists and the number of votes thrown; by comparing also the registered and the actual vote in certain districts; and further, by comparing the vote of 1868 with the population and with the vote of previous years. For the purpose of the first comparison, it is worth while to see part of a table prepared by the committee:

Street and number of house.	*Owner or lessee.*	*Politics.*	*Number registered.*	*Number voted.*	*No. actual residents.*
Cor. 3d Ave. and 24th St.	Scannell & Fagin.	Dem.	152	94	..
449 4th Avenue.	Michael Sharkey.	Dem.	20	18	..
120 East 32d Street.	——— ———	Dem.	6	6	2
288 Hudson Street.	George Thompson.	Dem.	35	23	1
69 East Houston Street.	Peter Burns.	Dem.	13	10	..

With regard to the difference between the registered and the actual vote, an excess of 167 in seven districts is shown; this seems a small number, but the committee very truly consider it startling; because this is one of the frauds least likely, from the facility with which it may be exposed, to recommend itself to politicians. As to the rest, according to an estimate of the average rate of increase of voters, the vote of 1868 should have been 131,000, whereas 156,000 votes were cast. Again, an estimate is made of the average increase of ballots cast, and this rate is 4 per cent.; but the vote of 1868 was 40 per cent. larger than that of 1867; lastly, a table showing the ratio of votes, both for City and State, to population at each of the last five Presidential elections, has been prepared, and this ratio averages 1 to 8.44; but in 1868 it was, for the City, 1 to 4.65, and for the State, 1 to 4.47.

We have given above pretty nearly all of the majority's evidence that will bear sifting; their summing-up is one of the most singular pieces of extravagance we have seen since the famous report of the committee appointed to investigate the conduct of senators during the impeachment trial, summed up by the chairman's saying that the chief proof of the villany of the "guilty seven" was the suspicious circumstance that no evidence had been discovered against them. The only fair conclusion from the facts we have given, and others referred to by the majority, would be that enormous frauds were perpetrated, and that their number could not be ascertained. But what they apparently wanted to do was to show that if the *Democratic party had not committed frauds last fall New York would have gone for Grant.* To prove this they need all the figures they can get, because of the very great natural strength of the Democrats in the City. So they make an estimate of a total fraudulent vote of 68,000 for the State, two items of which are as follows: "In the counties of Ulster, Monroe, Westchester, Rensselaer, Putnam, Green, and Orange, estimating what is probable from what is proved . . . 5000." "As the evidence shows a wide-spread conspiracy, it is safe to estimate for other portions of the State . . . 5000."

On the other hand, the Democratic minority find that all the facts cited by the majority are a stock of stale slanders; that frauds have been common in all ages and countries; that the very constitution of man inclines him, be he Republican or Democrat, to villainous devices of all kinds to advance his selfish interests; that the fraudulent vote of last fall did not exceed 1500 or 2000; that of that number there were just as many Republican fraudulent votes as there were Democratic; that the character of the witnesses on whose statements the majority rely is beneath contempt, many, if not most, of them being notorious swindlers, liars, and thieves; that the majority know this as well as any one; that the whole investigation is a shameful effort to convict the Democracy of crimes which are really the result of the long-continued misgovernment of the Republican party, the war which the Republican party brought about, and the low tone of political morality which that party notoriously cultivates. In short, we have on one side an argument which reads like an address to the jury by the counsel for the prosecution; on the other we have the reply by the counsel for the defence. Now, it is just this character which almost every Congressional report which has lately been made has assumed in the eyes of the public. The theory is that an investigation of this sort is a judicial proceeding, and accordingly each party is represented in the committee. The practice is for the majority to report such evidence as tallies with the convictions of their party, and the minority, of course, do the same, in self-defence if for no better reason. The result is that no human being cares anything about the reports, no one believes in the conclusions reported, no one even reads them, except those who by their occupation are doomed to the task. We have referred already to the Senatorial Corruption Committee. That was an extreme case, and unlikely to occur twice in any country which was not in a chronic state of revolution. But, so far as public confidence is concerned, that report obtained as much of it as any do. The reports of the committees on elections furnish the most common instances. These frequently involve very important questions of bribery, or constitutional right; yet the known character of the investigations prevents any one from heeding the conclusions at which the committee may arrive. It is understood beforehand that if by any means the Republican candidate can be shown to have a claim to the seat, a Republican majority will so report, and *vice versa;* the committee do not examine their witnesses to see who is entitled by law, but to see whether they can, without public scandal, gain a vote for their party. The committee directed to report upon the claims of the Georgia senators, the committee which had in charge the New Orleans riots in 1866, this last Naturalization Frauds Committee, have all had matters of the gravest consequence to the whole country. But the reports appear, are published, and disappear without the slightest effect. The people and Congress make up their minds long before, from the reports in the newspapers and from private sources; the report is used as an oratorical weapon in debate, and that by both sides, with equal advantage to each. So far as the public are concerned, such a meeting as that held in this city the other day by a union of Republican and Democratic Germans has much more effect.

As we have already said, we think the general fact of fraudulent voting last fall is amply proved by the facts adduced by the report, and we have no doubt, either, that the illegal votes were mainly thrown for the Democratic candidates. Such an assertion is, of course, impossible to prove in detail, but every one knows that the courts where most of the naturalization was done were held by Democratic judges, and that one of the most successful manufacturers of citizens was Judge McCunn; that the Republicans had far less opportunity at the polls than the Democrats; and that there was no suspicious increase of the Republican vote. But that is not the important point; we have no reason to believe that the Republican party, did it control the city, would not become quite as adept in "repeating" and "stuffing" as the Democrats now are. Lawlessness is the parent of fraud, and the Republican party is every year becoming more lawless. A party which to-day "gerrymanders" a State, may be expected to-morrow to close its eyes to practices not worse, although more scandalous. A party which admits a State into the Union to-day with the understanding that the arrangement is final, and throws it out the day after because the population is not of a promising character—a fact which was perfectly well known from the start—ought not to express too great horror at the fact that the opposing party permit practices of a more corrupt but not of a more fraudulent kind. A party which elects a legislature like that now sitting at Albany ought not to plume itself too much on political morality. Indeed, Republicans ought not to express surprise if Democrats resort to one form of lawlessness to offset the other forms engaged in by them. They take to fraudulent voting just as naturally in New York as Congress takes to high-handed nullification of its own laws. In fact, it is their only way of defending themselves; they will continue to do it until they are prevented, and they will not be ashamed of it until some better means is devised to that end than a majority report of a Congressional committee.

THE DEATH PENALTY.

Now that people are beginning to have time and attention to spare for the work of general reform, and that crimes and criminals seem to be multiplying all over the country to an extent that renders the ordinary courts unable to cope with them, we shall probably before long have a vigorous overhauling of the whole system of criminal judicature. In this the question of capital punishment of course occupies a prominent place, and is just now becoming a subject of anxious discussion. Our remarks on it some weeks ago have drawn forth a number of replies, containing objections to our views of it, some of which are worth notice.

It is said, in the first place, that statistics show that in Belgium, for instance, in provinces in which there have been fewest executions the number of murders has steadily diminished; but this proves nothing either one way or the other. The advocates of capital punishment—or at least the sensible ones—have never said that hanging was the only preventive of murder. The causes which produce murder, like the causes of all other social phenomena, are various, and so are the causes which diminish the number of murders. Anything which increases the average moral culture and material well-being of the mass of the people undoubtedly tends to diminish the number of crimes, and especially crimes of violence. No intelligent advocate of the death penalty has ever opposed education, or wise financial or sanitary legislation, or has ever said that you ought to rely on the gallows alone for the safety of either life or property. Therefore, it is idle work to tell him that in any particular country or district the rarity of executions was followed or accompanied by a decrease in the number of capital offences. You have also to show, in order to drive him from his position, the nature, amount, and progress of all the other preventive agencies actually in operation. You might hang ever so much in Montana, and crime go on increasing; you might hang ever so little in Massachusetts, and crime go on diminishing; but from these two facts alone you could draw no conclusions of any value as to the deterring force of the death penalty.

Little of what is said about the effects of the abolition of capital punishment in England for crimes against property touches the question of its efficacy as a punishment for taking away life. When men were hanged for petty theft, of course, if the law was faithfully carried out, the number of executions in a population largely made up of poor and very ignorant persons was sure to be so great as to beget recklessness and indifference. If it was not faithfully executed, of course it lost much of its force as a deterrent. Says one of our correspondents:

"The English lawyers, who, after the execution of Fauntleroy, petitioned in great numbers for the abolition of death punishment for forgery, made a correct calculation; their anticipation was fully justified by the results. The crime of forging bank-notes diminished when no longer capitally punished. That the fear of death does not prevent murders is illustrated by the fact that in Rhode Island the prison chaplain testified that the murderers confined in the jails did not know that capital punishment had been abolished in the State. Murderers know that the execution of the death sentence is often avoided. In England during the year 1848 there were 23 criminals convicted of murder, of whom only 12 were executed; this is one item out of the long list from the murder statistics of England and Wales. A punishment that will surely be inflicted is more apt to prevent crime than one from which escape is possible, even probable. Moreover, those who commit crime do not generally think of the legal menace; or if they do, their minds are so preoccupied with their desire and

intention that the recollection of legal danger loses its preventive influence."

It is quite true that the crime of forging notes diminished when the death punishment for forgery was abolished, but our correspondent does not seem to know why. The objection of the best lawyers to such a penalty for such an offence was, that the feelings of jurors deprived it of what gives any penalty whatever any value, and that is *certainty*. Hanging which in eight cases out of ten is not inflicted is no better for any offence than any other punishment. Moreover, the prohibition of the circulation of one-pound notes by the Bank of England is universally acknowledged to have played a large part in diminishing the crime of forgery, because it made forgery unprofitable. When forgers had only to deceive the poor and illiterate, the temptation to forge was very powerful. But when five-pound notes became the only paper money in use in London and its vicinity, of course it became necessary to deceive the shrewd and well-educated, which was no easy matter. Therefore, what with certainty in the punishment and increased difficulty in the crime, forgers naturally went into some other line of business. English statistics showing the proportion borne by the number of "murders" committed to the number of sentences of death passed or executed are of very little value, because in England there is no scientific classification of crimes, and the death sentence is passed in cases of what would be called, in this State, "murder in the second degree," and is then commuted as a matter of course.

The argument that the fear of hanging does nothing to prevent murder, inasmuch as "those who commit crime do not think of the legal menace, their minds are so preoccupied with the desire and intention," is, when closely examined, almost comical in its absurdity, and yet it does constant service in the mouths of many very sensible reformers. It is, in reality, an argument against all punishment whatever for any crime; for if the criminal does not think of the punishment when he is committing the crime, what is the use of courts and jailers, and why imprison a man for murder any more than hang him? But all we can possibly know of the criminal's state of mind when he commits his offence we learn from the criminal himself, who naturally enough tells the jail chaplain, and everybody else, that when he did the deed he was under the domination of a wild and irresistible impulse. It is excusable in him to tell this story, but what are we to say of social reformers who gravely ask a community to base its penal legislation on it? The best refutation of it is to be found in the fact that murders and robberies are hardly ever committed in daylight, or in the presence of witnesses; that in well-governed countries criminals usually take elaborate precautions against discovery, both before and after the offence, thus showing that they are terribly afraid of *something*. What it is we cannot know for certain; but it is fair to conclude that it is not the disapproval of their own consciences, or the moral reprobation of society, but rather the jail and the gallows. Anybody, however, who is in search of a psychological foundation for his criminal jurisprudence, would do well, instead of interrogating convicted prisoners as to their reasons for committing their crime, to follow the example of the metaphysicians, and interrogate himself as to his reasons for *not* committing crimes. All but the best and purest of us, subjected to this test, would have to answer that the fear of the jail and scaffold had *something* to do with keeping us from committing robbery or murder. The "revoltingness" of capital punishment, on which many reformers dwell a good deal, is a purely sentimental consideration, which it is difficult to argue about. All punishment is "revolting." The spectacle of a man shut up in a cell like a wild animal, and kept on low diet and hard labor for years, is inexpressibly repulsive. But then all punishment is the result of a choice between two evils. The question is, whether the sight of an honest man with his throat cut in his own house is or is not more revolting than the hanging of a hardened ruffian, for whom all minor penalties have lost their terrors?

Our own position is simple enough. The first duty of society is to its good members. If it cannot furnish them with peace and security otherwise than by killing rascals, rascals it must kill. As regards the punishment of murder, we believe that no community can retain a proper sense of the sanctity of human life in which a man who has deliberately slain a fellow-creature is not removed for ever from the sight of his fellows. We do not care how this is done, provided it *be* done. No boy can continue to look on murder as a very dreadful offence if, as he grows up, he sees murderers walking about in the streets as free, and apparently as happy, as other people; and no criminal can hesitate much about shooting a man after robbing him, or blowing a policeman's brains out, as Real did here the other day, if he every day meets friends and acquaintances who have done the same thing, and expiated it by a few years' imprisonment. Now, those who advocate the abolition of the death penalty do not even attempt to offer any equally efficient means of removing murderers out of our sight. They know perfectly well that in the present state of American society and politics the penalty they offer as a substitute is simply seven years' imprisonment, or less, and that what they propose is in reality to place the taking of a man's life on the same level, in the eye of the law, as taking his watch or forging his name; and yet they accuse the advocates of the death penalty of helping to lower the popular appreciation of the sanctity of life.

REPUBLICAN SIMPLICITY.

An attempt was made last week to raise the salaries of the Justices of the Supreme Court to $10,000, and that of the Chief-Justice to $10,500. It was defeated, and we doubt if any proposition to raise the salaries of any officials, except those of members of legislatures and of Congress, will meet with any better fate for a long while to come. In other words, those public servants who have it in their power to increase their own pay will not, on the whole, allow their salaries to fall much below the market rate of remuneration. Indeed, there are at this moment only few members of Congress or members of State legislatures who are not receiving considerably more than the market rate—that is, considerably more than they could obtain in any field of employment in which wages depend on the proportion borne by supply to demand. Whenever a suggestion is made that the administrative or judicial officers of the Government should have their pay raised, one of the commonest arguments used by legislators against the change is that plenty of men can be obtained to accept the places for the salaries now paid, and hence it is inferred that an increase is inadvisable. There is, of course, no limit to the application of this rule. If the lowest bidder is to be considered the best man for a public office, there is no officer who is not now ridiculously overpaid. There would be no difficulty in getting the Chief-Justiceship of the United States, for instance, filled by a fair lawyer at five hundred dollars a year, and the Associate Justiceships at a dollar a day. Of course the incumbents of such offices could not live a respectable or worthy life on such salaries, but then they would live somehow and even thrive. If the ordinary economical tests were applied to the salaries of legislators, it would be found that as a class they were ridiculously overpaid. The supply of such capacity as they bring to their work is practically unlimited, and could, if sought in open market, be had for a mere trifle, while a majority of the present law-makers, if compelled to give up law-making and seek a livelihood in free competition, would fare miserably.

The arguments used by the legislators against increasing salaries are, however, not often the arguments which have most weight with themselves, but rather those which are likely to have most weight with their constituents. All the higher and more responsible offices in the public service, except those, such as the Presidency and the foreign embassies, which are attended with extraordinary social advantages, are suffering seriously, as everybody who has considered the subject sees and knows, from the lowness of the pay. The judicial bench in all the great centres of commerce and population, or, in other words, in the very places in which causes are most numerous, weighty, and intricate, is every year losing its best men, and is every year more and more carefully avoided by the ablest lawyers, simply because the salaries are vastly inferior to what those who are fit to sit on it can earn in other ways; and the growing disproportion between these salaries and the cost of living suitably, and the amounts which lawyers can earn at the bar, is not compensated for by any increase in the social consideration accorded to the office.

In like manner, for the proper discharge of the functions of the Secretary of the Treasury, of the Commissioner of Internal Revenue, of the district assessors, and the assistant treasurers and collectors of the great ports, men

are needed of a class who find little difficulty in making from $20,000 to $50,000 a year if they engage in trade or manufactures on their own account or in obtaining from $10,000 to $25,000 a year if they choose to accept the presidency of banks or insurance companies or railroads; in the government service they get from $4,000 to $6,000 a year. There are, of course, honorable and able men found now and then to take responsible government positions on these terms, and perform their duties faithfully for a time under the influence of a love of the bustle and distinction of public life or from patriotic devotion; but then they inevitably soon get tired of it, unless they are men of large private fortunes, which they seldom are. Hard work for small pay and plain living soon ceases to be attractive, particularly when performed in full view of the companions of one's youth who are living luxuriously and accumulating rapidly. The result is the steady withdrawal or abstinence from public service of the able and scrupulous men, and the steady flow into it of able and unscrupulous men who make up by the pickings for the lowness of the regular salaries. There is hardly anybody who has seen much of the public service who has not striking stories to tell on this point, of really valuable men who find it impossible to remain in it with a due regard to their own comfort and peace of mind and the future of their families. Of course the reorganization of the civil service in the manner proposed by Mr. Jenckes would be equivalent in all the subordinate branches to a considerable increase of salary, inasmuch as it would give certainty and respectability to what is now a precarious and slightly disreputable position; but nothing that can be done in this way for the higher offices which the Civil Service Bill will not affect, or in which certainty and respectability are already secured, will compensate for the lowness of the salaries.

The causes which operate most to prevent a rational readjustment of the salaries of public officers with a proper regard to the great change in the value of money and the standard of living which, altogether apart from the disordered condition of the currency, has taken place within the last twenty years, are three in number. One is the reasonable fear, which pervades the whole community, that as long as public officers are chosen as they are at present, to increase their pecuniary value would be to increase the eagerness of the scamps who now scramble for them, and still further degrade and corrupt the whole nominating system, and cover the party "slates" still more thickly than at present with the devil's equations. Another is the wide diffusion of the theory that there is a necessary connection between republicanism and "simplicity" of living, and that there is something improper in the spectacle of luxurious living on the part of republican officials; and more extraordinary still, that the American community is pervaded by a love of plainness in food, attire, and houses. The third is, that in the United States, for the first time in the history of the world, political power is now lodged in the hands of small farmers, who are thus enabled to impose their standards of fitness, in the matter of material wants, on all persons in the public service.

The amount of pay public servants should receive has always hitherto, in countries in a high state of civilization, been regulated by the notions entertained by city people of what is necessary for a man's comfort or for the dignity of his office; and on this class of subjects the opinions of city and country people differ widely. The cities are the seats of wealth and elegance and splendor; money is plenty in them, and comparatively easily earned, and the rich merchants and bankers are apt to fix the scale as to houses, dress, furniture, and amusements. They do not think $25,000 a year at all too much to pay a man competent to manage the national finances; or $100,000 too much to pay a man competent to fill the Presidential chair; or $10,000 too much to pay a man able to fill a large church once a week with attentive and paying auditors. But there are few farmers who have any sympathy with city wants and aspirations, or who are willing to pay anybody in the public service more than they themselves would think sufficient for a decent livelihood. The old Connecticut deacon who agreed reluctantly to raise the minister's salary to six hundred dollars, but said "he *knew* no man could spend six hundred a year," expressed very well the feeling of the rural districts on this whole question of the amount which ought to be paid to the people for services which do not plainly and directly bring in money to those to whom they are rendered.

The theory that republicans are or ought to be simple in their manners and frugal in their mode of living is a tradition of antiquity—a tradition, too, of that period of antiquity when wealth was unknown in republican communities. The Romans were simple and unostentatious in the days of Cincinnatus because labor and money were both scarce amongst them. Cincinnatus himself returned to the plough chiefly because he had no place else to go to. The dread of luxury as a relaxer of the moral fibre is a relic of the same period. The origin and history of this fallacy is a subject much too extensive to be touched on here. The feeling still survives, and is constantly met with in the pulpit, in literature, and in legislation, and has much to do with the prevailing theory that men who serve the state, especially in a republic, ought to serve it for a smaller sum than the same kind and amount of labor will bring elsewhere. That duty of plain living to which the community at large attributes so much importance, and which all private citizens who can carefully avoid, it imposes with great solemnity on the only class it has in its power. There is probably no community in the world in which the virtues of frugality and simplicity of living are held in less real esteem than they are in this. The popular horror of ostentation, of fine clothes, of fine houses, and rich food is theoretical mainly. In practice, every man gets as much of them as he can. Nearly everybody is, in fact, engaged in the eager pursuit of them, and the attainment of them is recognized universally as the great mark of success in life. We see proof every day, too, that luxury in modern times, being usually the result of scientific discovery and peaceful industry, and being kept reasonably under the control of moral and religious culture, does not produce the doleful effects on mind and body ascribed to the luxury of antiquity, which was mostly the result of conquest and rapine. The prolonged existence, under these circumstances, of the doctrine that republicans are not or ought not to be luxurious in their habits, and that the officers of republics ought to be extremely simple in their mode of life, and practise daily self-denial, no matter how rich the government they serve may be and what style their neighbors live in, is one of the most striking illustrations within our knowledge of the strong hold of classical ideas on the modern mind. It is all the more striking in view of the fact that those who maintain most strenuously that there is something discreditable in a man's receiving as large a salary from the government as a private individual would pay him, and who would hold even a superannuated government pensioner in contempt, do not by any means place the offence of cheating the government—by smuggling, for instance, or an undervaluation of property—in the same category with the cheating of an individual. In other words, they have one code of ethics for the honest servants of the government, and another for those who swindle it. As an employer, they talk of it as a poor devil who can ill afford to pay for anything; as a creditor, they treat it as a bloated corporation from whom it is somewhat excusable for anybody to keep back all he can.

The fact is, that the manners of republics, and the amount they ought to pay for honest service, depend, as under all other forms of government, on the wealth of the community. People in a great commercial republic like the United States, where capital pays twenty per cent., and is actively employed, will not and cannot be got to live like Spartans or Uri cowherds. Men live in all ages, and under all governments, in accordance with their gains and expectations, and treat themselves to such means of material enjoyment as are within their reach. We cannot prevent this, and we ought to give up pretending that we can or do. Moreover, instead of organizing our civil service on theories which might be true in Uri or Zug, we must, to reform it, frame it in accordance with the facts of American life. No government can be honestly or economically administered which wilfully ignores, in fixing the pay of its servants, the agents by which human conduct is most strongly influenced in the society of which it has charge. Our Government goes into the labor market deliberately, to seek employees, on two theories, for which there is not a particle of foundation. The first is, that average Americans of ability and character do not care what their income is or how they live; the second is, that the demand for labor is so slight that plenty of men of the right kind can be found for all judicial, executive, and deliberative functions, for salaries fixed by reference to an ideal standard of republican pay, and without any reference at all to the actual market rate. Places at $4000 a year, for instance, are gravely offered to men to whom banks and railroads are willing to pay $10,000, and they are expected to serve the government, and not the corporation, under the influence of a lofty contempt for money which nobody else feels or affects, and in obedience to an ideal of how a man ought to feel towards a republic, concocted by the legislature or the authors of popular school-books. Inasmuch as no honor or social prestige is offered in the government service in lieu of salary, the fact is that people expect to have justice well administered, taxes honestly collected, finances wisely managed, by a system of selection and payment of employees, in which nearly as little count is taken of human nature and of the facts of actual life as in Plato's Republic. But human nature is not to be suppressed or overlooked in that way; and it is accordingly asserting itself vigorously all over the country, by putting third-rate lawyers on the judicial bench, knaves in nearly every office of the government in which money is to be handled or favors sold, and thus making our talk of the "simplicity" of the republican régime one of the great political jokes of the age.

VIRGINIA REVISITED.

I HAVE just returned from a visit of a week in Virginia. Business took me to the gold mines in Spottsylvania county, about twenty-five miles from Fredericksburg. The Wilderness is as wild and wasted as ever, and the inroads made by Northern men in the way of large outlays for gold-mining are not likely to be successful enough to invite repetition. Others who buy farms which they mean to work, at the same time that they get gold by simple and inexpensive processes, are more likely to succeed. There is certainly a great and dangerous fascination in a day spent in wandering about a great estate, where the sand and dirt can be washed in the nearest stream and furnish a nugget of gold and "fine gold" in sandy particles, worth anywhere from twenty-five cents up. The tremendous earnestness of all the people engaged in the business, the careful recital of stories of great wealth got out years ago, the legends of hidden "pockets" and concealed "chimneys," and the neglected, barren, wasted country, all tell the story of the ruin that the search for gold has brought on this country. The negroes, no doubt, get gold enough by covert "panning" to make them almost as lazy, worthless, and good-for-nothing as the poor whites. Their old masters have gone away as far and as fast as they could. The new men coming in from the North find that the opportunity to improve their cheap land is made difficult by the presence of some, and the promise of more Northern mining companies, with their improvident and spendthrift agents, their confident stockholders, and their trusting officers, who spend large sums in useless machinery and buildings and then end in insolvency and indebtedness all around, making negroes and whites alike suspicious of Northern promises and enterprise—with this difference, that the white neighbors generally contrive to get money enough out of the concern in its palmy days to console them for their losses and to induce them to try again.

The old battle-fields of Chancellorsville and the Wilderness show plentiful traces of our fighting there. Many of the earthworks are substantial enough to outlive the energies of the land-owners, and the ruins of the Chancellor House and of some other pretty well-known memorials brought back with more freshness than I had expected the memorable days and nights of my last visit to these parts. Near Fredericksburg almost every sign of war has disappeared. The old Southern homes—the great house with its big brick chimneys wasting their heat on the outside, the unpainted woodwork, the negro quarters—are disappearing, and I found that some new, Yankee-looking houses belonged to old residents who had exchanged some of their land for hard cash, and their old homesteads for more modern, convenient, and suitable houses. A good many Northern men bought the old places because they wanted a house ready to hand, and they were without that Virginia peculiarity which would rather build than repair.

In Fredericksburg itself there was little change; the old shot-holes were repaired, the houses looked brighter, the churches and the court-house had been mended and painted; the stores had their good old Virginia names in big letters, but did little business, and that little not very wisely done. We bought at the leading "wholesale" grocer's all his stock of sugar, about a dozen pounds, at sixteen cents; the price had gone up in the Eastern cities a week before to twenty, and although that fact was mentioned, it did not seem to be any reason for a change in the asking price; the same rule seemed to hold good as to everything but land. There are a great many Northern men, for the most part farmers from Pennsylvania and New York, who are looking for land for grazing or trucking. If such a man find a tract of a couple of hundred acres offered at ten dollars (and there is plenty of it within five miles of Fredericksburg), and go home for a week, he is sure to find on his return that they ask five dollars an acre more, and want him to take a few acres less. Some of the great land-owners won't sell at all, and a few of these are not only waiting for the rise, but they are working the land. There used to be a fine old Colonial house below Fredericksburg, near Deep Run, where my division crossed and went into the first attack—on the extreme left of our line—with a thousand acres stretching up almost to the town. I drove down to see the old place; it was in ruins—burned, I remember the story ran in our lines, by the owner, because the "Yankees" made it their headquarters (poor Bayard was killed in front of it by a shell); nearly all the fences were up, the ditches cleaned, and the place under cultivation—ploughing in February. There were little tenement-houses, just such as one might see at home, for farm hands, and some of the best of the old slaves had taken each a hundred acres or so, and were farming it on shares—the owner supplying the stock and working his own large proportion. His ploughing was done with mules, and they looked well and strong; but in every instance, except the rough clearings in the Wilderness, I saw only negroes in the field. In the little places where there was a white man there were also negro men and women, unless the thing was done in a very poverty stricken manner—as in one instance with a cow and a mule. The horses are used mostly for riding, and the owner always does the fetch-and-carrying which we should commit to the smallest boy about the place.

I went to Richmond, and saw there very little of the Virginians, but enough to show me that their men, even the best of them, are still waiting for help; they think it a hardship that the North does not come there with more capital, although Northern capital has rebuilt the main street in a much better way than before the war, and much too well for the business of the place. The bookstores have nothing new of their own, except Maury's pamphlet to prove that the Chesapeake and Ohio Railroad, formerly the Virginia Central, only wants 200 miles built, from Covington to the Kanawha, to make it rival all the great Northern through lines. The men are anxious and willing to meet and do business with Northern men, and receive them with their old heartiness and a characteristic promise of help. It is said that the women are only held back by fear of one another, enforced by a sort of social league which cannot last much longer. Still, one hears characteristic stories of them. A lady came from the North and opened an industrial school; she spent her own money and gave her own time, and offered both alike to white and black. The blacks came of course in large numbers, and she is idolized by them; not a white person ever appeared, and when once the wife of the commanding general introduced her to a lady whose husband attended to the business matters of the Northern woman, the "Southron" matron deliberately turned her back on her.

A friend of mine in an important place near the general in command, and with an independent office over freedmen's affairs, has been fired by the opposition of the people into a sturdy zeal for the interests entrusted to him. He characterizes the Virginians as the Chinese of America; their notion is that the Virginia of a hundred years ago was a realized Utopia, and every change since then, the Revolution as well as the Rebellion, was only a change for the worse, and a thing not to be encouraged. He made a vigorous effort to get a common-school system made part of the constitution, and its rejection is largely due to the clause which prescribed free schools. The example of the success of the freedmen's schools, and the wonderful results of the education of the negroes, are all looked upon as enormities, or abnormalities, to coin a word, that will soon come to an end. The last duty of the Bureau—that extraordinary power with a history that ought to be written, and an influence that can never end, that of education—terminates in July of this year. Some effort has been made to extend at least this part of the system; but Congress can hardly do anything for the country until it has done something for itself, and the parcelling out of offices under Grant's administration is much more important than the preparation of that which is, if not the greatest, at least the most living result of the war, the education of the negroes of the South.

The houses in Richmond—the old ones, I mean—look a little the worse for six or eight years of usage a little harder than that of old times. Virginia woodwork never was painted—now it is not mended. Houses, even the biggest and finest, had no conveniences within themselves, and have still the little detached outhouses for servants. The servants gone, of course the neglect and dilapidation have not stopped at their old quarters, but spread to the main house. Many fine houses are evidently well supplied with fine furniture—in front; people say, in a sympathetic tone, that the furniture of the other rooms has been sold, one piece after the other, to supply means of living; and in the extremest case that I heard of, the impoverished owner had spent the money thus got, in printing and publishing a work on the history of the late Confederacy and the part taken by Virginia in the achievements of that period. Richmond has two subjects of discussion—it can hardly be called excitement, for excitement there is none in the place—the project of the committee of nine for readmission to the Union, and the trial of Grant for the murder of Pollard. People really talk about Grant's case with interest; very few think the manner of the killing slightly out of the regular routine, and nobody believes or fears that it will be followed by any punishment. As to reconstruction, that is a matter of very little moment, for, in or out, Virginia is the martyr of the war, and her sons and daughters are true only to her.

I came North by way of Gordonsville, and spent an hour there waiting for the train. Even the railroads are managed *more suorum*, for the train from Richmond and that from Washington meet and then follow one another for fourteen miles until they diverge again, one for Lynchburg and the other for Covington. The trains South and East are managed

with the same economy of time and motive power. I walked through Gordonsville—a long straggling street with shops, stores, churches, a few decent dwelling-places, and the invariable gathering of a dozen or twenty horses fastened to a fence, with some of the owners talking horse at the station, some at worse places—all come in to talk over the affairs of the day; to see one set of trains in and wait for the other out; ready to discuss anything with anybody, and friendly and hearty and delighted to find some one who listens to their ingenuous account of how they live, and shows by his wondering gaze that he finds an interest in the story of their ways. Of course the listless Virginian thinks it is admiration, but the more acute understands and talks of it as drunkards talk of their bad habits; and the more they talk the less they change them.

A New York "gentleman farmer" was on the train, and I asked him to walk with me to the hitching-corner; as we walked we saw the Freedmen's School, the only neat building in sight, and the colored children playing around it. My New-Yorker waxed wroth at the sight, and wanted to know why New-York should be taxed to educate niggers, make them lazy and dishonest, and much more to the same effect, which I answered as best I could. We walked on and met some Virginians, who talked freely of horses and crops; they seemed to be men who before the war were overseers, and since the war had leased parts of the estates on which they lived for one-third the crops. The most intelligent man said frankly that in old times he was n't able to get land, and he could n't get work either, except as an overseer. He pointed with no little pride to white mechanics building a house, and showed us two or three other houses which they had built in the long, straggling, twisted line of the main (and only) street of Gordonsville. Just then a great farm-wagon came along, drawn by three mules, with the negro driver sitting on the near-wheeler; my New-York farmer asked indignantly why the man did not walk or sit on the shaft or in the wagon, and where was his master that he did not look after him? As the wagon passed by, our Virginia farmer pointed out the owner sitting in the tail of the wagon, smoking at his ease, and the contents of the wagon—besides the owner—were two barrels. This roused my New Yorker's rage and he hurried back to the station, where I found him afterwards laughing over an encounter between the ladies of his party and a couple of Virginia ladies, who were abusing the Yankees. During the rest of our journey we went over the plains of Manassas and Bull Run, and I was delighted to be able to point out the improvements made since my last visits there.

Of course even a Virginia journey must have its own finish, and I was not a little amused at ours. The Orange and Alexandria Railroad has until lately crossed the Long Bridge and landed its passengers at the Baltimore and Ohio Railroad depot. We were told that the Long Bridge was impassable and unsafe, and therefore the train stopped at Alexandria and we had a lovely moonlight sail up the river, with the Capitol all aglow. Landed at Washington, we had a long drive by passenger-car to our depot, and as my train did not go for an hour, and the conductor of the Orange and Alexandria Railroad was in the supper-room, I tried the effect of a polite question; my faith in the Long Bridge had stood too many tests in old times to allow me to believe that it was unsafe now. I found that it was only the Virginia railroad way of settling a dispute with the contractors who made the last repairs on the bridge. Rather than pay them or settle by due process of law, the railroad company submitted to a prodigious increase of expense, and exposed its passengers to delay, annoyance, risk, and discomfort. Satisfied with my hasty look at old familiar places, and finding much to be pleased with and much to reflect on in the experiences of my "Virginia Revisited," I commend an early visit to all who still feel an interest in the South. A week from any of the leading cities of the East will give time for a pretty general survey of the points of most interest in the Old Dominion; and, besides the places, every traveller will find in the people he meets, in what he sees them do and hears them say, in the questions they ask and the answers they give, very much to set him a-thinking, and to show that Northern notions and Northern men cannot get the South reconstructed by staying at home. They must examine the question on the ground, and answer it, if they can.

ENGLAND.—THE FISHMONGERS' DINNER.

FROM AN AMERICAN CORRESPONDENT.

LONDON, February 12th.

MOST Americans, on first hearing of a dinner given by a company of Fishmongers, would hardly conceive of an entertainment remarkable for its assemblage of noteworthy men and for its external splendor; but when hey learned that the Fishmongers are one of the twelve old, great Companies or Guilds of London, possessed of the power and wealth that belong to great and ancient corporations, it would easily be believed that a dinner such as they gave last night to her Majesty's Ministers would be both interesting and magnificent.

The Fishmongers are a Liberal body—the only Liberal Guild, I believe, in London; and this dinner to Mr. Gladstone and his colleagues, as others in former years to distinguished Liberal statesmen, was intended, not as a mere compliment, but to afford them the opportunity of seeing and being seen by the representatives of a large class of business men, and of expressing in a pseudo-private way feelings and opinions which would be made known to the public the next morning through the papers.

The Fishmongers' Hall is in the city, at the foot of London Bridge, so that it was after something of a drive, but not an uninteresting one, that we arrived about seven o'clock at the broad flight of steps which leads up to its entrance. The dinner had begun an hour earlier, but the gallery would not be opened until an hour later. Private tickets were the *open sesame* that admitted us into a large and handsome entrance hall, on one side of which stood, ranged in their scarlet costume, the "Coat and Badge men" as they are called, who row a race every summer from London Bridge to Battersea, because of some dusty old reason and the will of some dead old Fishmonger. There were several attendants in the hall in the quaint livery of the Company, a sort of maroon colored gown, covered with black braid and tassels, and a few gentlemen were moving about superintending the arrangements.

We passed on through a very elegant cloak-room and dressing-room into a corridor filled with lovely flowers, exquisite ferns and orchids, to a reception-room, where some thirty or forty ladies were collected. A moment after our party entered the room, a gentleman in black robes standing at the door came forward and said: "Mrs. ——, you are the senior lady in the room whom I know, will you please lead the way to the supper room." So we went out into the corridor again and up a broad double stairway, and through one or two richly furnished ante-chambers, seeing on every side more and more beautiful flowers, arranged with great taste, and found ourselves at length seated in a large room at a nicely laid table, where refreshments were served to us off china decorated with the company's arms, which met the eye everywhere, and which one unlearned may describe as two mermaids rampant—very rampant, with the motto: *All worship be to God only*—an odd enough mingling of associations. From the supper room we passed into the adjoining drawing-room, a spacious apartment magnificent with mirrors, brilliant chandeliers, blue damask, white marble and scagliola, a Persian carpet and Chinese vases, fine bronzes, and ever the same Arabian Nights-like wealth of flowers. Here was to be seen the dagger with which Sir William Walworth killed Wat Tyler, and which he, a Prime Warden of the Fishmongers, bequeathed to the Company. And here we waited, looking at this strangely incongruous, suggestive old relic, and listening to pleasant music from a band, whiling away the time as might be, till the order came for us to go again into the corridor; there, as we stood all together, an usher called in turn the names of the gentlemen whose friends held tickets, and each party was led forward by itself, with no crowding or confusion, with a most agreeable quietness and decorum, to the stairs leading to the gallery. Seated there we looked down on three tables running the length of the handsome and brilliantly lighted hall—tables covered with gold and silver plate and flowers, and saw the line of Ministers, broken only by the great chair and rather small figure of the Prime Warden, at the horse-shoe shaped table which united the two other ones.

Mr. Gladstone's well-known face is instantly recognized. He was, of course, at the right hand of the Prime Warden. Then came two or three lords—Lord De Grey and the handsome young Marquis of Lorne, and Lord Cork, noticeable chiefly for his broad blue ribbon of St. Patrick, and half a dozen more whom one's eye quickly passed over to rest on the face most Americans would rather see than that of any other Englishman—need I say, of John Bright? It is idle to describe faces which have been a thousand times photographed, but at a distance one receives much less impression from Mr. Bright's look and movements of *ponderosity* than is conveyed by the common portraits. Force rather than weight characterizes his appearance.

On the left of the Prime Warden was the Lord Chancellor, Lord Hatherley, a slight, gray-haired, narrow-headed man, with a face suggestive of the moral intentness and enthusiasm that shows itself in what he says and does. Next but one to him was Lord Granville, round and rosy, and genial and shrewd. Then Tom, Dick, and Harry, as we might say of less high-born individuals, till the commonplace faces and lords were marked off as it were by Mr. Lowe's massive form and great white head—white,

not with age, but because he is an Albino. His face, with the half smile it usually wears, might be read one way or another till he speaks, partly because his eyes are for the most part almost or quite closed, from their evident painful sensitiveness to light.

Among the other guests in the room were several men of note; but many of the audience, I take it, were men of a similar standing to that of the Prime Warden himself, who, now a man of immense fortune and living in one of the superb houses in Kensington Palace Gardens, is the son of a Cumberland "statesman"—that is, of a man belonging to the upper portion of the yeomanry, a class which, to England's infinite loss, has almost disappeared.

The after-dinner ceremonies began by the passing round of the Loving Cup, and the singing of a grace and the national anthem by a choir of unaccompanied men's and boy's voices, and the formal toasts, not received with much enthusiasm, to the Queen and the Royal family. But even these were entertaining to a foreigner from the peculiar form in which they were given. The toast-master in a loud voice chanted, in a tone midway between that of a town-crier and an English priest, "My lords and gentlemen, please to charge your glasses; a bumper, if you please." After a moment's pause he cried again, "My lords and gentlemen, praise waiteth for the Prime Warden." Then the Prime Warden rose, read a little speech on the subject of the toast, and coupled it with a name. Then the toast-master proclaimed the toast and the respondent, and then shouted "Praise waiteth for the Right Hon. W. E. Gladstone," or whoever it might be.

Mr. Gladstone's speech was the first of any interest, though Mr. Cardwell had answered previously for the army and Mr. Childers for the navy, and some one less well known for the volunteers. Mr. Gladstone's health was drunk with the honors, and he was received on rising with what is called the greatest enthusiasm. He was listened to with the most respectful attention, and with constant expressions of sympathy and admiration.

His voice is sweet and powerful, without having the precise quality of richness, and reminded me strongly of Mr. Emerson's, or of what Mr. Emerson's might be after years of parliamentary speaking. His enunciation was faultlessly clear and simple, but the tone, the emphasis, was not quite so simple and conversational as my idea of parliamentary eloquence had led me to expect; there was just a little, and for the best effect, a little too much, of pulpit emphasis. There were certainly sentences that in their sound belonged rather to a sermon than to an after-dinner speech. His gestures were very quiet, none, indeed, of an illustrative kind.

His speech was entirely non-committal; more so than, I judge, had been hoped would be the case by the audience, who thought that since, as he himself said to them, "the policy and measures of the Session must in a few days be communicated to Parliament and the world," they might anticipate from him some well-defined sketch of it. Instead, he only went over for half an hour the old ground, with the same expression of strong moral purpose which he never fails to show, and which gains even greater force when you hear his voice and see his face. I cannot doubt that he has the most sincere and a very intense desire to do what is right. Whether he sees the highest right is another point.

One could not but watch Mr. Lowe somewhat closely while Mr. Gladstone was speaking, for the differences between them are deeper than mere differences of opinion, and imply a difference of temperament which must make the stand-point of one an object not easily seen by the other. And Mr. Lowe's face, one could at least fancy, betrayed this, as it grew more and more, perhaps superciliously, calm, while listening to Mr. Gladstone's earnest *preachment*, with what seemed like cold amusement playing over it as he took up his lorgnette to study "the enthusiast," as his well-trained brain may sometimes be inclined to call his leader. It was pleasanter to forget Mr. Lowe and think of Mrs. Gladstone, who was sitting so near us that we could perfectly see the honest changing expressions of her agreeable face, and many little indications of her lively, simple interest in her husband's success.

After Mr. Gladstone's speech, came the handing round of ices and fruits, and these refreshments were conveyed in the most courteous abundance, under inconvenient circumstances, to us ladies in the gallery.

Then the House of Lords was toasted, coupled with the name of Earl Granville, and we had an easy, rather jaunty, very Granvillian ten minutes' talk from the pleasant lord, who began with a joke: "I am bound to admit, if there is anything weakly in the constitution of the House of Lords, it is not owing to the want of its health being drunk," and went on with a smiling face to refer to the various projects for changing the character of the Upper House, prefacing these remarks with a few characteristic sentences to this effect: "There is always this substratum to our after-dinner speeches on this subject; we Englishmen think that the representative form of government is the best; we believe that the best form of representative government is to have two assemblies, and we pride ourselves that other nations have not been able to surpass or equal that which has grown up or been created by time and circumstances in this country. This argument is so complete that it makes quite a bed of roses for us Sybarites in the Upper Chamber to repose on, and it is sad to think that some of these rose-leaves at different times are crumpled by censure." He professed a belief, which the reporters left out of his speech as printed, and of which, I see, the *Daily News* doubts the seriousness, in the utility of the creation of Life Peers—an opinion very warmly received by his hearers.

He was followed by the Lord Chancellor—Lord Hatherley, who had an air of shyness suggesting rather a secluded and scholarly life than that of a judge. His face seemed to be even more delicate and less vigorous when speaking than when silent, and when he hastily glanced at the audience with his somewhat piercing and dark eyes, which were mostly cast down, I could not but fancy that I saw the same youth in them which kindled the fires of Abolitionism or of Wesleyanism. The two most marked points of his speech were the announcement that the Court of Chancery was now but a score of cases in arrears, and his closing very fervent and almost graceful expression of devotion to Mr. Gladstone, and to the principles profoundly dear to both of them.

Then came Mr. Lowe, called up to represent the House of Commons. And what a contrast! Perfectly self-possessed, with an agreeable voice and ready manner, he threw back by the coldness of his look and words any warmth of sympathy, as an iceberg does sunlight. The humor which at times lighted up his face, so that it became almost attractive, was changed in utterance into a clever sarcasm or a somewhat insolent ridicule of things highly prized by others. He made a great laugh through the room by saying, in reference to the unpopularity of some recent rather petty official reforms: "Every man mends his own pens when he wants to write any more, but it is considered intolerable that a government clerk should be asked to mend his." And yet one had not exactly the impression that he was supporting the Government in this matter—rather that he was sneering both at the proposed reform and at the public's criticism of it.

Then came a speech which nobody listened to, and then we knew from the Prime Warden that we were to hear Mr. Bright; and from him we heard words—and the only words uttered through the evening—which conveyed half-unintentional meanings, and were full of a deeper interest than their carelessly perceived sense. He was welcomed even more warmly than Mr. Gladstone, but one's pleasure in the applause diminished as he spoke, and one felt a growing conviction that neither the position he assumed nor the tone of his remarks could be heartily approved. It can scarcely be denied that John Bright, as a Cabinet Minister, ought to feel himself less able to "gang his ain gait" than when unconnected with the Government, and that there is a special impropriety in his claiming applause for himself individually from the public. But the whole tenor of his speech was to the effect: "I am still John Bright, neither more nor less, and I stand as much alone as ever." He not only did not imply any close sympathy or even regard between himself and his colleagues, but strongly suggested the contrary. He defined his position in the Cabinet as the head of a department of counsel, not of action, and with a slightly humorous turn of phrase, which only thinly veiled rather bitter warmth, he charged upon his colleagues the constant disregard of his advice. "My proud friend opposite" (Mr. Lowe), he declared, "says with his absolute air: 'The thing cannot be done.'" And Mr. Bright even went so far as to proclaim that unless he were absolutely silenced by his official position (the word "*gagged*," I think, would have better pleased him), he should take repeated opportunities of bringing his colleagues before the bar of public opinion. Both these passages the report in the *Times* omits.

It would not be surprising if Mr. Gladstone had been made uneasy, and not for the hour only, by this seemingly rash and ill-considered manifesto; and indeed one's conviction, which springs from several reasons, that the present Cabinet is not a very united Government, became last night every moment stronger as one saw more and more clearly such opposite elements of character in its various members as must draw them to different sides of every important question. And the thought could not but present itself that this occasion, which Mr. Gladstone spoke of as "the first time he and his colleagues had presented themselves publicly to any great body of their countrymen," might, perhaps, be also the last opportunity of hearing in the same evening himself, Mr. Bright, and Mr. Lowe.

With Mr. Bright's speech, the dinner, to all intents and purposes, came to an end. And when it was all over, one could not but question, "has one

word been said to-night implying a really statesmanlike recognition of the actual position and dangers of the country, or that gives any ground for hope of its wise guidance? Has there been one expression of thought for the welfare of the people, for the well-being of individuals, beyond the abstract desire to secure justice as the basis of national prosperity? Do these men only think, as they only speak, of the Irish Church and financial reform?"

Mr. Bright had said in the course of his speech, with a light and almost airy manner, that two years ago, when dining in this same hall, he had observed, in reference to the statement that the civilization of a nation is to be judged of by the manner in which it transacts its revolutions, that "we must have attained a very high state of civilization in England, because while we were enjoying the abundant and elegant luxury provided for us, the representatives of the nation were engaged in making a formidable revolution in the House of Commons."

Does he now not see, or does he only appear not to see, the dreadful possibility that unless there is some speedy lightening of the load borne by men who are dumb as beasts of burden, a revolution not quite so civilized may occur, and this abundant and elegant luxury be trampled under foot by representatives of the nation less well-known but not less powerful than those who sit in the House of Commons?

Correspondence.

A DIFFERENCE OF OPINION.

To the Editor of the Nation:

The *Nation* of February 18 contains an article, under the head of "The Constitutional Amendment," the sentiments of which appear to me very just, in the main; but I would point out one statement in which I cannot wholly agree with you. Our difference of views may serve to illustrate an important point. You state that "There is a feeling implanted in the breasts of people long accustomed as ours have been to self-government which makes military rule odious, and that feeling carried the day and hurried the reconstruction acts upon us before we were prepared for them."

This statement with regard to the odiousness of military rule to a free people is undoubtedly true, but it does not appear to me to sustain the inference drawn from it, namely, that it was that feeling among the people that carried the day and hurried the reconstruction acts upon us. According to my way of viewing matters, the want of a proper management of government affairs during the rebellion was due entirely to the incapacity of the administration, and not to any defect or impracticable quality in the people. Never was there a people who offered themselves and their resources more freely and untiringly for the use of their government, and never was there an administration that derived so little comparative return from the application of such offerings. The fault lay in the administration: the education of its members had been merely *political;* they knew nothing of positive government—of that kind of government which is as necessary to republics as it is to monarchies in times of war. Unused to the exercise of positive power and to the accurate logic of positive ideas, they met the hostile political principle opposed to them in the same way that the real politician must ever meet such opposition, that is, by trying to circumvent it with the practice of low cunning. As an illustration of this fact, they bent their whole energies upon the scheme of intruding upon our sacred *magna charta* a provision for prohibiting slavery, a measure which, considering that the people had already joined issue on that question before the last supreme tribunal to which it could be carried in this world, showed a want of confidence in our cause and of respect for our Constitution and ourselves which appeared like the last degree of fatuity. Their only policy besides this seemed founded upon the belief that all they had to do to ensure peace was to knock the musket out of the hands of the rebellion, and then leave the rebels to their wise reflections. But in fact the greatest danger to the country from the rebels has arisen from the secret opposition of their leaders to their constitutional obligations, before and since the war, and not from their armed assaults upon the Government. These leaders found it easier to manipulate the votes of their ignorant and deluded followers than to direct their armed efforts against a Government that stood as the poor man's best friend.

The idea which I myself had formed as to the timeliness of the reconstruction acts is that, instead of being hurried upon us before being prepared for them, the fault lay in their not having been made the policy of the administration in the conduct of the war. They were rendered necessary, as acts of Congress, only from the fault of the administration. The end proposed by these acts ought to have been secured by the authority of the Executive through the means and appliances of war; but as the administration failed to perform its whole war-duty, the necessity at last came upon Congress of attempting to supply the defect, and in the effort that body was inevitably forced into the unconstitutional measure of assuming executive functions—a step which endangers our republican institutions more than the rebellion itself need to have done, if it had been properly dealt with.

J. W. Phelps.

Brattleboro, Vermont, Feb. 19, 1869.

THE ALABAMA CLAIMS.

To the Editor of the Nation:

The sentiments respecting our differences with England expressed in "America's" communication in the *Nation* of February 18 are no doubt shared by many of our countrymen. For this reason it may not be superfluous to point out what seems erroneous in them. "America's" proposal, if I understand it, amounts to this: "Pay the sufferers by the depredations of the *Alabama*; wait till England is at war; then let the citizens of the United States go into the privateering business on a large scale—the Government meanwhile winking at their occupation."

By paying the *Alabama* claims our Government will affirm that England was responsible for their existence. Otherwise the claimants would have no better case than owners of property destroyed by the rebel armies. Admitting the offence therefore on the part of England, America is advised to reject legal compensation and to appeal to lynch law. A mob is not the best defence of public order, at any rate when even inadequate justice is to be had from the courts. Nor is that a good member of the family of nations which refuses the best compensation to be had by fair means, the best which can be decently *asked* (as you have yourself shown), that it may watch its chance for a lawless though perhaps gainful revenge.

Again, shall we not give much ground for the charge that our moral indignation at England's failure in duty was only cant or hypocrisy, if we go deliberately to work to pursue the very same course ourselves?

Nor am I desirous that America should advertise its mercantile marine as a force of piratical mercenaries, to be placed at the disposal of the next King of Dahomey, or more civilized potentate, who may chance to be fighting for some cause, villanous or otherwise, against England—or any one else indeed, for the principle suggested will be apt to be applied in other cases than hers. When we make an alliance let us make it openly.

The state has not to do with the theory of Christianity or the theory of morals. It *has* to do with the practical application of the theory in its own sphere. Such application is not made by preferring revenge to justice, gain to uprightness and fairness of dealing, and perpetual enmity between nations to impartial, independent, and dignified friendship.

"America" himself recognizes this in his illustration from history. Would he have quoted it with the same approval had the English commander ransacked the annals of France to find some unfriendly treatment of England, and made *that* his model? Admiring justice when he sees it, he ought not to advise iniquity as the policy of his country.

Caring most for the true moral uprightness of my country, next for its genuine honor won by such uprightness, and only after and below these for its material prosperity, I earnestly hope that she will not violate

Integrity.

Brunswick, Me., Feb. 24, 1869.

To the Editor of the Nation:

Sir: If your correspondent "America" is a ship-owner who suffered from the depredations of the pirate *Alabama*, his indignation is natural, but the way in which the question as between England and America should be treated is of too serious consequence to be left to feeling or personal interest.

We have all felt bitterly the unsympathizing attitude of England, or rather of certain classes and of many individuals in England, during the war of the rebellion; but perhaps we have not sufficiently considered that, however hard it may be, we cannot claim the sympathy and friendship of others as a *right*. Shall we then, as many have suggested, having let our wrath wait while, during the war, it was unsafe to gratify it, wait further till England is at war and weak, and then strike and take our revenge? Is this *manly*, adopting the standard of chivalry? Is it *wise*, for the sake of recovering a few millions, even if unjustly taken by England, to spend hundreds or thousands of millions, and many lives, not to recover the few millions but to avenge their loss, or perhaps to punish England for unfriendly feelings? Is it wise or *right* to set at war the peo-

ple of this country with the masses of the manufacturing laborers of England, who would be the first and greatest sufferers, though they did so much to prevent hostile *action* against us on the part of the governments of England and France?

And if we adopt a higher standard, is it right so to treat this question as to endanger the peace of two nations which should stand together in the joint effort to advance the civilization of the time; and to bring about such misery as we have all witnessed enough of during the past few years? And, if we profess to be a Christian nation, are we treating this question as we ought to treat it on a Christian standard? Let us not, at all events, imitate the bad English example quoted by your correspondent. There is no doubt that England did us a grievous mischief and wrong, but we may do a greater to ourselves, as well as to the civilization of the world, by our mode of treating the settlement of this question. X.

BOSTON, Feb. 23, 1869.

Notes.

LITERARY.

ALONG with as much, perhaps, of the slight and ephemeral as has been printed in any American city, Philadelphia has produced more than one work which reflects credit on American scholarship, and which recalls the time when that city was, without dispute, the seat of American literature; the place to which authors made pilgrimage from Boston as from Savannah. One such work as we have mentioned is Mr. Austin Allibone's bibliographical and biographical dictionary of English literature, of which, some years ago, we had the first part from Mr. George W. Childs, as publisher. Messrs. J. B. Lippincott & Co. now announce that they have in their hands the manuscript of the two volumes which will complete the work. Each of the volumes will be of about the size of the first one—a trifle smaller, possibly—containing nine hundred pages, or thereabouts. The cost of the whole work to persons who now, for the first time, subscribe for it will be eighteen dollars. The same house have in press, besides various technical works, a cheaper edition, revised and abridged, of the *Memoirs of Baron Bunsen*, Mr. William Gilbert's *Life of Lucretia Borgia*, which is based, he says, on new and important documents discovered by him in Italy, and which may probably enough be of a whitewashing character.——Messrs. D. Appleton & Co. announce the address delivered by President Barnard, at Chicago, before the American Association for the Advancement of Science.——Messrs. Harper & Brothers have in press English novels, of course, and will reprint, also, Hartwig's *Polar World*, which is well spoken of as a book of travels, and Wallace's *Malay Archipelago*, which, as being the work of a naturalist of repute, will have a special value apart from the interest of the general subject.——Mr. Gladstone, who "obeys the voice at eve obeyed at prime," has prepared some further papers on Homer, which he calls *Homeric Studies*. They are at about this time being published by Macmillan, in England, and will be published here by Messrs. Charles Scribner & Co. The same firm will publish Mrs. Warren's *House and its Furnishing;* Bulwer's translations of Horace; a translation of a book in which Thiers, the veteran French politician, has unexpectedly launched, or is about to launch: it is a *History of the Natural Sciences*. ——Messrs. Gould & Lincoln will have ready, in the course of this week, the volume for 1869 of their well known *Annual of Scientific Discovery*, again from the editorial hands of Doctor Samuel Kneeland.

—It seems that there is not going to be any effective denial of the severe charges which recently have been brought against half a dozen of the English publishing houses. We have waited some time before speaking of the matter to see if some of the English mouthpieces of "the trade" would not, when the news of the accusations got over to them, make some valid defence, but nothing of the kind has come to our notice. It appears, then, that a Mr. Shaw, a bookseller hailing from Canada, went over to England, and letting it be known among the publishers that he had a way of getting goods across the frontier into the United States without paying much of the regular duty, several of them—all men of repute—became his willing accessaries in his fraudulent scheme. So it appears. Some of the men that he solicited refused; we have the name of one gentleman who declined to have anything to do with the business, when Mr. Shaw—as a means of getting credit—frankly said to him that his plan was not to sell the books in Canada, but to take them into the United States—a job for the doing of which "he had facilities." It is not to be supposed that what he said openly to one man he kept concealed from others in a similar relation to him. He had but little money or credit; one of the people who did trust him wrote at the same time to the banker in Montreal, to whom the books were to be consigned, to tell him that Shaw was not at once to have *all* the books, but only those "marked for Milwaukee." Besides throwing a little light on the estimate of his pecuniary responsibility which was held by one of these gentlemen who were trusting him to the extent of sixty or seventy thousand dollars (in gold), this letter is valuable as evidence in regard to another aspect of the affair. The publisher must have known that the books were to be taken to the United States. "But not necessarily," it may be said, "that they were not going to pay any duty, or to pay only a small part of the duty which they should have paid"—(as a matter of fact they were brought in at a valuation of $5,000, which was one-twelfth or one-fifteenth of what they were worth. This story is honorable to some of our American officials, it will be seen, as well as to Mr. Shaw and some of the London booksellers). But even let that be so, that the publisher was ignorant of the proposed fraud and trusted Shaw for some sound business-like reason, the business is not so very much better on that account. He, at least, knew that he was not doing right when he sold to come here large editions of copyright works by American authors; and this he did the fact being shown when the books were seized, indeed the seizure being made because of that fact. This, we should say, is an affair that ought to be borne in mind by Englishmen and Americans both, when next the well-worn theme of the rascality of Yankee publishers comes up in conversation. No one hears of Mr. Fields, or Messrs. Little, Brown & Co., or Messrs. Leypolt & Holt as having been concerned in little affairs like this one which has got Messrs. Bell & Daldy's names into bad odor. It was not for the sake of saying this, however, that we have spoken of the matter, but to call attention to the part borne in its later stages by Mr. Solicitor Jordan. When Shaw came over here he somehow got *all* his packages, not the Milwaukee one alone, from the banker and consignee. This gentleman then, having acted contrary to his consignor's orders, might properly have been required to make good Bell & Daldy's loss when the books, unpaid for, were seized and confiscated. But the firm, or the firm and the banker, bethought themselves that if the books could be got back from the United States Government on the ground that the man in whose possession they were seized had not paid for them, it would be a very good thing—which there is no denying. So they asked this small favor of Mr. Jordan—there is a letter on file in his office which shows Bell & Daldy's complicity so far as it can be shown by the reference to Milwaukee, and there are some invoices on file there in the writing of their clerks, which speak of Cincinnati, St. Louis, and other towns to which no English bookseller has a right to send American copyright books—they asked this favor of Mr. Jordan, and he actually accorded it. The other publishers appear to have promptly, as soon as they heard the news, set down the amount of their venture to the account of profit and loss; what they will do another time depends perhaps on who may be the Government's legal advisers.

—Most boys of fourteen and upwards have read in Dumas of the Man of the Iron Mask; and the theory which the novelist adopts as to the birth and station of this mysterious personage is one of the most plausible of the many which have been suggested: the theory, that is, that he was the twin brother of Louis XIV., doomed to live and die unknown for fear of political dissensions if there should be two claimants to the throne. From this, conjecture has ranged to an Armenian patriarch ravished from Constantinople, to a son of Anne of Austria and Cardinal Mazarin (or the Duke of Buckingham), to the Duke of Monmouth, to Nicholas Fouquet, to Mattioli di Bologna, minister of the Duke of Mantua, etc., etc., and still the riddle has escaped solution. But a late number of the *Petit Moniteur Universel* states that M. Maurice Topin, a young writer who received a prize of 3,000 francs from the French Academy for his essay on "Europe and the Bourbons under Louis XIV.," has accidently won a much greater distinction. In his researches among the archives he has satisfied himself that he possesses incontestable proofs of the name and rank of the Man of the Iron Mask—in short, what the world has been eager to know for nearly two centuries. But the discoverer is far from taking pity on an anxious, curious, and perhaps a little incredulous public. He has an uncle, M. Mignet, to whom he first communicates his good luck; and M. Mignet, to show himself worthy of so great a confidence, advises his lucky nephew to put down all the facts in a letter, addressing it to the president of the Academy of Moral and Political Sciences, and making him the trusty depositary of his secret until ready to draw it out and astonish mankind. M. Topin does so; so for us there is nothing to do but to wait.

—Since, as we remarked the other day, we are not likely to return to apprenticeships, in printing or in any other handicraft, and have devised nothing to take their place, the following notice, which we find in the Milan *Perseveranza*, of Jan. 28, has a decided interest as suggesting a way out of our present difficulties:

"*Professional Typographical School of Milan.*—With the first of February proximo, at 8 p. m., instruction in this school will regularly begin. During the present month, at the school building, Piazza Mercanti, from 8 to 10 p. m., all journeymen printers (*operaj tipograft*) without distinction, who cannot on account of their age or from any other circumstance attend the regular courses of the school, have an opportunity of entering their names for a special course of arithmetic and *amministrazione* applied to typographic art, which will be held on Sunday afternoons between 2 and 3, by the same instructor as last year."

Can any trades union point to a similar training school which it has established, in order, while demanding of the employer an increase of wages, to show that it was striving to produce workmen worthy of higher pay? Thus far, in our experience of them, the two things are incompatible. The distinct aim of the unions is to level down, not to elevate; and the greatest heresy in their eyes is the doctrine that men should be paid according to their abilities, and not according to their appellations—printer, baker, cloth-cutter, saddler.

—We have mentioned in our list of announcements quite a number of English works which our publishers are going to reprint. Several others may be mentioned as having, for one reason and another, an interest for the American general reader, although not all likely to be republished. One is Mr. Hepworth Dixon's "Her Majesty's Tower," which is "dedicated by express permission" to the Queen. The book appears to be but a farrago of true and false statements and out-and-out "fine writing" about the Tower of London, a subject which, says the *Saturday Review*, Mr. G. T. Hill has made absolutely his own forever. But considerations of this kind never come home with great force to the mind of the professional maker of books. A book that we hope to see soon announced by some American firm is a new edition, edited by Mr. Mill, of the late John Austin's lectures on jurisprudence, which has been held at a price that almost put it out of the reach of the class—here in America at all events, not usually a rich one—who most wanted it. Mr. Mill attended the course of lectures and took notes; these he now places at the disposal of the lecturer's widow. Another rare book which all lawyers will want is an edition, very copiously and systematically annotated, of Reeve's "History of English Law;" and there are not many of them who will not take an interest in the spiteful carping of Lord Campbell in his biographies of Brougham and Lyndhurst; a bad old man he seems to have thought each one of his friends, and the reader of his "Lives" gets quite a similar impression of him himself, and the further impression of his being the most ingeniously malevolent of the race of biographers; and yet gets, too, a curiously inconsistent impression of his malevolence being at the same time ingenious and unconscious. A long-known and well-liked writer, popular here as at home, reappears in the new book by Mrs. S. C. Hall. "The Fight of Faith" is the title of a novel that she has just published. There is talk of a pension for her. Whoever read Sir Henry Bulwer's set of biographical essays on Canning, Talleyrand, and other "representative men," in which there was in very agreeable combination the knowledge and the "tone" of the man versed in affairs with a literary skill quite marked, will be glad to know that the author is to give us a life of Palmerston. The family is a very literary one, but there would be nothing very surprising to some persons if the baronet's biography were to outlast his sister-in-law's novels, and his nephew's verses, and even all his brother's labors, except his plays, which may "keep the stage" and give him a singularly appropriate immortality. We should have said above, when speaking of Mr. Mill, that he intends to publish a new edition of his father's "Analysis of the Phenomena of the Human Mind." It will have notes by Mr. Grote, Alexander Bain, and Mr. A. Findlater. A noteworthy book—not English, however, but German—of which several copies may well enough be sold among our Shakespeare enthusiasts, is the folio of illustrations of the "Midsummer Night's Dream" printed at Heidelberg, and designed by a Mr. Konewka. The pictures are wood engravings of twenty-four silhouettes, or shadow-pictures. With these the comic papers long ago made us all familiar, but to see them applied to the illustration of Shakespere, and with success, and to the subtle and sentimental fancies of the poet as well as to the humorous scenes and incidents, is strange. We have space only to mention the "Chaucer's England" of "Matthew Browne," who is also "Henry Holbeach," and "the author of Lilliput Levee," besides being himself; Sir J. T. Coleridge's "Life of John Keble;" a complete edition in twelve volumes of Hugh Miller's works; a promised "Shelley"—if promised is precisely the word—from Mr. W. M. Rossetti; a "Coleridge," with some prefatory talk by Mr. Swinburne, and a history—praised as true to the spirit of the time, so far as that is disclosed in Froissart—of the "Life of Edward the Third," by Mr. W. Longman. This is the proper place to mention, too, that Mr. Orridge, late chairman of the City Library Committee, has reported to the Common Council, (London,) that he finds in the library some six or seven hundreds of letters from all the prominent statesmen of the Elizabethan period and from the queen herself. For two centuries and more these documents have lain neglected. As usually happens, now, when people find new documents relating to later English history, Mr. Orridge charges Lord Macaulay with ignorance and carelessness.

—As announced, the sale of the Emperor Maximilian's (or, as it is called from the collector, the Andrade) library took place at Leipzig, Jan. 18–27, at the establishment of Messrs. List & Francke. Agents were present from leading houses of England and the Continent; the United States being represented by Mr. Sabin, of this city, who purchased about one seventh of the collection, partly on account of the Library of Congress. The highest interest of the sale centred in six volumes published in Mexico, 1544–47, one of which (Çummaraga's "Doctrina Breve") was the first book printed in America with date affixed. It should be cause of lasting regret that this book, at least, was not ordered to be secured at any price for the Library of Congress, but that it has instead fallen to the British Museum, which bought it for 805 thalers. The remaining five volumes brought 485, 300, 461, 400, 340, thalers—famous prices, which, for an American importer, must be reckoned at about $1:33 in currency for every thaler. The sale as a whole was very remunerative, and any one who desires a record of it can obtain of Tross, Paris, a large-paper copy of the catalogue "avec les prix d'adjudication" (marked 931 of Tross's *Catalogue No.* 2, 1869). The private record is not to be had for the asking, but we believe it to be true that the auctioneers, Messrs. List & Francke, had, in company with Butsch, of Augsburg, purchased the collection before it came to sale; the latter afterwards selling out his interest to Tross. As these parties probably acted also as agents for individual buyers, the opportunities of collusion were very great. Thus, a part owner of the library could bid, as if on his own account as bookseller, against himself as agent; and it is rumored that not only there was this double dealing, but even the books thus knocked down at "kited" prices were, in some instances, resold at an advance for the profit of the "agent," as if he had bid them in on his own capital. Not all foreign booksellers, we know, would be guilty of such a breach of trust.

—Apropos of book auctions, Mr. Welford tells, in the last *Book-buyer*, of a recent sale of the Marquis of Hastings's library, consisting of 24,000 volumes, accumulated by the Rawdons and Earls Rawdon, of Huntingdon, and apparently having had no addition since the days of Lord Rawdon, who figured as a British commander in our Revolutionary War. No catalogue was made of this collection, but merely a brief and imperfect list; the books were tied up in bundles quite indiscriminately and disposed of without examination in four days. On opening their respective "grabs," purchasers found, for one prize, "a copy of John Eliot's Indian Bible, the second edition, clean and perfect as the day it was printed," and, for another, "a volume of tracts (in German) from Benjamin Franklin's press—perhaps unique." Besides these, original plans and drawings of Lord Rawdon's campaigns in the Southern States came to light.

MR. BEECHER'S SERMONS.*

NOTHING is, of nature, so ephemeral as a sermon. There is nothing disrespectful in saying so. The true preacher aims at the moment, by methods fit for the moment, to impress truth which is eternal on the minds and hearts of those before him. If his object were other than this, he would simply read or repeat to the congregation the New Testament or any other statement of divine law which he considered the best possible. The true preacher, not satisfied with such a repetition of the law, stands before the congregation watching the play of every feature even—studying while he speaks the changing aspects of those men and women, striving with all his skill, and praying God for more, that he may illustrate the eternal truth in such form and method as may best suit the necessity of that passing hour.

This is the real reply to the sneer sometimes made regarding sermons, that the most famous sermons of one day lose all their power and flavor in a generation. If this were true, it would only show that the sermon was so precisely fitted to its own time that it did not fit another time. That we of America in 1869 are not interested in what South said in England in 1700, may be no more strange than that an audience in Rome to-day would not be long interested in an address made by Hans Andersen in his native tongue. It is all a matter of language.

* "Sermons. By Henry Ward Beecher, Plymouth Church, Brooklyn. Selected from published and unpublished documents, and revised by their author." In 2 vols. New York: Harper & Brothers. 1868.

This prime essential of the sermon keeps the true preacher in certain lines of thought—even of study—and of discourse which the preacher of the second class is constantly tempted to overstep. For even men of distinguished ability will preach sermons sometimes which are essays on metaphysical or ethical subjects—which are historical treatises—or in some other form elaborate studies of the opinion or action of the past, or of other men than those whom they are addressing. Such essays may be very valuable. They may in their way do great good. But they are not sermons of the first class. The sermon, in its essential nature, is an address to a particular congregation—which illustrates truth from the special position and point of view of the hour and the place of its delivery.

Mr. Beecher's sermons are precisely such illustrations of the truth, as he feels it and believes it. The collected volumes of them show to any man who is curious, why Mr. Beecher is reputed the first of preachers in America, and they show how thoroughly he deserves that great reputation. They show how completely at home he is in the pulpit, with what victorious power, and yet with what reverence, he compels the mere traditions of the pulpit to give way on the right and on the left, as he addresses himself to his Master's work. If there are left any persons who consider him, as Southern people were taught to regard him, as an eccentric buffoon, thrusting himself forward into every oddity or novelty—or, as other persons have fancied, as a designing politician making the Plymouth pulpit a masked battery in the service of some party organization—these two volumes will show to such people, if they have any sense at all, how completely they have been deceived. Mr. Beecher is ingrain a preacher. We are almost tempted to say that he is nothing else—and that in a very different meaning from Lamb's when he said the same thing of Coleridge. Whether he writes for the *Ledger*, or lectures before a lyceum, or speaks on the ruins of Fort Sumter, he never loses the central idea of the true sermon. His wish is always to illustrate truth by the freshest illustration of the present hour.

But, on the other hand, any young fool—if the word may be permitted us in consideration of certain past experiences—who has been licensed to preach and is lazy enough and conceited enough to think that the sermon thus considered is a trifling matter which he can manage extemporaneously on Sunday morning, by jotting down a few words of a brief, interspersed with anecdotes from his week's reading, will do well to look carefully at one or two of these sermons and addresses, and seriously take to heart the contrast between them and the slip-slop which he had the impudence to pour out on the devoted heads of his poor fellow-creatures who were led, by their veneration for an institution, to go and be miserable under his ministrations on the last Sunday. Mr. Beecher speaks from a short brief, and not from a written manuscript; almost all the American church-goers know that. But in these collected sermons—as reported by the first-rate reporting skill of our time—there is no evidence of carelessness. There is in each of them a complete plan, steadfastly held to from beginning to end. The vivid poetical illustration—which is what people are most surprised by, and most delighted by—is not, more than one time in ten, the accidental suggestion of the instant, shot in by a happy inspiration. It is what is of a thousand times more worth—bound up by natural analogy with the thing illustrated, an analogy of which this man who speaks is certain, because he has brooded over it in different moods, tested it by different tests, proved it as a vital and essential analogy, and made himself so at home with it that he can handle it with even a playful ease. He is not trying experiments with his poetry when he is in the presence of his audience.

No one has ever joined the audience in the Plymouth church without the feeling that Mr. Beecher is not only one of the most eminent of public speakers, but that he is at the same time one of the most religious and truly reverential of ministers. The real charm, to a worshipper, of that united service of thousands of people, is that the master-mind under whose influence they are for the hour is the mind of a man who is not only a quick thinker, and not only a person of high poetical susceptibility, but who is also a profoundly religious man acting and speaking under the most real and vital religious conviction. The popular estimate of him among persons who have not joined in the worship of his church may be different from this. The popular estimate of many public men is wholly wrong; and just as people try to account for Channing's success by talk of his correct English style, and for Spurgeon's success by talk of his Boanerges manner, and for Chalmer's by talk of his executive skill, they try to account for Mr. Beecher's fame by this or that trick of method. Every now and then, in one's travels, one lights on some "smart" country town, where a "smart" young preacher, with his collar turned down and his hair properly brushed, has, on some such theory as this, set up an imitation of Mr. Beecher. But the imitation does not answer; the people know gold from oroide, after they have handled the oroide a little, and if necessary scratched it with their penknives.

So far, then, as a record can be made permanent of a series of impressions on a body of people, which were not meant for posterity by him who spoke, but for the accepted *now* in which he spoke, these two volumes have great value. Mr. Beecher does not lay much stress on his theology, nor do the special theologians of the world often refer to it. But he has a theology of his own, carefully thought out. People will not read these sermons, however, to hunt out the theological system. They will read them Sunday after Sunday, because on their quiet and thoughtful days they will find in them what are clearly true statements of a true man's deepest convictions, lightened up and all on fire—which in their mere language are spoken in the dialect of to-day, and in their poetry are illustrated from to-day's keen and cheerful observations. They will not convince sceptics, they will not be read at all by the Gradgrinds; but, for all that, they will make a great many good people better, a great many cheerful people more cheerful, and to a great many puzzled people they will explain intricacies in life which, unexplained, might make life a failure.

THE MAGAZINES FOR MARCH.

Of Mr. Charles Reade's new story it will not be proper to speak at length until he has got further into it than in the three chapters before us in the March *Galaxy*. What of it we already have gives promise that we shall not miss anything of the author's accustomed vigor, and that his good heart, or rather his strong feeling for people in any way oppressed, will find full and forcible expression in "Put Yourself in His Place." That it will be a good story is, of course, a thing certain; whether or not it will be one of its author's best we shall be able to see hereafter; he has two distinct manners. At all events, Mr. Reade in his second-best manner is almost infinitely superior to most magazine or other novelists in their best.

Mrs. Julia Ward Howe prints in this month's *Galaxy*, for the sake of greater publicity, a letter which she has recently written by way of reply to a female friend of hers who has been asking for her opinion on the question of women's voting. Mrs. Howe is an advocate of "female suffrage;" but except so far as that fact goes we should imagine that her correspondent might have found her reply not very satisfactory. The right to vote is, whether in the case of man or woman, a means to an end, and Mrs. Howe seems to have no clearer notion than most of the women who have spoken on the woman's rights cause as to what it is precisely that she has in view. Her article is, however, a well written contribution to the literature of unrest, so to speak, with which intellectual women are disturbing their brothers and sisters—their brothers more than their sisters, apparently, for the women in general seem to be slow to move.

The article entitled "Is Being Done," by Mr. Richard Grant White, we shall take occasion to refer to hereafter. Meantime, we need hardly caution people who have given any consideration to the auxiliary substantive verb not to believe too much of what is said to them in regard to this or that form of it. Mr. Justin McCarthy's "English Positivists" is a very good essay, though its title is too narrow for the subject, not really descriptive, concerning the little knot of intellectual English radicals which includes Mr. Morley, Mr. Beesly, Mr. Goldwin Smith, Mr. Mill, Mr. Frederic Harrison, and a dozen more of the men who are busy democratizing England. "Will Murder Out?" by Mr. Edward Crapsey, is an article which possesses in a high degree the interest that always belongs to stories of mysterious murder. The impression upon the reader is increased by the fact that the stories told are told as a policeman would tell them, and the sense is never lost of the reality of the horrors related. In "Tea and its Adulterations," Prof. Draper makes out tea, and especially green tea, a worthy companion of the coffee he exhibited last month. No tea-drinker can afford to be poor if the half is true of what Prof. Draper tells of the turmeric, gypsum, lead, and arsenic with which, under the name of hyson or oolong, the Chinese and our own venders poison and paralyze us. In the third of his series of papers about "New York Journalists," Mr. Benson writes pretty well about Mr. Curtis—better of him, perhaps, as an author than as a journalist pure and simple. When one thinks of him as a writer for the press, it seems that no writing about him is wholly good which fails to take into account the great service which he has done the average voter in the editorial page of *Harper's Weekly*—which helped to preserve the Union. For years it presented to a couple of hundred thousand householders—probably more—in a manner so attractive as to make them doubly convincing, sound political views, and this at a time when that the average voter should hold sound views in politics was a matter of vital importance. The

minor departments of the March *Galaxy* are of their ordinary degree of goodness, except the "Driftwood," which is still better than usual.

Mr. Parton's "Popularizing Art," an article on Mr. Prang's chromo-lithographs, is as attractive—using that word in its strict sense—as anything else in this number of the *Atlantic*. "Popularizing Art" is the title which he characteristically gives his essay, forgetting that there is a lively and as yet unsettled dispute as to whether chromo-lithographs are "art" at all—at least if we give to that term any but a very wide meaning. We are far enough from being willing to make attempt at defining the limits of "art" in such a way as that painters, who may be supposed to know something of it, should accept our definition. But this we think may be safely said of chromo-lithography and painting: We may say of any picture that it is what some man has tried to say to us in a language which, though it is his natural speech, is of peculiar difficulty to us who try to understand it, and furthermore is extremely difficult to him who tries to speak it. There is much labor to express his meaning; everything is hard; whatever gets itself said at all is said by means of an infinity of small, nice touches; the inflections and tones are nearly the whole talk; one must, as it were, feel the speaker in each word. Now the artist, brush in hand, trying this light and that, and this and that tint, succeeds, sometimes, in so employing his inadequate means of communication—and often he hardly knows how he has done it or when it is done—in making the canvas tell us his meaning. Chromo-lithography will do the same thing when chromo-lithographers use as many processes as the painter may be said to have used when he has touched and retouched a hundred and a thousand times. But this the chromo-lithographers have not done yet, and their work, therefore, fails in the case of any but works of a sort which have not overmuch meaning in them. It may be said that for a picture to make a good chromo-lithograph it must have been a chromo-lithograph from the start; it may have had certain beauties, it may have had many, but if the stone and the press could paint it there must have been in it originally a want of the finer qualities which belong to good pictures. In short, chromo-lithographs—of which we do not speak with any intention of disparagement—are a means of enjoyment, we will say, and of education, and of civilization; they may be almost anything, but, accurately speaking, they are not "art" in the sense in which art is, perhaps, best worth attention. This, or something like this, is, we suppose, what would be said by people with whom painting is—we were going to say a study, the business of their lives—with whom it is the passion of their lives, and to whom and such as they we owe all its triumphs.

The other articles of this number are of the *Atlantic's* ordinary sort, and none is particularly noticeable as deflecting from the standard, one way or another. "Our New President" seems like a very accurate study of Grant's character; "A New Chapter of Christian Evidences" contains comparative evidences of its truth, but persons who are reading for absolute evidence will here find none of it; the "Foe in the Household" is to be praised as a story of much freshness of flavor.

Mr. Moncure Conway does the good thing of the March *Harper's*—another of his "South Coast Saunterings," which talks very agreeably indeed about Shelley and the Shelleys, and Godwin and Mary Woolstonecraft, and Henry Taylor and other poets and men of letters.

Mr. Justin McCarthy's "My Enemy's Daughter" will be a novel worth reading, we should say; and if the elderly gentleman that turns up in this instalment does not prove to be a decidedly new character in fiction, we are mistaken. The Madrigal Concert at Steinway's the other evening—which was so entirely good that it is a wonder the public does not insist on more of them—is the theme of a characteristic and nice little essay by Mr. Curtis in the Easy Chair, and for the rest the magazine is what all the world knows for *Harper's*.

The American novel in *Lippincott's* is not very much to our taste, but shows signs, we think, of improving. The magazine in general has a little indecision of tone, and occasionally, as in the case of this number, a prevailing mediocrity which there ought to be some means of preventing in a periodical of the pretensions of *Lippincott's*—one, too, which as a rule nearly makes its pretensions good. The Monthly Gossip, however, is always admirable of its kind: no other of the magazines does its purely literary small-talk in half so pleasant a way; and the gossip is that of a bookish and scholarly man, and is instructive as well as entertaining.

The more frivolous readers of *Hours at Home* will be glad to see that Mr. Schuyler's translation from the Russian, "Sevastopol in May, 1855," is to be continued; it is a very spirited and agreeable story, as well as a vivid sketch of life in the besieged town. For readers of a more serious cast there is a good review of the new life of "Raleigh" by Professor Fisher; some (translated) reminiscences of Schleiermacher; more of Professor Porter's "Books and Reading," and "the usual variety of other matter."

In *Putnam's* Mr. Bayard Taylor tells us in verse of the usual quality of his a rather striking story of Napoleon, which he calls "Napoleon at Gotha." "A Violin Stop," by Mrs. Stoddard, is concluded, and concludes thus much better than it begins that there is an overturn of the reader's expectations as to the relations in which the parties stand to one another. But for the rest it is like Mrs. Stoddard's other work; it is surely a very vicious sort of style—the innuendoing, riddling fashion of talk in which she indulges herself. Nor are intense young lovers, rabidly in love, pleasant people to have about. Perhaps "A Royal Wedding in Cashmere" is the most readable of the other papers. A valuable feature in *Putnam's* is the very full list of new publications which is printed at the end of it.

IMPORTATION OF BOOKS

FROM

ENGLAND, FRANCE, AND GERMANY,

For Public and Private Libraries, Booksellers, etc.

The Subscribers have special agents in London, Paris, and Leipzig, and direct correspondence with English, French, and German Publishers. Orders for a single Book or Periodical, or for Books and Periodicals in quantity, will receive their most careful attention.

ORDERS FOR FOREIGN BOOKS, Etc.,

are forwarded as often as once a week, and answers may be looked for within six weeks. *Books, etc., for Public Libraries, College and School Libraries, pay no duty.* Catalogues and Bibliographical Works are kept for reference and may be consulted at all times. Catalogues and Cheap Lists of particular Publishers are supplied gratis on application.

JOHN WILEY & SON,

2 Clinton Hall, Astor Place, New York.

The Switzerland of America.

A SUMMER VACATION IN

THE PARKS AND MOUNTAINS OF COLORADO.

By Samuel Bowles,

Author of "Across the Continent."

A volume of 175 pages, Price ONE DOLLAR.

It describes the Pacific Railroad—the Scenery on its Route—and how it is built; the wonderful Regions of the Rocky Mountains in Colorado, below the line of the Railroad; their grand Snow Peaks; their great enfolded Central Parks—vast Prairies of Grass and Grove and Flowers, seven to ten thousand feet above the sea level; experiences in Camp Life with Indians, Ladies, Vice-President Colfax, and Gov. Bross; the claims of Colorado to be the Switzerland of America, the resort of pleasure-seekers and invalids; the Charms of Atmosphere and Climate in the Centre of the Continent; and the state of the Mines and of Agriculture in this great central region,—all in the graphic and sympathetic style that made "Across the Continent" the most popular book of American Travel.

*** Sent by mail, postage paid, on the receipt of ONE DOLLAR, by SAMUEL BOWLES & COMPANY, Springfield, Mass. Also, published by the AMERICAN NEWS COMPANY, New York, and LEE & SHEPARD, Boston.

The American Wheat Culturist.

A PRACTICAL TREATISE UPON THE CULTURE OF WHEAT. By S. Edwards Todd, 432 pages large 12mo, illustrated, price $2 50.

"No well-appointed Agricultural Library can be without it. If a poor farmer can buy but one book relating to his art, let him buy this."—*New York World.*

"We commend it to all intelligent farmers, and believe its careful reading will be one of the first steps towards the raising of a successful crop of that from which comes the staff of life."—*Maine Farmer.*

"The chapters on 'Preparation of the Soil,' 'Varieties' and 'Means of Preventing Ravages of Disease and Insects,' are worth very many times the price of the book."—*Rochester Express.*

"It is a thorough treatise on the subject of Wheat-growing."—*New York Observer.*

"Its common sense and practical statements, together with its excellent pictorial illustrations, will make it a favorite and useful work in the farmer's library."—*New York Tribune.*

Illustrated Library of Wonders.

Marvels of Nature, Science, and Art.

Messrs. CHARLES SCRIBNER & CO.

Will immediately commence the issue of an

ILLUSTRATED LIBRARY OF WONDERS.

The works to be comprised in this series are now in course of publication in Paris, and their great popularity there may be inferred from the fact, that of those already issued more than

ONE MILLION COPIES

have been sold. The subjects treated are of universal interest, embracing the different phenomena of nature and the advances in science and art; and they are discussed in that popular and entertaining manner in which French writers excel, and which is peculiarly adapted to interest the young and develop their taste for studies of this character, as well as to instruct older readers by informing them regarding the latest inventions and discoveries.

THE ILLUSTRATIONS,

which are drawn and engraved by the most distinguished French Artists, are very numerous, and add greatly to the attractiveness and value of the series, which will be by far the most thorough, interesting, and valuable of the kind ever produced.

The Volumes will be sold at the uniform price of $1.50,

making them, considering the number and class of engravings, the

CHEAPEST ILLUSTRATED WORKS NOW IN THE MARKET.

WILL BE PUBLISHED MARCH 6.

The Wonders of Optics. By F. MARION. Illustrated with seventy engravings on wood, many of them full-page, and a colored frontispiece. One volume 12mo, price $1 50.

In the WONDERS OF OPTICS, the phenomena of Vision, including the structure of the eye, optical illusions, the illusions caused by light itself, and the influence of the imagination are explained. These explanations are not at all abstract or scientific. Numerous striking facts and events, many of which were once attributed to supernatural causes, are narrated, and from them the laws in accordance with which they were developed are derived. The closing section of the book is devoted to Natural Magic, and the properties of Mirrors, the Stereoscope the Spectroscope, etc., etc., are fully described, together with the methods by which "Chinese Shadows," Spectres, and numerous other illusions are produced. The book is one which furnishes an almost illimitable fund of amusement and instruction, and it is illustrated with no less than seventy-three finely executed engravings, many of them full-page.

Thunder and Lightning. By W. DE FONVIELLE. Illustrated with thirty-nine engravings on wood, nearly all full-page. One volume 12mo, price $1 50.

THUNDER AND LIGHTNING, as its title indicates, deals with the most startling phenomena of nature. The different kinds of lightning—forked, globular, and sheet lightning—are described, numerous instances of the effects produced by this wonderful agency are very graphically narrated, and thirty-nine engravings, nearly all full-page, illustrate the text most effectively. The volume is certain to excite popular interest, and to call the attention of persons unaccustomed to observe to some of the wonderful phenomena which surround us in this world.

WILL BE PUBLISHED MARCH 20.

Wonders of Heat. By ACHILLE CAZIN. With ninety illustrations, many of them full-page, and a colored frontispiece. One volume 12mo, price $1 50.

In the WONDERS OF HEAT the principal phenomena are presented as viewed from the standpoint afforded by recent discoveries. Burning-glasses and the remarkable effects produced by them are described; the relations between heat and electricity, between heat and cold, and the comparative effects of each, are discussed, and, incidentally, interesting accounts are given of the mode of formation of glaciers, of Montgolfier's balloon, of Davy's safety-lamp, of the methods of glass-blowing, and of numerous other facts in nature and processes in art dependent upon the influence of heat. Like the other volumes of the Library of Wonders, this is illustrated, wherever the text gives an opportunity for explanation by this method.

☞ Other volumes of the "Illustrated Library of Wonders" are in preparation, and will be duly announced.

*** The above works on sale by all Booksellers, and sent by mail, post-paid, to any address upon receipt of the price.

The Gospel Treasury, and Treasury Harmony of the Four Evangelists.
Having the Text in parallel columns, with Scripture Illustrations, Practical Reflections and Addenda, geographical, biographical, topographical, historical and critical, illustrating manners, customs, opinions, and localities of the Sacred Narrative, analytical and historical tables, and a very copious Index, and a chart with every Event numbered and localized. 1 vol. 12mo, over 900 pages, cloth extra, red edges, $3 50.

II.

Simmon's Scripture Manual,
Alphabetically and systematically arranged. A Hand-Book of proof-texts. 1 vol. 12mo, cloth extra, $1 75.

III.

Cruden's Complete Concordance.
A Dictionary and Alphabetical Index to the Bible. *The Unabridged Edition.* Royal 8vo, sheep, $5; cloth, $4.

N. B.—Send for a new Descriptive Catalogue of all our publications.

M. W. DODD,
506 Broadway, New York.

BURKE'S WORKS.

THE WORKS OF EDMUND BURKE,

As Edited by his Literary Executors, and completed under the superintendence of the

Bishop of Rochester, Dr. King.

THIRD EDITION.

In 12 elegant volumes crown 8vo, green cloth, price $18.

In preparing this edition great care has been taken to examine all early and authentic copies of the papers embraced in the collection. As evidence that such a revision was needed, the publishers would state that over three thousand errors of text, in editions until now considered accurate, have been discovered and corrected by the present editor.

"This edition has every advantage which critical acumen, labor of research, and an almost fanatical exactness can give it." It "possesses the capital merit of accuracy; and we feel that the publishers deserve the special thanks not only of mere readers, but of all who love truth and honesty, for having resolved, first of all, to make a trustworthy book, and then, what does not always follow, for having secured a competent man to see that it shall be what it professes to be. The editor deserves the thanks of all admirers of Burke for having done for his author all that he undertook, and more than any one else we can think of would have been competent to do."—*North American Review.*

IN PRESS:

FAMILIAR LATIN QUOTATIONS.

Referred to their authors and chronologically arranged together with proverbs, maxims, and phrases, mediæval and modern; the whole accompanied with a translation, parallel passages, illustrative notes, and a complete verbal index.

LITTLE, BROWN & CO.,
Publishers and Booksellers,
110 Washington St., Boston.

"It is far superior to any other work of the kind in our language."—*Lord Macaulay.*

PROPOSED COMPLETION OF

ALLIBONE'S

DICTIONARY OF AUTHORS.

MESSRS. J. B. LIPPINCOTT & Co. respectfully announce that they propose to issue, at as early a day as practicable the concluding volumes of DR. ALLIBONE'S

DICTIONARY OF ENGLISH LITERATURE, AND BRITISH AND AMERICAN AUTHORS,

the first volume of which was published some years since, and the remaining volumes of which are now in MS. ready for the hands of the printer.

Two volumes, of about 900 pages each, will complete the unpublished portion of the work, and it has been determined to furnish these volumes to the original purchasers of Vol. I. at *Six Dollars per Volume*, cloth binding—or other styles proportion—to enable them to complete their sets. Parties desiring these concluding volumes for this purpose are therefore invited to forward their subscriptions to the Publishers at the earliest date, as the Edition uniform with Vol. I. will be regulated by the number of copies required. The price of the complete work to all who subscribe direct to the Publishers before Vols. II. and III. are issued will be $18 00; after the publication of these volumes, the price through the trade will be $22 50 for the three volumes.

The work contains of authors (separate articles) about 43,000, and in typographical bulk is equal to 38 volumes of Prescott's or Bancroft's Histories (worth $114).

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

CHARLES READE'S NOVELS.

HOUSEHOLD EDITION COMPLETE.

Uniform, Compact, Legible, Handsome, Cheap.

Foul Play. 1 Vol.	**Hard Cash. 1 Vol.**
White Lies. 1 Vol.	**Griffith Gaunt. 1 Vol.**
Love Me Little, Love Me Long. 1 Vol.	
Never too Late to Mend. 1 Vol.	
The Cloister and the Hearth. 1 Vol.	
Peg Woffington, Christie Johnstone, and Other Stories. 1 Vol.	

Price $1 a Volume. The set in a neat box, $8.

THE HOUSEHOLD EDITION OF CHARLES READE'S NOVELS, published by Fields, Osgood & Co., of Boston, is the neatest, cheapest, and only uniform series of the writings of this very popular author that has yet appeared. Of convenient size, compact yet clear typography, and substantially and tastefully bound, it will attain a wide circulation.—*Cincinnati Gazette.*

All lovers and readers of one of the most graphic and original story-tellers of the day will thank Fields, Osgood & Co. for undertaking to print this uniform collection of his works, and for doing it so quickly and cheaply, and in such good style.—*Boston Transcript.*

The volumes are neatly printed and of convenient size. Mr. Reade is one of the most vigorous of modern writers of fiction. And in all his works he has a high moral aim, as the exposure of some evil that demands correction.—*N. Y. Observer.*

The new uniform, elegant, and cheap edition of Charles Reade is just in time to take the tide of the story-teller's great and deserved popularity.—*The Western Bookseller (Chicago).*

For neatness, beauty, and cheapness exceeds any of the numerous editions of popular novels which have been issued within the last year or two.—*Worcester Spy.*

Foul Play, Paper Cover, 25 Cents.

*** *For sale by all Booksellers. Sent post-paid on receipt of price by the Publishers,*

FIELDS, OSGOOD & CO., Boston,
AND 63 BLEECKER STREET, NEW YORK.

MODERN SPIRITUALISM.

Planchette;

OR, THE DESPAIR OF SCIENCE.

Price in illuminated paper covers, $1; in green cloth, $1 25.

This long-announced volume, from the pen of a well-known American man of letters who has given, for the last thirty years, much attention to the subjects treated, will not disappoint public expectation.

"Planchette" is a thorough and careful survey of the whole subject of well-attested phenomena believed to be spiritual.

Beginning with the modern phenomena that broke out at Hydesville and Rochester in 1847, and which have claimed so much of public attention here and in Europe, the writer, after giving a most interesting account of such contemporaneous incidents as are commended by irresistible testimony to the consideration of all liberal and thoughtful persons, shows their perfect analogy with the well-attested marvels of the past, the phenomena of witchcraft, somnambulism, clairvoyance, etc.

He then gives the various theories of those investigators who admit the phenomena, but reject the spiritual hypothesis; and the reader will be surprised to find what a change is taking place in the opinions of the scientific world in respect to the genuineness of these manifestations. Science is fast abandoning the "pooh-pooh method of denial" with which it used to treat the subject.

"Planchette" is appropriately dedicated, in an interesting preface, to the Rev. Wm. Mountford, of Boston, well known as an investigator. The book is thoroughly edited, and the reader has but to glance at the alphabetical index to see the extent of the ground that the author has gone over.

Considering the amount of matter it contains, and its deeply interesting character, "Planchette" is the cheapest book that has appeared for years. It cannot fail of an extensive circulation. Report attributes the authorship to Mr. Epes Sargent.

Sold by all booksellers. Mailed post-paid by the publishers,

ROBERTS BROTHERS,
BOSTON.

IMPORTANT ANNOUNCEMENT.

VALUABLE ADDITION TO

Gray's Botanical Text-Books.

BY ASA GRAY, M.D.,

Fisher Prof. of Natural Science in Harvard University.

The Teacher, the Student, and the Botanist will hail with delight the appearance of this new and valuable CLASS-BOOK, just added to this popular series, namely:

SCHOOL & FIELD BOOK OF BOTANY.—This consists of the "LESSONS IN BOTANY" and the "FIELD, FOREST AND GARDEN BOTANY," bound together in one compact volume, forming a comprehensive SCHOOL BOTANY. This will be the most generally used class-book of the whole series, adapted to beginners and advanced classes, to Agricultural Colleges and Schools, as well as to all other grades in which the science is taught.

This work supplies a great *desideratum* to the Botanist and Botanical Teacher, there being no similar class-book published in this country. Cloth, 8vo, 162 pages, price $2 50.

GRAY'S FIELD, FOREST & GARDEN BOTANY.—Is an easy introduction to a knowledge of all the common plants of the United States (east of the Mississippi), both wild and cultivated. It is designed to be a companion of the "LESSONS IN BOTANY." 386 pages, price $2.

***Single copies sent by mail on receipt of price.

Address the Publishers,

IVISON, PHINNEY, BLAKEMAN & CO.,
47 and 49 Greene Street, New York.

The Philadelphia City Item,

CLARKE'S NEW METHOD
FOR

Melodeons and Reed Organs.

JUST PUBLISHED.

A Comprehensive System of Instruction, and an Improvement on all other Methods for the Simplicity and Progressive character of its Studies, Exercises, Scales, Voluntaries, and Recreative Pieces; containing an admirable selection of Choice Pieces of every grade of difficulty, from favorite and popular authors; adopting for Reed Organs the System so successfully carried out for the Piano-Forte in "Richardson's New Method" for the latter Instrument. Arranged expressly for Cabinet, American, Metropolitan, Prince & Co., Carhart & Needham, Burdett, Esty, and all other Reed Organs; also for the Melodeon and Harmonium. By WILLIAM H. CLARKE, Author of "The American Organ Instructor." Price in boards, $2 50. Sent post-paid. O. DITSON & CO., 277 Washington Street, Boston. C. H. DITSON & CO., 711 Broadway, N. Y.

THE TRADE LIST DIRECTORY FOR 1869 contains a complete Catalogue of all the Books published by nearly every publisher in this country and many foreign publishers, and as a work of reference for BOOKSELLERS and BOOK-BUYERS, LIBRARIANS and LITERARY MEN generally, its value for reference will be incalculable. It saves time in making up or filling orders; aids in increasing a small order, by suggesting other books or articles; indicates where to buy certain classes of books advantageously; gives the prices, styles of binding, etc.

Being divided in sections, SUPERINTENDENTS OF SUNDAY-SCHOOLS and Preachers can see all the lists of Juvenile and Religious Books in Section 1st; LIBRARIANS and LITTERATEURS all Belles-Lettres, Fiction, etc., in Section 2d; Professors and Teachers all School-books in Section 3d; LAWYERS, DOCTORS, and SCIENTIFIC MEN will find Law, Medical, and Scientific Works in Section 4th; STATIONERS and FANCY GOODS DEALERS will be interested in the Trade List of Wholesale Stationers and Manufacturers of Fancy Goods, in Section 5th. The entire work costs $5, or each section can be obtained separately at $1 each. Address,

HOWARD CHALLEN,
1308 CHESTNUT STREET, Philadelphia.

First Mortgage Bonds

AT PAR.

By its charter, the Company is permitted to issue its own FIRST MORTGAGE BONDS to the same amount as the Government Bonds, *and no more*. These Bonds are a First Mortgage upon the entire road and all its equipments.

THEY HAVE THIRTY YEARS TO RUN AT SIX PER CENT., and both PRINCIPAL AND INTEREST ARE PAYABLE IN GOLD.

The entire amount of the mortgage will be about $30,000,000, and the interest $1,800,000 per annum in gold. The present currency cost of this interest is less than $2,500,000 per annum, while the gross earnings for the year 1868, FROM WAY BUSINESS only, on AN AVERAGE OF LESS THAN 700 MILES OF ROAD IN OPERATION, WERE MORE THAN

FIVE MILLION DOLLARS.

As the supply of these Bonds will soon cease, parties who desire to invest in them will find it for their interest to do so at once. The price for the present is par and accrued interest from January 1, in currency.

Subscriptions will be received in New York

AT THE

Company's Office, 20 Nassau St.,

AND BY

JOHN J. CISCO & SON, Bankers,

59 WALL STREET,

And by the Company's advertised agents throughout the United States.

Bonds sent free, but parties subscribing through local agents will look to them for their safe delivery.

JOHN J. CISCO, Treasurer,

NEW YORK.

Jan. 20, 1869.

Premiums on Policies not marked off 1st January, 1868	2,563,002 30
Total amount of Marine Premiums	$9,345,972 12
No Policies have been issued upon Life Risks, nor upon Fire Risks disconnected with Marine Risks.	
Premiums marked off from 1st January, 1868, to 31st December, 1868	$6,807,970 89
Losses paid during the same period	$3,081,080 49
Returns of Premiums and expenses	$1,383,230 61
The Company has the following Assets, viz.:	
United States and State of New York Stock, City, Bank, and other Stocks	$7,587,435 00
Loans, secured by Stocks and otherwise	2,214,100 00
Real Estate and Bonds and Mortgages	210,000 00
Interest and sundry Notes and Claims due the Company, estimated at	290,530 03
Premium Notes and Bills receivable	2,953,267 53
Cash in Bank	405,548 83
Total Amount of Assets	$13,660,881 39

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives, on and after Tuesday, the Second of February next.

The outstanding certificates of the issue of 1865 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the Second of February next, from which date all interest thereon will cease. The certificates to be produced at the time of payment and cancelled.

A dividend of FORTY Per Cent. is declared on the net earned premiums of the Company, for the year ending 31st December, 1868, for which certificates will be issued on and after Tuesday, the Sixth of April next.

By order of the Board,
J. H. CHAPMAN, Secretary.

ADDRESS, PUBLISHER OF "THE NATION," BOX 6732, NEW YORK.
PUBLISHING OFFICE, 3 PARK PLACE.

The Week.

ON Wednesday the Fortieth Congress was busy getting itself ready to die, and both houses were in session nearly all night. The Senate had a long discussion on the Public Credit Bill. It was opposed by Mr. Bayard and Mr. Hendricks on the old Democratic grounds; Mr. Sprague opposed it because in his opinion it would "make capital higher;" Mr. Morton would not vote for it because in effect it made a new contract with the public creditor, and for doing that he saw neither necessity nor excuse; Mr. Cole, of California, spoke still more plainly on the same side, and put himself frankly with the letter-of-the-law repudiationists. The debt, he said, ought to be paid in coin if, when the time came to pay it, the United States currency in circulation was coin; otherwise it should not and would not be paid in anything but paper. The bill passed by a vote of 31 to 24. It was decided on the same day that Mr. W. W. Corcoran should be paid for the property of his which was seized during the war; but first he is to take the test-oath. In the evening session there was much talk about the appropriation of $20,000 for the Sisters of Charity, of Charleston, those ladies having befriended Union prisoners during the war. It was opposed and defeated. Mr. Howard handled the Pope of Rome without gloves, but the Democratic Senators defended him. That the Sisters of Charity have a claim on the country's gratitude, and that whatever pecuniary acknowledgment of our debt we may make will be spent, we may be sure, in the continual work of charity which they carry on, would seem to be the strongest argument in favor of the appropriation. The vote was 22 against it and 20 for it. On Thursday the Forty-first Congress began its existence. Mr. Colfax took the chair and swore in the Senators elect, of whom the new ones are Thurman, of Ohio; Pratt, of Indiana; Carpenter, of Wisconsin; Schurz, of Missouri; Casserly, of California; Brownlow, of Tennessee; Hamilton, of Maryland; Hamlin, of Maine; Buckingham, of Connecticut; Stockton, of New Jersey; Fenton, of New York; Bayard, of Delaware; Scott, of Pennsylvania; Gilbert, of Florida; and Boreman, of West Virginia. By the advent of these gentlemen the small Democratic minority in the Senate is made smaller by one. The Republicans are strong in ability, but will miss Frelinghuysen, while it is probable that they have received an accession of genuine strength in Schurz and Carpenter. The Democrats lose Hendricks, Buckalew, and Doolittle, three of their ablest men—a loss against which there is as a set-off the gain of Mr. Thurman. On Friday the Senate transacted a little business, and then on receipt of two very brief messages from President Grant cleared its galleries, went into executive session, and amid great silence listened to the names of the Cabinet that had been selected. The persons nominated were all promptly confirmed, no Senator apparently being familiar with the act establishing the Treasury Department. A knowledge of the provisions of that law would have made Mr. Stewart's confirmation impossible; and great a prize as the Treasury is, and much as Mr. Stewart's name has been talked about in connection with it, and much as quite a number of people may be presumed to have wanted it for themselves, it is truly surprising that no Senator was ready with his objection. On Saturday Grant's message setting forth the difficulty, and asking not the repeal of the law, but that Mr. Stewart should be exempted from its operation, was received and allowed to lie over, the Senate showing what everybody will consider proper dignity and respect for itself and the President.

There was one rather extraordinary performance by the Senate of the Fortieth Congress in its last hours, which ought not to go unnoticed. This was the confirmation of a batch of Mr. Johnson's appointments, for which there could have been no urgent necessity, and in the face of the Senate's previous determination to fill no more offices under the outgoing administration. Half the Senate was asleep, it is said, and the rest mostly in a less creditable condition, when the few who were awake engineered the confirmation, and inflicted on Philadelphia a Democratic district-attorney, together with a collector of the port and an assessor of internal revenue, whose chances for appointment by Grant would undoubtedly have been of the slimmest. We hear less of injury done in other quarters, whose indignation perhaps is less likely to make itself felt than that of a great city like Philadelphia; but whatever tends to prolong the rule of the politicians, to corrupt the civil service and obstruct its reformation, and fetter General Grant in his attempts to destroy the one and purify the other, is an evil which strikes everywhere, and which in this case, if the truth is told us, common vigilance and sobriety might have spared us.

In the House on Wednesday Mr. Colfax tendered his resignation of the place he has filled so long and so well, in a speech which, though wordy, as all his speeches are, was not ungraceful. The House paid him, with more feeling than such formalities usually call forth, the compliment of a laudatory resolution. The honor of the Speakership for the last few hours of the session was accorded to Mr. Pomeroy, of this State, who has been "rotated" out of his seat, and whose retiring is said to be a loss to the House and a gain to the "men inside politics" in his district. The Public Credit Bill, as it came amended from the Conference Committee, was discussed and passed. Mr. Butler objected to the manner in which the final debate was conducted, only two or three minutes each being allowed the members who desired to speak. His own "short and easy method with dissenters" is, however, so well known that his complaints were severely disregarded. The vote stood 118 to 51. The papers do not give the names of the Republicans who voted against it, but there evidently were some Republican votes in the negative. Mr. Butler's opinions, as the debate showed, have undergone no change, and he still denounces the bill as made in the interest of the brokers. On the following day the representatives elect of the Forty-first Congress assembled in the House, and, under the chairmanship of the Clerk of the House in the last Congress, proceeded to organize. The clerk is the only official of the House who holds over from the end of one Congress till the beginning of the next; the sergeant-at-arms, doorkeeper, and other officers are newly chosen. This fact was apparently known to Mr. James Brooks, for he defied the authority of the clerk with a turbulence and vehemence that he has never shown at times when it would have been easy for the presiding officer to order his arrest. The clerk has power to make up the roll of

members elect, and if any informality in any person's certificate of election appears, it is his duty to keep such person's name off the rolls till there is a House which can pass on the certificate. Governor Bullock, of Georgia, did not—as some hint, designedly—make out his certificates of the election of the Georgia members in the form prescribed by law; and there was some irregularity in the certificates from Louisiana; so, of course, the names of the claimants of the seats belonging to these States were not read. Thereupon Mr. Brooks began a great disturbance, out of which he could not hope to come with success, and out of which he does not seem to have seen that he could not come without disgrace and some ridicule. The better sort of Democrats sustained the clerk in restoring order. Mr. Blaine was chosen Speaker; the Democrats giving the compliment of a nomination to Mr. Kerr, of Indiana. On Friday nothing was done except the electing of a Clerk of the House and a Sergeant-at-arms. Mr. Ordway, in spite of all that has been laid to his charge in some of the newspapers, got the latter post; and Mr. McPherson the former. On Saturday the House was not in session; like the rest of Washington, the discussion of the constitution of Grant's Cabinet kept it fully employed. It is to be hoped that the gentlemen there assembled will not make the mistake of supposing that the people who elected Grant share their disappointment at the fact that so few "statesmen" have been called in to manage our "rings," the collection of our internal revenue, and the other things which our grand public men have formerly had such marked success with. On Tuesday, Mr. Boutwell got the Reconstruction Committee reappointed, and the House, under the lead of Mr. Butler, aided by the previous question, again repealed the Tenure-of-Office Act.

Mr. Johnson's "farewell address" was a very characteristic performance, and perhaps the very best answer he could make to those who loved to consider him "the greatest criminal of this or any other age." The comparison, so favorable to Andrew Johnson, which he draws between this gentleman and the wicked Sylla of Roman fame, is in every respect a triumphant vindication of himself against the Butlers and Chandlers and Logans, and proves to our mind beyond question that he has studied Plutarch and Smith's dictionary to much more purpose than they. To the timid philosophers who predicted confidently that, unless "hurled" by impeachment "from the chair he had disgraced," he would overturn the Government and get drunk among the ruins, he can now make the triumphant reply, that though they have done their best at him, he did n't do half the mischief which they swore most vehemently he might do if he liked. He says he had a vast army at his disposal, which, if he liked, he might have led furiously against the French in Mexico; and that he had vast powers offered him by the Radical ruffians in Congress, which he might have used to make himself a dictator; but he steadily resisted their blandishments, and remained plain Andrew Johnson, the friend and servant of the people. In short, he has covered his enemies with confusion. The continued existence of the United States Government during his administration and at its close must for ever remain, on their own showing, a monument of his disinterestedness and self-restraint. The most humorous part of the address is the close, where he shows that treason was not a crime at all, as he at first supposed it to be, but a mistake, for which the North was as much responsible as the South, and that, instead of punishing the rebels for it, we ought to do all we can to soothe them and assist them to forget it.

General Grant's inaugural has at least the merit of being a plain, sensible, practical document. It does not contain much; but, except the allusion to the gold-mines as a peculiarly valuable source of national wealth, it contains nothing which anybody could wish had been omitted. The policy he traces out for himself is excellent; the view he takes of the President's place in the Government shows that the discussions of the last four years have not been in vain. He knows exactly what a President's "policy" amounts to, and means to act on his knowledge. He makes one really valuable contribution to the political wisdom of the day when he says that the best way to secure the repeal of bad laws is to execute them stringently. He might have added that it is the best mode of "educating the people up" to the knowledge of good and evil in legislation. The notion which he appears to hold that the gold-mines of the country are likely to be of any more value to the Government than the potatoes of the country, we cannot help calling a very unfortunate delusion. Gold-mining is a poor business, which makes perhaps poorer returns on the labor and capital invested in it than any other species of industry. Government can only get gold out of the mines by taxing the miners heavily, which would drive them out of the business, or by working the mines itself, which it would find vastly less profitable than raising cranberries, and which it would necessarily do at very much greater disadvantage than individuals. The inaugural has been received with the greatest satisfaction by the press of all parties.

We have discussed elsewhere, as we could amid the shifting rumors of the hour, the new Cabinet; and all that we need do here is to report the condition of affairs as we go to press. The President having withdrawn his request for an exemption of Mr. Stewart from the operation of the law of 1789, and that gentleman having in vain made an offer to relinquish all the profits of his business during his term of office—a liberal but technically insufficient expedient—and finally having declined his appointment, it is now certain that Mr. Stewart will not be Secretary of the Treasury. Mr. Boutwell is his reputed successor, and this rumor is always coupled with the statement that General Grant cannot endure two Cabinet officers from one State, and therefore must displace Judge Hoar. This being, in our opinion, a relic of the spoils-of-office and sectional politics, we sincerely hope it has no existence in Grant's mind and will not influence his action. There is talk already of Mr. Washburne's resigning his seat in the Cabinet.

Another glimpse of blue sky after the long reign of corruption and inefficiency with which we have been afflicted is the removals and appointments which Grant has made during these first few days of his power. Mr. Binckley was at once ordered out of the Treasury Department. General Gillem, who has been the delight, so far as a Federal soldier could be, of the rebelliously disposed in Mississippi, and within the limits of whose command the negroes have been in a state of semi-servitude, has been sent to rejoin his regiment. General Reynolds has been sent back to Texas, and Sheridan to Louisiana. We do not know what qualifications General Hancock may have for command in Dakota; sending him there may, for anything we know, be for the best interests of the service. It does not, however, look much like a favor to him—which perhaps is not a disadvantage; but the appointment *has* the disadvantage of making one remember that Hancock worked hard for the Democratic nomination for the Presidency, and if he could have got it would have run in opposition to his old companion in arms. It is to be remembered, however, as a matter for thankfulness, that in Dakota he cannot do the harm that he unquestionably did in Louisiana and Texas. The appointment of Sherman as General was, of course, a foregone conclusion and no man says no to it. There is little or no demur, either, to the appointment of Sheridan as Lieutenant-General, high as Thomas stands in the respect of his countrymen. Grant's personal liking for Sheridan has never been denied, nor his disposition to give honors where his affection is given; but it is not said—and it would be excessively hard to prove—that he makes people his friends who are not worthy of all the confidence he can give them, or that he gives honors and imposes labors where there is not desert and ability. One might doubt if the selection of Mr. Washburne as Secretary of State might not be cited in contradiction of this statement. But it appears to be the fact that Mr. Washburne is only temporarily in the State Department, and mainly by way of compliment to him, and thus the seeming exception in his case is removed.

Some four columns of the *Times* have been taken up this week with the correspondence between District-Attorney Courtney and Attorney-General Evarts relative to the prosecution of Mr. William Fullerton. Apparently it is Mr. Courtney who has given these letters to the light; and that, we suppose, is the reason why we get from

them no information on a point which, first and last, has caused a good deal of curiosity, and which, it is probable, can be made clear only by Mr. Evarts, namely, how it happened that, with a District-Attorney straining in the leash to be let loose on an alleged criminal, and a gentleman under indictment anxious in a very high degree to be put on trial, so that his perfect innocence might be made patent to all the world, and a whole municipal community, not to say the people of the whole country, very willing to see the inside of the Whiskey Ring, and to see it visited with exemplary punishment in the persons of some of its worst members, in case Mr. Fullerton should not make his innocence manifest—how it happened, all these things being so, that Mr. Evarts suddenly ordered all proceedings under the indictment to cease, only Mr. Evarts—perhaps we should do better to say Mr. Evarts or Mr. Johnson—can tell us. The correspondence in the *Times* may be said to be printed by way of clearing Mr. Courtney's skirts. To do him justice, he seems to have been choked off his enemy only with difficulty, and in his letter of February 9th he makes some very good points against the Attorney-General. His style, by the way, contrasting with the verbal cloud behind which the Attorney-General can, on occasion, place himself, aids him in disposing the reader to think that probably his view of the matter may be right, and that in the attempt to quash the case there may have been an attempt at screening rascality from justice and conniving at the robbery of the revenue. However, all this is now of not so much consequence, except to the men whose reputation the delay may have endangered, as it was a few days ago. One of the first acts of Grant's administration was an order directing that the trial of Mr. Fullerton's indictment should proceed as soon as might be fitting; and now, if that gentleman has been slandered, he will be cleared so far as a jury and an honest judge can do it, and will not be compelled to rest content with the imperfect whitewashing given him by an inexplicable stay of proceedings against him. Other "Whiskey men" have already found the difference there is between Grant and Johnson. Pardons granted by Mr. Johnson in his last official moments for Blaisdell, Eckel, and Dupuy—who are all at Sing Sing—were recalled before they had reached their destination, and it is extremely probable that those convicted thieves will serve out their terms.

The writer in the *Tribune*, whose article provoked the card from Mr. Bigelow on which we commented last week, returned to the attack on Tuesday, and endeavored to show that Mr. Bigelow had reference to quite a different conversation from that so severely censured by the *Tribune*. This position is fortified by extracts from the Diplomatic Correspondence, which fix the date of the transaction between Mr. Bigelow and M. Drouyn de L'huys as early in October, 1865, whereas the former, in his card, speaks of "an effort I made, soon after the peace of 1865," which was brought about in April. But soon is a relative term; and one phrase—"the logic of the situation"—which does not escape the notice of the *Tribune*, by its occurrence both in the official correspondence and in the ex-minister's card, satisfies us that Mr. Bigelow had in his mind the very occasion for which he is taken to task. For the rest, we fail to discover any material discrepancy in the two reports of what he said to the French minister, and if anything is to be inferred from the official version it certainly is not that Mr. Bigelow was the medium of the State Department, as was alleged. If he had been, he would not have felt called upon to explain away to Mr. Seward the representation of his language made by M. de L'huys to M. de Monthelon, and afterwards published in the *Documens Diplomatiques*; and Mr. Seward would not have assured him that "it is hardly necessary to say that the *misapprehensions* which you have now *corrected* excited no particular uneasiness here." That Mr. Bigelow's discourse, whatever it was in substance, was the occasion of the French retreat from Mexico, proves nothing unless it can be shown to have furnished grounds for reproaching the United States with want of faith in not recognizing Maximilian.

A Cable despatch represents Mr. Goschen, President of the Poor Law Board, to have advocated in the House of Commons the removal of restrictions from emigration, and even the encouragement of pauper emigration to America. The pauper class in all countries has furnished by far the greatest proportion of emigrants to the United States; but Mr. Goschen undoubtedly had in mind when he spoke, not what we might call foreign paupers, including the Irish, but those whose frightful increase at the East End of London has awakened the solicitude of the English people to a degree never known before. We have more than once adverted to the distressing facts which philanthropic enquiry has elicited in regard to the forced descent into the pauper ranks of families once respectable, whom a slight embarrassment has reduced, and who, sinking lower and lower, are deprived of every hope of rising again to self-support and to self-respect. It has been seriously contemplated to collect this class of the London poor in an organized scheme of emigration to this country; but those who have entered upon this task have experienced a lack of such explicit information as would supply the want of pioneering capacity—if we may so express it—in the poverty-stricken trades-people in question, and without which they could hardly be induced to come over, or would fare wretchedly if brought here. As they have never been trained to labor in any way, and least of all agriculturally, and have the national ignorance of geography, no directions could be too explicit for them, and no cares after they got here superfluous. If these were provided by the Government or by States, there would be little difficulty in procuring an extensive supply of a good quality of settlers for any given territory. A pamphlet, giving the necessary facts and instructions, would, in the case of people speaking our own language and thus protected from one great source of fraud, almost answer the purpose; but it should be backed by names of authority, and if possible by positive arrangements for the reception and transportation of new-comers under official guidance.

The rage of the French Imperialist press over the refusal of the Belgian Parliament to permit the surrender of the frontier lines of railroad to the control of French companies—which is the last Paris sensation—is another attempt to turn away the attention of the public from internal reform, but the Liberals are clearly aware of its real nature, and their papers are making head against it vigorously. Of course, there is more or less justification of it to be found both in the spectacle of Prussian aggrandizement in Germany, and the probably well-grounded belief in the working of Prussian influence in Belgium. The arguments in favor of the annexation of Belgium to France are fully as strong as those on which Prussia relies in defence of the annexation of Hanover; and on the now generally accepted theory of the nature and uses of nationalities, Belgium will undoubtedly one day be absorbed. In the meantime, however, the hostility of Belgium to annexation to France increases, while its intellectual and political sympathy for Germany increases also. The French have lost, to an extent which they cannot believe or understand, the character of political leaders on the Continent, and French political ideas hardly cross the frontier. The resistance of Belgium on the railroad question would be the simplest and most natural thing in the world, if Bismarck were not supposed to be at the bottom of it, and the defiant tone of his recent speeches of course gives color to the belief that he *is* at the bottom of it.

Russia is still making it a large part of her business to extinguish the Polish nationality. Scarcely had the Russian language been made obligatory as the sole medium of instruction in all public and private schools of the "Vistula Country," when a new enactment replaced the Gregorian calendar, which Catholic Poland was one of the first countries to adopt, by the imperfect Old Style calendar still used by the Russian Church and administration. A still more recent order prohibits the pupils of the Warsaw gymnasia from using their native tongue in their conversations. All these measures are applauded by the Philo-Slavic press of Moscow and St. Petersburg, which daily teems with denunciations of the "monstrous" oppressions practised—according to those organs—by the Austro-Hungarian and Turkish governments on their Slavic subjects. A new Philo-Slavic aid society, similar in its organization to that long established in Moscow, is now forming in Odessa, under the name of "Slavo-Servian Fraternity," the object of which is to give "moral and material" aid to South-Slavic revolutionary propagandas.

THE NEW CABINET.

The general expectation with regard to Grant's Cabinet was that it would probably surprise nearly everybody, but that nobody but the regular politicians would be disagreeably disappointed by it. There is little question, however, that the first announcement of it did disappoint even his friends and admirers, and probably his friends and admirers rather more than his enemies. The firm front he had presented to the deputations urging the "claims" of States on the old-fashioned grounds, had no doubt somewhat prepared the politicians for his complete departure from the regular routine hitherto pursued in cabinet-choosing; but then it had also prepared his friends for an extraordinary display of sagacity in the work of selection—in fact, for the formation of an ideal cabinet. The appointment of Mr. Washburne to the State Department was, therefore, a somewhat severe shock to a great many people, because, although Mr. Washburne is a very able and useful man, his qualifications for the management of the foreign affairs of the Government, in which the duties of the department mainly consist, are, if they exist at all, entirely unknown to the general public. In fact, to state the case plainly, there is a general, and apparently well-founded, belief that Mr. Washburne knows nothing about foreign affairs, except what the general public knows from the newspapers, and that his installation in the State Department would be the commencement of his intimate acquaintance with the precedents and principles of international law; and as General Grant has never given any signs of adhesion to the doctrine that American citizenship is of itself sufficient to fit a man for the exercise of any craft or mystery under the sun, the appointment has somewhat troubled those who relied most on his skill in judging men's character with reference to official duties. The disappointment has been the greater because there is no lack of men in the Republican party, particularly if we leave the ranks of the regular politicians, who have the whole of the controversies now pending between this country and foreign governments, as well as the rules and precedents on which these controversies must be settled, at their fingers' ends. Mr. Washburne is, moreover, master of one subject—the ways and means to which the plunderers of the public treasury resort for the accomplishment of their ends, and those to which honest men must resort for their defeat. He has been for a good while, in the House, their most determined enemy, and has managed, consequently, to incur a more than usually large share of the detestation which, sooner or later, overtakes people who undertake to stand guard over objects of general desire. In the performance of this self-imposed task he has naturally acquired a vast amount of information which in the House or in the Treasury Department would be of immense value, but which in the Department of State will be completely wasted.

There are, however, one or two very strong reasons for not considering the appointment nearly so bad as it seems, and even for not considering it a permanent appointment at all. The Secretary of State is the member of the Cabinet who, partly from usage, and partly from the nature of his duties, stands in the closest personal relations to the President. There are a great many matters, in themselves of small importance, but in their relations and bearings of a good deal of importance, by which a new President is naturally a good deal puzzled, and on which he has to seek the counsel of a man in whose character, and experience, and judgment he has confidence. Everybody knows the extent to which Mr. Lincoln, in the early days of his administration, leaned on Mr. Seward, and it is not unreasonable to suppose that General Grant wants somebody who can, while he is getting firmly into his place, give him useful hints about the many strange men and strange things with which a new President has necessarily to deal in the early days of his term; but this service rendered, it is by no means unlikely that Mr. Washburne will make way for somebody possessing special acquaintance with the duties of his department. We say this on the supposition that his health is good enough to permit him to perform those duties himself. But we are assured that this is so far from being true, that the probabilities are that he will be compelled to leave Washington at once, and remain absent for some time. If this report be correct, it will confirm the belief which many have held from the outset, that his appointment was complimentary merely.

The selection of Mr. A. T. Stewart for the Treasury is neither so bad nor so good as it seems. He is a better choice than Mr. Boutwell would have been, and we compare these two gentlemen because the popular belief is that the place was first offered to the latter. Mr. Boutwell is doubtless as sound as possible on all the leading financial questions, and is not without administrative ability; but he has for the last four years displayed so many marked symptoms of chronic mental inflammation, and such unswerving fidelity to party—the last evidence of it being his open support on the stump of, the great apostle of repudiation, General Butler—as to lead the best judges in doubt whether he will ever be fit for any position in which a cool head is the first requisite, and scientific considerations the weightiest and most important. Of Mr. Boutwell's most marked defects no trace is to be found in Mr. Stewart. We doubt if any emotions on any subject have ever disturbed his mental equilibrium; and if the time has come for managing the finances of the country on a business rather than a sentimental basis, certainly few persons could be found for the work possessing the requisite coolness, and the requisite contempt for purely emotional views of great questions, in a higher degree. But then that which constitutes, in the eyes of many persons, and perhaps in General Grant's, his highest qualification—his business experience—is, we take leave to say, not necessarily a qualification at all, and may prove a hindrance. It is singular but true that no contribution of value has ever been made to the science of finance by a man engaged actively in trade. Indeed, considering the steady opposition or indifference which the work of financial reform has in all ages and countries experienced from merchants, it would seem as if there was something in daily contact with the details of commerce which made comprehensive views of the whole field of national economy, and the diligent pushing of economical principles to their remote conclusions, in most cases unusually difficult, in many cases impossible. The ideas which have, since 1789, revolutionized this field—as the friends of "practical education" ought to acknowledge oftener than they do—were produced by men of the closet, like Adam Smith, or men possessing only a theoretical knowledge of commercial processes, like Turgot. Some of the most determined friends of monopoly, of inequality, and of makeshifts have been organized merchants and manufacturers. It must be remembered that successful dealers in any commodity labor constantly under the strongest possible temptation to consider things from one point of view only, and that the low and selfish one. The fierceness of modern competition, in fact, especially in most retail trades, renders active selfishness almost necessary to success. A striking illustration of this is to be found in the experience the country has had, during the last few years, of the operations of combinations of traders and manufacturers of various branches with reference to the tariff, at Washington. That Mr. Stewart is not superior to these weaknesses is, of course, within the bounds of possibility.

On the other hand, it has to be borne in mind in judging of any man's qualifications for the Treasury Department, that the Secretary of the Treasury is not, in the proper sense of the word, a minister of finance like the Chancellor of the Exchequer in England. He is not the sole contriver of the national ways and means. He does not shape the financial policy of the country. In fact, the United States has no minister of finance. The nearest approach to such an officer is the chairman of the Committee of Ways and Means; but he is, after all, only a faint approach to it. The work which is in Europe ordinarily performed by such an officer is here distributed amongst the Committee of Ways and Means and the whole of Congress. Congress does not feel under any obligation to accept the plan of the committee, either entirely or in its main features. It rejects or modifies it as it pleases, in whole or in part, and every individual member of either branch of Congress has no hesitation in inserting in it, if he can, any clause that happens to come into his head, or is suggested to him by any of his constituents. As to the Secretary of the Treasury, he may consider himself a lucky and much-honored man if any financial measure, when enacted, contains one of his recommendations or shows the smallest trace of his influence. Until, therefore, some great change comes over the Congressional way of looking at financial legislation, the head of the Treasury Department may be, without any

very mischievous results, what Mr. Stewart undoubtedly is—honest, painstaking, prompt, orderly, used to the correct management of a vast variety of details, and thorough master of the art of securing from numerous subordinates faithful and efficient service, and little used and doubtless little disposed to allow favor or friendship to interfere with the proper working of any machine of which he may have charge. He may prove a great deal more than this; but if he should prove simply this, the country will have reason to feel grateful to him. We did hope that General Grant would, if he departed from the beaten track, put in the Treasury a scientific economist, like Mr. Wells, who is thoroughly acquainted with the resources of the country and the working of the revenue laws. Had he done so, he would have given the public a lesson touching the value and claims of specialists which might have proved a powerful aid in the work of reform; but since he has not done this, we may be thankful that he has given us a successful business man, whose head contains no sentimental cobwebs, and who has never, as his life shows, been troubled with any hallucinations as to the meaning of the terms "debt" and "credit," "dollar," "promise to pay," and "payment." We say all this on the supposition that the objection to his appointment discovered at this late hour in the act of 1789 will not be deemed fatal, and that the Senate, while taking Mr. Sumner's very sensible advice not to change the law in a hurry, will finally change it. It is almost absurd in our day to exclude traders and merchants from the Treasury, as long as manufacturers and bankers are admitted to it. We presume no change ever likely to be made in the tariff produces any sensible impression on a large importer who makes his contracts in gold, and whose business is largely retail, while a great iron master, or other manufacturer, has the strongest possible interest in getting an occasional twenty per cent. duty suddenly clapped on by his appointment. It was, however, very natural for the people to ask why Mr. Stewart, if he wants to manage the finances of a great nation, could not qualify for it by retiring from the flourishing business in which he has already realized a large fortune, and passed the greater part of an unusually successful life.

Judge Hoar's selection for the Attorney-generalship is, however, the President's happiest stroke, and a very high compliment to the Massachusetts judiciary. Mr. Hoar is the only one of the appointees to whom nobody has any objection to make, and whose acceptance of the office everybody will consider a great national gain. He is an uncompromising anti-slavery man, who in the hottest of the fray never lost his head, and knows how to love and labor for his kind, without divesting himself of reason, judgment, and forethought, as if they were encumbrances. Governor Cox was at one time under a slight cloud, as other good men were, for overconfidence in Mr. Johnson's good intentions, and he had some notions which time seems to have proved false in regard to the warfare that would spring up between whites and negroes, unless the negroes should be deported, or put on "reserves" somewhere; but he brings to his work both ability, honesty, and good sense; and the Indian Ring has troublous times before it.

THE RAILROAD MANIA.

It is astonishing how little attention has heretofore been given by the public generally to the enormous increase going on in our railroad building. The cotton and grain speculation, the real estate speculation, the gold and stock speculation, have all had their share of comment, favorable or otherwise; but the railroad-building speculation, which in magnitude far surpasses all the others, seems to have almost entirely escaped scrutiny. In the twenty-five years, from 1836 to 1860, both inclusive, a little over 29,000 miles of railroad were built in the United States, or an average of 1,150 miles a year. This period of twenty-five years comprised the history of the greatest and steadiest progress in wealth, numbers, intelligence, and general prosperity that any people is known to have ever experienced. Whatever the future may have in store for us, it is highly probable that the great bulk of the American people will not for many years to come enjoy an equally long period of equal progress. Certain it is, that the years that have passed since have not by any means been years of equal or unqualified national well-being. Yet, during that quarter of a century, on an average, 1,150 miles of new railroads were annually built, an exceedingly small proportion of which have ever paid steady dividends, many of which have never paid any dividend whatever, honestly earned; while others have had their entire stock capital, and in some instances even their mortgage capital, sunk and lost; and many continue only in existence as ill-paying adjuncts of larger lines, which for reasons of their own maintain in existence a number of starving institutions that are more of a curse than a benefit to the districts they traverse. No candid person acquainted with the facts will deny that the railroads built prior to 1860 were actually in excess of the wants of the community. In 1861 there was a general depression in railroad as in all other interests; but from 1861 to 1865 the earnings of many of the roads increased very greatly, owing to the extraordinary movement of men and materials consequent upon the war, and the general stimulus given to business and travel everywhere by the enormous government expenditures. The high prices of labor and of material of every description, *and especially the many opportunities for profitable investment offered to capital and credit elsewhere*, prevented, however, immediate resumption of building, which might have been fairly anticipated from the improved earnings and prospects of existing lines; and hence in the five years, from 1861 to 1865, only 4,550 miles were constructed, an average of 910 miles a year. But the following years witnessed a new and extraordinary increase in the number of miles constructed: 1,832 miles in 1866, 2,227 in 1867, over 2,500 miles in 1868, while for the current year the number of miles projected is altogether fabulous, and if only a small proportion is actually built will far exceed that of any year yet named. Six or eight lines are projected to cross the continent from the Atlantic to the Pacific, as many more to connect the great Northern Lake basin with the Gulf of Mexico, and lines innumerable, of greater or lesser length, within the limits of every State of the Union. Are these lines really required? Is there traffic for them all? Can the people afford to build them?

It is almost impossible to tell what the nation's requirements in the matter really are. The traffic on existing roads has unquestionably increased enormously during the last ten years—has increased in a ratio far exceeding that of the increase of population. There seems to be scarcely any limit to the new traffic that railroads can create when they open up new districts of an inviting character to trade and settlement. There is no doubt that many lines, heretofore unprofitable, can be rendered productive by improved management, and that a generally improved system will admit of railroads running at a profit through sections that under the present system could not support a line of horse-cars. All these circumstances would seem to point to the probability of there still being room for a large increase in our roads. But there are other and more striking facts which point in a precisely opposite direction. At the close of the year 1868 the public was furnished with the usual compilations of railroad statistics, all of which showed eminently encouraging results. The comparison of the earnings of the leading fourteen Western roads for 1867 and 1868 was extensively copied and widely commented upon. It showed that the earnings of these fourteen roads had increased from $65,400,000, in 1867, to $70,000,000, in 1868, an increase of over seven per cent. in one year. But when we came to examine the facts carefully we found that the number of miles had likewise increased from 7,047 to 7,300, or nearly four per cent., showing that the real increase of the earnings of these fourteen roads was but a trifle over three per cent. Of this three per cent. increase in the total earnings, one single road had earned nearly ninety per cent., so that the other thirteen lines had virtually had no increase of traffic whatever. Compared with the high average rate of increase of the last years, this nominal increase of last year should be looked upon as an indication of decline. But even with this nominal increase of traffic the dividends of the roads have not materially increased. The opening of the present year has been characterized by a severe competition between leading lines to the West, and a decided lowering of freights (long since foretold by the *Nation*), which is the best evidence of their being insufficiently employed. The great roads connecting with the Pennsylvania coal-fields are likewise promising a reduction of freights, which is certainly not

a voluntary concession. The repeated "waterings" of stock of prominent companies, and the declaration of dividends in stock and scrip and the like, in place of cash, do not warrant the belief that their genuine surplus earnings are very large. On the whole, there seems to be fully as many indications of diminishing as of increasing prosperity. There certainly are no such striking examples of general profitableness as would lead to railroad building as a tempting investment. In truth, no one looks upon a new railroad enterprise as in any sense an investment. A prudent capitalist would scarcely dream of putting money into such an undertaking, except to a very moderate extent, and then more by way of speculation than of actual investment. But, if new railroad lines are not generally profitable, if capitalists do not consider them safe investments, who builds the new roads and where does the money come from?

Unsophisticated people imagine that when a new railroad company is started the stock is subscribed and the cash paid in and the building of the road begun; that, if the cash subscribed does not suffice for the completion of the road, then the finished portion is mortgaged for money enough to build the remainder, and in that way the road is completed. Undoubtedly in the early days of railroad building that was the course pursued. Undoubtedly, even in these degenerate days, some extremely desirable bits of road are occasionally constructed in that way by extremely conservative New England capitalists, who reap honor and profit from their sharp, close, honest, intelligent management. But of the great bulk of the roads now building so far is this from being the case that it is safe to say that not one road out of a hundred is constructed in the antiquated fashion described. The modern practice is entirely different; in fact, is the reverse. The stock is indeed subscribed, or at least as much of it as the law imperatively demands. But only a very small, nominal cash payment is ever made, which generally barely suffices to meet the expenses of obtaining a charter and perfecting the preliminary organization. Suppose a road is projected requiring five millions of dollars to build it; a charter is obtained for a company with a capital of five millions of dollars. Of this capital one half a million is subscribed by the original projectors, but the subscription is only nominally paid, and if really paid, is almost immediately returned to the subscribers under pretence of being payment for legislative and other expenses, for surveying, for obtaining the right of way, and other matters which do not or have not cost one-twentieth of the amount claimed. In this way a dozen gentlemen of some little influence in "legislative circles," but generally of very little influence anywhere else, find themselves possessed at very slight expense of a charter to build a railroad between two given points, and of half a million of dollars of stock of a new company. Neither of these things have in themselves any mercantile value; they are made valuable in the following manner: The twelve gentlemen referred to select from among the names of leading New York merchants, bankers, brokers, lawyers, and railroad contractors, half-a-dozen or as many more as may be required to give character and responsibility to the enterprise. These merchants and bankers and brokers see that they are invited to co-operate with men of their own standing; one or other among the names selected, though perhaps of high character and excellent credit, is just a little more accessible than the rest; through good-natured inability to refuse, through vanity, through greed, through carelessness, often, very often, through honest conviction, one is the first to permit the use of his name, a second and a third are gradually won over, and with a little good management some of the best men in the city are often induced to lend their names to an enterprise that they really know little or nothing of. It is done very carelessly sometimes, with criminal carelessness occasionally, but generally honestly enough, although of course the service is not rendered gratuitously. One of the new directors of high standing expects to have his brother-in-law made president of the road, another will be the banker and treasurer of the concern, a third expects to sell their securities, the fourth to furnish the iron, a fifth to contract for the building of the road, and a sixth (most ambitious of all in these days of railroad litigation) will be the company's legal adviser; while each one, at the time of giving his consent to serve as a director, *permitted* ten or twenty or thirty thousand dollars of the company's stock to be transferred to him by the original subscribers, on payment, of course, of a merely nominal sum. When the original projectors have arrived at this point without losing the control of their road—which very often happens, for the men whose names stand high financially are *very* shrewd—the game is pretty safe. At this stage of the proceedings it is generally found desirable, if there is no land-grant from Congress or the State, to acquire property of some kind, coal-mines, timber-lands, a ferry-slip, or grounds for depots or warehouses. This is generally some property which would have no value whatsoever without the new road, but would become highly valuable on the road's being built, so that the owner can afford to give away one half to aid in the construction of the line. But of course it is not *given away;* on the contrary, it is sold for a large sum of money, nominally cash, in reality the company's stock. The company now comes before the public. The real estate of the company, its franchises, road-bed, tracks, buildings, constructed or to be constructed, are immediately mortgaged for a large amount, and first-mortgage bonds issued for it. A rolling-mill in Pennsylvania contracts to furnish the iron at a usurious price payable in bonds, a railroad builder contracts to build the road-bed for fifty miles at a usurious price payable in bonds, and as soon as a reasonable show is made of building the road the company's banker or broker publishes a glowing account of the company's affairs, offers for sale the first-mortgage bonds secured by a pledge of the company's lands, twenty-five miles of track laid, etc., etc., and the public buys the bonds, and the road goes on building; and if its credit and reputation are good, the original projectors after a while find that they can get quite a good price for the three or four hundred thousand dollars of the company's stock which they hold and which cost them little or nothing. In this way, or some similar way, the original projectors find an ample reward for their labors. It is this reward that induces men to persevere in procuring fresh charters for fresh roads, and in getting them actually built, without much regard to the question of their ultimate profitableness. It is the innocent public that furnishes the money, in the belief that when they buy a railroad first-mortgage bond they buy a bond secured on some existing property which is about to be further improved and rendered more valuable by the judicious expenditure of the money paid to the company for its bond. It is just here where the deception begins—or can it be fairly called deception when a credulous public all but insists upon being deceived?

The railroad contractor and the iron manufacturer agree to do certain work for the company, to furnish them with certain rails and machinery, and to take their payment wholly or partly in first-mortgage bonds. They would do the same work or furnish the same iron for fifteen or twenty per cent. less, if paid in cash. The one hundred dollar bond which they receive in payment they expect to sell for, say, eighty dollars. But they are not certain of getting eighty dollars for it; they may have to sell it for seventy, they may find it totally unsalable. Even if it sells for eighty dollars, it may require considerable time to realize it, and will involve the payment of one or two bankers' or brokers' commissions. Neither the contractor nor the mill-owner can, therefore, afford to furnish eighty dollars' worth of work or of iron for a one hundred dollar bond; on the contrary, they cannot, and do not pretend to, give more than sixty dollars' worth. Now, by what is that one hundred dollar first-mortgage bond secured? It is secured by a first mortgage on what? Upon some worthless land, a valueless charter, and sixty dollars' worth of contractor's work or mill-owner's rails. And every fresh one hundred dollar bond is secured by the same worthless land and valueless charter, and by further sixty dollars' worth of work or iron. In other words, each one hundred dollar bond is secured by a pledge of about sixty dollars' worth of property, which frequently is not even yet in existence at the time the bond is sold, which will only be created with the money—if honestly applied—which the unsophisticated investor pays for his valuable security.

If a capitalist were asked to lend a house-builder ten thousand dollars, so that he might buy a lot for two thousand dollars and put up a five-thousand dollar house on it, and the builder were then to offer the capitalist a mortgage upon the whole as security for the loan of the ten thousand dollars, the capitalist would consider the builder a knave or a fool. But when a railroad company does precisely the

same thing it seems to be considered a perfectly just and proper transaction, and there never seem to be wanting people who will advance money to railroad companies on precisely that basis; in other words, who will buy the bonds of new railroad companies, secured by a mortgage on the property which may *perhaps* be bought with two-thirds of the money that they pay for the bond. Of course as long as the company can go on borrowing or selling fresh mortgage bonds, it is the easiest thing in the world for them to pay the semi-annual interest with the utmost regularity and thus lull the holder of the bond into a deceptive security. But a time must come when the road will be finished, when no fresh borrowing can take place; and if by that time the road has not proved a triumphant success, a very profitable enterprise, the interest may not be forthcoming. If then the holder of the bond relies upon the property mortgaged to him, he will be apt to discover how little it is really worth.

Nothing, in fact, can be more absurd than the whole modern theory of building railroads "on mortgage bonds." It is a delusion and a snare. Years ago the first subscribers to the stock of a new railroad company, who paid in their cash, one hundred cents on the dollar, very generally found their whole cash subscription sunk. But after thus sinking a large amount of money, there was generally a good deal of property on hand, which could be made very valuable by the expenditure of additional money. That additional money was obtained by mortgaging the property actually on hand, and the bond issued against such a mortgage might be and was good and safe enough. In this way the public has become accustomed to the idea that railway *stocks* are dangerous, but railway *mortgage bonds* are perfectly safe. It is upon this idea that most of the new railroad enterprises of the country are based. It is this idea that makes possible the construction of mile after mile of new railroad that will never pay running expenses. But it must be evident that there is not the slightest resemblance between the railroad bond that many investors have in their mind's eye and the bond that they have in their safe. Some day the difference will be very patent to them, and then they will discover, as English investors discovered in 1866, that in railroad enterprises it matters very little what name is given to the security you hold, whether it be called stock or debentures, shares or mortgage bonds, they are all alike valueless if the property does not pay expenses or is not honestly managed. That is a matter, however, for individual investors to look to. The fact that we desire to establish is, that the system of raising the first money for building new railroad lines by means of mortgages upon imaginary property is a deceptive and dangerous one, and induces the public to furnish money for enterprises which could not get their support if rightly understood, and that it thus facilitates the construction of unnecessary and unprofitable lines of roads, to the great detriment of our national prosperity.

ENGLAND.

LONDON, February 19, 1869.

THE chief news of this morning is the rejection by the Senate of the convention negotiated by Mr. Reverdy Johnson. The *Times* alone contained this intelligence, and even anticipated the other newspapers so far that it was able to insert a leading article, as well as a telegram from its correspondent. Hence the only remarks upon the news are those made by the *Times*, and I do not know that there is much in them to which I need draw your attention. The convention had been sharply criticised already on the ground that it was too vague as to the subjects proposed for deliberation, and especially left it open to the United States to call us to account for the recognition of the belligerent rights of the South; or at least to adduce that recognition as evidence of our *animus* in the matter. This view differs, as I need hardly say, from that which led to the rejection of the convention; and perhaps does not tend to improve the prospects of an agreement. However, it consoles the *Times* for the disappointment, for which I think every one was pretty well prepared. This is not the place to argue the propriety of the step taken by the Senate, although I confess that I regret anything which tends to keep such questions open; nor can I as yet make any report as to the effect produced in England. I therefore take to matters of more domestic interest.

Parliament has met; and, if I may use the language of prize-fighters, the rival champions have stepped into the ring and shaken hands, but have not yet planted a single blow or drawn first blood. A meeting held a few days before was more significant as to the promise of the session. The Company of Fishmongers held a grand feast, at which the chief ministers were present. Mr. Gladstone had to declare that the proudest day of his life was that in which he had been made a Fishmonger, and Mr. Lowe and Mr. Bright were provided with proper occasions for oratory. The result was curiously characteristic. Mr. Gladstone adopted his usual tone of high moral principle, and declared in emphatic terms that the ministry were about to discharge their duty and to annihilate the Irish Church. Mr. Lowe looked on with something of a sneer, and spoke in his usual tone of rather cynical chaff, explaining how every one was for economy in the abstract, and nobody liked it when it came to cutting down any particular item of expenditure. Mr. Bright, as I hear from those present (for I am not a fishmonger, nor have I even the honor of being a frequent guest of the Guild), made one of the most unfortunate speeches which has ever fallen from the lips of that great orator. He seemed to be anxious to apologize for his position in the ministry, spoke in disparaging terms of the previous career of his colleagues, and expressed his intention, which sounded like a threat, of bringing them frequently to the bar of public opinion. Then he turned upon the bishops, some of whom had unluckily been attending a Fishmonger's feast a few days before and making some rather foolish little speeches of the facetious kind. He rent and gored them to his heart's content, remarking pleasantly that they subsisted on the generosity and credulity of the public, and then sat down amidst a rather ominous absence of applause. The feeling amongst his brother ministers was apparently what might have been produced in a party of missionaries who had invited a converted savage to dine with them, if after the meal he had raised a war-whoop and explained that his cannibal propensities were only in abeyance, and that he might at any moment resume the tomahawk, and cast off the dress-coat of ordinary life. The impression on the general public was that the ministry resemble nothing less than a happy family, if on the first occasion of dining together in public they thus take every opportunity of dancing on each other's favorite corns. To say the truth, it is difficult to distinguish the bond of amity which holds together men of such distinct proclivities. The Irish Church will be the first object of attack; but if they once dispose satisfactorily of that abuse, it is hard to see how they are to be kept in hand.

The Queen's speech is like most Queen's speeches, a very insignificant document, and as Mr. Gladstone explained, is intended to set forth only those matters upon which there is a fair prospect of legislation. Besides that all-absorbing question of the Irish Church, it seems that Government mean to undertake the following matters: They will investigate the system of elections, municipal and parliamentary; they will patch up certain defects in the laws of rating; they will introduce a measure about bankruptcy (a promise which is becoming a regular formula in all Queen's speeches), and they will, perhaps, do something about primary education in Scotland and about secondary education in England. The programme is not very extensive, and probably some of these matters will drop out of sight long before the weary series of debates has been brought to an end. To say the truth, the whole energy of Government will be used up upon two points: one, the Irish Church—a question which becomes more perplexed and troublesome the more it is examined; and the other, an attempt to economize in the different branches of national expenditure. The new ministers are hard at work cutting off odds and ends, limiting the number of postage-stamps in one department, directing the number of times in which quill-pens are to be mended in others, and generally pinching, scraping, and cheeseparing with extreme energy. It is a process in which one has not much faith, and resembles rather too strongly the spasmodic desire for saving which sometimes leads a private person to save a half-crown a week in cabs and on the strength of it to spend a hundred pounds more in house-rent. A great deal might be done by a reorganization of many departments which might indefinitely increase their efficiency; but the attempt to introduce parsimony as a permanent principle in the public service is certain to be of transient service. I fear that much good energy is likely to be wasted on details, and that we may at best see a session wasted in destroying the Irish Church without bringing about any of the substantial reforms so urgently required.

The most interesting of the election petitions, that against Mr. Smith, who succeeded in ousting Mr. Mill, has just been decided. Mr. Smith is a man of whom even his opponents speak with respect. He is the greatest news-agent in England, supplying all the railway bookstalls, and is a man of considerable fortune. He stood against Mr. Mill three years ago unsuccessfully; but the recent elections succeeded, as you are aware, in turning him out. The trial, which is just concluded, explains to some extent the nature of a metropolitan election. Against Mr. Smith personally there was no impu-

tation, or merely this, that he meant to take advantage of his great wealth. He spent about £9,000 in all, and doubtless meant to spend it within the law. Great sums, of course, went in printing, in committee-rooms, in hiring agents and clerks, and in paying canvassers. The particular part, however, which went hardest with him was as follows: Mr. Smith had a warm supporter in Mr. Grimston, another honorable man. Mr. Grimston had an humble acquaintance named Edwards. Mr. Edwards had been a professional briber in the good old days when bribery was an established practice, but had exercised his profession so unskilfully as to have been imprisoned by the House of Commons for a few weeks in consequence of certain transactions at St. Albans, where he confessed to having spent £18,000 in a few years. Mr. Grimston took this gentleman to help him at Westminster. Here Mr. Edwards employed various persons whose respectability was not so plain at this end of the chain. The most dangerous case was one in which he had paid voters small sums, of not more than £1 per week, to exhibit placards; the question was whether these payments were *bonâ fide*, or were intended to influence the votes of the recipients. That neither Mr. Smith nor Mr. Grimston knew anything of them was granted on all sides; but this innocence was more doubtful as to Mr. Edwards, and not at all doubtful as to certain lower agents. It was at length decided that, although bribes had been given, they were not given by any agent of Mr. Smith, and that, although Mr. Smith's agents had in other cases done some very questionable actions, they had not done them with corrupt motives; and thus Mr. Smith escaped, though, as it were, by the skin of his teeth.

It results, I think, from this and other enquiries, that the judges are a more satisfactory tribunal than the House of Commons committees; yet it also results that a man may spend £9,000 on a single election, and yet keep himself to windward of the law. It was generally said, and with some truth, that the increase of constituencies would put direct bribery beyond the means of any but gigantic fortunes; yet it is also true that the small voters who have now received the franchise are open to such small inducements as a few shillings for four or five weeks; and if these inducements are skilfully administered the detection is by no means easy. It is true that a man is responsible for the acts of his agents, but it is very difficult to define exactly in what cases and to what extent a man is to be considered as an agent. If, like Mr. Smith, the candidate is a man who wishes to be strictly legal and yet wishes to take advantage of his wealth in all legal methods, he has great opportunities of doing so. Direct corruption is probably on the decline, and we must congratulate ourselves on that result without expecting to deprive wealth of many of its more or less doubtful modes of influence.

The trial which I mentioned in my last, as to the persecution of a nun in a convent, still drags its slow length along, and every one is wearied of the whole concern. It has, I believe, become evident that if she was subject to a deal of petty persecution, she was also what is called in the vernacular a very "aggravating" young woman. But the really definite result is to impress the outside public with the extreme pettiness of lady life in a convent, and to make it ridiculous rather than either hopeful or admirable. The trial will probably last a week longer, and before that time we may hope for a parliamentary dispute or two sufficient to eclipse it in interest.

Correspondence.

THE RECORDER'S LATE DECISION.

To the Editor of the Nation:

In two paragraphs of "The Week," in your issue of February 25, you treat of a subject so important to every woman in the country that it seems incredible that all men have not before this time come to look upon it as we do. Perhaps the true explanation of the difference which exists is to be found in the fact that in such cases, while men are always the aggressors and women the sufferers, the laws which declare the punishment of that atrocious crime are made by the former only. You may be sure that, had women had a voice in the making of the laws, the wretch who committed the outrage in question would never have been sentenced to *imprisonment*, nor have had his sentence suspended because he consented to desecrate a holy ceremony by going through the form of marriage with his victim. Every such criminal would be punished so surely by death that we should soon cease to have our hearts wrung by such stories as the one you have commented on. The wonder, the shameful wonder, is that while the law-making men are husbands, fathers, and brothers, they have no more sense of the hideous character of this crime than to permit the possibility of such a thing, and thus to render the country which they govern more and more unsafe for their wives, their daughters, and their sisters. Such being the case, however, it is the duty of every man worthy of the name, for the sake and for the safety of those who are near and dear to him, and who ought, under our present social arrangement, to be able to look to him as a protector, to see to it that such inadequate laws as we now have shall be enforced to their utmost penalty.

If the records of our courts and of our daily papers did not show the frequent occurrence of such tragedies as that which occasioned your paragraph, the question you put to the leaders of the woman's rights movement would be much more pertinent. It is difficult to imagine, however, how women could be any more exposed to such outrages than they are now, even if they did have the right of suffrage and the poor privilege of earning their bread in the manner most suited to their faculties, with only their natural disadvantages to contend against; and they certainly would be better able to protect themselves.

A Woman.

February 27, 1869.

[We fear a "Woman's" announcement of the fate that awaits the perpetrators of a certain class of offences when women get into the legislature will not tend to hasten their getting there. It is just the readiness expressed in this note to look at things from a purely feminine point of view that makes a great many men so much opposed to having women meddle with legislation. If, as we have often remarked, what they will bring into politics is simply feminine intensity of feeling, the longer they can be kept out of politics the better. The proper punishment for such offences as that of which our correspondent speaks is the one which will most effectively diminish them, and not that which, as it seems to the female heart, the wretches who commit them deserve. What is the most effective punishment is to be got at by human reason and human experience, and not by sympathy. The facility with which false charges of criminal assault on women can be made and sustained is of itself a sufficient reason why the punishment of death should not be inflicted for such offences. Its enforcement would place any man in the community at the mercy of any pair of female conspirators who wanted to get rid of him. In cases of murder you have to produce a *corpus delicti*—that is, somebody has to lose his life before anybody else can be hanged for taking it; but in the trial of offences against modesty, as the French jurists call them, the proof has to consist mainly of the oath of one person, or of circumstantial evidence which it is always in her power to prepare beforehand. We called the attention of the leaders of the women's rights agitation to the incident, because we think they are doing some mischief by exciting extravagant expectations as to the effect on woman's condition both of the possession of the suffrage and admission to the various professions. There are peculiarities in woman, of which they make no account whatever in painting her possible future, which must, it seems to us, no matter what legal rights she may enjoy, prevent her competing with men on equal terms in most walks of life; and no lasting improvement can be made in her condition by any agitation in which these peculiarities are passed over or made light of. We do not believe in the efficacy, in a democracy, of the ostrich treatment of any question.—Ed. Nation.]

TRANSFORMATION OF NAMES.

To the Editor of the Nation:

Sir:—Have you patience to add another to the list of places in New England which are misnamed and misunderstood?

When New England was a wilderness, the Indian tribes which inhabited the northern and eastern part went under the general name of Abenakis or Wabenakis. Of these the Norridgewock tribe or clan was the most important, and was ruled by a hereditary chieftain called a Bashaba, whose family name was Bomoseen. These Indians and their Bashaba migrated about New England more or less, and left behind them the evidences of their residences in local names. Thus, on the Kennebec River at Norridgewock, there are some falls or rapids called by the inhabitants the "Bombazine rips," and in Vermont a beautiful lake in Castleton, nine miles long and three miles wide, is called "Lake Bombazine." For a long time this name was a puzzle, because it was obviously a misnomer. Plainly, some Yankee trader, familiar with the article of dry goods called bombazine, had substituted that name for the Indian or local name resembling it

in sound. Whittier's "Mog Megone" let in light upon the question, as he refers in the poem and the notes to Bomoseen, Bashaba of the Norridgewocks. Further enquiry brought to light some old Indian treaties signed by Bomoseen with his name and totem. Here we see the true name, euphonious and significant, instead of the unmeaning, prosaic, and ill-sounding *Bombazine*.

Names become so firmly fixed that when they are wrong it is almost hopeless to try to change them, though something could be done if the inhabitants of the misnamed localities would try to correct them in their maps and conversation. One of the *Bombazines* is in a fair way to be obliterated. A new map of Rutland County, Vt., has been published this winter by Beers, Ellis & Soule, New York, in which the lake is rebaptized—as the old chief signed the treaties—"Bomoseen." If the Kennebeckers will take a little care when a new map is made of their county, "Bombazine rips" and the home of the Bashaba will be no longer desecrated by his misspelled name.

VERMONT.

MARCH 6, 1869.

Notes.

LITERARY.

WE have not mentioned, we believe, that Messrs. Charles Scribner & Co. will reprint, in a two-volume octavo edition, Professor Max Müller's "Chips from a German Workshop." The reprint will be made from the second and revised English edition, and will have a copious index.——The connection of the study of language with the history and origin and probable destiny of our race is obviously so close, and questions about man's origin and destiny now occupy so many minds, that there is, perhaps, no branch of learning so abstruse which can be called so generally popular as linguistics. It can hardly be said to have succeeded to the place in popular estimation and interest which not long since was held by geology, when that study, with the help of the religious press, took the reading public by storm; for there are one or two other branches of research—as, for instance, physiological psychology, or psychological physiology, and the physical studies of Tyndall and his fellows—which are on a level with it as regards the attention they respectively attract. But the yearly number of the books and of the readers who study them must be steadily increasing. We have just mentioned Müller's book, which seeks to find in language the support the author wants for his "Science of Religion." That is more than twelve months old; but we might mention a score of books relating to linguistics which within the twelvemonth have appeared in England, Germany, and America. A forthcoming philological work which will be issued in the United States, by Mr. L. W. Schmidt, is a translation, by Mr. T. Davidson, of St. Louis, of a thin pamphlet of seventy-two pages, "On the Origin of Language," by W. H. J. Bleek, the curator of Sir G. Grey's library at Capetown, C. G. H. The German edition, edited by Dr. Ernst Haeckel, of Jena, who wrote a preface for it, is now about six or eight months old.——Messrs. Oakley & Mason announce "A Phonographic Reader," by Mr. J. E. Munson, and "The Trapper's Guide," by Mr G. Newhouse.——Messrs. Claxton, Remsen & Haffelfinger announce, or have just published, "Mistress Margery: A Tale of the Lollards," by Margaret Holt; "Queer Discourses on Queer Proverbs," by "Old Merry;" a "Pilgrim's Progress" in extremely large type (double pica); "Whispers to a Bride, and Christian Households," by Mrs. Lincoln Phelps; a "Memoir of Bishop Burgess," of Maine; "Fox's Book of Martyrs," with fifteen illustrations, edited, or rather supplied with a preface, by the Hon. and Right Rev. Samuel Waldegrave, Bishop of Carlisle; a new edition of a decidedly poor book—"Vulgarisms and Other Errors of Speech," and two or three other books which are either technical in character or "juveniles."——The Presbyterian Publication Committee will publish "The Lost Father," by the author of "The Chinaman in California," a pleasant and good book for children; "A Tennessean in Persia"—a work which has the far less attractive second title of "Scenes in the Life of the Rev. Samuel Rhea"—and several books for Sunday-schools by Mrs. Julia McNair Wright.——Messrs. Warren & Blakeslee, of Boston, announce a work by Mary Barrett, with the title "The Story of William the Silent and the Netherland War"—a title which seems to need amendment in the second part.——Messrs. J. B. Ford & Co., who are keeping on with their series of pamphlet sermons by Mr. Beecher, announce "The American Woman's Home; or, Principles of Domestic Science," by Mrs. Harriet Beecher Stowe and her sister, Miss C. E. Beecher; and Mr. R. W. Raymond's "United States Mining Commissioner's Report."——Messrs. J. B. Lippincott & Co. will republish in this country, or, rather, will put on the market in this country, a uniform edition, illustrated, of all Mr. Charles Reade's novels. The volumes, ten in number, are to be of duodecimo size, bound in cloth, and of the price of two dollars. The same house announce "Königsmark, the Legend of the Hounds, and Other Poems," by Mr. Boker; an edition, complete in one volume, of Mr. Baring-Gould's "Curious Myths of the Middle Ages;" "A Home for the Homeless," by Mr. Horace Field; a translation by the well-known Ritualist, Mr. Orby Shipley, of "Preparation for Death," the work of Alphonso, Bishop of Saint Agatha; "Force and Nature, Attraction and Repulsion; or, the Radical Principles of Energy graphically Discussed in their Relations to Physical and Morphological Development," by Dr. Charles Frederick Winslow; "Don Quixote," "Milton," "Pope," "Cowper," "Crabbe," "Wordsworth," "Campbell," and "Coleridge," in the Globe Edition; "Lost in Paris, and Other Tales," by Mr. Edwin Hodder; "Vignettes of American History," illustrated, by Mary Howitt; Dr. Lyman Coleman's "Manual of Prelacy and Ritualism; or, The Apostolical and Primitive Church, Popular in its Government and Simple and Informal in its Style;" "The Christian Worker: A Call to the Laity," by the Rev. Mr. F. C. Beach, and "Cottage Piety Exemplified."——Messrs. Fields, Osgood & Co. will publish not only Mr. Stedman's new book of poems, but also new editions of his "Poems, Lyric and Idyllic," and "Alice of Monmouth, an Idyl of the Great War, and Other Poems." Besides books previously mentioned by us, the same firm have in press, for publication in the months of April and May, the Rev. Mr. W. H. H. Murray's "Vacation Adventures; or, Camp Life in the Adirondacks;" Mr. Higginson's "Malbone;" Miss E. S. Phelps's "Men, Women, and Ghosts," and a revised edition of Mr. Parton's "Life of Horace Greeley," to which additions have been made that bring it down to the present time.——A work which is not to be considered as merely a school-book, is Professor Gray's "School and Field Book of Botany." It is published by Messrs. Ivison, Phinney & Blakeman.——We have received the first number of the *Phonographic Advocate*, a little monthly publication, edited by Mr. James E. Munson, who proposes to send it to subscribers for a dollar a year, and to press upon their attention, and that of the public generally, "the great advantages that would be derived from the general introduction and employment of phonographic writing;" to show how it may be used by all, especially by professional and business men; to urge its claims to a place in our system of common school education; to answer the objections of such as oppose this introduction, and to give hints for the guidance of teachers and learners.——Messrs George Routledge & Sons announce that they also, as well as Messrs. Cassell, Petter & Galpin, have in press "Swiss Family Robinson," in words of one syllable, and Mrs. Barbauld's "Evenings at Home." Their author or adapter is Miss Mary Godolphin, who invented—the publishers say—the monosyllabic literature in her monosyllabic "Robinson Crusoe." The volumes are to have colored plates—chromos, we believe. The same house announce a good cheap edition, bound in half roan, with gilt tops, of the works of Fielding and of Smollett. By the term "complete works" it is not meant, we suppose, to promise Smollett's History.——Messrs. Appleton & Co. announce the "Théâtre Complet de Jean Racine," edited and annotated by M. Auger; "Hereditary Genius," by Francis Galton; "The Brain and the Mind," by Dr. Thomas Laycock, and, in paper, "The Principles of Psychology, Part I.—Data of Psychology," by Mr. Herbert Spencer.

—Very convenient to journalists, and far from being useless to others, are such collections of brief biographies of contemporaries as go under the head of "Men of the Time." Such books have also the further value of gathering and handing over to posterity authentic information collected on the spot, and often from the subject of the memoir himself, or his friends, in regard to his birthplace, his descent, his residences at various times, and a thousand similar matters that are often the despair of biographers. Facts, such works should give, and not opinions, critical or otherwise, and that is what most of them aim at doing. We are glad to be able to announce that the field which America presents for a dictionary of contemporary biography—now but very partially occupied by Congressional dictionaries and similar books—is to be occupied as fully as may be by a work which is being prepared by Mr. Markinfield Addey, of this city, assisted in each department by writers especially conversant with it. It is expected that "Eminent Living Americans" will contain the lives of about two thousand people, a number which leads one to wish that Mr. Addey would select some other title for his book; it is not probable that we have any more "eminent Americans" than we had thirty years ago, when Mr. Jefferson Brick and his compeers flourished, nor so many; but Mr. Addey makes them about as numerous. To the number of "men of the time," or "noted contemporary Americans," there need be no limit. "The church" is to be one of Mr. Addey's departments, and the persons treated of under

that heading are to be "archbishops and bishops of the Roman Catholic Church; bishops of the Protestant Episcopal Church; bishops of the Methodist Episcopal Church; presidents of and professors in theological institutions and popular pulpit orators." There is a danger, apparently, of the compiler's being a little too mindful of dignities. The other departments are devoted to men "in political life;" "in the army and navy;" "in the law;" "in literature, science, and art;" and "in the commercial world." This is an enterprise on which everybody will look favorably. It is a pity that the necessity for compression in books of this sort is so imperative that a little essay on each one of the departments could not be prefixed to an edition for foreign circulation. By way of briefly exemplifying our meaning: such an essay relating to "men in political life" would save foreign journals so well-informed as the *Pall Mall Gazette* from speaking of a member of the Senate as "Representative" So-and-so; and such a periodical as the Augsburg *Ausland* from imagining Mr. Pendleton a Radical Republican.

—The poem entitled "Snow-drops in Italy," which was printed in the *Nation* of February 25, and which has since been credited to Miss Harriet Hosmer, the sculptor, is the work of Mrs. Helen Hunt, now in Rome.

—The example set by the graduates of Harvard in attempting to raise a fund for the relief of the college, and the disclosures of the poverty of the library in Gore Hall, have moved some of the under-graduates of Yale to urge on the attention of the alumni the condition of the college libraries at New Haven. If we take the account given by the *Yale Literary Magazine*, matters seem to be no worse at Cambridge than at the sister university. Including the libraries of the "Linonia" and the "Brothers"—two societies in which are enrolled most of the under-graduates—the libraries of all the professional schools and that of the college proper, the total number of books and pamphlets collected at Yale is 105,000. Twenty thousand of this number of titles are pamphlets. It is stated that The Library—by which term is doubtless meant the college library proper—is in debt $3,200, which sum represents the income of nearly two years; and out of the $1,700 of annual income all binding must be paid for and all purchases made. The debt being what it is, of course purchasing is nearly at a standstill, and for some time has been. The librarians have not even had such help in bearing their burdens as Mr. Gray's annual donation for five years of $5,000—by which piece of genuine benevolence the Harvard income, quite as scanty as that of Yale, was most notably increased. It is now proposed that there shall be raised by the Yale alumni, as soon as may be, the sum of $100,000, the interest of which shall be wholly devoted to the service of the library; and every lover of learning will hope that steps may at once be taken to carry the project into effect. A college without a library may have pupils, but can hardly have, and almost surely will not make, students; indeed, it need not hope to have pupils very long. As an encouragement to the rest of the alumni, we may mention that one of their number, a graduate of the class of 1848, has given to the library a sum of money to be used for increasing, arranging, and binding the collection of handbills, pamphlets, and papers illustrative of the recent war. The authorities solicit contributions to this collection, and do not care what is sent them; even when a duplicate file of newspapers, say, or a seemingly common and worthless pamphlet is sent, they find themselves frequently able to make it serviceable by bartering it with some collector who has what they want and happens not to have what they are willing to part with.

—M. Languellier, with the aid of Mr. Christern as his publisher, is undertaking a rather novel enterprise, which will have, we fancy, a certain vogue. In a neat pamphlet form he reproduces the *Spectator* of Addison and Steele, translated into French, with the original text on the same page below, and with original and selected notes. We are left to guess the motive of this publication, but shall probably be not far wrong in thinking it designed as an aid in learning to compose in French. Such it may fairly claim to be without pretending that the style of the version is as good as that of the original: that it be good is enough. A hasty examination of the former shows that it is free in places where it should be accurate, and where the shades of meaning are of the first consequence. But any student who should try without help to turn the English into French would probably find M. Languellier's translation of decided use to him for correction. A singular competitor in this sort of pedagogy is "The New Idea," *alias* "L'Idée Nouvelle," which is a weekly newspaper of the usual size, edited by a French Canadian, at Burlington, Vermont, with the principal object of revolutionizing the Government of the New Dominion, and exchanging colonial dependence for republican independence. As a means of teaching the French idiom to Americans, and the English idiom to Frenchmen, everything in the paper, to the smallest item, and even the advertisements, is printed both in French and English in parallel columns. We will only say of the result that we warn the Frenchmen not to trust too much to the English of the paper. An American can use it to get an idea of the French.

—We have to add a few titles to our list of new English books of interest to the American reader: A year and more ago we spoke of the Shakspearean labors of Mr. George Russell French, who had just then discovered a missing link in the chain of the poet's pedigree. Messrs. Macmillan & Co., we see, now announce that they have nearly ready a work which Mr. French calls Shakspereana Genealogica, of which the First Part contains, (1) the "Identification of the Dramatis Personæ in the 'Historical Plays,' (2) Notes on Characters in 'Macbeth' and 'Hamlet,' (3) Persons and Places belonging to Warwickshire alluded to;" the Second Part contains an essay entitled "The Shakspere and Arden families, and their connections," to which is appended a "Table of Descent." The same publishers issue a new work which will have great attractions for our medical readers; it is "Medicine in Modern Times," and consists of addresses delivered at a meeting of the British Medical Association by Doctor Stokes, Doctor Acland, Doctor Gull, Professor Haughton, and Professor Rolleston. "A Report on Mercury," by Doctor Hughes Bennett, is to be found in the same volume. To persons interested in "Americana," especially "Americana" relating to the aborigines of the New World, we may mention a work by an Essequibo missionary, an Episcopalian clergyman, the Rev. Mr. W. H. Brett: "The Indian Tribes of Guiana, their Condition and Habits; with Researches into their Past History, Legends, Antiquities, Languages, etc." Some of our clerical readers will be interested to know that Doctor Cureton, an English clergyman and scholar, now deceased, some time since discovered in the library of the British Museum three Syriac manuscripts—one of the date of A. D. 474, one of the date of 512, and the third undated, but certainly to be referred to the early part of the sixth century—which contain the oldest Christian homilies known—sermons composed by Aphraates, a father of the Syrian church who flourished in the first half of the fourth century, a few years before Ephraim Syrus, hitherto the earliest homilist. Doctor W. Wright will edit the work, which will be in two volumes; the first will give the Syriac text, and the second a translation. This is very probably a valuable addition, if any were needed, to the resources of the polemics.

—Whatever may be true of the clergy here or elsewhere, one is struck in looking over the English lists by the proofs they give that the laity are very good readers of religious literature. "The Pathway of Safety" is a book of "counsel to the awakened"; it is now, although it is but a few years old, in its one hundred and fifty-sixth thousand. This is certainly a good many to sell of any book, and the books are very few indeed that can in this respect make any show beside "The Pathway of Safety." But the "Home Beyond, or a Happy Old Age" comes respectably near it, for it has reached its seventy-sixth thousand; and "The Early Communicant" even beats it; for that work—to be sure it is only a shilling volume, or a half-dollar one, as we should say—is in its one hundred and sixty-second thousand. Far behind these, but still far ahead of ninety-nine in a hundred of the best of the books that have a merely literary value, comes "Rend your Heart and Not your Garments," a penny book in its tenth thousand; "Noontide at Sychar" ($1 75) in its seventh thousand; "The Shadow and the Substance" ($1 and $1 25), in its ninth thousand; "The Life of the late Rev. Doctor Marsh" ($1 75) in its sixth thousand, and the Rev. Mr. Moody Stewart's "Life and Letters of Elizabeth, the last Duchess of Gordon," in its eighth thousand. It may be doubted if even here in America, where on the whole the average reader is a more variously intelligent and curious reader than his English cousin, there is any book, except an educational text-book of real value—and which has been well pushed—that is a better property than one that addresses itself simply and directly to the religious sentiment—the religious sentiment somewhat but not too much denominationalized, to coin a word. The monosyllabic library of Messrs. Cassell, Petter & Galpin receives two additions—namely, "The Swiss Family Robinson" and good Mrs. Barbauld's "Evenings at Home." This house had previously put into words of one syllable "Æsop's Fables" and "Sandford and Merton."

—The marvellous mountains of the Arabian Nights with their enormous caverns, the abodes of djinns, with their hollowed mountain ranges,

containing kingdoms of enchantment that surpassed in riches and beauty any kingdoms of the upper air, may go hide themselves if Mr. George Catlin should succeed in making good some theories concerning the Rocky Mountains that he is about to publish. Living as he has done among the Indians, he has become familiar with the scenery of the Far West, and has studied it as a geologist might; perhaps, indeed, he is a geologist, though we know little or nothing of him in that character. The researches made in his travels have led him to believe that beneath the Rocky Mountain range, in a series of vast, clean, dark cellars and subterranean channels, there flows a river many times larger than the Mississippi, and twice, or nearly twice, as long. Flowing over its bed of rock it loses nothing by alluvial absorption, and concealed as it is from the sun's rays it loses nothing by evaporation, but secretly pours its undiminished volume—increased, indeed, by the sinking rivers and lakes of Mexico—into the waters of the Caribbean Sea and the Gulf. Again, beneath the Andes, says Mr.Catlin, "through the vast and heated vaults I contemplate a similar river, running from the thirtieth degree of south latitude to the north, and carrying its overflowing waters also to the Caribbean Sea." The frequent "steaming mountains," "blowing caves," and "trembling rocks," which occur among the Rocky Mountains indicate, says Mr. Catlin, "submontagne cascades." Another alleged circumstance which he offers by way of proof of his theory is, that by the great influx into the outer ocean of the subterranean rivers of North America the western surface of the Caribbean Sea is elevated several feet above the level of the ocean water. Another theory which Mr. Catlin announces is closely connected with this one of the upheaved mountains and the underground streams. The West Indies were once mountain peaks, the proudest of the Andes chain; but the mighty rivers, "meeting and debouching into the ocean east [west?] or north of the Antilles, combined with extraordinary volcanic influences, undermined the Antilles chain which went down in the cataclysm, well established by Indian traditions which I have gathered both in North and South America, and also by unimpeachable records on the rocks themselves; by shapes and grooves left in the giant walls at Caracas and Santa Martha, on the coast of Venezuela, where the mighty chain was broken, etc." It was in this tremendous convulsion of nature that the peninsula of Yucatan, with its splendid Aztec cities, sank, and these cities, with the evidence they give of their submersion, afford Mr. Catlin some confirmatory proof. The Gulf Stream, also, Mr. Catlin would explain by reference to this same theory and not by any reference to tidal currents. The full title of the book, which will be looked for with interest, is "The Lifted and Subsided Rocks of America, with their Influences on the Oceanic Atmosphere and Land Currents." Who will republish it in America we do not know; Mr. Catlin's former works, first published on this side of the water, are divided among several houses. Probably "The Lifted and Subsided Rocks" will be issued here by the American agents of some London firm.

—All signs indicate that we are fast approaching the time when pictorial representations, drawn or printed on paper, will be reproduced with absolute accuracy. The methods already applied with more or less success do nearly this, but photolithography, the highest of them, has not proved to be, for prints, a perfect counterfeit. However, according to the last number of the *Bibliographie de la France*, M. Drivet has at last succeeded in solving the problem which had hitherto baffled all the efforts of chemists and photographers. He has discovered a mode of reproducing on copper, either in relief or not, as may be desired, the most delicate details of photographic images. By the new process a copper plate, obtained, apparently, by electro-plating, is engraved automatically to a sufficient depth to allow of taking a large number of impressions. The process is said to be so cheap that, for a price little exceeding what a good photographer asks for two or three dozens of cartes-de-visite, one can procure a well-engraved plate from which any printer can print hundreds or thousands of copies. And these portraits do not fade as so many photographs have done and all may do. The *Bibliographie* gives no details of the mode of execution, and we cannot, therefore, compare it with the heliographic printing of Mr. von Egloffstein of this city, who publicly offers to make, on steel, "portraits, country-seats, circulars, reproductions of engravings, designs," etc., at one-third the cost of manual engravings.

—M. Brasseur de Bourbourg has recently published at Paris an octavo of nearly five hundred pages entitled: "Quatre Lettres sur le Mexique. Exposition absolue du système hiéroglyphique mexicain. D'après le Teo-Amoxtli et autres documents mexicains." In these four letters the author treats the following topics: The end of the stone age; the temporary glacial epoch; the beginning of the bronze age; the origin of the civilization and of the religions of antiquity. After many years of travel and antiquarian research in Central America, he has come to the conclusion that the myths of the old Mexican gods and heroes are not only intimately related to those of China, India, Egypt, Persia, and Greece, but also anterior to them; that the civilization of the Western hemisphere is not borrowed from the Eastern hemisphere, but that, on the contrary, America is the mother of Asia; that the continent which we have been accustomed to call the "New World" is not merely the oldest physically, as geologists had already taught us to suspect, but also the oldest ethnologically and in every way—the cradle of the human race. This theory M. Brasseur de Bourbourg maintains with much learning and logical acumen, and in an appendix to his volume prints a number of "*pièces justificatives*," among which are curious traditions of the deluge and a dissertation on the songs of our aborigines. Whatever we may think of this theory, we may say that the book presents a thorough and scientific discussion of American antiquities, and cannot fail to be welcomed by those who are interested in this subject.

—Teubner of Leipzig has just issued the first volume of Heinrich Deinhart's "Gesammelte kleine Schriften," edited by Hermann Schmidt. These "chips from the workshop" of the late director of the gymnasium at Bromberg show the same ability in the portraying of philosophic ideas and abstract thought in a clear, intelligible, and attractive style that characterizes his larger and more elaborate works. The topics discussed are the following: David and Jonathan, or the nature (*Wesen*) of friendship; the antithesis of pantheism and deism in ante-Christian religions; the ideal, with especial reference to formative art and poesy; the conception of culture; the conception of religion; emotional life and emotional culture (*Gemüthsleben und Gemüthsbildung*); Kepler's life and character; Kepler as the true reformer of astronomy; rational grounds for the immortality of the soul; the distinction between classic and romantic; the difference between poetry and prose; the development of man into freedom of will; J. G. Fichte's moral-religious principle. It is expected that this first volume of Deinhart's posthumous papers will be soon followed by a second volume.

REALMAH.*

THE publishers have done a thing for which they are to be thanked in having reprinted "Realmah," perhaps the best work of an author with several very fine qualities, and these, some of them, of a sort of which our society knows too little. Mr. Helps's "Friends in Council" made him known to a certain part of the American reading public, but the publication of this volume will extend the knowledge of him among many more readers; and whoever reads him makes the acquaintance of a person of very great refinement of manner, which matches a refinement of nature that is sometimes fastidiousness, but is redeemed from being so by the brightness of the author's mind and the firmness of his moral fibre. From these qualities naturally comes the simple elegance of the author's style, which is, within certain well-defined limits, a model of English. It is the English of educated and cultivated as well as well-bred "good society;" its general character is that it is conversational, though it is true, too, that the writer now and again at very rare intervals is beguiled into making what has been designated as "the purple patch," and raises the tone, perhaps to show doubters that underneath the man of social polish—the well-bred man—there is the educated man, the man of literary accomplishments, who could if he liked be the "writer." Examples of this little slip are where he makes his otherwise delightful Sir John Ellesmere construct, for the sake of showing that he could do it, a faultless sentence or set of sentences; and again, where the same gentleman indulges himself in a rhetorico-oratorical outburst against mere dulness and stupidity as the source of most extant wickedness of all kinds. But these patches are so rare that in spite of them it is proper to recommend Mr. Helps's style as a subject of study to very many writers, and especially to very many American writers, with whom not only are purple patches of Tyrian intensity—though they wash but poorly—of continual recurrence, but who, not content with the patch, so run the gorgeous threads through all the texture of the ill-woven web they weave, are so eloquent and fine and bald and poor together, that the result at last is that they have the mixed mess with purple predominating, which the old ladies used to call the "hit or miss pattern." The danger of direct imitation is always great and greatly to be shunned; still the study of styles admirable, as we may almost say, for their moral rather than for their literary characteristics can hardly do harm; and, on the other hand, to learn the right uses of the small things

* "Realmah. By the Author of 'Friends in Council.'" Boston: Roberts Brothers. 1869.

of speech is to learn by-and-by some of the intellectual and moral good which is beneath all nicety, simplicity, and genuine force of speech. For this purpose we are not afraid to recommend Mr. Helps. But the student must be on his guard against a certain degree of finicalness which, as we have hinted, is here and there to be found in him; he is not a robust person.

We might refer the reader to that same reprehensible passage about dulness which we mentioned a moment ago, for an illustration also of one of the most marked, in fact the most marked, of its author's good mental characteristics. Readers of light literature will understand well enough what we take him to be when we say that he is a mine of "social articles." He is very full of the "philosophy" of the things about him; and though in "Realmah," philosophizing on this or that social phenomenon is perhaps more mixed with sportiveness and badinage among the personages of the scene than is the case in the author's other works (and mingled too with a partly fantastical allegoric tale), still at bottom they are all the same, and it is the philosophizing which is their essential part. Thus may be justified a description which has been applied to him which makes him an excellent smallish Emerson, so far as Emerson is only a "conduct of life" philosopher. Opening "Realmah" at random and turning but a page or two, we come upon this scrap of conversation, which affords a good enough view of the author at his "social article" discoursing:

Sir Arthur. Notwithstanding Ellesmere's eulogium upon dogs, I ven ture to say again, what I said before, that I do not like their barking. But, to pursue the general question of noise, we never hardly, in our houses, make any sensible provision against it.

Milverton. Very true, Sir Arthur. I remember reading of some murder committed in a Russian palace—a noisy murder, too—but nobody heard anything of it in the next room. Now, that is my idea of how a house should be built. It should be possible to commit a murder in any room without the rest of the house being troubled or disturbed. As it is, architects seem to have set their faces against all quiet and privacy. Studious men are the victims of neighboring pianos. A nursery is a hot-bed of annoyance. I have studied the question of noise very deeply, and I will tell you something of the greatest importance. Put a layer of small shells between the flooring that separates a room from the room above it. You will find these shells admirable non-conductors of sound.

Cranmer. I wish architects were subject to examinations.

Milverton. Very good. The first question I should ask them would be, What thickness of what material will prevent such and such noises—say the playing of a piano by a beginner—from being heard in the adjacent rooms?

Sir Arthur. I remember when I was in Germany, and used to spell over the German newspapers, nothing used to delight me more than the advertisements of servants, which so often began "*Ein stilles Mädchen.*" Now, if one could advertise about houses, and say truthfully, "*Ein stilles Haus*" (I'm sure I do not know whether that is the right German), what an attractive advertisement it would be!

Ellesmere. You were quoting just now "Never Too Late to Mend." I don't think Mr. Reade protested so much against solitary confinement as against the cruelty which in that particular case accompanied solitary confinement. At least such is my recollection of that eloquent and fervid book.

Milverton. No, you are wrong; he protested against the system as well as against the cruelties which he stated to have accompanied it in that particular case.

It is a commonplace remark to make, but what an atrocious thing cruelty is!

In the above extract we have not exhibited the sportiveness of which we have spoken, which is, however, of so gay and pleasing a character, and so constant, that we should be glad to do what we easily might do—quote very many pages pervaded by it. Sir John Ellesmere, a hard-headed and hard-worked lawyer, in particularly high spirits because he is taking his vacation among his friends, is the source of most of it, and altogether is a most enjoyable companion. Perhaps none the less agreeable in that, having risen from low estate, he has not all the repose and perfection of mere manner which makes the other gentlemen and ladies just the least bit obnoxious to the charge of vapidness. He is the only one of the characters who has not more of the lay figure in him than of humanity. Mr. Helps is not great at inventing men and women, and his insufficiency in this respect is visible even when all his task is to make interlocutors in English drawing-room and breakfast-room and library conversations. Mr. Mauleverer, for instance, is quite absurd. So is Johnson; the ladies often are, and Sir Arthur and Milverton hardly exist. In Sir John there seems to be a touch or two that was got from life itself, but on the whole one would say even of him that he is but the more playful and sarcastic side of Mr. Helps, plus rather more animal spirits and bodily strength than have fallen to Mr. Helps's lot. He is to be highly delighted in, however, no matter where he came from, as the following extract may show. The friends have been amusing themselves with inventing maxims which builders of houses should bear in mind:

Ellesmere. Well, you are all very clever! and have offered a heap of good suggestions.

As I proposed the game, I think I ought to be allowed to have another turn.

[We all assented.]

Then I say, *When you are building, think of the comfort of your servants, even before you think of your own.*

["Hear, hear," from Mr. Milverton and Sir Arthur.]

My first maxim, however, was the great one. I really am proud of it. I should like it to be commemorated in my epitaph. By the way, as this is Milverton's last essay, it would be a very appropriate thing if I were to give you a sketch of what my epitaph should be. I think it should run thus. Give me your pencil, Sandy; let me write it out:

He was a sound lawyer;
And, by a peculiar felicity,
Not uncommon to great advocates,
The side on which he argued
Happened always to be
The side of justice and of truth.
He never beat his wife, though she was often
Very provoking.
He was an endurable friend,
And, in a dull country house,
Was worth a deal of money
As a guest.
He was a good master to his dogs,
A persevering fisherman,
A powerful singer;
And when he borrowed books, he always
Took care to return them.
The grand maxim,
NEVER MIND THE OUTSIDE,
Which has improved the Art of Building
Throughout the world,
And which has tended to dignify and purify
All other departments in human life,
Was his'n.

Sir Arthur. Excellent! But there must be a Latin quotation somewhere.

Ellesmere. Oh, ah! Latin. Yes, I have it. "*Quis tulerit Gracchos de seditione querentes.*"

Sir Arthur. I must be very stupid, I suppose; but I do not see the appropriateness.

Mauleverer. Nor I.

Ellesmere. Nor I; but it will set people thinking. They will say I used it in some great speech, and that, as it had never been heard in the House of Commons before, it completely crushed Mr. Disraeli or Mr. Gladstone.

Sir Arthur. No; say something of which nobody can make any meaning, such as "*Sed memor quia immemor*" ("But mindful, because unmindful," ladies).

Milverton. No: turn it this way, "*Immemor quia memor*" ("Unmindful because mindful"), and then a very subtle interpretation might be given. Do n't you know that, when you know a person very well, and love him or her very much, you have more difficulty in recalling his or her countenance than that of any ordinary person?

Ellesmere. That is too fine-drawn. I stick to my Gracchi.

But is not my epitaph modest and touching? I could almost myself shed tears for the loss of such a man. I do not say that I was a perfect friend, but only an *endurable* one. And then how exquisitely my honesty, carefulness, and general propriety of conduct are indicated in what is said about the returning of borrowed books! Some people might think there is a little flattery in the words "powerful singer," but I know that Lady Ellesmere always goes out of the room when I begin to sing, and I conclude that her exit is from an excess of pleasure that requires solitude to moderate it.

I observed that Lady Ellesmere did not say anything, and looked grave. Women do not like this kind of jesting about serious subjects, such as epitaphs. Sir John saw this too, and immediately turned into another branch of the subject.

But with a word or two about the half of the book of which we have not yet spoken we must close. Indulging himself in one of those little ineptitudes which are not quite infrequent enough with him, Mr. Helps gives the name of "Realmah" to the principal figure in the romance which Mr. Milverton reads to his assembled friends. Realmah becomes king of a certain realm, which was inhabited some thousands—or hundreds of thousands of years ago—in the stone period, at all events—by the Sheviri (*she* and *vir*, perhaps), who were dwellers in "lake cities." The describing of the monarch, and his domestic arrangements, and the kingdom, and the religion and education and laws of this imaginary people, of course gives Mr. Helps opportunity for any amount that he likes of philosophizing and poetizing on a thousand things, and, to do him justice, so far as the amount of it goes no fault is to be found with him. But it is dull, often fantastically weak, and never really forcible; still it is, on the other hand, very often acute and delicately fine. The whole love-story of Realmah and the Ainah, one of the king's three wives, is to be called beautiful in a high degree. On the whole, though, the reader is under a constant temptation to skip to the fine print of the friends' conversations, and leave Abibah and its king to themselves. Then at the end, when the reader finds that apparently this elaborate performance has for its final cause to persuade the English to give up Gibraltar to the Spaniards for

high moral reasons, he feels an increased sense of its want of strength, and a wish that he had yielded to the temptation, at least as soon as the Ainah dies and the love episode is over with.

A NATURAL THEORY OF CREATION.*

Two years ago Professor Haeckel, of Jena, published a "General Morphology of Organisms," in which he attempted to sketch a broad outline of the history of the development of organic forms. This was the first attempt of a thoroughly scientific investigator to apply the development theory as modified by Darwin in carrying out the details of classification of the organic world. Intended for the specialist, it is filled with tables giving his views of the probable manner of development of the great divisions of the animal and vegetable kingdoms, as well as genealogical trees of the classes and orders. The "Natürliche Schöpfungsgeschichte" is a series of popular lectures, delivered in 1867-68, based upon his "Generelle Morphologie," being a comprehensive statement of the present condition of the development theory—or, as the author terms it, the natural theory of creation.

The Darwinian theory has found great favor among German scientific men, who consider it a phase of the development theory which has again brought prominently before the public the old views of Goethe, Lamarck, and Geoffroy St. Hilaire. They look upon "development" as the magic word which is to solve the problems of life surrounding us, or, at any rate, point the way to their solution. This tendency is the natural result of the school of Goethe, Büchner, Moleschott, and Vogt, who have paved the way for what is considered the turning point in the history of the development theory, and which cannot fail to lead, sooner or later, to its universal recognition, thus claiming for our century the honor of discovering the origin of the human race and of giving birth to Darwin, the Newton of the organic sciences.

The author writes with the greatest enthusiasm for his subject, he is temperate in tone, no difference of opinion becomes a personal question, and he shows throughout the utmost courtesy and fairness to his opponents. The lectures open with a brief statement of the theory of development, claiming it as the only explanation of the phenomena of organic nature in accordance with natural causes. We find next a review of the theories of creation of Linnæus, Cuvier, and Agassiz, the principal exponents of the theory of the immutability of species. In this part of his argument the author underrates the merits of their methods. It was a natural result of the Linnæan method to flood scientific writings with short diagnoses of new species, such as we still find in not a few scientific periodicals. It was of the utmost importance for Cuvier to dwell upon the slightest points of difference, insisting on their permanence, while comparing the bones of living animals with those he found embedded in tertiary beds of the Paris basin. In the hands of a Linnæus new species served as the means of sketching an outline of the organic world, in those of his followers they have mainly served to encumber our scientific literature with a mass of crude materials. Cuvier founded comparative anatomy and paleontology and reconstructed the past history of our globe; his followers have simply filled out and finished the outlines of the picture to be traced. We must not forget, in criticising the views of these men, what was known in their time, and it certainly is not fair to judge Cuvier and Linnæus by the light of our present knowledge of the organic kingdoms. Agassiz's theory of successive creations, the natural sequence of the Cuvierian hypothesis of the sudden revolutions to which our globe has been subject, he deems untenable, as well as his categories of classification, which he considers as a coarse anthropomorphism of the Creator, and they appear to him in distinct contradiction with what will prove (with the glacial theory) the greatest discovery of Agassiz, namely, the parallelism between the paleontological succession and the embryonic development of animals. Haeckel considers the development theory as the logical application to organic phenomena of Lyell's theory of the natural development of the earth by means of changes identical with those still going on before our eyes. He next takes up the Darwinian theory as a special explanation of the development theory, giving an excellent exposition of the arguments in its favor from the "Origin of Species." He also treats at length Agassiz's embryological views, and is the first to appreciate fully the important arguments which can be drawn from this source in support of the development theory. It is certainly remarkable to what extent the importance of embryology in the ultimate solution of these problems has been overlooked and how little impression embryological studies have made thus far. Darwinists, as a general rule, seemed suddenly struck with the truth of the parallelism of embryological and paleontological development when it was pointed out by Darwin as indicating the probable character of the prototypes of an order or class, forgetting that this same parallelism they had most emphatically denied when urged by the upholders of special creations.

The development theory has in its favor many arguments drawn from analogy. We can only trace development in all organisms; we have never thus far seen anything created. Many animals and plants undergo during their growth from the egg to the adult changes far greater in form, structure, and habits than would be sufficient to identify them at various stages of growth (supposing their development arrested) as different species, genera, orders, classes, or even branches of the animal and vegetable kingdoms. Unfortunately, this point is not yet proved; we have only a strong presumptive analogy in its favor. To seek for a definite solution seems a hopeless task; the very elements of a strict demonstration are wanting. There is not, strange as it may seem, a single animal or plant of which we know the whole life history; still less the comparative history of closely allied species. We have nothing but fragments, here and there a tolerable chapter; we must wait for the Newton who will find the key of organic nature, and till then be content to accumulate facts and catch an occasional glimpse of the probabilities of the development theory. We owe much nonsense and many childish arguments to the Darwinian theory, which have filled hundreds of pages of recent natural history publications; but in Germany, Switzerland, Italy, and England the development theory is being tested by numerous sincere and capable workers, as well as by the most prominent leaders of the natural sciences.

Although Haeckel's purpose is to give a view of the development theory as modified by Darwin, yet the last part of his book, where he enters into specialties, and which is mainly made up of his own views and explanations of the creation of organized beings, differs greatly from the Darwinian theory. Haeckel's natural system is a genealogical tree of organized beings; he looks upon the intervention of the Creator at any time as passing from true scientific knowledge to poetical and supernatural belief. He pushes the development theory to its logical sequence; with him all organized beings are potentially present in the original chaos of the nebular hypothesis, and he claims boldly that the formation of the first organisms from inorganic matter is nothing imaginary, since we have as the primordial organized beings those simple albuminous organisms (*monera*) consisting of particles of protoplasm which has originated from combinations of carbon, hydrogen, oxygen, and nitrogen. He looks upon all the phenomena of life as a natural sequence of their chemical and physical combination as much as if they were conditions of existence of inorganic substances, though in both cases the ultimate causes are hidden from us. The monera are the prototypes of what the author makes into a third kingdom in nature (*protista*), and from these original neutral monera develop animal and vegetable monera. This once established, from each of the archetypes we have developed a genealogical tree giving us the history of the vegetable, protozoan, and animal kingdoms by a skilful combination of fossil forms (actually found) with hypothetical animals and plants (still to be discovered), ending with the present organized beings including man. Though we cannot agree with his views of protista, of the relation of diatomea and myxomycetes to protozoa, of the position he assigns to the coelenterata, echinodermata, and scolecida, and of the numerous classes he interpolates, yet many of the affinities he points out are very interesting, while others not proved thus far are exceedingly ingenious.

He devotes a special chapter to the origin of man, following Huxley and Vogt in uniting him with the monkeys, and he prefaces his work with a plate, better than all arguments, where our common descent from the mandril—"mandril man," as he is called by Haeckel—is painfully well delineated; though all sensitive organizations may console themselves by reading the glowing picture of the future of our race with which he closes this volume.

Haeckel's "Schöpfungsgeschichte" and "Generelle Morphologie" both suffer from the evident haste of the author to publish his views. We miss the discussion of some of the most important points bearing on the development theory; even authors whose tendency is strongly Darwinistic are forgotten. Nothing is said of Hooker, and others of the leading botanists are neglected. We would specially mention the views of Heer in his "Urwelt der Schweiz," which contains one of the most original theories of development. The works of Rütimeyer, Fritz Müller, Claus, and others, bearing directly upon one of the strongest points he makes, are passed over in silence. But what is particularly to be regretted is the meagreness

* "Natürliche Schöpfungsgeschichte. Gemeinverständliche wissenschaftliche Vorträge über die Entwickelungslehre im Allgemeinen, und diejenige von Darwin, Goethe und Lamarck im Besonderen, über die Anwendung derselben auf den Ursprung des Menschen und andere damit zusammenhängende Grundfragen der Naturwissenschaft. Von Dr. Ernst Haeckel, Professor an der Universität Jena." Berlin: Verlag von Georg Reimer. 8vo, pp. 568.

of his statement of the geographical distribution, as well as total neglect to discuss the glacial theory, without which no natural theory of creation can be complete.

RECENT REPUBLICATIONS.

All American readers of novels—all, at any rate, whose eyes are not afraid of some little hard work—will be glad of Fields, Osgood & Co.'s new edition of Charles Reade. It gives us in a set of uniform volumes, neat as regards their external appearance, and not bad as regards paper and printing, all the stories yet published of the brightest of living English novelists. It is to be hoped that the publishers of the new work of his which is now appearing in the *Galaxy* may see fit to complete the set—so far as completeness in this respect can be attained in the case of a living and working writer—by putting the new novel into a dress like that of the volumes before us, which, to be so cheap as they are, are elegant. The fineness of the print is not of so much consequence to Mr. Reade's public as it would be in the case of some other readers. He is not wholly, perhaps not mainly, but certainly he is, to a great extent, a writer for young people, whose eyes may be presumed good. There is none, we believe, of his stories that does not deal with the love of young men for young women—unless, indeed, it is a little more accurate to say that they all deal with the love of young women for young men. It is his young women, we should say—speaking from recollection and not now from a fresh reading—who take up most of Mr. Reade's attention. Thus, perhaps, it is that it happens that while both sexes read him he is more highly spoken of among the young men of his audience, and doubtless is really more interesting to them, than he is to the young ladies. It is a necessity of the case that if it is the relations of the sexes that are uppermost in a writer's consideration, and if the personality of the people affected is secondary, there should be apparent injustice, an inadequacy that amounts to seeming injustice, in his or her picture of one or the other party to love affairs. This is more especially true of male novelists. A woman writing about men, if she is very apt to give but inadequate accounts of them, yet is not so apt as a man is, writing about women, to take a tone which piques the vanity or the pride or the self-respect of the class of whom he professes to be giving account.

It is as little surprising, then, that women are generally disposed to deny the truth of Mr. Reade's portraiture of them, as it is that men should generally accept it. The denial and the acceptance alike, we suppose, point to the real truth of his handling of, not the whole matter of life, but a certain side of it. And that he deals with a certain well-defined portion of human life, and not with all of it, or very much of it, might be offered in proof of the necessary assertion that with all his great cleverness—genius, even, may be said, if while we say it we think of his limitations—he is to be classed with the second or third-rate novelists and not with the best. One might say, too, that it is to the narrowness of the foundation on which he has chosen to build that is due the frequent, indeed almost the habitual, clumsiness of construction of his stories. With his natural strength and ability—not of mind only, but of hearty feeling—it is not possible that he should not be compelled now and again to leave alone mere love-making and work at this and that interesting question. So, while the passion of the heroine and hero is his main business—is, at any rate, what alone gives coherence and unity to his work in any given case—he is apt and of late almost sure to bring into the book some such matter as the prison discipline of "Never too Late to Mend," or the madhouse management of "Hard Cash." If we compare, as respects their artistic construction, these books with the otherwise inferior "Peg Woffington" and "Christie Johnstone," in which love is all, in which every portion of the work is informed and vivified by its originating motive, we find confirmation of this judgment and at the same time the reason of the higher repute of the author's smaller works. The later, stronger ones, although there is more of real matter in them, more of what would be called man's work, are yet to be called comparatively not as good—on account of their indigested masses, on account of the dead-wood which encumbers them—as "Peg Woffington" or "Christie Johnstone."

How entertaining, how readable, how clever all of them are, how likable a man they reveal to us, in spite of his fieriness, if there is such a word, and his too great fondness for smartness, and his frank self-conceit—the frankness of which, in great part, removes the curse of it—all of our readers, we make no doubt, know very well without our telling them. For the information of such of them as have not seen it, we may say that in this edition—which, it is announced by the publishers, has the author's sanction—the novels are put into duodecimo volumes, with the text in two columns of print about as large as that of the well-known "Diamond Editions" of popular authors, and with a green cloth binding. The price of each of the eight volumes is a dollar, and the list includes "White Lies," which is perhaps the best of the long novels, and which—in spite of the excessive Frenchiness and theatricalness of Dujardin—some people think its author's best work; "The Cloister and the Hearth," which seems to us the author's best long work; "Never too Late to Mend," "Foul Play," "Peg Woffington," "Christie Johnstone," "Hard Cash," "Griffith Gaunt," and "Love Me Little, Love Me Long," as well as several shorter tales.

We spoke in terms of such high praise of the first edition of "The Works of Edmund Burke" (Boston: Little, Brown & Co.), that the third edition, which now lies on our table, and is printed, of course, from the same plates, might naturally pass without much comment. But so rare a specimen of book-making cannot be too frequently praised, especially when, as in this case, the result is, that an Englishman who wants the correctest edition of Burke must send to America for it. And if he wanted the best, typographically, he perhaps would still send here; at least he need desire nothing better than the workmanship of the Cambridge printers. The third edition, we remark, being cheapened in price—so that the twelve volumes may now be had for eighteen dollars—has a lighter paper than the first, but to our mind this is fairly offset by the diminished bulk, while again the green and gold backs are an improvement on their predecessors. We sincerely hope that this edition will not be the last, nor nearly the last. We are, most of us, obliged to take the word of the editor and publishers that they have saved us from three thousand errors; but then it is a word which has never deceived us, and to rest implicitly in this is a privilege for which we could hardly pay too dear.

When Dr. Windship began his lectures in Boston, in which he was to exhibit the extraordinary strength he had acquired by his practice of lifting, his auditors will remember that on several occasions in the midst of his reading he was obliged to retire in a half-fainting condition, because, as he afterward explained, of the noxious atmosphere of the room. In one instance, as we remember, this happened in Music Hall, the largest audience chamber in the city; and we have even known him at a small company, in a private house, to stay in the entry as the only place in which he could be sure of breathing pure air. He was a remarkable example of the inconvenience of too high a state of health and robustness amid the necessities—we had almost said—of the life of the present day. Against this word, however, Mr. Lewis Leeds protests vigorously in his little work on ventilation, which Messrs. John Wiley & Son have republished in green covers adorned with this dictum, in flaming white letters: *Man's own Breath is his Greatest Enemy.* The book consists of familiar lectures before the Franklin Institute of Philadelphia, illustrated by experiments, and is valuable for the common sense and practical experience of the author, and his earnestness in calling attention to a subject whose importance is only equalled by the neglect which it has hitherto received, not only from common people but from architects, who should have a principle in the matter. The scientific portions of Mr. Leeds's discourses are not so sound as his deductions from their supposed facts. What he has to say about the abstraction of moisture from the air, and the poisonous quality of carbonic acid, is not borne out by the best experiments, and Dr. Derby's little pamphlet on "Anthracite and Health" will be found much better authority on these subjects. It ought, we would suggest, to be secured by Messrs. Wiley & Son for this series, in which George Catlin's "Breath of Life" appropriately accompanies the "Lectures on Ventilation." *Shut your Mouth* is the white legend on a green ground in his case. Mr. Catlin's is a work which we regard as of great merit and universal interest, and deserving an endless reproduction. It is capital reading, too, illustrated by quaint drawings, and replete with anecdotes of Indian life and adventure. We never take up the book without wishing that there were more of those fanatics whose bequests provide for the gratuitous publication and distribution of some work after their own hearts, and calculated to benefit the latest posterity. The enemies from whom the author wishes to protect mankind are the dentist, dyspepsia, and contagion, chiefly; he accomplishes a good deal more by the way.

"Frankenstein," which Messrs. Sever & Francis have just resurrected, is one of a dozen more than half dead, but not wholly forgotten, slight books—"The Monk" is another, and "Vathek" is almost another—which owe what life they have at present not so much to any vitality of their own as to their having succeeded in parasitically fastening themselves, one in this way and one in that, to the truly good literature of their time. Everybody who has been captivated—as what reader of to-day has not?—by the intellectual activity, and its results, of the great Georgian period, by the works and characters and fortunes of Byron and Scott, of Keats and Coleridge and

Lamb, of Jeffrey and Wilson and Gifford, must feel an interest, if only that of curiosity, in the romance, once so noted, which was written at Shelley's and Byron's suggestion by Shelley's wife, Byron's friend, Godwin's and Mary Woolstonecraft's daughter. "Frankenstein," then, still lives, and very likely may have before it many more years of existence. In itself it is not much. There is a sort of nightmare horror about the main conception. At any rate one would say of it that it might be the effect, if it could hardly be the cause, of a nightmare. One can even imagine it becoming almost terrible in the hands of a man like Poe, and becoming better than that in the hands of a writer gifted not only with a love for the horrible, but also with the moral imagination, so to speak. But each page of Mrs. Shelley's book, instead of adding something to the impressiveness or the significance of the original idea, takes so much away from it; she merely weakens and cheapens the naked horribleness of it. It would be hard to find an example of clumsier and more puerile handling of a subject capable of being put to good uses. It is easy to believe, what is hinted in the preface, that the plot of "Frankenstein," the conception of the chief personage was due to recollections or suggestions, more or less vague, got from some German "tale of wonder." It is not so easy to understand why it should cause regret to any one, as it recently has to some, that the author's career of authorship closed altogether when her young husband died. The edition before us is neat; the paper cover is really ornamented by its design, which does the artist credit.

For half a dollar one may buy of the Messrs. Appleton a paper-covered volume containing "Cary's Dante" with the "Life," all the notes of the last edition that was supervised by the author, an index, and a chronological table. The print is not very fine, and the paper is so thick that the reader never has before his eyes at one time the text of more than one side of the leaf—a thing not too common in books of the price of this sort. This "Dante" is uniform with the other volumes of the cheap "Standard Poets" series, which includes "Milton," "Burns," "Scott," "Tasso," "Pope," "Dryden," "Spenser," "Herbert," "Chaucer," "Butler," "Campbell," "Hemans," and "Kirke White." As regards most of these poets—perhaps all—it is surely well that they should be made so cheap, and it is true that the edition which Messrs. Appleton & Co. offer us is, on the whole, well prepared. But it is to be wished that the Johnsonized "Dante" of Cary could be displaced in the half-dollar market, as in others, by Mr. Longfellow's or Mr. Parsons's, or almost any other translation.

This edition of "Scott's Complete Poetical Works," which Messrs. Fields, Osgood & Co. have just issued, needs mention only, the public being very well acquainted with "Diamond Editions." A much-liked acquaintance, and an old one, "Scott" is an author fit for a pocket edition; as widely known as he is much liked, he is a typically good author for a cheap pocket edition, like this one, and the "Diamond Scott" is a suitable companion for the "Tennyson," "Longfellow," and "Whittier" of the same very successful series.

Miss Yonge's compilation known as "Golden Deeds" is reissued by Messrs. Sever & Francis, who have made of it a cheaper book—just as good, however, for the boys, for whom it was intended—than it was in the dress which it has hitherto worn. It would be so easy a thing to do—and so good a thing when done—that it is a wonder Messrs. Sever & Francis do not add a volume to their "Golden" series—or a supplement to this volume of Miss Yonge's—which should relate some of the countless golden deeds of our late war. In the agreeable and inspiriting little book before us the United States figures a little oftener than Bithynia or Milan or Malta, but not very much oftener. To be sure, a golden deed is a golden deed wherever done; there will never be any difficulty in making boys see that much; but the story of what ennobles human nature is for the most part told in vain unless the telling inspires not admiration merely, but emulation; and to do this it is as well, at all events it is well, that the hearers should be made to understand that great things have been done, and can be done again, say, by men from Connecticut, or by the young fellows who went out from the next town "in the three months," and were buried at Big Bethel.

This is not the latest written of the delightful series of literary works which the world owes to the elder Disraeli: "The Literary Character," which, however, Mr. Widdleton has chosen to give us last. It completes his set of nine handsomely-printed octavo volumes, which contain all that is worth preserving of an author who two or three times in the course of his life attempted original composition, but whose successes were all won by him in his character of bookworm and literary scholar. It can hardly be said that literature is any longer pursued as Isaac Disraeli pursued it: "He was a complete literary character, a man who really passed his life in his library"—and this was as true of him in his youth, when he haunted the libraries of Paris, as in his age, when at morning "he rose to enter the chamber where he lived alone with his books, and at night his lamp was ever lit within the same walls." These are the words of his son, a man who has pursued literature after quite another, and the common fashion, making it a means and not an end. The Widdleton edition is based upon that which Benjamin Disraeli annotated, and its external appearance is worthy of its matter, which will always make it a highly prized work among men of letters, and decidedly a work that no gentleman's library should be without.

To match the "Book of Golden Deeds" above mentioned, Messrs. Sever & Francis have got out a dollar edition of Mr. Palgrave's "Golden Treasury of the Best Songs and Lyrics in the English Language." It is no one's affair except the publishers, but we should have thought the daintier dress which this work used to wear would have been more profitable. However, carefully edited as it is, the notes hardly more profitable to the student than the critical ability and extraordinarily nice taste displayed in the selecting, it may be well to issue an edition that shall be within the easy reach of the poorer student of poetry, and of the person who can afford but one or two books of poetry, as well as an edition as beautiful in type and paper and binding as the songs and lyrics themselves.

Isaiah; with Notes, Critical, Explanatory, and Practical, designed for both pastors and people. By Rev. Henry Cowles, D.D. (New York: D. Appleton & Co. 1869.)—"This is the third in a series of notes on the Old Testament Prophets; of which the first, on the minor Prophets, and the second, on Ezekiel and Daniel, are already before the public." The text of the prophet is given only in the authorized English version, without alteration, and the Hebrew original is not only omitted, but almost entirely left out of view, the "critical" notes nowhere revealing any linguistico-critical pretensions. In fact, one might doubt whether the commentator has ever read the text in the original tongue, especially when in a lengthy disquisition in defence of the identity of the authors of the two portions of Isaiah separated by the historical narrative of the Assyrian invasion, we hear him coolly state that "not one reader in a thousand, in passing from the former portion to the latter, would suspect that he was passing from one author to another," which, he adds, "may be asserted of the Hebrew reader as well as of the English." Now, to read Isaiah in Hebrew and not to discover the striking difference of diction and literary character in general which distinguishes the last twenty-seven chapters of the book—referring to the period of the rise of the Persian empire—from the main parts of the first division—referring to an age almost two centuries earlier, in which the prophet personally figured—would require an obtuseness of the literary sense almost as great as that which would find no difference between the productions of Pindar and Theocritus, of Dante and Tasso, or of Milton and Moore. The bold assertion quoted above is one of Dr. Cowles's arguments in favor of the original unity of the book, and not much stronger are those with which he rebuts the evidences to the contrary. That the later "author's central theme is the restoration from exile in Babylon—the whole portion being grouped around this grand event; that the writer speaks as if the later years of the exile and the restoration were his actual present, prior events being seen in the past;" that he speaks "of the temple as destroyed and of the land as 'waste;'" that he exclaims "'our holy and beautiful house where our fathers praised thee is burnt with fire;'" that he speaks repeatedly by name of Cyrus, who flourished nearly two hundred years after Isaiah—all these difficulties our commentator endeavors to remove by a few remarks on prophetic vision and figurative sense. On the "internal evidence lying in the book itself," as he sees it, he expatiates more fully, though with the same superficiality—going so far as to assert that "if it were a fact that some pseudo-Isaiah, living during the exile, wrote the latter portion, then the similarity between him and the real Isaiah in respect to cast of mind, style of thought and expression, would be a greater miracle than prophetic vision itself." Another set of arguments with which Dr. Cowles tries to confound the critics of the opposite camp—from Koppe down to Gesenius, Hitzig, and Ewald—is drawn from the testimony of Jewish and Christian authority. Have not the Jewish compilers "given us the whole book as the prophecies of one and the same Isaiah?" If there ever was an "Isaiah No. 2," who was he? "What was his name? How came he to be a 'great unknown?'" Why has he no record in Jewish history? "How came his writings to appear in the accepted sacred canon without his name?" Who perpetrated the fraud of appending them to the prophecies of the great Isaiah, as if they were his? Did Ezra and his associates "perpetrate this literary fraud upon the true Isaiah? Were they inspired to do this?" Do not the Apostles, does not Jesus himself, credit Isaiah with passages quoted from the last twenty-seven chap-

ters? "Do the critics in question know more and better on this point than they?" "Have they thought of attempting an answer to these and similar questions?" These and similar questions our commentator asks in a triumphant tone—forgetting that the Jewish compilers nowhere asserted the unity of the collection, but affixed to it the name of Isaiah, probably on account of its beginning with visions of that prophet, just as they affixed the name of Samuel to the two books known under that title, the first of which begins with the history of that seer, and the second contains the detailed narrative of *a long period subsequent to his death—and that only;* that the Hebrew canon contains the works of many unknown writers, and among them those of another "great unknown"—the author of Job; that "Isaiah No. 2" may have left his record in Jewish history under the name of Baruch, of Zerubbabel, or even of Daniel; that his writings came "to appear in the accepted sacred canon without his name" precisely in the same way in which the Books of Moses appeared there without the name of their author; that the compilers, whoever they were, not only committed no literary fraud, but, by inserting the historical chapters between the two divisions, even intentionally guarded the reader against a possible mistake; that quotations from the latter chapters of the collection credited to Isaiah imply no greater acknowledgment of that prophet's authorship than a quotation from "Ossian" by Coleridge or Macaulay would imply of the antiquity of Macpherson's songs; finally—though much more could be said—forgetting that a certain kind of refutations was already out of date in the age of Galileo, and is entirely preposterous in ours. This being our opinion of the value of the author's general criticism on his subject, our readers, we imagine, will readily excuse us for not entering upon an illustration of his remarks on the single parts of the book.

Travel and Adventure in the Territory of Alaska. By Frederick Whymper. (New York: Harper & Brothers. 1869.)—The author of the volume before us is a son of a well-known engraver and water-color artist of London, and a brother of Mr. Edward Whymper, whose connection with the ascent of the Matterhorn, and its sad attendant catastrophe, some two years since, will be remembered. Mr. Whymper was for some time an artist of note in British Columbia, and joined the Western Union Telegraph Expedition at Victoria, V. I., in 1865. After the failure of that enterprise he returned to England, where his sketches and travels excited a good deal of attention, and resulted in the production of the present volume.

His narrative opens with an account of his voyage to British Columbia, and devotes about fifty pages to that country, including an interesting account of the great glaciers of Bute Inlet, of various Indian outrages in the vicinity, and of the colonial expedition for the exploration of the interior of Vancouver Island, of which party he was a member. Then he devotes some two hundred pages to matters of more immediate interest to Americans, viz.: an account of the history and various explorations of Russian America, now known as Alaska, in general; and, in particular, a narrative of a journey from Norton Sound to the Yukon River, and thence to Fort Yukon, at the mouth of the Porcupine River, and returning to St. Michaels, *via* the Yukon and the sea. A short sketch of the explorations in Siberia by officers of the Western Union Telegraph expedition, and forty pages devoted principally to California, with an appendix, and a map of the northern part of Alaska, conclude the book.

This being the first popular and accessible account of the great river of the Northwest, it is in the highest degree interesting, and Mr. Whymper's companions bear testimony to his general accuracy. His style is easy and unambitious, and the engravings from his sketches are good specimens of the art, and give a clearer idea of the country traversed, and the habits of the Indians, than any description could do. The book is well worth a careful perusal, and will clear up much of the mist which envelops the ideas of most people in regard to our new territory, which is popularly believed to be a paradise of polar bears, icebergs, and Esquimaux. Some errors, comparatively trifling, should be noticed. Want of familiarity with the Russian and Indian dialects (the only ones spoken in the vicinity of the Yukon) has caused much confusion in the nomenclature of the Indian tribes and of localities. From the same cause the vocabularies (except that by Mr. Kennicott, which is a *reprint* from the Smithsonian publications) are far from reliable. With regard to the map, Mr. Arrowsmith has sustained his reputation among geographers of being an incorrigible blunderer. That portion taken from the notes of Capt. Everett Smith and Mr. Whymper is probably approximately correct. That, however, which relates to the *coast line* and to the portion of the river taken from the Russian charts, is inexcusably incorrect. The English Admiralty charts of 1853 (obtainable in any seaport), and the more recent United States coast survey charts, in these particulars, are very much more accurate; so much so, that one is inclined to wonder that some member of the Royal Geographical Society, for which it was compiled, did not detect the errors previous to its publication.

With the above exceptions the book may be trusted pretty implicitly, and the account of a British trading post, quietly absorbing the best part of the trade of that portion of the country (amounting to some eight thousand sables a year), may induce the Government to notify the Hudson's Bay Company *not* to expect at some future time to obtain payment of claims as unfounded as any Spanish castles, if driven out by the superior energy and enterprise of American traders and trappers.

Drawing without a Master. The Cavé Method of Learning to Draw from Memory. By Madame Marie Elizabeth Cavé. Translated from the fourth Paris edition. (New York: G. P. Putnam & Son. 1868.)—This little book is familiar by this time to most students of drawing, and is exercising a certain influence. It is based upon one or two sound principles of study, principles which no teacher of drawing can afford to forget, no student to ignore; and these are pressed with proper persistence upon the reader's attention. But, beyond this, translation seems to have aided original text in making a wordy, uncritical, immoderately vain book, in which some good general advice and many useful hints are nearly spoiled by being declared exclusively good and exclusively useful; parts of *my* system—the only possible good one. The conclusion to which one is driven is very nearly this: Let artists and teachers read it and master it, and then throw it in the fire lest their pupils should get hold of it.

The main point insisted on is drawing from memory; and it is this alone which individualizes Mrs. Cavé's method. The pupil makes a tracing, for instance, of an outlined head, and keeping this tracing by his side goes on to draw the head by eye, using the tracing as a drawing-master to correct his errors. When in this way he has achieved an approximately perfect result, and not before it is as nearly perfect as he can make it, he proceeds to draw the same object altogether from memory. Mrs. Cavé's idea that by this means the forms and proportions of many things, the human form for instance, can be fixed most easily in the mind, is a sound one. It is less wise to assert that this is the *only* means of learning to draw, in view of the fact that not all good draughtsmen have been so trained, and in view of the further fact that many good, though of course not the greatest, artists never gain much power of drawing from memory. Neither is it safe to claim that this way of study is universal in its application; it will succeed much less often and less easily with landscape than with figure drawing.

Some of the remarks upon especial points—as upon shading in tint and without lines, upon composition of pictures, etc.—are very good and well put. The force of all this is much marred, however, by a curiously uncritical choice of examples for the pupil to consult. Gavarni's lithographs are named as good things to copy; and of engravings which the pupil is advised to get, and to copy parts of such as he enjoys, those after Metzu and the landscapes of Salvator Rosa are mentioned with engravings after Titian and Rembrandt. This argues absolute ignorance of what good work has in it different from bad. There is, for instance, a gathering of nearly all that is to be avoided in landscape art in many of the popular engraved landscapes after Salvator.

BOOKS OF THE WEEK.

JUST PUBLISHED.

THE FISHER MAIDEN.

16mo. $1 25.

BY BJORNSTJERNE BJORNSON.

English Authorities on Björnson.

"Björnson possesses the splendid virtue of concentration, and paints with sharp, decided truths on a tiny canvas. An artist, not a photographer, he draws souls more than faces, and although his manner is as expressive as can be, he gives you a good deal of thinking to do on your own account."—*Athenæum.*

* * * "There was room for a true genius, one with poetic insight and thorough faith in the simple element at his command, and surely such a man has recently arisen in Björnson. * * * The exquisite emotions, apprehension of beautiful truths combined with musical sympathies, constitutes sometimes a faculty in itself, and yields to mankind a lyrist like Tennyson and an idyllic thinker like Björnson."—*London Spectator.*

THE GAIN OF A LOSS. By the author of "The Last of the Cavaliers." 12mo. $1 50.

A novel of English life, containing a good deliniation of character, stirring incidents, and a novel well impressed. The novels of this author are attracting attention in England.

IN RAPID PREPARATION.

715 and 717 Market St., PHILADELPHIA.

THE TRADE LIST DIRECTORY FOR 1869 contains a complete Catalogue of all the Books published by nearly every publisher in this country and many foreign publishers, and as a work of reference for BOOKSELLERS and BOOK-BUYERS, LIBRARIANS and LITERARY MEN generally, its value for reference will be incalculable. It saves time in making up or filling orders; aids in increasing a small order, by suggesting other books or articles; indicates where to buy certain classes of books advantageously; gives the prices, styles of binding, etc.

Being divided in sections, SUPERINTENDENTS OF SUNDAY-SCHOOLS and Preachers can see all the lists of Juvenile and Religious Books in Section 1st; LIBRARIANS and LITTERATEURS all Belles-Lettres, Fiction, etc., in Section 2d; Professors and Teachers all School-books in Section 3d; LAWYERS, DOCTORS, and SCIENTIFIC MEN will find Law, Medical, and Scientific Works in Section 4th; STATIONERS and FANCY GOODS DEALERS will be interested in the Trade List of Wholesale Stationers and Manufacturers of Fancy Goods, in Section 5th. The entire work costs $5, or each section can be obtained separately at $1 each. Address,

HOWARD CHALLEN,

1308 CHESTNUT STREET, Philadelphia.

BURKE'S WORKS.

THE WORKS OF EDMUND BURKE,

As Edited by his Literary Executors, and completed under the superintendence of the

Bishop of Rochester, Dr. King.

THIRD EDITION.

In 12 elegant volumes crown 8vo, green cloth, price $18.

In preparing this edition great care has been taken to examine all early and authentic copies of the papers embraced in the collection. As evidence that such a revision was needed, the publishers would state that over three thousand errors of text, in editions until now considered accurate, have been discovered and corrected by the present editor.

"This edition has every advantage which critical acumen, labor of research, and an almost fanatical exactness can give it." It "possesses the capital merit of accuracy; and we feel that the publishers deserve the special thanks not only of mere readers, but of all who love truth and honesty, for having resolved, first of all, to make a trustworthy book, and then, what does not always follow, for having secured a competent man to see that it shall be what it professes to be. The editor deserves the thanks of all admirers of Burke for having done for his author all that he undertook, and more than any one else we can think of would have been competent to do."—*North American Review.*

110 Washington St., Boston.

The Switzerland of America.

A SUMMER VACATION IN

THE PARKS AND MOUNTAINS OF COLORADO.

By SAMUEL BOWLES,

Author of "Across the Continent."

A volume of 175 pages, Price ONE DOLLAR.

It describes the Pacific Railroad—the Scenery on its Route—and how it is built; the wonderful Regions of the Rocky Mountains in Colorado, below the line of the Railroad; their grand Snow Peaks; their great enfolded Central Parks—vast Prairies of Grass and Grove and Flowers, seven to ten thousand feet above the sea level; experiences in Camp Life with Indians, Ladies, Vice-President Colfax, and Gov. Bross; the claims of Colorado to be the Switzerland of America, the resort of pleasure-seekers and invalids; the Charms of Atmosphere and Climate in the Centre of the Continent; and the state of the Mines and of Agriculture in this great central region,—all in the graphic and sympathetic style that made "Across the Continent" the most popular book of American Travel.

*** Sent by mail, postage paid, on the receipt of ONE DOLLAR, by SAMUEL BOWLES & COMPANY, Springfield, Mass. Also, published by the AMERICAN NEWS COMPANY, New York, and LEE & SHEPARD, Boston.

The American Wheat Culturist.

A PRACTICAL TREATISE UPON THE CULTURE OF WHEAT. By S. EDWARDS TODD, 432 pages large 12mo, illustrated, price $2 50.

"No well-appointed Agricultural Library can be without it. If a poor farmer can buy but one book relating to his art, let him buy this."—*New York World.*

"We commend it to all intelligent farmers, and believe its careful reading will be one of the first steps towards the raising of a successful crop of that from which comes the staff of life."—*Maine Farmer.*

"The chapters on 'Preparation of the Soil,' 'Varieties' and 'Means of Preventing Ravages of Disease and Insects,' are worth very many times the price of the book."—*Rochester Express.*

"It is a thorough treatise on the subject of Wheat-growing."—*New York Observer.*

"Its common sense and practical statements, together with its excellent pictorial illustrations, will make it a favorite and useful work in the farmer's library."—*New York Tribune.*

Attention given to Land-Draining; the Construction of Farm Buildings, including Earth Closets; the Renovation of Worn-out Lands; Road-making, etc.

1,000 MILES
OF THE
UNION PACIFIC
RAILROAD
ARE NOW COMPLETED.

As 500 miles of the western portion of the line, beginning at Sacramento, are also done, but

267 MILES REMAIN

To be finished, to open the Grand Through Line to the Pacific. This Opening will certainly take place early this season.

First Mortgage Bonds
AT PAR.

By its charter, the Company is permitted to issue its own FIRST MORTGAGE BONDS to the same amount as the Government Bonds, *and no more*. These Bonds are a First Mortgage upon the entire road and all its equipments.

THEY HAVE THIRTY YEARS TO RUN AT SIX PER CENT., and both PRINCIPAL AND INTEREST ARE PAYABLE IN GOLD.

The entire amount of the mortgage will be about $30,000,000, and the interest $1,800,000 per annum in gold. The present currency cost of this interest is less than $2,500,000 per annum, while the gross earnings for the year 1868, FROM WAY BUSINESS only, on AN AVERAGE OF LESS THAN 700 MILES OF ROAD IN OPERATION, WERE MORE THAN

FIVE MILLION DOLLARS.

As the supply of these Bonds will soon cease, parties who desire to invest in them will find it for their interest to do so at once. The price for the present is par and accrued interest from January 1, in currency.

Subscriptions will be received in New York

AT THE

Company's Office, 20 Nassau St.,

AND BY

JOHN J. CISCO & SON, Bankers,

59 WALL STREET,

And by the Company's advertised agents throughout the United States.

Bonds sent free, but parties subscribing through local agents will look to them for their safe delivery.

JOHN J. CISCO, Treasurer,

NEW YORK.

Jan. 20, 1869.

The First Mortgage Bonds of the ROCKFORD, ROCK ISLAND AND ST. LOUIS RAILROAD COMPANY pay both the Principal and Seven per Cent. Interest—1st Feb. and 1st Aug.—in GOLD COIN, Free of Government Tax.

A limited amount only of these Bonds may be had at par and accrued interest in currency, of H. H. BOODY, Treasurer, 12 Wall street: or of HENRY CLEWS & CO., Bankers, 32 Wall street.

MARVIN & CO.'S
ALUM AND DRY PLASTER
FIRE AND BURGLAR

TWENTY-FOURTH ANNUAL REPORT
OF THE
New York Life Insurance Company,
OFFICE, 112 AND 114 BROADWAY.

JANUARY 1, 1869.

Amount of Net Cash Assets, Jan. 1, 1868..		$8,774,326 01
Amount of Premiums received during 1868.....	$3,912,130 07	
Amount of Interest received and accrued, including premium on gold, etc.....	766,144 13—	4,678,280 20
Total.....		$13,452,606 21

DISBURSEMENTS.

Paid Losses by Death..	$741,043 22	
Paid Annuities and for surrendered and cancelled Policies.	135,863 45	
Paid Dividends to Policy-holders.....	1,225,865 26	
Paid Commissions and Agency Expenses	493,714 72	
Paid Advertising, Physicians' Fees, and Reinsurances.....	76,978 87	
Paid Salaries, Printing, Office, and Law Expenses	130,558 64	
Paid Taxes and Internal Revenue Stamps	35,107 60—	2,839,131 76
Total.....		$10,613,474 45

ASSETS.

Cash on hand, in Bank and in Trust Company.....	$397,351 51	
Invested in United States stocks—cost ..... (Market value, $3,154,868 75.)	2,978,907 49	
Invested in New York City Bank stocks ..... (Market value, $47,862.)	41,549 00	
Invested in New York State stocks ..... (Market value, $991,070.)	947,856 42	
Invested in other stocks..... (Market value, $222,500.)	210,579 60	
Loans on demand, secured by United States and other stocks ..... (Market value of securities, $505,745 50.)	408,100 00	
Real estate..... (Market value, $1,028,806 59.)	878,806 59	
Bonds and mortgages ..... Secured by real estate, valued at over $5,000,000 (buildings thereon insured for $2,055,700, and the policies assigned to the Company as additional collateral security.)	2,389,900 00	
Loans on existing Policies....	1,257,735 63	
Quarterly and semi-annual premiums, due subsequent to Jan. 1, 1869.....	475,066 07	
Interest accrued to Jan. 1, 1869.	60,449 44	
Rents accrued to Jan. 1, 1869..	2,387 76	
Premiums in hands of agents and in course of transmission.	564,784 85—	10,613,474 45
Add excess of market value of investments over costs		387,348 15
Cash assets Jan. 1, 1869.....		$11,000,822 60

LIABILITIES OF THE COMPANY.

Amount of Adjusted Losses due subsequent to Jan. 1, 1869	$92,131 00	
Amount of Reported Losses awaiting proofs, etc.....	18,700 00	
Amount reserved for reinsurances on existing Policies: ($86,397,710 10 Participating Insurance at four per cent. Carlisle, net premiums. $1,047,434 65 Non-participating at five per cent. Carlisle, net premiums).....	8,473,594 03	
Return Premium 1868, and prior thereto, payable during the year.....	727,115 40—	9,311,540 48
Divisible Surplus - - -		**$1,689,282 17**

DURING THE YEAR **9,105** NEW POLICIES HAVE BEEN ISSUED, ENSURING **$30,765,947 67.**

☞ THE BOARD OF TRUSTEES HAS DIRECTED the redemption, on and after the first Monday in March next, of the last and only outstanding Scrip Dividend (that of 1867), and from the Undivided Surplus of $1,689,282 17 they have declared a CASH DIVIDEND, available on settlement of next annual premium, to each participating policy proportioned to its "contribution to surplus."

Dividends not used in settlement of premiums will be added to the policy.

By order of the Board.

The Week.

WE have commented elsewhere somewhat in detail on the Cabinet appointments. Taken as a whole, we think the general feeling is that the Cabinet is a very strong one, and that it would have been difficult to have made a better one out of the materials at command. It is quite evident that, in spite of one or two slips which we have pointed out, General Grant has acted with great independence in making his selections, as it was generally expected he would. It is not unreasonable to hope that he will infuse or has infused enough of his spirit into the heads of the Treasury and Post-office Departments, who are of course most exposed to the rush of office-seekers, to cause them to abandon the old party rule both in making vacancies and in filling them. Mr. Boutwell has announced his intention of doing so, and a rumor runs through the ranks of office-seekers that Mr. Cresswell laughs at "claims," no matter by whom presented.

Congress seems to have cut out for itself work enough to last it for a good many more than the thirty days which was spoken of at first as the probable length of the session. Already there are about four hundred new and old bills to be acted on. Then, besides its regular work, there is the absorbing outside work—the examining of certificates of "soundness," the interviews with supplicatory or deprecatory or minatory constituents, and the pushing of the "claims" of the lucky few by the senators and representatives. If it were not for certain obvious considerations, one would imagine that out of mere love of life every public man from Grant down would be ardently in favor of Mr. Jenckes's Civil Service Bill. The pressure on the influential men at Washington, the wear and tear of mind and temper, must be unspeakably great. The stories that are told will, however, have the effect of making some, at least, of us outside observers reflect once more, that the public cannot by possibility be well served by servants who get their places in such a scrabble for them as Washington is now witnessing.

To-day week the Senate adjourned till last Monday. On Wednesday most of the day was taken up by a discussion of the bill to repeal the Tenure-of-Office Act, which the House promptly sent up at the beginning of the session. Mr. Morton—who is as pertinacious in this matter as Mr. Sumner is in regard to Mrs. Lincoln's pension, not to mention other things—wanted the act repealed at once, but Mr. Trumbull thought it would be best to refer it to the Judiciary Committee. It was on a motion to that effect that the discussion hinged. Every Democratic senator is for repeal; so are Fessenden, Grimes, Morton, and Sherman. On the other side are some senators who want the act to stand, because it gives them more absolute control of the offices in their States; the resolution passed at the senatorial caucus the other day gives us leave to make this remark, for it bound senators not to "endorse the application" of any office-hunter who does not come from the senator's own State—which is much like saying that the two senators of any given State are to have its patronage. But, on the other hand, the repeal is opposed by Mr. Sumner, whose State is not divided very closely, and by Mr. Trumbull and Mr. Conkling and other senators of whose motives in such matters nobody speaks evil of course. There are doubtless some strong legal arguments in favor of keeping some parts of the present act still on the statute-book. On Thursday the Public Credit Bill was discussed. On Monday it was discussed again, Mr. Carpenter alone making any new or strong point against it. Some future Congress, he said, might *repeal* the bill—which we do not now need, for our honesty is not now suspected—and thus might inflict a blow upon the public credit, and make this enactment, useless at best, positively injurious. The bill, as it came from the House, was finally passed by a vote of 42 to 13. On Tuesday there was a very animated and very able debate on the Tenure-of-office Act, which the Judiciary Committee propose should be *suspended* till Congress meets in December next. Mr. Edmunds, in particular, was as sharp as a needle.

To-day week the House was not in session, nor was it the day before, nor on Saturday last—these days being devoted to constituents. On Friday a scheme of Mr. Butler's was taken up, and its execution agreed upon by a vote of 93 to 47. He wants a joint committee of three senators and six representatives who shall take charge of legislation upon Indian affairs. As he will probably have a place on this committee—if the Senate should agree to its establishment—he will be in a fair way to be paid for not being put on any of the important committees except the one on Reconstruction. Meantime, General Grant seems to have flanked the Indian Ring by giving to the department of which the Indian Bureau is a part General Cox for a head. Giving to the army the department, when the Senate had refused it the bureau, is not the directest way to get military influence felt in the Indian question, but it is better than unmitigated Ring-management. What will come of the proposed committee we shall see in time. On the same day Mr. Schenck's Public Credit Bill was passed by a vote of 97 to 48. Fourteen Republicans—if Mr. Beatty, a consistent repudiationist, is a Republican—voted with the Democrats in the negative. Mr. Butler of Tennessee was one of these; another was Mr. Butler of Massachusetts, who was followed on this, as on similar occasions heretofore, by Mr. Cobb of Wisconsin. The rest of the fourteen were: Mr. Deweese, whom no one would think of as the best man in the best Southern delegation—that from North Carolina; Mr. Coburn, of Indiana, an old member, but unknown to the country at large; his colleagues—Mr. Shanks, who is better known, or more widely known; Mr. Tyner, like Mr. Coburn as regards the extent of his reputation; and Mr. Orth, whom we know little about—Mr. G. A. Townsend praises him highly; Mr. Wilson, of Ohio; Mr. Taffe, of Nebraska; Mr. Hawkins, of Tennessee; and Mr. Hopkins, a colleague of Mr. Cobb's. These are all that remain in the House of the dangerously large crowd of repudiators who seemed to be having it all their own way a year or so since, and who, first and last, have been about as expensive a set of

men as any country with credit to be injured ever staggered under. But apparently we have seen the last of them, though there is no doubt that if we should find ourselves in difficulties at any time soon, Mr. Butler and his friends would improve their opportunities.

The standing committees in the House of Representatives have been announced, but present nothing very remarkable, and are on the whole pretty well chosen. General Butler magnanimously wrote a letter to Mr. Blaine, requesting him not to allow his friendship for the unworthy subscriber to influence him in his appointments. The general is accordingly placed at the head of the Reconstruction Committee, in which he will probably do some good service, and has a place on the Judiciary Committee, where he can do no harm, if they do not let him "investigate" too much. Mr. Banks retains his old place on the Committee of Foreign Affairs, the dread and envy of the effete statesmen of the crumbling monarchies of Europe. Luckily, each year he holds the place his powers of mischief decline, and his "reports" are now read, when read at all, mainly on wet days in lonely taverns. The Committees of Ways and Means and on Appropriations, which are the most important, are both good. Mr. Schenck we are glad to see in his old place on the Committee of Ways and Means. He writes to us enquiring whether "we are able to answer the arguments" used by him in the debate which followed the row over the counting of the electoral vote, being moved thereto by our speaking of his performance on that occasion as "an escapade." We reply that we do not need to answer his arguments. What we say is, that the proper time and place for the production of them was in the debate on the concurrent resolution on providing for the case of Georgia, which took place a week before the counting of the votes, and that any man who then failed to speak was bound to hold his tongue at the actual counting; that the row was, in our opinion, really got up by General Butler for the sake of notoriety, and that it was, therefore, the duty of good citizens, to say nothing of sensible members like Mr. Schenck, to keep clear of him. All this has, of course, no bearing on the question of what ought to be done when the Vice-President finds an "old newspaper," in place of an electoral certificate, in the envelope; but that question not having yet arisen we have nothing to say about it.

We may perhaps have said a word too much when recently we charged Pennsylvania with being the most corrupt State in the Union. At all events, we are sure our Philadelphia friends will agree with us that the charge would perhaps have come with a better grace from some journal not published in the city of New York and the State of which Albany is the capital. They will very likely be pleased with the history, which has just been ordered printed, of the bribery and corruption of our last Legislature. A special committee has been for a long time taking testimony, and among the facts brought to light are some like these: Mr. Henry Thompson, an Erie Director, being put on the stand, was asked whether the company had paid Governor Fenton any money for his signature to the bill legalizing the acts of the Directors in the famous "Erie war." Mr. Thompson suggested that he could not be expected to answer that question, as the scope of the committee's powers did not warrant them in enquiring about any bribery but that of the Legislature. The Honorable Mr. Thomas Murphy was next called up, and he swore that Mr. Thompson told him that he saw two checks of $10,000 each paid over to Mr. Hamilton Harris, the Governor's legal adviser, under an agreement that on that same day the Governor's signature should be given to the bill. It was given, Mr. Thompson added, within three hours. This was pretty direct. Mr. Murphy went on to say, that a while afterwards he, as chairman of a Republican political committee, went to Mr. Jay Gould, president of the Erie company, and asked him for a subscription to the party fund to be used in the Presidential campaign. Mr. Gould replied, Mr. Murphy said, that he had already had to give $20,000 for Fenton. Mr. Harris and Mr. Jay Gould, however, do not know anything about any such moneys as the preceding witness mentioned. Then, after this little affair, we had our Senatorial election; and the Common Council of this city we have always with us; and there used to be talk of the Albany Regency; and altogether, perhaps as we have said, we may have been a little too fast in what we said about the neighboring State. Still there is no doubt that when Albany is destroyed by fire from heaven, Harrisburg may as well begin to look about her.

The returns of the Department of Agriculture for February help to confirm certain assertions as to the wealth of the country which we have frequently made in the *Nation*, but which some of our readers have found it difficult to swallow. Horses have only increased slightly in the Western and Southern States, hardly at all in the Eastern and Middle. Oxen and other cattle have decreased in New Jersey, Maryland, North Carolina, Florida, Texas, Kentucky, Ohio, Indiana, Illinois; in this last State, five per cent. In several of these States there is also a falling off in milch cows. There has been a general diminution also in the number of sheep and hogs, the falling off in fattening hogs amounting in the valley of the Ohio to fifteen per cent. It is no wonder under these circumstances that the prices of food show no serious decline. The matter would speedily be set to rights by the natural flow of capital and labor into agriculture, if there was anything like steady financial legislation, or rather no legislation, at Washington. But the more agricultural prices rise, the more the tariff doctors seek to draw off money and men from farming by raising the premiums on manufactures.

We two or three times last fall, when Mr. Van Meter of the Howard Mission was occupied in getting up the Water Street revival, asked for the accounts of that institution and the names of the auditors, but got no answer. These enquiries have, however, apparently produced some fruit. Mr. Van Meter has retired from the superintendentship, and the trustees have produced a financial statement, going back as far as November, 1868 (just about the time of the revival), which now lies before us. We presume it is satisfactory, and trust the institution will now flourish and keep its receipts and disbursements faithfully in black and white before the public. To expose charitable organizations to suspicion is an offence against the human race.

The Belgian trouble seems to have blown over, it appearing plainer, the more the subject was discussed, that to traverse the right of the Belgian legislature to prohibit the sale of national railroads to foreign companies, and thus place what will be the great military highways in the next war in the hands of Frenchmen up to the very gates of the capital, was to be a little too outrageous. Whether Count Bismarck was at the bottom of this matter or not makes little difference, as it cannot be denied that Belgian leaning towards Germany, with indifference to French opinion, grows, and nothing that France can now do can check this tendency. The constitutional system has been thoroughly rooted in Belgium, thanks to Leopold, who was considerably wiser in his generation than Louis Philippe, though the latter used to write him long letters of advice. Bismarck, who is back in his place, though not very well, seems to give little attention to the row, being occupied with the punishment of the ex-King of Hanover and the ex-Elector of Hesse, whose private property in Prussian dominions he is confiscating, on the ground that they are using it to promote intrigues against the Prussian Government, and to subsidize the French press into exciting hostility and suspicion of Prussia in the mind of the French public. The King of Hanover he treats somewhat tenderly, in deference to his own sovereign's feelings. But the Elector he "handles without gloves," calling him, amongst other things, "a reptile." The Elector, who is perhaps one of the greatest of living rascals, is in the meantime quite hopeful, and is said to have recently announced to a deputation of his former subjects his confident expectation that he would shortly again reign over them.

The recent debates on the press law in the French Senate and on the right of public meeting in the Corps Législatif both show decided movements in advance, even amongst the supporters of the Imperial dynasty. One of them, M. de Maupas, declared frankly in the Senate his belief that ministerial responsibility to the Chambers was absolutely necessary to the security of the throne, which called

forth an indignant rebuke from M. Rouland, the minister, as being a discussion of the constitution. M. de Sartiges, at one time ambassador at Washington, advocated, as the result of his experience here and in England, complete liberty of the press as the only safeguard against the excesses of the press, but he was met by the argument that it was the excesses of the press which had recently deluged this country with blood, which adds one more to the list of "causes of the rebellion." The question of public meetings is a more difficult one, and the ministers derived considerable advantage over their opponents in the debate from the fact that, in the meetings which are leading to all the uproar, free discussion is not permitted. All the speakers are in favor of the abolition of property and marriage, and of the Deity, and the addresses are directed merely to questions of detail. Anybody who objects to the general principles of the majority is at once silenced, if not expelled. There is a Commissary of Police present, who occasionally has a "set-to" with the speakers, but only when they seem to be assailing the existing Government. The opinion appears to prevail widely in Paris that the meetings, if not instigated, have been highly enjoyed by the Government, as they give the middle classes a glimpse once more of what is in store for them in case the strong hand is withdrawn; and the requisite impression having been produced the "free platform" is to be taken down and the halls shut up. This impression is strengthened by the performances of a one sou paper called *Le Peuple*, which is believed to be the private property of the Emperor, and is sold for the cost of the stamp. This organ maintains that questions of ministerial responsibility and parliamentary reform have interest for the middle classes only, and that the great questions for the working class are the distribution of property and the relations of capital and labor.

The progress of the Russians in Central Asia continues to excite anxiety as well as discussion both in England and in British India. The history of the extension of the Russian territory north of the mountains is very like that of the extension of British territory south of them. Agents or explorers, commercial or diplomatic, have naturally to be sent out in various directions; they fall in with native fanatics, are plundered, imprisoned, or beheaded; troops are sent to deliver or avenge them; troops need a base, and a base is supplied by a fort, or the expedition ends by an annexation of territory either by way of satisfaction or security. The great question under debate now amongst the Anglo-Indians is whether the mountains are passable by an army, and the geographers and explorers are hard at work over it, the weight of opinion leaning towards passableness. But there is a strong and growing feeling of the absurdity of maintaining that Great Britain has a vested interest in Central Asiatic barbarism, or that even Cossack civilization would not be something vastly better than Turkoman civilization, and that the Emperor of Russia would not be, after all, a very good neighbor, and that the best security for the British empire in India does not lie in arts rather than in arms. Sir John Lawrence, who is coming home after forty years of brilliant service, is strongly opposed to all interference, secret or overt, with Russia, and in his farewell speech urges the Anglo-Indians to rely for their security on justice and good government. That the government is rapidly improving, nobody denies. The revenue has nearly doubled within a few years; railroads are carrying civilization and commerce into the darkest corners of the peninsula, and there is already talk of throwing the whole cost of Indian administration, military as well as civil, on India itself.

Some additional light has been thrown on the origin of the Cretan insurrection and the relation to it of the Hellenic Government, by the publication by M. Boudoures, former minister of foreign affairs, of a minute of the discussion by the ministerial council of an announcement made by the Cretans in 1864 that they were going to rise in arms in 1865, and would like assistance. The application was gravely considered and positively rejected, and the Cretans were advised to rely on peaceful appeals to the European powers, which Greece would support, and which, in the opinion of the ministry, would have a good chance of success, while they were warned that an armed struggle would not only "have no chance of success, but might, on the contrary, become the cause of making the condition of the Cretans worse." This good advice was not taken, however, and the Bulgaris ministry, which succeeded that to which M. Boudoures belonged, encouraged the insurrection, and we know the result—the ruin of the Cretans and the ridiculous humiliation of the Hellenic Kingdom.

Mr. Gladstone has introduced in an able speech his bill for the disestablishment of the Irish Church. The Church property he estimates at about $80,000,000 in gold, and of this he calculates about one-half will go in compensating the holders of vested interests, and in appropriations for the maintenance of the three Cathedrals, which are to be treated as national property. The tithes which are now a rent charge on the landlord's estate, but were formerly paid by the tenant, the land-owners are to have the option of buying out, at about twenty-two years' purchase. The bishops are at once to lose their seats in the House of Lords, and all bishops and clergymen hereafter appointed are to rely for their means of support on their congregations. The other half of the property Mr. Gladstone proposes to use in the endowment of establishments for charitable purposes not specially provided for by the poor laws, such as idiot and lunatic, deaf, dumb, and blind asylums, hospitals, etc. The speech was listened to with great attention and Mr. Disraeli announced on behalf of the Opposition that he would offer no factious resistance, though he regarded the whole scheme as one of confiscation, but asked for abundant time for the consideration and discussion of the bill. It will probably pass the House of Commons without much difficulty, but its fate in the House of Lords is uncertain. It is doubtful, however, whether the latter has courage enough left to stop it.

Our readers may remember that when Mr. Romero, the Mexican Minister at Washington, was leaving this country, in October, 1867, he was entertained at a public dinner, at which he laid down some rather startling doctrines in political philosophy, on which we commented at the time. One was, that "nature had not made different sets of rules for each people, or each family of peoples," and "that Providence controls mankind by the same code of rules, which are equally applicable to the Anglo-Saxon as to the Latin races, and to Indians and Africans." This is quite true as to one rule, at least, which is, that a sober, self-restrained, intelligent, and industrious people, is fit for self-government, and no other; but the soundness of the deduction that Senor Romero drew from it, that his own countrymen were fit for self-government, had, as we then said, to be tested by experience. He said it was Maximilian and the naughty French who kept Mexico from being a happy and united country. We said we feared not, but would wait and see. A letter from him to a private friend in this country has just been printed, dated February 17th, from which it appears that there were, when he wrote, three distinct rebellions going on in Mexico, with the accompanying slaughter and in security, though Maximilian has been nearly two years in his bloody grave, and there is not a hostile foreigner on Mexican soil. Turning to the latest newspaper reports from that region, we find that the opposition accuse the President and his Cabinet of corruption, and charge Lerdo de Tejada with buying land and Senor Romero with sending money to the United States in large sums, and General Palacio has published a letter in which he denounces the Juarez administration as unequal to the task of government. The charges of corruption are perhaps not worth attention, but turning to Senor Romero's letter for an answer or explanation, we find that the "opposition to the Government, formed of a very few persons who sympathized with the rebellion, have been clamoring for a change of Cabinet. *As their motives for asking this are not patriotic or noble*, and they cannot in any manner represent the country, these desires have not been complied with." As an answer from the ins to the outs, this strikes us as one of the best things in political literature, and gives us a tolerably clear notion of the ideas on which the attempt to carry on a constitutional government in Mexico is based. Nothing can be sounder; we trust Juarez and his colleagues will never give up the reins of power till the pure and good come and ask them to do so in a respectful manner and from proper motives. We wish the plan could be introduced here.

THE PRESIDENT'S APPOINTMENTS.

THE Cabinet has at last been brought into the shape in which it will probably carry on the Government during General Grant's Administration; the public can now criticise it without having to rely too much on guesses or rumors. Mr. Washburne, as we ventured to anticipate last week, does not remain in the State Department, for which he was wholly unfitted, but goes as Minister to France, a post for which he may have some qualifications, but what they are it would be difficult to say. If they include even a slight knowledge of French, or any knowledge at all of continental politics, or society, or ideas, or manners, the public will have no reason to complain. In any event, the appointment is as good as Mr. Lincoln's first one to the same position. If the Secretary of Legation, who has not as yet been named, should possess any acquaintance with French, or even possess a rudimentary knowledge of written English, it will be better. Luckily, there is no question of importance now pending between this country and France. We have nothing to fear from her, as we had in 1861, and nothing to exact from her, as we had in 1864; and though we do not think the French, or any other mission, should be made a retreat for the President's invalid friends, no immediate mischief is likely to result from General Grant's choice in this instance. The mistake, for such it must be called, no matter how we look at it, will on the whole be atoned for by the retention of Mr. Marsh in Italy, of Mr. Bancroft in Berlin, and the despatch of Mr. Motley to London. The substitution of Mr. Hamilton Fish for Mr. Washburne, in the State Department, is one with which everybody will feel at least satisfied. Men more familiar, not only with existing controversies between this and foreign governments, but with the various weapons of diplomacy, might doubtless be found without much difficulty; but it would not be easy to find a man in the ranks of the Republican party who meets so many of the requirements of the place and is likely to give the Administration so much moral as well as political strength. Mr. Fish possesses too, in an eminent degree, what every Secretary of State ought to have—that is, skill and experience in the social art, and a sense of dignity and self-respect which will save him from the temptation by which the State Department is so frequently beset, to convert State papers into stump speeches.

The public interest in the Cabinet, however, has been mainly monopolized by the Secretaryship of the Treasury, as this was the place which the friends of the old system made from the first the key of their position. It is the office which controls the largest number of appointments, in which rests the largest amount of responsibility, and which has at its command the largest number of pickings and perquisites of all kinds, for the reward of faithful adherents; and more important than all, it is the only office which can exercise a serious influence on the protection and free-trade controversy. It was, therefore, the office about which the politicians proper were most troubled in their minds, and with regard to which they made the most determined stand. The appointment of Mr. Stewart to it was to them a bitter disappointment in more ways than one. In the first place, he had not reached it in the regular line of political promotion. He did not belong to the political class, and had no experience of its wants, wishes, traditions, and rules; in the second place, his training has been so purely commercial that there was every probability of his introducing into the transaction of the government affairs the system by which he has succeeded in the transaction of his own—that is, the selection of employees for their business qualities solely, their dismissal for business defects solely, and the consideration of all matters of detail with reference to their bearing on the question of profits and loss solely. To introduce this system into any government office would, we need hardly say, have been a revolution; a revolution that we desired, and hoped Grant was going to give us, and a revolution the political class was determined we should not have if it was in their power to prevent it. That the President did not intend to put one of their number into the office, and had a due appreciation of the needs of the place, his selection of Mr. Stewart showed clearly; but he committed an irreparable mistake when he neglected to admit somebody of at least legal experience to his confidence, before he announced the appointment. The legal objection to Mr. Stewart seems to have come on him unexpectedly, and dumbfounded him. The attempt made to meet it, such as the message requesting a suspension of the law, and Mr. Stewart's assignment of his profits in trust, were of the clumsiest kind, and revealed clearly to the politicians the weakness of the President's position, and satisfied them that the time for a determined charge had come. Then we had the great Boutwell movement, which finally succeeded, and succeeded mainly because the President, being taken unawares, had nothing to oppose to it. He has more than once effected a change of front in the presence of the enemy; but this time the enemy was too quick for him.

Mr. Boutwell was unquestionably the politicians' choice for the Treasury, and his triumph is their triumph. He has been in no way prominently associated with financial questions, and has given no proof of financial knowledge or skill. The cry which has been kept up by the newspapers about his having "organized" the Internal Revenue Department, and which our contemporary, the *Sun*, sought to silence us with a few weeks ago, has really, if examined closely, no meaning. The word "organize" is one which is made to cover all kinds of action or interference, and is just as often used in a good as in a bad sense. It is not pretended that Mr. Boutwell *created* the Internal Revenue Service; and if it be said that he provided the system of checks and responsibility under which the employees work, the answer is, that these checks are worse than worthless, and that he "organized" the greatest sink of iniquity to be found in this or any other civilized country, and one in which a fourth of the revenue is stolen, and the morals of the community corrupted. There is, indeed, in view of the facts, a touch of the comic in anybody's basing his claim to the Treasury Department on his having had anything whatever to do with setting the Internal Revenue machine in motion. The rest of Mr. Boutwell's career has been that of an ardent politician, pure and simple. To the reconstruction process he supplied zeal simply. There was hardly a wild or foolish measure attempted by the Republican party in the course of it in which he was not a leader; and of the unmitigated rant of the period he supplied more than his share. His published volume of speeches will supply anybody who is in search of it with some means of judging of his powers, and of the kind and amount of wisdom with which the world is governed. He is entitled to the credit, however, of having exposed once more the old fallacy of supposing that a sinking fund can be created out of anything but a surplus; and he has brought to the transaction of public affairs what is certainly a valuable quality in these times—a personal character above reproach. He is, too, perfectly sound and clear, if we may judge from his speeches, on the question of the payment of the public debt; but then, that question has been settled already by the people. The opinions of the Secretary of the Treasury upon it are not likely now either to strengthen or weaken the public credit. It must, too, be said in his favor that some point of contact between the Administration and the extreme wing of the Republican party was almost essential to the harmonious working of the different branches of the Government, and this point is perhaps furnished by Mr. Boutwell better than it could have been by any other man.

What is of most interest to the public is the manner in which Mr. Boutwell's antecedents, training, and political relations are likely to affect his administration of his office; and on this point, we have nothing encouraging to say. A well-informed correspondent throws some disagreeable light on the subject in another column. One thing is certain, that it is all but impossible for a man, who has made his way in public life as Mr. Boutwell has, and who holds the notions that such a man must hold on the subject of party obligations and party discipline, to introduce thorough reforms into any branch of the public service. A curious illustration of the effect of party discipline on such minds is afforded by the support Mr. Boutwell gave to Butler last summer—a support through which he helped to return to Congress the most determined enemy the public credit has had, and probably one of the greatest jobbers who has ever sat in a legislative body. A more striking illustration still was afforded by Mr. Sumner's refusal, at General Butler's request, to confirm the appointment of General Gordon to an office in Massachusetts, Butler asking the refusal as a personal favor, and the reason being that Gordon holds and offers unrefuted—

and, as we believe, irrefutable—evidence of Butler's complicity in some most disgraceful dealings with the enemy during the war; and yet there are not many men in Congress on whose neck the party yoke has left fewer galls and bare spots than on Mr. Sumner's. When men like him are guilty of such "base compliances," what can we expect of the regular party hacks?

We think we are safe in saying that there is a widespread and growing conviction that we can look for no real reform in the Government till the system under which the present race of politicians have been bred has been broken up, and a new set of ideas and customs as regards the nature and objects of the government service introduced, and that this cannot be done by any faithful party man, no matter how noble the causes he may have served. Until it is broken up, a change of Administration may mean many good things, but one thing it will not mean—the cessation or diminution of corruption; and corruption will kill, in spite of all the lyceum lectures, monthly magazines, and cheap lands. As long as the attempt to govern the country through the old set is continued, a large part of the effect of a party victory, no matter what the party cry may be, will be to put Smith into Jones's place to do what Jones has been doing. What is wanted to complete the triumph of the politicians in Mr. Boutwell's case is, that in order to get him or keep him in the Treasury, Judge Hoar, as coming also from Massachusetts, should be turned out of the Attorney-Generalship. This is talked of, and, we may be sure, hoped for; but we trust General Grant will have the good sense and firmness to prevent it. Judge Hoar is the strong point in his Cabinet; the only officer of whom it may be truly said that had the country been searched through, a fitter man for the place could not have been found. He is not only a lawyer of the first order, but a somewhat rare combination of all the strong points in the American character—an almost ideal Yankee; and his fidelity to the principles of the Republican party is as old as anybody's, while his support of them has shown that they can be supported by the "legal mind," as well as by that curious piece of mush known to some of our Radical brethren as "the human mind."

THE "SENTIMENT" OF THE "ALABAMA" CASE.

The English papers brought by the last mail contain a great deal of discussion of the *Alabama* case, apropos of the probable rejection of Mr. Reverdy Johnson's convention by the Senate, and the comments of the American press upon the negotiation. Those who thought Lord Clarendon had conceded too much, of course console themselves with the reflection that England has escaped further humiliation; but all are agreed that as long as the question remains unsettled, the position of Great Britain, viewed with reference to a future foreign war, is exceedingly unpleasant. The *Spectator*, which was during the rebellion one of the few faithful and steady supporters of the cause of the North, comments on the matter in a tone of grave and earnest remonstrance, deprecating as in the highest degree absurd the sentimental view of their wrongs which the Americans are taking, in refusing to accept pecuniary satisfaction for the injury they have suffered. It says:

"The American people is in a mood only to be compared to that of an angry woman, who, when, every possible form of conciliation consistent with self-respect has been exhausted, declares to herself that 'the sulks' are very enjoyable luxuries. They do not care about damages; they are indifferent to reparation; they will not be bothered with arbitrations; they do not want to fight; they do not desire amity; one thing, and one thing only, will content them, that they shall have the last word, and that we shall acknowledge ourselves in the wrong precisely on the only point where we were unmistakably in the right. The Government of Great Britain has gone, not indeed further than was right, but quite as far as was possible on the road of conciliation; has agreed to submit everything, except its right to acknowledge a belligerent, to arbitration, and allows even that to be advanced as a plea in enhancement of damages; and is ready, if judgment goes against this country, to make the clearest conceivable acknowledgment of error, by paying a fine; and the Americans say that is all of no use. They were insulted, so they were, and they won't take the bracelet, so they won't; and they were never in the wrong, and Edwin shall say so, before they'll kiss and be friends; and if not, they'll wait, they will, and pay him off some day. They will not be content with damages, even though submission to the award is, under the circumstances, an open acknowledgment of error; but will have the British Government say, in the teeth of all the facts, that they had no right to acknowledge the South, that it was an 'unfriendly act,' though the North did it first, though it was done to prevent war—for war *must* else have followed on the seizure of our vessels on their way to a non-belligerent port—and though stanch friends of America like Mr. Forster pressed for the recognition in the interest of the Northern people."

The sentimental view of this or any other political question is not, as our readers know, one for which we have any great sympathy; or one which, to our mind, has ever yet contributed much to the happiness or prosperity of mankind. In fact it is almost demonstrably true, that the progress of civilization consists largely in the disuse of the sentimental view in the regulation of political affairs, and in the submission of an increasing number of the facts of life to the calm, cold jurisdiction of reason. It will be found on the whole, that in comparing one country with another, those in which sentiment has least to do with legislation, including treaty-making, are the happiest and greatest; those in which pride, prejudice, and passion do most to mould the policy, foreign and domestic, are most backward and miserable.

We have published a few letters on the *Alabama* case which represent two different ways of looking at it—one the sentimental, and the other the legal or logical. We do not deem it necessary to comment on them, because we are satisfied that whenever the *Alabama* case comes to be settled, be it next year, or fifty years hence, it will be settled in the way which seems best for the country, materially as well as morally. When the opportunity offers to retaliate on England, by according belligerent rights to a nascent rebellion, or selling cruisers to a foreign power engaged in hostility with her, we feel right well assured that, no matter what may now be said or felt, the action of the Government will be regulated by the consideration of American interests and honor solely. The neutrality laws, as well as all other laws, have been enacted for the promotion of American happiness, and not for the satisfaction of any foreign powers; and the question of enforcing or not enforcing them in any particular case will be determined by a contemplation of the possible consequences to American interests, moral as well as material, and not by the strength or weakness of the popular desire to spite somebody or pay somebody off. We are so well satisfied of this that we think the calculation in which our correspondent "America" indulges is interesting rather as an expression of present feeling than as furnishing any help in guessing the final result of the *Alabama* controversy. We see in the universal repudiation of war, as a possible means of ending the dispute, a striking illustration of the extent to which the whole matter is already under the control of the popular understanding; there is no reason to believe that this control will not increase as the years roll on.

But while saying this, we cannot help expressing some surprise at the pain with which the *Spectator* and some other English journals regard the "sentimental" way in which the Americans look at the matter. The truth is, that "sentiment" has been at the bottom of the whole affair in England from first to last. Had Englishmen taken that intensely practical view of the war and its incidents which they are now so anxious to have Americans take, there would be no controversy whatever between the two countries, arising out of the war. What has given the recognition of the Southerners as belligerents so much importance is the general feeling that it was dictated by sentiment, and that sentiment one of extreme dislike to American government and society. The ground the *Spectator* takes as to the expediency of the thing would have been tenable ground enough if the act were not judged by the help of the subsequent acts and language of the British public. There is no use in saying that the concession of belligerent rights was simply the exercise of an undoubted legal right, and was on the whole a good thing for Americans. The right to laugh and clap your hands when your neighbor's house is on fire is also an undoubted legal right; but you cannot prevent him from regarding it as at the same time an indication of hostility, particularly if followed by a good deal of abuse and derision.
